I have tried to figure out whether the ships obtained—provided they are obtained—could not be operated at a profit with American crews, cared for as required by our laws. My conclusion is that it is impossible. The Government might carry a limited amount of foreign commerce at low rates of freight and make up the loss by taxation. In what way that would differ from subsidies, of which the Democratic Party has been so liberal in its denunciation, would be difficult for any sane man to understand, with the single exception that in the case of subsidies we would know just what we had to pay, while under the provisions of this bill no living soul can even approximate what we should be called upon to pay.

Imagine the United States Government running a foreign ship, manned with a foreign crew and with foreign officers. But that is the only way it could be made to pay expenses, and it is extremely doubtful if a ship could be run even under those circumstances without a loss. I do not believe that the American people would approve of any such thing; I do not believe that the American people want the Government of the United States to purchase ships and man them with foreign officers and foreign crews for the running of a foreign ship purchased by the Government; but that is the only way, in my opinion, they could be made to pay expenses, and, as I have said, it is extremely doubtful if they would pay even then. Privately owned vessels would be obliged to reduce rates accordingly, and, having no Treasury filled by taxation from the people to fall back upon, the privately owned ships could do nothing but go out of business, and they would go out of busines as long as that condition existed, provided, however, there were ships enough owned by the Government to affect the rates or the trade as a whole. But this bill does not provide money sufficient to buy that number of ships. We need not worry about that. The number would only be a flyspeck compared to the number of ships that are in the transportation business of the world. Hence, instead of increasing our merchant marine, it would decrease it by this indirect method of subsidies to Government-owned vessels. It would result in a complete failure of privately owned American shipping in the foreign trade.

We have not very much of that kind of shipping to-day. It is so small now that it is worth little; but if under the provisions of this bill the amount to be subscribed were unlimited, as the original bill, the first substitute and the second substitute provided, and the Government purchased ships to the amount of $600,000,000, or I might say half of that amount, it would affect rates and at the same time it would drive out of business every American vessel now engaged in the over-seas trade.

We would not secure American vssels because there would not be time enough to build them to be of any advantage in this emergency. I say "emergency" because those defending this measure, including the President himself, state that it is an emergency measure, and if it is an emergency measure this bill can not assist the American shipper in his present unfortunate condition.

This is not the first time that the American shipper has been in an unfortunate condition. The war has intensified that condition; the advances in rates came a little quicker than advances generally come, but the result is very little different from what has happened to over-seas rates many times in the past. Our comparatively insignificant share of the foreign carrying trade, amounting only to about 8 per cent, might be wiped out, but it would be a shameless undertaking on the part of our Government. Not having protected them in the past, leaving them to fight their own battles against great odds—and as to those that did survive it was a case of the survival of the fittest—now, after they have struggled without making much of a success of their undertaking, it is proposed that our Government step in and purchase ships and place them in direct competition with her own citizens, and, as has been avowed by those who are defending this measure, to relieve them of all taxation, to relieve them of paying even the ordinary interest charges that every individual citizen, acting on his own initiative or through the combined initiative of more than one American citizen organized in a company and doing business as such is compelled to meet.

It is unfair. Is there a Senator here who believes that if such a proposition had ever been presented to any American citizen engaged in the shipping business, he or his friends, or the people who have purchased stock in those institutions, would have ever undertaken it? They would not have done so.

The stock owned in the companies doing a shipping business is scattered all over the United States. Much of it is held in the savings banks of the country. Great quantities are made up by little subscriptions held by the thrifty people of small towns. They have saved a few hundred dollars, through hard work, and, in some cases, by actual privations; and because of the confidence they had in the men that were directing the affairs of the company, they have placed their all in the business. Now we are asked, apparently in all sincerity, to pass a bill with the avowed purpose not only of robbing the companies doing business now of the meager profits they have made in the past, but of taking their all from them.

On the other hand, I suppose it would be just as well to say: "They are no better off, and should be treated no better, than some of the other institutions of the country." The papers tell us that this company has passed its dividends, this institution has failed to make its usual profits; and it does not apply only to one line of industry but, I am sorry to say, it has hit them all. There is no telling when it will cease.

Mr. President, I believe there is a slight revival in business, caused directly by the war in Europe. It is only temporary, and only in lines of trade that are manufacturing such articles as ammunition, implements of war, steel products for export that may be used for the purposes of war, automobiles used by the different armies, craft that fly the air and are used for the destruction of human life. I wish our increase in business were based upon a better foundation than this.

Mr. President, if we design to transport the products of our factories and farms, the Government would have to keep increasing the number of vessels employed, and thus virtually take possession of our foreign trade at a great loss, or we would be more and more dependent on foreign shipping. If we destroy what few boats we have—by our own action drive them from the ocean—we would be in a worse fix than we are to-day, for there are a few ships that we have a right to call on in case of war.

No, Mr. President. I believe in the position taken by the Senator from Nebraska [Mr. NORRIS], that if the Government of the United States is going into the shipping business it ought to go into it directly. It ought to build or purchase its ships and own them as the Government of the United States, and have every one of them subject to the call of our Government in case of war or any other unforeseen emergency.

I do not know from what fertile brain the idea sprang of forming a company—a corporation, if you please—with the Government of the United States as the principal stockholder. I do not believe there are any Senators who believe there will be one American citizen who will subscribe for the stock which is to be offered to the public, unless that American citizen has some motive other than would appear upon the face of the transaction. There may be men who would want to undertake such a thing as this, but I doubt it. They certainly would not go into it for the profit they would make out of the business; for we are told by the President of the United States that if it should happen to be profitable, just as soon as it becomes so we are to sell the Government's interest, and that interest is to be at least 51 per cent at all times; so the stockholders who go into this business as partners of the Government may be sold out, and to whom? To anybody this board that is provided for may choose. They may sell out to a foreign country; they may sell out to a foreign citizen; and that country or that citizen may have just one object in view—to freeze out the American citizen that went into this business as a partner with our Government. There is nothing in the bill to prohibit it, and we are told that if the business becomes profitable, that is what will be done. I can not imagine anyone that would enter into such a proposition.

If the Government goes into this business, it will not only be subject to international complications, so well brought to the attention of the Senate by others, but it will have to meet retaliation from foreign governments, to say nothing of the necessity of increased taxation here. Why would not such foreign countries retaliate? Why would not countries that have treaties with the Government of the United States retaliate if our Government went into the shipping business and, through rates made by our Government, placed the products of their country at a disadvantage? Why should they not retaliate?

It not only involves international complications, Mr. President, but it will involve our commercial relations with all the countries of the world. We take good care in passing our tariff laws to provide that in case we are discriminated against by any foreign country there shall be a penalty attached to that country in the way of an increased rate upon the goods that may be shipped from that country to our own. Before that provision became a law there was hardly a country on this globe that did not give preferential rates and make lower prices to other countries than to our own. They do not do it now, Mr. President, because we have protected ourselves.

Whenever any rates of duty are imposed upon importations by foreign countries now they are made equal for America and all other countries, with the exception of the preferential rate which may be given the dependencies of the country making the law, and that is a preferential rate to itself. As to all other rates for all other countries we must stand upon an equal footing, or else we impose the penalty upon all the goods coming from such a country into our own.

Mr. James J. Hill, the well-known western railroad man, has often been quoted by the Democrats in pushing their free-trade legislation to help them in their efforts in that direction. They have put much stress on Mr. Hill's views on that subject in the past. We never have heard them quote him on the other side of the Chamber in this discussion. What he says on this shipping bill ought at least to be heeded by our friends on the other side who have so often quoted him approvingly. Mr. Hill says:

There are but two recourses—one a merchant marine owned and operated by the Government, the other a merchant marine provided by and for the people. The former, just now urgently advocated, is unwise and would be certainly a disastrous experiment. Aside from the complications almost certain to drag us sooner or later into the European conflict owing to the uncertain and conflicting claims of national neutrality, this policy would be followed by the total destruction of the private shipping interests. Private enterprise can not possibly compete with the Government, which pays no interest on the cost of its ships and throws aside consideration of profit and loss. As Lincoln said that the Nation could not continue to exist "half slave and half free," so our merchant marine, if once the precedent is set, must inevitably become a Government monopoly.

Could anyone state the case more clearly, more succinctly, than Mr. Hill has done? No one here has tried to answer him in this debate, and I do not believe it will be undertaken. It is so plain, so simple, based upon the principles underlying business, that no one can misunderstand it.

I will say that in seeking to meet Mr. Hill's statement Secretary Redfield stated that he had offers to sell to the Government English, French, and other vessels. That may be, but if owners of vessels now engaged in the English trade, making as they are unheard-of and unknown profits, offer to sell those vessels to the Government of the United States, I predict now it will be at such a price that it will be prohibitory. English owners of ships are not going to offer them to America at a sacrifice. They are going to make out of them all they can. They have no regard for the Treasury of the United States, and in that particular they are a good deal like a great many Members of Congress. But, Mr. President, you can depend upon it that they will make a profit sufficient out of the sale of a ship to insure them in receiving as much profit from the sale as they would if they operated the ship.

The owner may also have the same opinion that the President expressed, that we will buy the ships, and if we are fortunate enough to establish a profitable business within a few months or a year or two we will sell them. The seller, no doubt knowing the history of the purchase of ships from Governments, would be in the field to buy with the same money he received from the Government of the United States as purchase price for his ships. He would want to buy the ship or ships back, but not for anything near what we gave. Some excuse or other will be made so that it will be sold for a nominal sum.

It is not improbable that if the Government will pay enough it may be able to buy vessels other than German, but the additional payment would be far in excess of the value of the ships. Nobody will deny that. That is just as certain as that the sun will rise this morning. It is just as certain as it has been in the past and will be in the future.

Welding Ring, a prominent shipper of New York, in replying to Secretary Redfield, said that the Government could not buy ships because they were not on the market. It could, for reasons already given, secure interned vessels, but not those free to sail on the ocean to-day. However, if the Government pays enough it could probably get such vessels, and it would be a case like that of buying transports at the time of the Spanish War.

I stated some seven or eight hours ago that I would call attention to the purchase of some of the ships required by our fleet and purchased from foreign countries or foreign citizens at the time we were engaged in the little skirmish with Spain. I did so in answer to a question from one of the Senators, and I am sorry he is not in his seat at this time in the morning.

We all know how those purchases turned out. The Government at that time paid $117,000 for a vessel which it named the *Hornet*, but after the war it sold it for $5,100. Senators, is that enough to convince you that when the Government of the United States purchases a vessel and then desires to sell it nobody is going to pay it what was paid for it originally? Our Government paid $201,000 for another vessel which it sold for $75,563. In another case it paid $87,597 and sold the vessel for $3,300. It paid $150,000 for another ship, which it sold for $4,663.

I wonder if my statement is challenged wherein I stated that in some cases we did not get 20 per cent of the original purchase price. Senators, we hardly got 3 per cent on some of them. The Government paid $150,000 for a vessel which it sold for $4,663. Another vessel for which it paid $350,000 it sold for $175,000, and another one for which it paid $267,657 it sold for $20,521. In another case it paid $35,000 and sold the vessel for $1,800.

That is about what would be the results now if the Government undertakes to buy vessels open to navigation without incurring the danger of capture by a belligerent nation because of a claim that we had violated the neutrality laws, and paying such exorbitant prices would make it all the more difficult to run the vessels without great loss. We have no money to spend for such a purpose when there is no need of it.

Mr. President, when I saw the morning paper day before yesterday, giving an account of the President calling his Cabinet together for the purpose of considering the financial condition of our country, calling attention to the reckless, headlong plunges that this administration was making in expenditures, I hoped that in their combined wisdom they would have said, "Let us save the $50,000,000 provided for in this bill." Evidently that was not the decision. I suppose the hand has been put to the plow must not be withdrawn.

Why, Mr. President, the statement that I called attention to to-night, showing that on the 28th of this month the excess of the expenditures of the Government over the total receipts was $90,000,000, only tells the story under present conditions. I call attention not to the little items, and yet the Good Book tells us that it is the litle foxes that spoil the vines, but it is the millions that are appropriated that are running us headlong into financial trouble.

Sugar, on which the duty has been greatly reduced, will go on the free list next year, unless the Treasury of the United States is in such a deplorable condition that the majority party decide that they have got to have the $50,000,000 received from that source in the past; but $50,000,000 does not amount to anything with this administration—that is a mere bagatelle. We shall have a pork-barrel bill to consider—the river and harbor bill—if they can crowd this bill through this session of Congress in time for its consideration. Then will be piled on the backs of the taxpayers of this country another $34,000,000.

It is the intention, and I will say under the law, of the administration to expend $35,000,000 in constructing a railroad in Alaska as soon as possible, even with the alleged war tax in effect—a mere subterfuge for increasing taxation. A large deficit is already a problem to overcome. With the loss of the sugar tax of over $40,000,000, to go into the shipping business presents a serious outlook for the American people.

I have just been handed the morning paper—the Washington Post of January 30—and the first thing that catches my eye is a heading, "Fear of bond issue." How natural—Democracy and a bond issue—twin brothers, always found traveling side by side, always existing at the same time.

[Special to the Washington Post.]

NEW YORK, *January 29.*

A Washington dispatch to the New York Herald says:

"Concern continued to grow to-day over the rapidly increasing excess in expenditures of Government funds over the receipts, which has grown to more than $70,000,000 in the last seven months."

If some one would hand me the statement of the Treasury Department for yesterday instead of the 28th instant, I would gladly call the attention of the country to the loss that happened upon yesterday.

The articles continues:

President Wilson met Secretary of the Treasury McAdoo before the Cabinet assembled at 11 o'clock. Discussion of possible reductions in expenditures occupied some of the time.

It does not say much of the time, and the word "some" is not underscored; but I have no doubt that that subject was discussed up to a minute before 11 o'clock.

In the House, where appropriation bills originate, the leaders held informal conferences on the subject of what could be done to prevent a tremendous deficit at the end of the fiscal year 1916. That there will be a deficit at the end of the present fiscal year (June 30) is generally believed, although the attitude is taken that it is a condition over which this administration has no control—a situation due to the disturbances in commerce and finances due to the European war.

The same old cry! If our birth rate increases, it will be due to the war; if it decreases, it will be due to the war; if the chickens fail to lay this coming spring as early as they did last spring, it will be due to the war; if our pigs are not quite so fat at killing time, it will be due to the war.

Everyone concerned in the conduct of the Government is aware that unless some vigorous policy of retrenchment in the appropriations for 1916 is adopted there can be no escape from a deficit of tremendous proportions. As the appropriation bills stand in Congress now they call for $70,305,134.38 more than the estimated revenues for 1916.

Well, since they saw the last report it has climbed up to ninety millions.

Plainly, it is necessary to cut the appropriation bills to fit the size of the national pocketbook.

Will they be cut? It is too late to start cheeseparing. To do any good, it ought to have been started before.

Unless a bond issue is to come. Nobody wants that.

Of course, no one does.

Further taxation is out of the question, politically and every other way. The only hope seems in the elimination of the "pork barrel" river and harbor and public building bills and a few others, which might make up the difference.

This bill with $50,000,000 is not enumerated. I say now that the only way the river and harbor bill will be defeated in the Senate at this session of Congress is to talk it to death. If it is ever allowed to come to a vote, it will pass; and no matter how unsavory the items in the bill may be, if it is left to a vote they will remain in the bill. I ask the Senators who are present to note that prediction and see when the vote is taken, if it is taken, whether I am wrong or whether I am right.

If politics were the only consideration in the discussion of this bill, it would be the duty of the Republican Party and the members of that party to let this bill pass; but there is a duty devolving upon a Senator of the United States greater than the duty that he owes to his party, and that duty devolving upon him is to protect the interests of the people of the United States. The United States is no different, so far as business is concerned, in its management, other than in size, than a business institution; and when a principle of business is violated the business in which the violation occurs must suffer. So it is, Mr. President, with the Government of the United States.

The rivers and harbors bill provides for an appropriation of $34,000,000; the public buildings bill for $12,000,000. Besides the $12,000,000, there has been appropriated by previous Congresses $21,000,000 which is yet to be spent for public buildings—$21,000,000 which eventually must come from the general fund of the Treasury, which now is about $57,000,000.

I think that is about right, although on January 28, 1915, the net balance in the general fund of the Treasury of the United States was $56,006,694.07. If you will compare that with the statement of two years ago to-day, I have no doubt in my mind that instead of $56,000,000 the net cash balance in the general fund at that time was over $100,000,000.

In a word, the hitch is political. There is going on one of the finest little games of "passing the buck" that ever could be imagined.

I do not know what "passing the buck" means, and, in looking around the Chamber, I do not see a Senator that I feel like asking if he knows its meaning.

Mr. THORNTON. Mr. President, will the Senator repeat it?

Mr. SMOOT. Yes; I will repeat it to the Senator. It is as follows:

In a word, the hitch is political. There is going on one of the finest little games of "passing the buck" that ever could be imagined.

Mr. THORNTON. I do not know myself what that means.

Mr. SMOOT. No; I certainly do not know what it means.

In general, all eyes are cast on the "pork-barrel" bills—

We know what that is—

and all hopes are staked on their elimination. But who is to do the eliminating is the puzzle.

All the appropriation bills are based on estimates sent to Congress by Mr. McAdoo. Thus, plainly they have the approval of the administration, and originated with it.

On this theory the leaders of the House who have prepared the bills are willing to stand by them, and intend to stand by them, in their efforts to have them passed. The word has gone out, apparently from high administration sources, that the bills ought to be cut. The scheme is to have Congress do the cutting, leaving the administration with clear skirts and in the position of having approved projects which Congress eliminated without its sanction.

SUCH SUPPORT NOW NEEDED.

Some Members of Congress profess to see in this action an effort to keep friendly the "pork-barrel" feeders who might support the ship-purchase bill. This support might be lost if the administration were put in the position of refusing river and barbor improvements and public buildings in order to get money to invest in a ship line.

The House leaders who desire to cut out the "pork-barrel" bills do not desire to take the responsibility for this action in order to permit the passage of the ship bill. They would be the objects of attack from their colleagues and would not have the administration leaders to back them up. It is plain to see that in their present frame of mind the House leaders must have it known without question that the administration desires the elimination of the pork bills. Whether the administration will admit that it made a mistake in sending to Congress such large estimates for appropriations is doubted.

TARIFF LAW CHANGES FAVORED.

It developed to-day that there is a growing sentiment for a change in the tariff law to retain the duty on sugar at least until the European war is over and the Government's revenues regain normal proportions. Under the Payne law the sugar duties amounted approximately to $50,000,000 a year. The Underwood law reduced the tariff on sugar and will put it on the free list May 1, 1916.

Officials of the Treasury, who are in charge of customs affairs, said to-day that they expected that $28,000,000 would be added to the revenues through the importation of sugar when the shipments start in the spring. This probably will be the last money received in sugar duties unless the law is changed, for it is generally believed that next year the sugar importers will wait until May 1 in order to avoid the payment of duty. This, however, has been taken into consideration in the preparation of the estimates in revenues for 1916.

POST OFFICE DEPARTMENT PREPARES.

At the Post Office Department there are preparations for the enforcement of a vigorous policy of retrenchment in order to keep the expenditures within the figure of receipts if possible. Letters have been sent to all the first-class post offices asking for suggestions as to how economies can best be effected in the various offices. Clerks and carriers are to be transferred to substitute rolls wherever it is possible to get along without their services.

Mr. President, if the time has arrived when they feel that they have got to get along without the services of men now in the employment of the Government, it seems to me conditions must be most critical.

I have not with me the list showing the number of additional Government employees who have been taken on in the last 18 months. The American people will wake up some time and find that through the appropriations made it has enabled an army of men to be appointed, and are now traveling over this country, not one or two but hundreds and thousands of them. I have not the time now to tell the Senate what their work and instructions are.

One great trouble in the shipping business at the present time, as pointed out by those engaged in it, is the lack of facilities for unloading ships, to which I have heretofore referred. One day recently 47 ships were lying at anchor at Genoa, Italy, waiting to discharge, because the warehouses and other such places were all filled. Mr. President, just think of 47 ships lying at Genoa waiting for berths to be unloaded! That does not look as though there was very much of a shortage of ships. It is a shortage of men; a shortage of capacity of storage.

Suppose we had 30 more ships and all of this money had been appropriated, and we had bought the German interned vessels and had them in service. We would not have as many ships as were lying at Genoa waiting to be unloaded. At the same time there were 21 vessels at Liverpool that could not get a berth in which to discharge. There was a lack of workmen, because of the war, which prevented vessels from discharging. A similar condition exists at other European ports. I do not think it would be interesting to the Senate to name each port and the conditions that have existed at those ports for the last month or two; but they are all blocked, and necessarily so, for the exportations from our country have greatly increased. The people engaged in war in Europe must be fed, and they are relying upon America to a large extent for this purpose. This congestion involves a great loss, while it takes the vessel from other uses, as I have already stated.

What possible advantage will the Government have in that respect over private shipowners? None whatever. If it had a thousand vessels, it would not help the matter at these ports. I have not heard anyone say that there is a lack of shipping facilities to transfer our products from this country to South American countries. The report is just to the contrary; and if the Government did have a thousand vessels at its disposal to-morrow, the situation existing in the ports of Europe would not be changed by such a condition, but on the other hand it would be multiplied.

Up to January 20 this country shipped 54,000,000 bushels of grain in excess of any corresponding time in the history of the country. That does not seem to show any great need of Government interference in this business—a burden of carrying 54,000,000 bushels of grain in excess of any corresponding time in the history of our country. The trouble has not been in getting the grain to the ships in America; the trouble has been in trying to land it in the ports of Europe. The vessel that is compelled to lie still for a month, waiting to be unloaded, with no berth for it to enter, must be at a frightful expense; and that of itself would be sufficient to justify increased rates.

This demand for Government purchase of ships largely grows out of the cotton situation in the South. The cotton growers think they will profit; but before this bill becomes a law and can be put in operation the cotton trouble will probably be over. There is, however, a lack of insurance to Bremen, and it is for the benefit of Germany and Austria that the cotton growers would sell their products if they had an opportunity. Senators, no matter what has been stated in this discussion as to the length of time to build a first-class boat, it is generally conceded by those who have had experience in this line of business that it takes at least 18 months to build a first-class ship. That

being the case, this bill is not intended to add to our merchant marine new vessels of that kind, and there are no first-class ships to be had except German ships interned in our ports. Are those ships of a class that we could use and that would be of profit to us? I say, without the slightest fear of contradiction, that the great bulk of them are not the ships that any business concern in this country would think of purchasing. I want to call the attention of the Senate to a list of those ships and ask Senators if in their judgment they think they are of the class of ships they ought to purchase. I believe the senior Senator from Massachusetts [Mr. LODGE] called attention to this subject.

I find that the North German Lloyd Co. has 147,887 gross tons interned at New York, Boston, and Baltimore. The names of the ships are the *George Washington*, gross tons, 25,570, interned at New York; the *Kronprinzessin Cecilie*, 19,503 tons, interned at Boston.

Mr. CLAPP. Will the Senator pardon me a question?

Mr. SMOOT. I yield for a question.

Mr. CLAPP. I ask for information. Does the Senator know, and I have no doubt he does, whether those are freight or passenger ships?

Mr. SMOOT. I will say to the Senator that some of them are freight ships and others are passenger ships and others are combined passenger and freight ships, but the great bulk of tonnage and the cost of the boats are in the fast ships carrying the German mail and passengers from this country to Germany. We certainly would not buy them.

Mr. CLAPP. That is what I supposed, without having looked it up, but I thought the Senator would know just what ships might be passenger vessels and what might be freight vessels.

Mr. SMOOT. I will state to the Senator that out of the gross tonnage of the North German Lloyd and the Deutsch-Amerikan Petroleum Co., which is entirely a tank line, the D. Tripovitch Steamship Co. and the Atlantic Sea Navigation Co. (Ltd.), the greater part of the tonnage, I may say two-thirds nearly, belongs to the North German Lloyd Co. The amount of gross tonnage belonging to that company, as I stated before, is 147,887 tons, of which one boat, and that is a passenger boat, the *George Washington*, is 25,570 tons. Then the very next three boats named, if I remember correctly, are fast boats, and the gross tons are 19,503, 19,361, and 13,102. So when you take the first four boats named as belonging to the North German Lloyd Co. we find the great bulk of the tonnage is in boats that are used for the transportation of passengers from this country to Germany. So when we look at the list of the German boats interned in this country and see the size of the vessels and see the condition of the vessels and the age——

Mr. CLAPP. I was going to ask the Senator if he could throw any light on the question as to how modern these boats are?

Mr. SMOOT. I had a list with me, but I can not lay my hand on it, giving the age of every ship. I will say to the Senator that if the company followed the rule of business to write off each year a certain percentage for depreciation the books of the company would not show very much value for many of these vessels.

I did not refer, however, to the Hamburg-American Line. I find that they have 248,301 tons interned. They are at New York, Boston, Baltimore, Philadelphia, Seattle, and New Orleans. Of that 248,000 tons the *Vaterland* has a gross tonnage of 54,282. She is interned at New York. The *Vaterland*, of course, as we all know, is a boat we would not want. It is a passenger boat of the very highest type. The cost of the operation of a boat of that kind is so much that it is hardly believable. Every trip to and from America that is made by the *Amerika*, and that is not one of the largest boats, is $110,000. Every round trip of the *Cincinnati* costs $100,000.

There is no lack of transportation facilities over the ocean to-day. Those great boats are running at a loss. Instead of having hundreds—yes, thousands—of American citizens over in Europe spending their money and their time, the war has driven them home, and many of them came over here in any kind of a vessel they could get into. So the transportation of passengers from Europe to America is almost nothing, and as far as the transportation from America to Europe is concerned you might call it nil. The passenger boats to-day are running at a loss, and will continue to run that way until there is a change in the war situation in Europe. We certainly do not want to buy from Germany or any other country a lot of boats which will be of no use to the American people.

Mr. President, I shall ask unanimous consent to place in the RECORD without reading a list of the ships I have referred to rather than to take the time of the Senate in reading them at this time.

The PRESIDING OFFICER (Mr. REED in the chair). Without objection it is so ordered.

The matter referred to is as follows:

German steamships.

Mr. SMOOT. As I stated, Mr. President, it would take at least 18 months to build a first-class ship. So this bill is not intended to add to our merchant marine new vessels of that kind, and there are no first-class ships to be had except German ships interned in our ports. The British Government requires the assent of the board of trade, which is a Government department, to the transfer of a British vessel to a foreign country. Is it reasonable to suppose that that Government would allow any first-class vessel to pass out of its control while this war lasted? I care not what the head of any of the departments or bureaus of this Government says, unless the requirements of the British Government are changed from what they have been in the past no British ship can be transferred to a foreign country without the consent of the board of trade. So when we talk about buying British ships, when we think we are going to secure them, we have got to take more than the wishes of the seller into consideration. We have got to take into consideration the wishes and desires of the board of trade, which is an English institution.

Mr. President, I have just been handed a clipping from the Washington Post of January 30, 1915, this morning, in which I find a statement by Sir Edward Grey warning the United States that the purchase of German ships would be construed by his Government as an unneutral act.

NEW YORK, *January 29.*

A Washington dispatch to the Sun states that Great Britain has given official notice that it would regard as an unneutral act the purchase and operation by this Government of the interned German and Austrian vessels as proposed under the pending special purchase bill.

England has heard of this measure, England knows what its provisions are, or, I should say, were, and England is not slow in notifying our Government of the position she takes in the purchase of interned German vessels.

NEW YORK, *January 29.*

A Washington dispatch to the Sun states that Great Britain has given official notice that it would regard as an unneutral act the purchase and operation by this Government of the interned German and Austrian vessels as proposed under the pending special purchase bill.

A written statement to this effect is now in the possession of Secretary of State Bryan and has been in his hands for 10 days.

I can not see, Mr. President, why the Senate of the United States does not pass a resolution asking the Secretary of State, if not incompatible with the interests of our Government, to send all the information that is in the State Department to Congress touching the question of the purchase of interned German vessels. I think it is due to Senators to know just what has passed between our Government and the British Government upon this subject. But we have not a word unless it is given to the public in driblets as the department sees fit.

Now, that is not the way to legislate. I thought myself that it would be a good idea for some Senator to offer a resolution, but I do not know that it could pass. I know that under the present parliamentary situation I believe this is the legislative day of January 26.

Mr. CLARK of Wyoming. Yes.

Mr. SMOOT. It is after 2 o'clock on the day of January 26, and I know, of course, it would require unanimous consent. I would not want to undertake to secure that information unless I knew it was perfectly satisfactory to the Secretary of State and to all the Senators upon the other side of the Chamber. But I would like to know just what has passed between our Government and the British Government, the communication of which would not be to the disadvantage in any way of either our Government or the British Government.

This article proceeds as follows:

Furthermore, similar views in regard to the reported intention of the administration to purchase interned vessels are held by France and Russia.

All the three great powers forming the allies agree that for us to purchase under this bill any or all the interned German vessels would be construed by them as an unneutral act on the part of the United States. Is not this warning sufficient, Senators? Just the other day, Thursday, I listened to a speech from the Senator from Montana [Mr. WALSH] in which the whole burden of it was that we have a perfect right to buy the interned vessels; that it was none of England's business; that it was none of Russia's business; none of France's business; that we under the fifty-sixth article of the London convention had a right to purchase the vessels. Evidently England does not agree with the Senator, nor does Russia, nor France.

The article proceeds as follows:

Among those who are aware of these facts there is great surprise at the repeated impressions conveyed by officials that the State Department has had no particular reason to believe that Great Britain or any of her allies would refuse to recognize the validity of the taking over of the interned ships and their operation in trade.

I have heard that stated time and time again, not officially, but by Senators who I thought were in close touch with the State Department, and I had almost come to believe that there had been some secret understanding between our country and England and Russia and France that they would not object to the purchase of the German ships if our Government so decided to do.

But evidently they were mistaken or else this article does not state the truth. It continues:

Great Britain, as the nation with which the United States has had occasion most frequently to discuss maritime questions during the war, has taken the lead in conveying to the United States a warning as to the view which the allies will take of the contemplated action under the pending legislation.

Sir Edward Grey has gone out of his way to inform Secretary Bryan that the British Government would not look with complaisance on the purchase of the interned ships by this Government.

I do not know whether it is proper to designate the action of Sir Edward Grey as going out of his way. I think he has a friendship for our country, and I rather think it is his duty to at least warn our State Department that Great Britain would not look upon the purchase of interned German ships with favor, especially after a bill has been introduced in Congress, especially since in the discussion upon this bill one who I believe all Senators felt was speaking for the State Department had so positively said that we had a right under the London conference to purchase interned German ships, and that England or Russia or France or any other of the belligerent powers had no right to object.

I apprehend, Mr. President, that the longer this question remains before the Senate for consideration the more the testimony will pile mountain high to show that the measure is fraught with great danger.

Mr. Welding Ring, in addressing the National Foreign Trade Convention at St. Louis, said:

I venture the assertion, and I think it will be supported by every practical man in the shipping business, that every steamer suitable for carrying cargo is employed to its utmost capacity at the present time.

This is from a man who is in that business. He knows it from A to Z; he is as thoroughly familiar with the details of the business as a man could possibly be. What he says I believe to be true. He further states:

There are no idle steamers except those that are interned and can not be employed. It is not boards in Washington we want, but an opportunity for individual effort to do in this country, not only in regard to shipping, but in many other lines.

If the Government of the United States enters the shipping business by reason of the importunities of people from one section of the country, why should it not enter into other businesses? I think this administration intends to do so, particularly if a southern industry is involved. We have upon the calendar a bill which has been reported from the Public Lands Committee, which, if passed, will mean that the people of the Western States shall pay for what rightfully belongs to them a tax to the Government of the United States forever. No consideration is taken as to what our enabling act provides; no attention is paid to what the Supreme Court of the United States has decided, not once, but many times; no attention is paid to the long list of decisions in the United States district courts in many of the Western States, wherein the proposition has been laid down so plainly that the State owns the water within the borders of the State that there is no question about the facts.

Here, however, we find a bill undertaking to do indirectly what the Constitution says can not be done directly. Mr. President, I have thought many times that if each Senator would spend a day with some western Senator, taking a map of our Western States to show him how the public lands of each State containing the chief resources of the State are locked up, it would convince the Senator of the injustice that is being done to the people of those States. There are in my own State withdrawals of land in some of the counties amounting to 93 per cent of all the land within the county.

What kind of government can be maintained with the power to tax only 7 per cent of the land. How can the counties maintain schools, churches, and a form of government that will insure to their people the protection so absolutely necessary in outlying counties so common in all of the Western States. I expect, Mr. President, that if this program proves a success and we can be forced, aye, by brute force, to the passage of this bill, the same program will be undertaken to place upon the State of the Senator from Arizona [Mr. ASHURST], who sits before me, a condition that I know his people will resent; but such are the conditions.

In connection with the quotation just made by me from the statement of Mr. Welding Ring in addressing the National

Foreign Trade Convention, in St. Louis, I wish to say that his statement as to individual effort is the truth. I also wish to say that individual effort has been discouraged and suppressed as a result of the legislation, including the tariff bill, of the party in power.

The Senator from Georgia [Mr. HARDWICK] in a recent statement on this subject, printed in the Washington Post, is reported to have said:

The objections to the pending ship-purchase bill continue to multiply and grow in strength day by day. In the first place, where and how will we get the ships if the bill should pass? By purchase? If so, from whom? Certainly not to any considerable amount or at anything like a reasonable figure from Great Britain, whose merchant marine must serve her own great commerce, and is, besides, now subject to demands made upon it for aid to the military and naval operations, as well as an increased demand from the world's carrying trade growing out of the elimination of German competition.

SHOWS BRITAIN'S PROBABLE ATTITUDE.

From Germany? If this be the purpose, or one of the purposes of the bill, it seems certain that it will involve us in serious complications with Great Britain. It is not probable that the Government of that country will permit us to purchase and transfer to our registry the interned ships of Germany that could probably be bought at a most reasonable figure, and then operate them on the high seas.

It seems certain that Great Britain will insist that if the transfer of the ship under the registry of one of her enemies is made to a neutral registry after the declaration of war, that Great Britain is neither bound to recognize nor respect such transfer and does not propose to do so.

SAYS NEUTRALITY MAY VANISH.

Besides, the transfer of these German vessels to a corporation of which the United States is the principal, if not the sole, stockholder will greatly add to the gravity of the situation by making this Government a direct party with an immediate interest of its own in the controversy, and will seriously endanger our continued peace.

Therefore this step ought not to be taken lightly, and not at all unless we are prepared for any eventuality. If we can not safely buy these German vessels, then what ships are we to purchase under this bill, and from whom?

A very pertinent question.

From other neutral nations or their citizens? We can certainly hope to secure no considerable supply from that source.

PROSPECT OF PURCHASE IN UNITED STATES.

Nor can we hope to purchase these ships either from our own citizens of from the citizens of other countries, if it be true, as asserted and urged by the proponents of this measure, that the rates have risen so enormously and the profits of these ships increased so largely since this war began. If that be true, what inducement would be held out to private capital invested in this business to sell its ships just when they are reaping the richest harvest?

Where, then, are we to get the necessary ships? Obviously by construction. And yet this measure is urged as a temporary one—a war measure, as it were, to be promptly abandoned when the war is over and the present emergency past—certainly as soon as it becomes a "profitable" enterprise again and therefore becomes attractive to capital.

POINTS TO TARIFF REMEDY.

The Congress of the United States in the recent tariff bill adopted a plan that in the past has proved most efficacious and practicable in building up and maintaining an American merchant marine, namely, a discriminating duty in favor of goods carried in American bottoms. The discriminatory rate may not be large enough to accomplish the purpose sought. If not, let us raise it. Certain treaties with foreign powers forbid its enforcement, the Attorney General held. If so, let us give the necessary notice to the powers in question to modify these treaties in this respect and then proceed to enforce the law we have enacted and so restore our merchant marine.

Long have we Democrats insisted that business and government should be divorced; that the Government should keep out of business and business should keep out of the Government. Were our protestations insincere? Were our principles unsound? I believe not.

Mr. President, if I have been rightly informed, and if I have heard correctly the many appeals on the part of the Democratic orators in past campaigns, they have always taken a ground against the Government of the United States going into business. They have always condemned paternalism. I say that this bill is paternalism run mad. The Government is going into the shipping business. We are going into the power business. We are going into the land-leasing business. We are going into the mining business. We are already in the railroad business. We are already in the lumber business. We are already in the sheep business and the cattle business, and where on earth is it going to end?

Are we prepared, as citizens of the United States, to acknowledge that the old Populist Party was correct? Are we ready to acknowledge that all of the preachings of socialism are what is required for the betterment of the citizens of our country?

I warn my friends upon the other side of this Chamber that the passage of this bill is not worth to them what it will cost them in the future. I am thankful that I am not a member of the Democratic Party, and particularly one of the many who do not believe in this bill but are forced to vote for it. It must be most humiliating; but that is not the question involved. I would not care how much humiliation came to Senators; I would go far toward bearing it myself, or my part of it, if we could save our country from the effects that this bill is bound to bring.

I do not believe, Mr. President, that all that I say or all that anyone will say against this bill will change the result. We can only hope that it will. We can only trust that it will be brought home to the majority in such a way that they will hesitate to take the step. I believe myself that the discussion that has taken place is going to prove of inestimable value to the American people, and the longer the measure is discussed the more the people of this country will be convinced that it is a wrong step to take. I wish I had the power to convince one or two more Democrats that this bill should not pass. It would not take any more than that to defeat it. You are passing, or undertaking to do so, a measure which, if statements that have been made to me are correct, a very large majority of the Senators in this body feel is unwise. The situation is as it is, however. I shall do what I think is my duty. If the bill becomes a law I shall go home to my people, and if asked in relation to this legislation I shall simply state that if it had been in my power it never would have been enacted into law.

Mr. President, the lengths to which our friends on the other side are willing to go to pass this bill are almost beyond belief. If I had been asked a week ago—aye, if I had been asked but yesterday—whether Rule XVIII would be slaughtered, whether the precedents established in this body for years and years, some of them rendered by some of the greatest Democrats that ever sat upon that side of the Chamber, would be lightly set aside, I would have said no, no—a thousand times, no, not for any piece of legislation. I wish, after this fight is over, it might be possible to make a motion that every ruling that has violated the rules of this body should be expunged from the official RECORD.

When I came to the Senate of the United States I thought it my first duty to learn the rules by heart, and know what they were. I do not care much about the rules any more, any further than that every time I see them violated it hurts me. I say that there is not a piece of legislation that has ever been before this body, or that ever will be before it, that justifies the willful violation of the rules of the Senate.

I referred some time ago to a conference report. That report was brought before the Senate last August, with an amendment to admit foreign ships to our coastwise trade. It was not accepted by the Senate. Some of the Democrats objected to it as not a legitimate proposition to be submitted on a conference report. Yet that report, agreed to by Democratic committees of both Houses, would have practically destroyed our coastwise shipping so far as American-built ships and American sailors are concerned. Conference reports! Yes, Mr. President, we have passed in this body, concurred in by the House, some of the most vicious legislation on conference reports that has reached our statute books. I hope the time has arrived when a majority in the Senate of the United States will rise and put a stop to that practice.

An American vessel with an American crew could not compete with a Japanese vessel and a Japanese crew, and we would have had the painful opportunity of witnessing foreign vessels doing our coasting and lake trade. The coasting trade has been protected from foreign invasion for a century. It has grown to an extent employing over 50,000 men, with $125,000,000 capital and with an output of nearly $100,000,000 annually, paying in such wages some $40,000,000, purchasing some $35,000,000 worth of American products in addition. This industry has hundreds of millions of dollars invested in this country. Yet the committee propose to open that trade to foreign competition. Is it possible that my friends would like to see that army of men thrown into the already overcrowded avenues of business and manufacturing? Is it possible that with their votes they will at once make next to worthless hundreds of millions of dollars of American products?

I expect there will be an amendment offered to this bill, unless the Democratic caucus has already decided that it shall not be proposed, similar to the one that was offered for the purpose of opening our coastwise trade to foreign vessels. I now express the opinion that if such be the case and it should happen to become the law, it would be the last nail in the coffin of those who perpetrated the act.

Our dependence on foreign nations for anything that can be produced at home is a tremendous mistake. Our country is not any different, only in size and numbers, from the family at home. How long will the head of the house keep out of financial difficulties if he spends more every month than his income? How long would it take to bring financial disaster to a family who said that every member of the family should be waited upon by others, that all help in the home should be hired help, and in the hiring of that help it took more than the income of the head of the family? Not very long, Mr. President, and it does not take a nation very long to find itself in debt if it fol-

lows the policy of allowing other nations to make the goods that should be made at home. It is true that her credits are greater, but not more so when you take into consideration the wants of the Government and the wants of a family.

As far as the principle is concerned, it is the same. But the thrifty housewife, the thrifty husband, the industrious children, made so by the example of a father and mother, would do what a thrifty nation does. To see that each member of the household does their part of the work and share the burdens of the home. It is not only a question of dollars and cents that is involved in this; it is a question which affects the children morally. It is a question which affects each member of the household physically. It is a question which affects the well-being of every member of the family.

I have been taught all my life that the proper thing to do for every head of a family is to secure a home of his own and keep it free from debts of all kinds. Let it be a home and shelter for the wife and the children that God gives him. A home-owning people are generally a God-fearing people. A home-owning people are always the truest and safest citizens that a Government or a country can have. Whenever the people become landowners and home owners, I care not how small the farm or humble the home, they are not going to be men and women who organize to destroy property and trample under foot the laws of the Government under which they live.

So, Mr. President, when you undertake to drive out the individual initiative, when you undertake to say that the Government of the United States shall enter into competition with its own citizens in all classes of business, you might just as well say that the father and the mother of a home shall draw the line, that the head of the family shall do the work and the children none. Mr. President, it will never work. If this is undertaken and this Government branches out into business enterprises, I dislike to contemplate what the future of my country will be. I know, Mr. President, that there are people who look at the question of Government ownership in altogether another light. They look at it from another angle. They may be just as earnest in it as I am in the position I take, but God knows I can not see anything ahead but trouble and danger to my country if such a course is undertaken.

Mr. President, I do not care how small the industry may be; I do not care where located. I have been just as proud of that busy little hive of industry of New Jersey as of any other State in the Union. I have often pointed to her in my remarks at home as a State that manufactures everything from a ship to a needle. I have told the people by way of encouragement of the industries of that thriving State. I have told them of the interest that they have shown in legislation before Congress many times, and I have felt in my heart if the same energy that is displayed in New Jersey in establishing every sort of business was manifested in other States in this Union it would be better for the country as a whole. I once heard a Jerseyman say that they were interested in making everything from catgut to thrashing machines, and I went him one better; I thought it was from catgut to ship. But here we are. We are depending upon foreign countries for things that should be made at home, and we ought not to be doing so.

God has placed in and upon mother earth all the products required for the happiness of the human family. Our own country has been blessed, and is just as rich in all those things as any country in the world. In America is found the raw materials for making dyes of all kinds equal in every respect to Germany. But we do very little in manufacturing dyes for our own consumption. It can not be done unless protection is granted. We can manufacture dyestuffs as well as Germany, and yet we have been dependent for years upon that country for dyestuffs used in the textile industry, and to-day every textile mill in the United States and every shoe factory in the United States and every glove manufactory in the United States would be closed if England and France and Russia had not given their consent that dyestuffs should be shipped out of Germany direct to the United States. It would not take very much money to establish the industry. Yet we find ourselves dependent upon foreign countries for a product that we could make just as well as not. The policy, to me, is almost wicked, almost a crime on the part of the lawmakers of this country.

In the same way the steel industry is largely dependent upon imports of ferromanganese. Do you remember, Senators, when we had the Underwood tariff bill before us, and do you know that the Steel Trust is about the only concern in the United States that is making ferromanganese, and every independent manufacturer of this country is compelled to import it? The independents are not large enough to take from their capital sufficient means to establish a plant for the manufacture of ferromanganese. The only concern in the country that has it is the Steel Trust.

The item of ferromanganese is just a small one, but let me call your attention to what has happened to the little fellow, to the man who is struggling to build up a steel business. It is the small man who generally gets hurt by a reduction of the tariff. The ordinary price of ferromanganese is somewhere from $30 to $40 a ton, but it has been selling at an excess of $125 a ton since the European war began, and sufficient quantities were almost impossible to obtain even at that price. We had to go and beg of England and France and Russia to allow us to ship what little we have secured for the small American manufacturer. It is not right, Senators, and no country ought to be placed in that position. I predict now that the time will come when it will not be allowed.

Take the question of sugar. If we had not been dependent upon a foreign country for our sugar, do you think, Senators, that we would have paid during the last year $240,000,000 because of that fact? Our losses are not completed yet, and shall not be for at least another year, because, if the war should cease this very night, it would be impossible to plant a beet crop for the present year. So the American people, because of a mistaken policy, are paying dearly for it—$480,000,000—and no one benefited.

Senators, that amount of money would build a thousand factories; they could have been given to the people of the beet-sugar States, and half of them could make all the sugar required by the people of the United States. Competition at home would have been such that the regular price would have been paid and no more, whether there was war or whether there was peace.

A British bluebook issued not long ago, referring to our coastwise shipping, said that it surpassed in tonnage the combined coastwise fleet of the leading nations of the world, and added that it was chiefly due to that enormous volume of domestic tonnage that the United States ranks to-day as the second largest maritime nation in the world.

If our shipping in the foreign trade had been given similar encouragement, we would not now be talking about a bill to enable the Government to purchase vessels to be operated at a loss in competition with private owners. That question, Mr. President, would have been solved years ago. The war, if it had broken out with twice the fury that it did, if it covered twice the amount of the territory of the globe that it does, would have had no effect upon our industries. We are now paying for our mistaken policies. Our unpreparedness is costing us most dearly. If the war should continue another year, it will cost this Government of ours more money than it would take to build a thousand ships to carry our commerce to the world.

Some people think that we are only unprepared so far as our defense in case of war is concerned. I admit, Mr. President, that we are unprepared in that respect. I believe that if we are going to be extravagant with expenditures of the Government money it ought to be in preparation for the national defense. I want to live, but I would prefer to die rather than be compelled to have my country humiliated by a foreign power by reason of our lack of preparation, or destroyed by a greater naval or military power. It is never going to come. God established America. He gave us our Constitution; he planted liberty here; and it is going to spread from our shores until it covers the whole earth, and then mankind will be prepared for universal peace and the teachings of the Master will be adhered to.

The senior Senator from New Hampshire [Mr. GALLINGER], in speaking on the subject of our merchant marine some time ago—I forget just what year it was, but I believe it was in the year 1907—made this statement:

> I believe that there will be an uprising of the people of this country when they come to know the fact, as in due time they will come to know it, that the United States leads all the nations of the world in wealth, agriculture, mining, manufactures, and in all the great industrial pursuits of life; and yet in this matter of our merchant marine in the foreign trade we are lagging behind every maritime nation in the world. This will not always last, and I am profoundly grateful that in the debate which has occupied the last few days the American people have had an opportunity to understand that there are some men in public life who feel that this great question should be seriously considered and that an effort should be made now and hereafter to accomplish the desired result.

It takes years sometimes to get public opinion molded and aroused, and the very fact that this bill has been introduced shows that the American people have been thinking. How much better it would have been to have established a merchant marine and paid an individual or individuals a mere pittance, called, if you please, a subsidy, than to have forced the Gov-

ernment of the United States into business in competition with her own people.

Although these words were uttered a few years ago—I think they were spoken in 1907—we have not made any progress, but, on the contrary, have been going backward, especially since the present administration came into power.

The discussion of the subject on the pending bill will be of some advantage in the way of informing the public. If I did not think so, I certainly should not occupy the position that I am occupying at this time.

We have been told, as a result of investigations, how foreign steamship lines combined to deprive our farmers and others of their markets in Brazil and elsewhere and substituted for American products those of other nations. I know that Senators do not understand the workings of those foreign combines. If they did, they would put a force at work in this Government that would forever stop them. This is known by the heads of our Government. It is not altogether a new thing, and if it had not been for the filibusters that have taken place on this subject in the past we would have had a merchant marine to-day. I remember when this same question was talked to death by a few Senators on the other side of the Chamber; but, of course, the rules of this body were adhered to and their rights as Senators were respected.

Mr. President, the high and discriminating rates which the foreign combines have imposed to the detriment of our foreign trade can only be remedied by competition from American vessels. It is impossible to regulate it in any other way. Do Senators know that not only are combines in Germany and in England and in Russia allowed, but that they are encouraged, and in some instances the government itself takes a hand and combines are formed with the power of the government back of them? The manufacturers are told how much to manufacture; they are told what the price shall be, and whatever the loss may be at the end of the quarter or the half-year period is assessed against the manufacturer, or if gain it is paid to him.

Why, under that form, Mr. President, they can drive competition from almost any part of the world, and it has been very successfully accomplished in the past.

I speak more of Germany on this point than any other nation, because her combinations, I believe, are most highly organized and most efficient in their operation. There is no effort on their part to conceal the matter. They publish statements showing the transactions. When an American institution undertakes to compete with them, and, in order that their men may be employed, they make a price for export lower than they do for home consumption, they are most bitterly criticized.

If the Senators of the United States had been in a manufacturing business, they would know that in order to make a success of any concern it must run all the time. If a manufacturing concern closes down for a month or two months, its employees are scattered. It never gets them back in working force as they were before. Not only that, but the stamp of disapproval of the Almighty is placed upon idleness, and an idle man always wears out quicker than an active one. An idle brain is the devil's workshop. Idle machinery goes to wreck and ruin much quicker than if the wheels were humming and they were running to their full capacity. That is the way it ought to be. That is the way it ought to be with men and women. That is the way it ought to be with children. That is the way it ought to be with machinery. That is the way it is under the design of the Almighty.

A man and a woman can live in a house and the wear and tear of it is nothing compared to what the elements do to a vacant house. No business is run without there being a certain overhead charge. The taxes upon a plant are the same whether it runs 6 months in the year or 12 months. The superintendents, the secretaries, the office expenses, all these are standing expenses, and if a business gets off with an overhead charge of 15 per cent per year it is doing very well. So I say to the Senators it is better for a manufacturer to run all the year and keep his men working all the time, not only for their good but for the good of the machinery, if he has to sell a two months' production, or whatever time the plant would have had to lie idle, at 10 per cent below cost. Even under a condition of that kind he would be 5 per cent better off than to have let the mill lie idle. That is why, in some instances, you find goods sold for exportation for a little less than they are sold for home consumption.

American vessels will not increase in the foreign trade to any extent until they can engage in it on an equality with those of other nations. Senators, it will never come until that happens. We can whet the wits of our business men, we can preach to them about better facilities for manufacture, but that never can take the place of the difference of cost between running a business in the United States and running the same class of business in a foreign country. All other nations have found it to their advantage to encourage their shipping by Government aid at home and abroad, while we have desisted from that service in this country, where the need of it is so much greater because of higher wages and laws requiring better treatment for our sailors. Rather than to lower the standard I would prefer to see it raised. Rather than to lower the wages of our American seamen I would prefer to see them advanced. I do not believe the time is coming when they are going to be lowered; but I do believe that as we advance in civilization and as we advance in the thought of protection to this great enterprise, not only will the conditions surrounding the seamen aboard ship be improved, but an increase of compensation will be granted to them.

If the Government in going into the shipping business would help to solve that problem in the least degree the opposition to the pending bill would largely disappear. Mr. President, if I had the least idea that by the Government entering into the shipping business as provided for in this bill it would help to solve the problem, instead of opposing it I would be for its provisions; but I feel so positive that nothing but mischief can come from its passage that I have concluded it is my duty to do all I can to defeat it.

If this bill is ever put into operation it will not be for long. In fact, I doubt whether there will ever anything come from it, for I have not lost all confidence in the judgment of American business men, and I think I would conclude that this measure would not be acceptable to any such. In my opinion, instead of helping it would make the matter much worse. I do not say that in a wicked spirit, I do not say that in a feeling of fault-finding. I say it because I believe it with all my heart. I say it because every time I read the bill there is a new avenue of danger to our country appears. I have not taken up the bill yet to discuss it paragraph by paragraph. That I can do later and when I have more time at my disposal, but there is no question that the whole theory of the bill is wrong. It is based upon false premises. It is based upon false ideas of business. It is against the fundamental principles of our form of government.

Suppose we had adopted this policy 50 years ago, where do you think our country would be to-day? I will tell you, I think we would not be to-day a free people. I can tell you another thing, that individual initiative has made the American people so great; through it cities have been built as if by magic; it is the basis of American inventive genius which has been proverbial all over the world; it has increased our love for liberty and country, and has been a commanding force in making our country what it is to-day.

If Government ownership had been put in operation as provided in this bill, if this had been the policy of the American Government 50 years ago, we would not have been the leading Nation of the world to-day.

We would have built up through this form of legislation a political organization so great the time would have come when a man holding the office of the President of the United States would have had sufficient power so that he could have made himself a king. Deprive a man of the knowledge that he is just as good as any other man, and has equal rights with any other citizen, and you drive out of him all there is that makes the difference between a true American citizen and a serf under the Czar of Russia.

It will be a sorrowful day for America if the spirit of ambition and individual initiative are crushed out of the lives of her citizens.

Do you remember that at the time of the Boer War in Africa the British withdrew their best steamships from our ports to carry troops and supplies to South Africa? That is not very long ago. Every Senator here remembers that far back. But do you remember what happened? I am afraid you do not. Certainly it did not make an impression on you the same as it did on me. It certainly has not made an impression on Congress sufficient for them to act. At that time shipping rates advanced greatly, just as they have advanced now as the result of the present war in Europe.

Evidently we did not learn a lesson from the history of that war. It seems that there has to be something more forcible than the calamities to another country to impress us greatly. We shall always be subject to such a disastrous situation in connection with our foreign commerce, as long as we remain in dependence on foreign nations to supply ships to carry on that commerce. There is no more doubt of it than that we are in this Chamber.

The American consul general at Rio de Janeiro some years ago reported, as follows:

Since last August the freights have been raised and lowered and lowered and raised again, to suit the purpose of the trust, until they have reached the present level.

I wish that some of the Senators who had so much to say about the American trusts would study a little as to the situation and condition of foreign trusts. I would like to see legislation that would reach them indirectly, as well as regulation to control our own. It can be accomplished and will be accomplished.

The trust—

So the American consul general at Rio de Janeiro says—

has an agreement with coffee shippers here to pay them a rebate of 5 per cent at the end of every six months from the date of the agreements on all freights collected.

Let us see what the other conditions are, and you will see that they are just along the same lines as the requirements made by Germany of ships to carry her mail and receive a subsidy from her. Germany requires, first, that the ships shall be built in Germany, and that they shall be manned with German officers, and they must be at the service of the Kaiser whenever he sees fit to call them.

Five per cent at the end of every six months from the date of agreement on all freights collected: *Provided, however*, That this rebate is forfeited in case the shippers give freight to any vessels not belonging to the trust during the period stipulated. Through this arrangement the trust controls the shippers, and American vessels go home in ballast.

That is not from a biased source. That statement comes from the consul general at Rio de Janeiro. That is only one of thousands of cases similar in character. There is no difference, Senators, in this case from thousands of others. But it goes to show how American vessels are discriminated against, secret understandings made, rebates of all sorts paid; but if an American shipper was placed upon the same footing and had the same privileges that the foreign shippers have, he would take his chances and, I believe, would win out.

Another writer, commenting at that time on the same subject, said:

Our commerce in Brazil and the River Plata countries is at the mercy of a shipping combine. Ostensibly four lines are competing in serving a route between New York and Pernambuco southward, but in reality the management of these services is centralized in Liverpool, the freights are pooled, and the spoils divided. At the head of this syndicate stands Lamport & Holt, of Liverpool, a powerful firm, owning and managing over 100 vessels.

He goes on to tell how higher rates are charged to New York than to Europe and other means of discriminating against the United States. Freight rates between the United States and Brazil at that time were about twice what the rate was from Hongkong to New York. That is the situation that has not been remedied, because we have not provided American ships. It can not be remedied under the pending bill unless the Government is going to go extensively into the shipping business, practically, as Mr. James J. Hill asserts, covering the entire field.

I can not understand, Senators, why you can not see that point. I can not understand how anyone can figure otherwise. This bill is a makeshift, a temporary measure, so-called; a Government leasing proposition to the Senator who believes in the Government owning and leasing ships; a Government operation proposition to the Senator who believes that the Government should operate them; a proposition of the Government building the ships and operating them to the Senator who believes in that plan. All these conditions found in the bill by its defenders must appeal to you as a very unwise measure and impossible of understanding.

It may be, Mr. President, that I can not read the English language, and it may be that I do not understand it; but if I do the provisions of this bill are anything but wise, and the enforcement of its provisions can not be anything other than dangerous and mischievous.

The Senate passed a bill about a year ago authorizing the use for commercial purposes of vessels belonging to the Navy Department when not required for active use by that department. Under it the department could construct auxiliaries for the Navy which might be used for commercial purposes when required, with comparatively little extra expense.

That was about a year ago; yet the House has never considered that bill. It sleeps in the burial ground of a House committee. The only way that it can get out is for the Committee on Rules of that body to meet and order it to be brought out. Will they do that? I do not think they will. When that bill went to the House about a year ago many of the Democratic Representatives said "no; we can not consider the bill for a minute. The idea of the Government of the United States going into the shipping business." A year ago they were frightened at the violation of Democratic doctrine contained in that bill; to-day some of the same men, if I am informed correctly, will swallow this bill whole. Some of them take the same position as Senators have in the debate upon this floor—that the bill is intended in its operations for the Government to build ships, to purchase ships, to lease ships. Some go so far as to say that the leasing provision is the one provision in the bill that would make them vote for it.

Is there any limit in a lease as to time? Is there any limit as to the amount to be charged? There is none. Nobody has ever undertaken to inform the Senate for what length of time or on what basis a lease is to be made.

The need of auxiliary vessels in time of war for military service is felt by both the Army and the Navy. The need of vessels by the Army being for transportation of men and supplies, would largely depend on the location of the field of operation of the Army forces. In case of operations of a large nature in the Philippines or Hawaii or any other distant land, there would be need of a large fleet of American-owned vessels available at once for conversion as transports or supply ships. England, at the time of the Boer War, and Japan, in its war with Russia, greatly benefited by the existence of many vessels available for such purposes. The Navy Department requires vessels to act as scouts, colliers, ammunition ships, supply and refrigerating ships, distilling ships or tank steamers, hospital ships, repair and torpedo-depot ships, transports, dispatch vessels, and tugs. Vessels which might be useful for such purposes could be used, when not in need by the Navy, for commercial uses. But such wise legislation is not entertained by either House.

It is most unfortunate, Mr. President, that we find ourselves to-day without very many of the class of vessels named by me. We not only need battleships, but we need auxiliaries of the kind named. I think, in the appropriations which are made in the future, if we are going to increase our Navy, among the first things toward a proper increase would be the building of such auxiliary vessels.

Notwithstanding the humiliating lesson we had when the American fleet made its trip around the world, employing foreign ships as colliers, the Navy is still comparatively helpless in that respect. Scout ships are extremely important and should be of the most rapid kind that can be built. Foreign navies have vessels of even 25 knots and higher sustained speed to be used as scouts. Speed is essential in supply ships, hospital ships, repair and other such vessels. In accompanying a fleet they must be able to keep up with it. There are not enough vessels in the American merchant marine to-day available for the use of the Army and Navy in case of a conflict at a distance, that would require the use of such vessels.

Why, Mr. President, in our recent conflict with Mexico, in our recent occupation of Vera Cruz, that most unhappy and unfortunate event, the Government of the United States had to charter some 12 transports. I do not know why they were held as long as they were, but I know that some of them were tied to the wharves for months, with the Government of the United States paying a thousand dollars a day.

Mr. CLARK of Wyoming. For each boat?

Mr. SMOOT. Not all the boats cost a thousand dollars a day, but the one I have in mind did. I know, Mr. President, that the boats chartered will cost the Government of the United States over $1,450,000. I know also that the Government of the United States refitted them at a cost of over $400,000. If it will take that much to occupy Vera Cruz, what will it take to enter a port of any other country that has not been torn with dissension and its resources wasted until nothing is left the people with which to defend their sovereignty. We would be up against a similar proposition if we should get into trouble with any other second or even third class power.

Our humiliating experience at the time of the War with Spain might be repeated at any time in case of another war with a distant nation. It is generally true that the worst way is the dearest and the best is the cheapest, the worst being a procrastinating, unready policy of penury during peace and prodigality during impending or actual hostilities, the net result of which is equal or greatly increased ultimate expenditure and much less value received. In a report made to the General Staff of the Army by one of its officers, it is stated that:

To strike the quick blow of a force corresponding to our permanent military establishment would require practically all the American shipping of suitable character in Atlantic waters and more than the entire tonnage in Pacific waters; it is doubtful whether such transport tonnage could be procured at all except by impressment and in a period of six months or more.

That report goes on to state that now—

The quick, first blow, so very and increasingly important, can not be struck at all, nor can an expedition of large size be embarked without delay, except by the use of foreign vessels. This condition can not improve until the American steam seagoing merchant marine has in-

creased in tonnage to approximately two and one-half times its present volume by the addition of ships adapted in size and design to quick conversion into suitable transports and built under conditions which make their voluntary surrender to the United States on demand a foregone conclusion.

In that connection, Mr. President, I certainly hope the Senate will have a chance to vote on the amendment offered by the Senator from Nebraska [Mr. NORRIS]. If the Government of the United States is going into the shipping business, let us do it openly, directly, and not in the fashion provided for in this bill. Let us buy the ships outright; but, still better, let the Government of the United States construct the ships, and let them be constructed in such a way that they will not only answer for the transportation of our commerce to the markets of the world but they will answer as transports, as an auxiliary to our Navy, and that in case of war with any country on earth we can immediately call into service all of that class of boats.

This bill, if enacted into law, will not only be a failure as a leasing proposition but it will be a failure as a Government operation or purchase plan. So it seems to me that every Senator who believes in the Government of the United States going into the shipping business ought to support a measure directly approving and providing for that course.

The London Financial Times, in referring to the effect of the Boer War in South Africa, said that it caused Britain to withdraw 250 steamships of an aggregate of 1,000,000 tons from peaceful commerce for transports and supply service. The United States suffered the most from that withdrawal, and the Financial Times remarks:

The war in South Africa has had a more serious effect on the trans-Atlantic than upon any other class of ocean tonnage, for the simple reason that the majority of the vessels employed for the purpose of transports have been taken from this route, the North Atlantic steamers, as a rule, being large, powerful, and reasonably swift craft, admirably adapted for this species of Government service. The natural effect of their withdrawal has been to cripple opportunities afforded to exports to and imports from America and to raise freight rates. It has also brought to the minds of Americans the dependence of their country upon Europe, and especially upon England, for the development of their export trade.

The farmers suffered the most from that withdrawal of foreign ships, as it interfered with their exports of farm products. The actual decrease in cereal shipments from Boston alone, as a result of that withdrawal of foreign ships, was nearly 2,000,000 bushels in six weeks. The farmers have been led to believe that they had no interest in building up our merchant marine in the foreign trade, but that was absolute proof to the contrary. Our total exports of breadstuffs declined $47,000,000 in one year, notwithstanding the war, which was supposed to lead to an increased demand. What the country needs is a permanent policy to increase our merchant marine in the foreign trade, and not such an emergency measure as that now before the Senate, which would drive American ships out of the business as a result of Government competition carried on at a loss. The British Government since 1840 has paid in mail and admiralty subsidies about $275,000,000 to its shipping. A parliamentary committee defined the object of these subsidies to be—

To afford us rapid, frequent, and punctual communication with distant ports which feed the main arteries of British commerce, and with the most important of our foreign possessions, to foster maritime enterprise, and to encourage the production of a superior class of vessels, which would promote the convenience of the country in time of peace and assist in defending its shores against hostile aggressions.

These subsidized British lines, over 30 in number at one time, have built up the British shipping to the enormous scale which now exists. She has developed shipyards and engine works, subsequently used to build tramp or cargo steamers. So, though the British tramp fleet is not directly subsidized, it is indirectly the product of the subsidy system. Most of the subsidized companies own cargo ships as well as mail liners. Besides the mail subsidies there are admiralty subsidies to fast steamers, and retaining bounties to 33,500 merchant seamen of the Royal Naval Reserve. One single British line receives $200,000 more than is paid by the United States under the postal aid law of 1891 to all the steamships beneath the American flag. In 1885 Germany granted a mail subvention of $1,047,000 a year for 15 years to the North German Lloyd Line for a mail service to the Orient, and requiring that the subsidized ships should be built in German yards. That subsidy created the German shipyards that have built the great German vessels of this time. Aid by the German railways, owned by the Government, also helped vastly in building up German lines. France, Italy, and other countries have gone to even greater lengths; but here in the United States little or nothing has been done, with the consequent decay of our shipping in the foreign trade. Materials for constructing ships for that trade are admitted free to the United States, so that the difference in cost is the difference in wages; and certainly no patriot wants to reduce wages in this country. That must be done, however, or else aid given to the ships in the foreign trade, the same as other countries do, if we are to have a merchant marine in that trade worthy of the name. The free ship policy offers no solution for the question, as has been demonstrated under the acts passed by the party now in power. All the maritime nations in the world have tried free ships in the past, and, disappointed with the results of this expedient alone, have all turned to some form or degree of subsidy, bounty, or subvention.

It makes no difference what you call it, Mr. President—a bounty, a subsidy, or a subvention. The result is the same. It costs the nation granting it the same amount. If the word "subsidy" grates upon the ears of my Democratic friends, why not use the word "subvention" or "bounty" instead?

Even Great Britain, in its subsidy to the Cunard Line, requires that the ships shall be built in the United Kingdom. The London Engineer some time ago said:

Free ships would be a good thing for our English shipbuilders, for, whether at first or at second hand, the vessels purchased would be of English build for the most part. The development of a native American shipbuilding industry can be of advantage to neither builders nor owners in the United Kingdom.

We are told of the great advance in ocean rates to foreign countries. R. G. Dun & Co., I suppose, are good authority on that subject, as they have no personal interest in the matter, and for a long period of time have had facilities for learning and reporting the rates. In their report of December 29 they say:

The ocean rates to Asia, Africa, Australia, and New Zealand are, as a rule, no higher, or somewhat less, than they were last October. To the west coast of South America the rates are very nearly what they were prior to the outbreak of the war. Rates of war-risk insurance have on the whole declined in the last two months.

That is the report made by R. G. Dun & Co., dated December 29 last. Dun said that the rates to Europe October 19 did not exceed 25 per cent on the average of nominal rates, and were less to other countries. The reports of the commercial agencies do not sustain the assertions of Secretary McAdoo and Secretary Redfield as transmitted to the Senate.

One thing is significant and that is that no other great nation has undertaken to enter into this business as now conducted by private shipowners, but the party in power wants to force this country to waste a large sum in that way. Government ownership will destroy individual initiative and produce maximum cost and increase the number of Government officials and employees, with their salaries and wages, just as has taken place in England in the telegraph and telephone business; that increase in salaries has been made notwithstanding the business is not profitable, showing an average deficit of over $5,000,000 a year, to be made up by taxation. Government operation affords increased opportunities for corruption, labor problems, and executive inefficiency. There is less interest to invent and improve facilities of service, and many other disadvantages. Public ownership of certain public utilities where competition does not exist is advocated with plausibility. But that is not the condition under this bill. If the business were conducted with a view of profit to the minority stockholders, it would not change the existing situation. If there were no profit, then it would drive off private competitors and stop the increase of private capital in the shipping trade. Moreover, if it affected foreign lines, foreign Governments would retaliate. Arguments used by the Republicans for years to increase the merchant marine, such as the need of going to Europe to reach Argentina and other South American ports in any reasonable time, and the necessity of sending goods that way, are now used in support of this pending bill by its friends. It is asserted that coastwise trade will not be affected. There is a large trade to Hawaii, which is part of the coastwise trade, but Hawaii is included in the countries to be reached under this bill. It is admitted that the cheapest water transportation of bulk freight is by steamers in the protected coastwise trade.

An argument is made that farmers are not affected by the importation of corn and other farm products free of duty, but it is admitted that Americans not only produce corn and meat to supply the home demand but also to supply a considerable part of the demand of foreign countries. Under such circumstances that party back of this bill must think that the farmers are weak minded if they can be made to believe that they are not hurt by the importation of such products from countries with low labor cost and lower transportation rates. The president of the Corn Products Co. stated over his own signature last year that that company bought Argentine corn because they could get it cheaper than American corn. Barley affords a splendid illustration of this situation. At one time we imported eleven or twelve million bushels of barley from Canada. That was excluded by the McKinley tariff law. But barley has not

been any dearer, and we have exported large quantities, while practically none has come from Canada. The importation of farm products from Argentina, Canada, and other countries is necessarily a great loss to American farmers, though there has been no reduction in cost to consumers as a result of that baneful legislation in the Underwood tariff law.

Our foreign shipping has not increased because the business has not been profitable in competition with foreign vessels manned by cheap crews and officers. How can the Government make it profitable and at the same time lower rates as it is said they will do if this measure becomes a law? Government work is always more costly than that conducted by private enterprise. The Government can run ships and make low freight rates, but it can do so only by taxing the people to make up the difference. Hence the talk about withdrawing from the business when it becomes profitable is pure nonsense. That is an admission that it will be conducted at a loss, which is a practical certainty. The Democratic Party has stated:

> We are in accord with those who feel that it is better whenever practicable for the Government to avoid engaging in any business that can be conducted by private enterprise.

They have changed that position. Are they embarking on a new one, one of public ownership or one of socialism?

There can be no question of the ability of private enterprise to carry on our merchant marine in the foreign trade. If the Government gives the necessary aid such as other Governments afford, there would be no trouble on that score. Thomas Jefferson, for whom I suppose the Democrats profess such great admiration, said:

> To force shipbuilding is to establish shipyards; is to form magazines; to multiply useful hands; to produce artists and workmen of every kind, who may be found at once for the peaceful speculations of commerce and for the terrible wants of war. * * * For a navigating people to purchase its marine afloat would be a strange speculation, as the ships would always be dependent on the merchants furnishing them. Placing as a reserve with a foreign nation, or in a foreign shipyard, the carpenters, blacksmiths, calkers, sailmakers, and the vessels of a nation would be a singular commercial combination. We must, therefore, build them for ourselves. * * * If we have no seamen our ships will be useless, consequently our ship timber, iron, and hemp; our shipbuilding will be at an end; ship carpenters will go over to other nations; our young men will have no call to the sea; our products carried in foreign bottoms will be saddled with war freights and insurance in time of war.

That is precisely what the Democrats are providing for in the pending measure. The wisdom of Jefferson does not affect the leaders of the party to-day. Jefferson favored protection to American industries, but the Democratic Party of to-day favors the purchase of products from foreign countries, even those of the farm.

It is a curious fact that the ships which the Government may purchase under this bill may sail under a foreign flag—Japanese, for instance—with a crew of that nation. The shipping board provided for by this bill could do almost anything. No restrictions are imposed and no supervision is provided. The board will determine what ships shall be bought, where they shall go, and what they shall carry. Our southern friends may be certain that their interests will be well cared for so far as the shipping board can do so with the money provided. There will be minority stockholders, as has been pointed out, not because of any profit to be obtained, but because of the advantages to such stockholders not apparent to others. It has been held here that this law, if this bill goes on the statute books, will be unconstitutional. There seems to be good reason for such contention. It may result in tying up the measure should it ever become a law, which would be an advantage to the public. The shipping board will have opportunity to give employment to a large number of Democrats. Even in selecting officers and men for the ships there will be no restriction on the choice of the board. It will be in the nature of another commission, so many of which have been created since the Democratic Party came into power. The Commission on Industrial Relations is an illustration of what may be expected from these boards. That commission expended $350,000 in 27 months, and about the only result seems to be found in a recent statement of its chairman that they want a minimum wage of $2, an eight-hours-a-day limitation, and a minimum of $10 a week for telephone girls. The commission is now conducting a hearing in New York City at which various persons are allowed to express their views. Of course, such a proceeding is of momentous importance to the Government and will result in giving the Government Printing Office a large amount of additional work.

This large sum to be expended by the shipping board, from a Democratic point of view ought to be of great benefit to that party in the way of distribution of patronage. The spirit of partisanship, the old spoils system, has been revived, and the cause of civil-service reform has already suffered more severely during this administration than in any period since it was first introduced.

Mr. President, I have been somewhat earnest in what remarks I have made this evening, at times perhaps more than necessary; but, Senators, I am in earnest in trying to call the attention of the country to what I believe in my soul will be the result if this bill becomes a law and is put in operation. It ought to be defeated. It should not be allowed to pass, and I hope and trust it may not pass.

I feel that it would be unwise for me at this time, Mr. President, to take up the consideration of the bill by sections and call the attention of the Senate to some of the glaring inconsistencies of the measure, and call the attention of the country to the basis upon which it is framed and show to the Senators themselves the unbusinesslike principles of the bill. But I can do that at some other time, and I shall take an opportunity at a very early day to do so.

I have not even called attention to the public opinion of this measure. I claim now that a large part of the public press of this country is opposed to the enactment into law of this bill. I believe that if it were submitted to the people they would speak in unmistakable terms and it would be in condemnation. We were told two years ago that no legislation should pass, no confirmations should be made of presidential appointments, as they should be left to the incoming administration and the new Congress. I say now, if your advice was accepted by the Senators giving it, this bill never could pass the House of Representatives at the next session. A year ago it was offered in the House. Why is it not first considered there now?

The friends of the measure well know if it can be forced through the Senate it can be forced through the House in a very few hours, if necessary; but before this debate is closed, I predict now that Congress will hear from the people. Protests will come, and I think they will be in such form that those receiving them will understand what they mean. The protests will come after the information that has been given to the public through the press of the country reaches the man who lives upon his farm; the man who works in his shop; but I believe, Mr. President, that protests will make no difference in the result, as far as our Democratic friends are concerned, for they have received their instructions from another source, the die has been cast, the result predicted. We can afford to wait and see if the program can be forced through.

Mr. SUTHERLAND. Mr. President——

The PRESIDING OFFICER (Mr. HOLLIS in the chair). Does the Senator from Utah yield to his colleague?

Mr. SMOOT. Mr. President, before yielding to my colleague I should like to suggest the absence of a quorum.

The PRESIDING OFFICER. The Chair rules that no business has been transacted since the call was last made for a quorum.

Mr. SMOOT. Mr. President——

The PRESIDING OFFICER. The request for the call of a quorum is denied.

Mr. SUTHERLAND. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to his colleague?

Mr. SMOOT. I will yield in a few moments.

The PRESIDING OFFICER. The Senator from Utah is recognized.

Mr. SMOOT. Mr. President, I want to say to the Senate that if this bill is put through, it will be put through with such rulings as the one which has just been made by the Chair. There has been vote after vote taken upon amendments offered by the Senator from New Hampshire [Mr. GALLINGER]; there has been vote after vote on roll calls. There has not been a suggestion made of the absence of a quorum in this body for hours; but I do not care for that, Mr. President; it is all right with me, and I am perfectly willing to yield to the request of my colleague.

Mr. SUTHERLAND. Mr. President——

The PRESIDING OFFICER. The Senator from Utah.

Mr. SUTHERLAND. I thought my colleague was about to conclude.

The PRESIDING OFFICER. If the Senator from Utah——

Mr. SUTHERLAND. I was desirous of proceeding on the pending bill.

Mr. SMOOT. Then I will yield to my colleague.

The PRESIDING OFFICER subsequently said: If the Senator from Utah will suspend a moment, the Chair wishes to announce that when he took the chair he was informed that no business had intervened since the last call for a quorum. Since the point has been raised, the Chair has investigated, and finds that he was in error. He therefore will recognize any Senator

for the purpose of calling for a quorum without the Senator from Utah losing the floor.

Mr. SUTHERLAND. I do not desire to suggest the absence of a quorum unless it is clearly understood that I am to resume the floor after the call has been completed.

The PRESIDING OFFICER. It will be so understood, without objection.

Mr. JONES. I suggest the absence of a quorum.

The PRESIDING OFFICER. The Senator from Washington suggests the absence of a quorum. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	James	O'Gorman	Smith, Md.
Brady	Johnson	Overman	Smoot
Bristow	Jones	Owen	Sutherland
Burton	Kern	Perkins	Swanson
Chamberlain	La Follette	Pittman	Thomas
Chilton	Lane	Ransdell	Thompson
Clapp	Lee, Md.	Reed	Thornton
Clark, Wyo.	Lodge	Robinson	Vardaman
Colt	McCumber	Saulsbury	Walsh
Dillingham	Martin, Va.	Shafroth	White
Fletcher	Martine, N. J.	Sheppard	Williams
Gronna	Myers	Shields	Works
Hollis	Nelson	Simmons	

The PRESIDING OFFICER. Fifty-one Senators have answered to their names. There is a quorum present. The Senator from Utah [Mr. SUTHERLAND] is recognized.

Mr. OWEN. Mr. President, I rise to a point of order.

The PRESIDING OFFICER. The Senator will state his point of order.

Mr. OWEN. There are a number of Senators whose absence has not been permitted by the Senate who have not responded to the roll call. I demand that they appear before the Senate.

The PRESIDING OFFICER. The point of order is well taken. The Sergeant at Arms will enforce the writs that are in his hands.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by D. K. Hempstead, its enrolling clerk, announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H. R. 20415. An act making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1916; and

H. R. 20818. An act to authorize the Brunot Island Bridge Co. to construct, maintain, and operate a bridge across the back channel of the Ohio River.

HOUSE BILLS REFERRED.

H. R. 20415. An act making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1916, was read twice by its title and referred to the Committee on Agriculture and Forestry.

H. R. 20818. An act to authorize the Brunot Island Bridge Co. to construct, maintain, and operate a bridge across the back channel of the Ohio River was read twice by its title and ordered to lie on the table.

THE MERCHANT MARINE.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 6856) to authorize the United States, acting through a shipping board, to subscribe to the capital stock of a corporation to be organized under the laws of the United States or of a State thereof or of the District of Columbia to purchase, construct, equip, maintain, and operate merchant vessels in the foreign trade of the United States, and for other purposes.

Mr. SUTHERLAND. Mr. President, I desire to make some observations upon the pending measure. Primarily I take the floor for the purpose of discussing some legal and constitutional features of the proposed legislation, but before I come to those I desire to discuss some of the practical features of the bill.

Mr. President, this measure, in my judgment, to say the least, is a most unfortunate one; but the methods by which it is sought to be put upon the statute books are worse than the measure itself.

Before the Government of the United States was organized the rule which was recognized was that the king commanded and the people obeyed. This Government of ours was founded upon the proposition that the people command and the Government obeys. This is a Government of the people. In order that the liberties of the people might be secure, the powers of government were delegated to three separate and distinct agencies: First, all legislative power was devolved upon the Congress—the House and the Senate; all executive power was devolved upon the President; and all judicial power was devolved upon the Supreme Court of the United States and such inferior courts as the Congress might from time to time ordain and establish.

Mr. President, there is no provision of the Federal Constitution that is wiser or more sacred than are those provisions which divide among these several agencies these separate powers of sovereignty. Let me call attention to what was said by Prof. Pomeroy in his work on Constitutional Law. I do not need to say to the Senate—at any rate, I do not need to say to the lawyers of the Senate—that Prof. Pomeroy was not only a great lawyer and a great law writer, but in his work upon Constitutional Law he has shown himself to be a great statesman as well. After speaking of the tripartite division of powers among these departments of the Government and discussing its origin and history, in section 170 he says:

> A proposition which is thus historically true must have some firm foundation in the nature of things. The possession of power is one of the most dangerous gifts which can fall to the lot of humanity. The tendency is always to its abuse. Power grows upon itself. In a perfect state it is not enough that the rulers at any given time should be perfect men. There must be checks so contrived as to resist the encroachments of authority which are to be apprehended, even from the purest and most patriotic rulers.

Now, mark this:

> No other check has proved so effectual as the division of functions into executive, legislative, and judicial and their assignment to classes of officials physically separate. If the legislature were also judges, their decisions would not be based upon the law as it is; but as it would be impossible for the same men to keep their two characters entirely distinct their judgments would rather be arbitrary enactments, special measures of legislation for each particular case. Thus all certainty as to law would be lost. If the same person or class of persons were to make and execute the laws—

That has direct application to the situation in which we find ourselves now—

> If the same person or class of persons were to make and execute the laws, the results would be still more disastrous, for in applying any particular statute whatever deficiency in its provisions had been left by the rulers in their legislative capacity could be easily supplied by them while acting in their executive capacity. Thus the laws instead of being general commands enjoining the observance of general rules would become special commands addressed to individual members of society. This uncertainty and special nature of the law is the very essence of an arbitrary and tyrannical government.

Mr. President, I believe that the Government of the United States has thus far in its history fulfilled its high mission, because under its Constitution these powers were vested in three independent and coordinate departments; and whenever the time arrives that one of these departments becomes the creature of another one of the departments, or whenever one of them shall exercise not only its own functions under the Constitution but the functions of either of the other departments, the end of popular liberty will be in sight and the end of the Government itself near at hand.

Our fathers understood the necessity of this, and they understood it far better than we do, because they were closer to the dangers which made this tripartite division of powers a necessary thing. The constitution of the State of Massachusetts declares what is implied in nearly every State constitution and which, although not declared in specific words, is clearly implied by the Constitution of the United States. That language, Mr. President, can not be too often repeated. Let me read it:

> In the government of this Commonwealth, the legislative department shall never exercise the executive and judicial powers, or either of them; the executive shall never exercise the legislative and judicial powers, or either of them; the judicial shall never exercise the legislative and executive powers, or either of them; to the end it may be a government of laws, and not of men.

That is to say, the citizen shall be bound by preestablished rules and not by the edicts of any person or of any persons, however numerous or however powerful they may be.

It is of the very essence of these several powers that they shall be exercised independently by the departments upon which they have been conferred. It is of the very essence of the division of powers among the several departments that these departments, which constitute the agencies of the people, shall be wholly independent of each other; so that when any one of these departments surrenders its power or its independence to either of the other departments it has not only violated the Constitution, but it has broken faith with the people who made the Constitution. Yet, Mr. President, that is precisely what has happened under this administration. The present administration came into power on March 4, 1913, nearly two years ago. Congress has been in session almost continuously from some time in April two years ago; and yet during that entire time I will defy any man to point to a single act of important legislation, outside of the appropriation bills, which has been originated in Congress, the lawmaking power charged with the duty and responsibility of originating legislation.

Thousands of bills have been introduced; thousands of bills have been originated in Congress; but, outside of those of trifling importance or of local application, none of them has been passed. The President has had a legislative program, and Congress, laying aside its power under the Constitution to originate legislation and put it upon the statute books, has permitted that power to be usurped by the President; so that the important legislation which we have passed has been framed at the White House or by a Cabinet officer and has been ratified by Congress.

Am I mistaken about that? The first important measure that we had to deal with was the tariff bill. Senators came from States vitally interested in preserving a duty upon sugar. Some of them, if I am credibly informed, had substantially promised their constituents that they would stand for a duty upon sugar; but whether they did or not, the sentiment of those communities was in favor of a duty upon sugar. The necessities of the State demanded that the duty should be preserved; but, one by one, they yielded their convictions and set aside the needs of their constituents in order to follow the command of the President. So the duty upon sugar was first reduced, and then, to take effect at a date in the future, it was put upon the free list.

The same thing may be said of wool. I undertake to say, without doubt in my own mind as to the truth of the assertion, that a clear majority of both Houses of Congress believed that there should be some duty retained both upon sugar and upon wool. Why, Mr. President, it is good Democratic doctrine and good Republican doctrine to maintain duties upon those two articles. True, the reasons for the maintenance of the duty are different with the two parties. The Republican Party believes in maintaining them in order to protect and foster those industries. The Democratic Party believes in maintaining the duties as a means of raising revenue. The Treasury of the United States is in a depleted condition. We have been compelled to resort to extraordinary taxation. We have provided for the collection of an emergency revenue, miscalled a war-revenue measure, because we are not at war; but we have been compelled to pass an emergency measure to collect by extraordinary taxation $100,000,000 a year. Why, Mr. President, we are losing half that sum upon these two articles alone. We were collecting, until the free-wool clause of the Underwood bill went into operation, $35,000,000 a year from the duties upon wool; we were collecting between $50,000,000 and $60,000,000 a year from the duties upon sugar. So, by one stroke of the pen we have kept out of the Treasury of the United States $35,000,000 in the case of wool, and already, by the reduction of 25 per cent of the duty upon sugar, $15,000,000 or $16,000,000 upon sugar; and when the free-sugar clause goes into final operation we shall have diverted from the Treasury of the United States an additional $45,000,000 from those causes alone. If the Payne-Aldrich bill had been in operation, it is perfectly plain that there would have been no lack of revenue; there would have been no occasion for resorting to emergency taxation. The President, in his message, as I recall it, asking for the passage of the emergency-tax law, said that we had been losing an enormous amount of revenue on account of the war in Europe.

He called attention to the fact that in August, 1913, the revenue of the Government from impost duties amounted to something over $30,000,000 for that month, and he said for the month of August, which was the first month of the war in Europe, the revenues amounted to $19,000,000. Hence there had been a loss to the Treasury of the United States of $11,000,000 a month on account of the war in Europe.

Mr. President, the statement, while, of course, not so intended, is entirely disingenuous. The President fails to distinguish between post hoc and propter hoc. A moment's investigation of the fact will show that this difference of $11,000,000 between the revenue of August, 1913, and the revenue of August, 1914, was not due to the war, but was due to the change in the tariff. Why do I say that? Because in August of 1913 the Payne-Aldrich Act, a protective law, was in operation; in August, 1914, the Underwood law, a free-trade measure, was in operation.

But that is not all. If you are going to ascertain how much of the loss of revenue was due to the war in Europe you must institute a comparison of the amounts received during different months when the same law was in operation. It proves nothing, so far as the effect of the war is concerned, to contrast one month when the Payne-Aldrich Act was in operation and another month when the Underwood Act was in operation, because to do so is to ignore the effect of the change in the two laws. Now, let us institute a comparison of that kind.

In August, 1913, the revenue was over $30,000,000. In August, 1914, it was approximately $19,000,000, a difference of $11,000,000. But the Underwood Act went into operation in October, 1913, and if you will take the figures for the months following October, 1913, you will see that the average amount of revenue received under the Underwood Act up to August 1, 1914, the date of the breaking out of the war, was about $21,000,000 per month. So it is perfectly apparent that $9,000,000 of the $11,000,000 was clearly due to a change in the tariff policy of the United States, and not to exceed $2,000,000 of it by any stretch of imagination can be ascribed to the hostilities in Europe.

But I have departed somewhat from the line of the argument which I had outlined. I was calling attention to the fact that all these important measures originated, were practically framed, in the White House. We passed the banking and currency law. Does anyone doubt that that was an administration measure pure and simple, a part of the executive program? We passed the so-called antitrust law and the trade-commission act, administration measures. We have pending before us bills of the most momentous importance to the country, and yet they can not be considered because the President's program at all hazards must be first carried into operation.

Mr. President, I deny that in any true sense the President is any part of the lawmaking power. He has the right, under the Constitution, to submit his views to Congress, and so far as the inception and passage of laws in Congress are concerned there his constitutional right ends. When the law has been considered and passed under the Constitution it must be submitted to the President, who then may exercise what is called the veto power. I know that has sometimes been described as a part of the legislative power, and yet, as I have said, it is not so in any real sense. It is simply a power in the President to say, "I think this law has not been properly considered; I think it is an unwise law; and therefore I will send it back to you without my approval, and before it can be passed there shall be a larger majority than merely one more than half; before it can go into operation it must have the approval of two-thirds of the membership of each body." But whether we can properly describe these powers of the President as a part of the lawmaking power or not, certain it is that by vesting the President with those powers we have in no way detracted from the fundamental principle upon which this division of powers is made, namely, that they shall be exercised by the several departments wholly independently of the others.

If the President has certain legislative functions to perform that does not make him a part of the legislative department; and it is just as improper, it is just as dangerous, it is just as much a perversion of his power to undertake to dictate to or control the action of Congress in passing a law as it would be for the House of Representatives to attempt to control or dictate what action should be taken by the Senate, and vice versa. These two Houses have always been jealous to maintain this prerogative, this high right of independence. The Senate would not tolerate even for one moment advice from the House of Representatives, let alone dictation, and the House, of course, would not tolerate advice or dictation as to its action from the Senate; yet both of them do supinely accept not only advice but dictation from a wholly separate and distinct department.

Let me read from Prof. Pomeroy a single sentence upon that subject. Speaking of the power of the President he says:

> He may communicate information, and recommend measures to the consideration of Congress. (Art. II, sec. 3.) But he can not directly set in motion any scheme of legislation; he must await the definitive action of the two Houses and add or refuse his consent to their perfected work.

That is the statement of Prof. Pomeroy, a man as deeply learned not only in the letter but in the philosophy and the underlying principles of the Constitution as any man who has ever studied or written upon the subject.

"He," the President, "can not directly set in motion any scheme of legislation." He has no such power. And yet the President has not only set in motion a scheme of legislation but he has practically set in motion, outside the appropriation bills, every important scheme of legislation which has had the consideration of Congress since this administration has been in power.

Mr. President, this is not a mere theory. It is a matter of profound and practical import. If the people of the United States intended that these departments should be independent of one another, they have a right to demand that they shall be kept independent of one another. Let me read one or two paragraphs, the appropriateness of which, I think, or at least I hope, will be apparent, from a book written by Mr. Franklin Pierce, of the New York bar, entitled "Federal Usurpations." He says:

> The President of the United States may approach the execution of his powerful office in the spirit of being a simple instrument of Providence, but if he is not endowed with the clearest head and most eminent common sense he will become so intoxicated by power as to imagine that he has become Providence itself.

Edward Livingston said:

The gloss of zeal for the public service is always spread over acts of oppression, and the people are sometimes made to consider that as a brilliant exertion of energy in their favor which, when viewed in its true light, would be found a fatal blow to their rights. In no government is this effect so easily produced as in a free republic; party spirit, inseparable from its existence, aids the illusion, and a popular leader is allowed in many instances immunity, and sometimes rewarded with applause, for acts which would make a tyrant tremble on his throne.

Mr. Pierce adds to that statement:

The people who elect the President can make and unmake constitutions, and it is natural for a strenuous, ambitious President, when sustained by the people, to feel that he is endowed with powers beyond the Constitution.

In other words, if I understand the author, the President, knowing that the people have the power to make the Constitution and also the power to put him into office, concludes from that that he has some power superior to the Constitution itself.

I wish a few of the old-line Democrats who in past debates have graced this body by their presence were here to listen to this. I wish my very delightful friend, the Senator from Mississippi [Mr. WILLIAMS], might listen to the quotation I am about to read. It is a quotation from Thomas Jefferson, the patron saint of the Democratic Party. It was written in a letter to William C. Jarvis. He said:

If the three powers of our Government maintained their mutual independence of each other it may last long, but not so if either can assume the authority of the other.

And Madison said:

If it be a fundamental principle of free government that the legislative, executive, and judiciary powers should be *separately* exercised—

The word "separately" there is emphasized by being put in italics—

should be *separately* exercised, it is equally so that they be *independently* exercised.

Here is a quotation from Chief Justice Chase—an opinion delivered in the Supreme Court of the United States:

It is the intention of the Constitution that each of the great coordinate departments of the Government—the legislative, the executive, and the judicial—shall be in its sphere independent of the others.

How can a department be said to be independent of another department when it takes orders from that department as to what it shall do?

And, again, here is a quotation from James Wilson, one of the framers of the Constitution, a profound constitutional lawyer, as everybody knows:

The independence of each power—or department of government—consists in this—

I invite special attention to this language—

consists in this, that its proceedings, and the motives, views, and purposes which produce these proceedings, should be free from the remotest influence, direct or indirect, of either of the other two powers.

We have gone a long way during the last two years from that doctrine, that this independent coordinate branch of the Government should be free not only from influences which are direct, but influences which are indirect or which produce their proceedings by the remotest influence.

Mr. President, it is high time that there was a return on the part of this body to fundamental principles. Here is an incident in history which I commend to my friends upon the other side of the Chamber or, rather, my friend on the other side of the Chamber, the Senator from South Carolina [Mr. TILLMAN], who honors me with his presence. There was pending in Parliament in the year 1783 a bill which had for its object the organization of the Government of India. There was very great objection to this bill on the part of a large number of people. Those people claimed that the bill would result in, and that indeed was the object of the bill, the centralization of patronage in the hands of a few Whigs. George III was then King of England, and George III requested Lord Temple to inform the members of the House of Lords that any peer who should vote in favor of that bill would be regarded as an enemy of the King.

If the King had any patronage that a lord of the realm wanted—such things existed in those days as they do in these days—it was tantamount to informing him that he should expect no favors of that character.

Mr. President, the House of Commons, representing the people of England, and speaking upon this matter, although the bill itself was not a popular bill, although the sentiment of the people generally was with the desire of the King that it should not pass—the House of Commons of England, which is and has been for many years the real governing body of England, the body in which in reality the sovereignty of Great Britain is vested, made this reply to George III of England. Four days after that word had been sent by the King the House of Commons passed this resolution:

To report any opinion or pretended opinion of His Majesty upon any bill or other proceeding pending in either House of Parliament with a view to influencing the votes of the members is a high crime and misdemeanor, derogatory to the honor of the Crown, a breach of the fundamental principles of Parliament, and subversive to the constitution of this country.

Mr. President, that was the reply which the House of Commons of England more than a hundred years ago, before our Constitution was framed, made to the attempt of the monarch to impose his will, directly or indirectly, upon one of the houses of Parliament.

Sir, we have fallen upon evil times when this great body, representing the majesty and power and strength of a hundred millions of the most intelligent and freest people that the world has ever seen, will not resent the attempt of the President of the United States to tell them what they should and what they should not do.

Mr. DILLINGHAM. Mr. President, will the Senator from Utah tell us from what book he has read?

Mr. SUTHERLAND. I have been reading from Pierce on Federal Usurpation.

Not only, Mr. President, does the President of the United States tell Congress what it shall and shall not do, but a few of the Members of the majority side who might be inclined to be recalcitrant are whipped into line by means of the secret caucus whip—not all of them, but some of those who are thus inclined. That has been the case as to practically every one of these important measures which have been considered. It is the case here.

The place for debate is upon the floor of this forum in the presence, and to all practical intents and purposes within the hearing, of all our constituents; but that is denied. Effective debate in the Senate of the United States has ceased. Debate which brings about any result is confined to the caucus room, from which the constituents of all those who attend the caucus are excluded. Notwithstanding that, complaint is made at the prolongation of this debate by the minority Members of the body.

Mr. President, I do not believe in filibustering; I would not do it except where I believed it to be necessary to avert a very great danger to the Republic. There has been thus far perfectly legitimate debate upon this bill; but if the minority Members of this body by any legitimate parliamentary means could succeed in defeating this bill, in my deliberate judgment they would be performing a very great and a very valuable service to the country.

Mr. President, what does this bill propose to do? It proposes, for the first time in our history, undisguisedly to put the Government of the United States into private business. It proposes the Government ownership and operation of ships engaged in the carrying trade between this country and foreign lands.

I am not going to stop to discuss what I conceive to be the evils of Government ownership; I think they are many. Not the least among them is that it has a tendency to break down, and ultimately must break down, the fundamental principle upon which this Government was established, namely, that it is a civil government and not a business organization.

In my deliberate judgment, whatever may be the case with reference to a State or a municipality, the Federal Government has no more power under the Constitution to engage in private business than private business, under the Constitution, has the right to engage in government. Not only does the Government propose to engage in this private business, but it proposes to engage in it in competition with its own citizens, whose rights and privileges the Government which engages in competition with them is bound, under the Constitution, to regulate, preserve, and protect.

It is bad enough for the Government to engage in a business of this kind if it takes possession of the entire field, but it does not propose to do that. It takes possession of part of the field. It may run at a loss, recouping its losses by general taxation, in competition with the private citizen who can not sustain losses without failure. So that, in addition to being a departure from fundamental principles and unwise in itself, it is vicious, because its effect will be to drive the private competitor from a field which the Government has made no preparation to fill.

I do not know, Mr. President, where the scheme of Government ownership will lead us. The Postmaster General has been pressing upon us for some time a scheme for taking over the telegraph and telephone lines. Other gentlemen are in favor of taking possession of the railways of the country. If we persist along that line, taking over those activities which

have always been considered heretofore as activities of the private citizen, we must end inevitably in so loading down the General Government with duties and responsibilities wholly apart from its governmental functions as will result in breaking the Government down entirely.

The legitimate increase of the exercise of power is fast loading down the Government almost to the breaking point. Is it wise to add to that these other responsibilities, which will still more add to that tendency? Why, sir, if we take over the shipping interests, the telegraph and telephone interests, the railroad interests of the country, together with the employees now under the Government of the United States, we shall have a pay roll of more than 3,000,000 people. If we keep on in that direction, after a while the Government will be supporting so many that nobody will be left to support the Government. Think of the power that could be exercised by 3,000,000 voting citizens of the United States! They could control, by organized effort, the politics of the United States until there is an uprising and a revolution among the people. The whole tendency, in my judgment, is dangerous and vicious.

I said a moment ago that it was proposed that this business should be run at a loss. Mr. President, that is the intention. Let me call attention to a statement made by Mr. McAdoo, Secretary of the Treasury, upon that subject:

The CHAIRMAN. Would not the Government, in that event, also obtain some control over the rates?

Secretary MCADOO. Precisely. I was coming to that. It is not only a question of establishing these routes, many of which will undoubtedly have to be operated at a loss for a time in order to establish the necessary trade relationships, but the Government will also have the power to establish rates that will be advantageous to American commerce.

Establish rates upon which the Government ships will be run at a loss! That may be advantageous for a limited period of time to the man whose goods are carried, but how about the man who is engaged in the carrying trade in competition with the Government?

On page 18 he says, further:

What we need is prompt and effective action. Then, again, as I said before, private corporations might operate these ships upon routes only which were profitable from the outset. Some of these lines undoubtedly will have to be operated at a loss for a time, until trade relations can be built up and established. One of the great objects here is to open up to this country some of these new markets.

Again, he says:

Of course, as I said before, it is not the expectation that every line that may be established if this bill is passed is going to be unprofitable, but some of them undoubtedly will be. I think the tendency will be to deter private capital, of course, from joining the Government in an enterprise of this kind. I think, however, the opportunity should be afforded private capital to take stock.

Mr. President, that is the most remarkable statement that I have ever heard as emanating from the lips of a great officer of a government, or that I have ever heard from anybody's lips. Let me repeat it:

I think the tendency will be to deter private capital, of course—

There is no doubt about that—

from joining the Government in an enterprise of this kind. I think, however, the opportunity should be afforded private capital to take stock.

They are not going to take it. It is perfectly apparent that they will not. Again, he says, just before that, in answer to a question:

Mr. HARDY. Is not the consideration you are discussing now one that would prevent private capital from taking any part of this stock?

Secretary MCADOO. Yes. I do not believe you can get private capital to take stock in any company that is going to be obliged for some time to operate the ships at a loss in order to build up trade.

What a farce it is to pass a bill to allow private capital to join in a Government enterprise and then say that the considerations are such as will prevent private capital from taking any part in it at all.

I do not believe you can get private capital to take stock in any company that is going to be obliged for some time to operate the ships at a loss in order to build up trade.

Mr. SMITH of Michigan. Mr. President——

Mr. SUTHERLAND. I yield to the Senator from Michigan for a question only.

Mr. SMITH of Michigan. If the Senator will permit me, Mr. HARDY pursued the matter a little further, and he said——

Mr. SUTHERLAND. I shall have to ask the Senator to put his interruption in the form of an interrogatory, because I am afraid, under the intimations that have been made, that I may lose some rights.

Mr. SMITH of Michigan. I call attention, then, if the Senator will permit me, to the balance of Mr. HARDY's examination of Secretary McAdoo a little farther down on page 19.

Mr. SUTHERLAND (reading)—

Mr. HARDY. So that really you do not much expect private capital to come in?

Secretary MCADOO. To take part of this stock?

Mr. HARDY. Yes.

Secretary MCADOO. No; I do not.

Mr. SAUNDERS. It is not too much to say that the very ideas behind the launching of this thing would exclude the likelihood of private capital being invested in a corporation of this kind?

Secretary MCADOO. As I say, the tendency, of course, will be to not encourage private capital to join with the Government in this particular enterprise.

So it is conceded by the chief sponsor for this bill, first of all, that the business is to be run at a loss, and second, that the tender in the bill to private capital to come in and invest is an idle ceremony, and that it is not expected the invitation will be accepted. How could it be otherwise?

There is another provision in the bill which says that this corporation shall pay no public taxes of any kind. I shall have occasion to discuss that feature of the bill a little later along as to its legality; but if it be legal, then we have put into private business, in competition with the private citizen, forty millions, perhaps in the end $50,000,000, an enormous sum of money, which is to be free from all taxation whatever, while the competitor of the Government is to continue his business bearing the burden of public taxation, including contributions to the Federal Government, which is his own competitor and which proposes practically to ruin him.

Mr. President, during the last Congress we passed a bill, called the Trade Commission bill, by which we created a Trade Commission, and among the duties of that commission we provided that they should deal with the subject of unfair methods of competition. That means something more than unfair competition. "Unfair competition" is a term perfectly understood, well known to the law. It means simply the attempt on the part of a person or a corporation to impose upon the public his goods or business as the goods or the business of another; but obviously that was too narrow a provision, so we inserted in that bill a provision making unlawful, not unfair competition, but unfair methods of competition. What are they? Things that are legally unfair methods of competition? Things that are economically unfair methods of competition? Things that are ethically unfair methods of competition? If we are to accept the statement of the Senator who had charge of the bill, and who ought to know, it includes all of them.

The Trade Commission is given the widest kind of latitude. I wonder what they would say in response to the question as to whether or not an enterprise set on foot by the Government of the United States, which proposes to pay no taxes upon it and to exact taxes from its competitors, which proposes in the beginning to run at a loss, recouping its losses by general taxation to which its competitors have no power to resort, and thus inevitably drive its competitors out of business, constitutes an unfair method of competition on the part of the Government of the United States?

Not only that, but a few months ago we passed a law through Congress, the terms of which are familiar to us all, and the object of which was to encourage investments of private capital in the shipping industry. While there were some features of that law that I did not like, I think that would be the tendency of it. I think it was helpful. I think it was passed some time in August. We passed this law, the effect of which was to invite private capital into this field, to say to them: "We have removed certain obstructions. We have passed a law which will make it profitable to you." What terms of condemnation can be imagined sufficiently strong to apply to a Congress which will first, by its legislation, invite private capital into a field by a promise of profits, and immediately follow it up by a law which makes it impossible for them to derive profits from the enterprise? If that is not playing fast and loose with the decencies which ordinarily would obtain among private citizens, then I do not understand what decencies are.

Mr. President, I predict that if this bill is passed and goes into operation it will drive more American ships from the sea than it will ever add Government ships to the sea. This bill was introduced in the latter part of August, months ago. Its effect has been already to discourage private citizens from going into this enterprise. It has hung as a menace over their heads for all these months. I believe that if this measure had not been introduced, if we had been content to rest upon the legislation which we passed in August of last year, even the proponents of this measure would now admit that there was no necessity for passing it. It is the threat of this legislation which has kept American capital from this field. Meddlesomeness of the Government of the United States in a private business in which it has no power to engage has kept this situation as it is, until to-day it affords a specious reason for the Government going into it.

Why, Mr. President, I do not believe there is any scarcity of ships for the trade. If I understand the statistics upon the

question, during the war there has been retired a tonnage equal to about 5,000,000 tons out of the total world tonnage of about 47,000,000 tons. That has been retired in a variety of ways—first, by the ships of some of the belligerent powers voluntarily seeking asylum in our ports and voluntarily submitting practically to imprisonment because they feared if they continued in business they would be captured. That will account for a very large proportion of the 5,000,000 tonnage. Then, a part of the ships heretofore engaged in the mercantile trade have been taken over to meet the military exigencies; and in a variety of ways, due to the war, about 5,000,000 of tonnage capacity have been withdrawn from the carrying trade of the world.

In the first place, I think it is reasonably clear that that 5,000,000 tonnage is largely offset by the loss of trade consequent upon the war. The German trade, of course, has fallen off tremendously. The Austrian trade has fallen off tremendously—first, because they can no longer export with the same facility, and second, because they can no longer import goods with the same facility. Other causes due to the war have brought about the retirement of additional tonnage, until I think it is not open to reasonable question that perhaps the equivalent of this loss of 5,000,000 tonnage has been offset by a like loss in the trade of the world. If that be so, where is the gap that is to be filled by this bill?

There are other troubles—not the scarcity of ships. There are plenty of ships, but there is a variety of other troubles. One of them is the trouble of unloading facilities. We know that ships have been held up for weeks in foreign ports because of the lack of unloading facilities, lack of labor, and so on.

I read, upon this subject, an editorial from the New York Times of January 18, 1915, very recent:

There is an odd contrast between the Washington theory that there is a deficiency of ships and the actual conditions on both sides of the ocean. On this side there is a supply of grain ships so large that there is a demand for an embargo to prevent our foodstuffs being bought away from us too fast and at prices higher than we like to pay. On the other side the ships are arriving faster than they can unload. At London there are 56 ships anchored awaiting their turn to be unloaded. At Genoa 54 are awaiting pier facilities. In the words of Mr. Franklin, of the International Mercantile Marine:

"One of the most serious things the shipping trade has to contend with during the present acute situation is the great congestion in the ports abroad. As a result, steamers are doing only half the work they could do under normal conditions. It is impossible to get them unloaded. Hence there is no use trying to charter additional ships to go to these congested ports, because we could not get them returned. It takes under current conditions 11 steamers to do the work of 5."

There is the explanation, Mr. President, or one of the explanations.

Mr. Franklin's own company has 20,000 tons of undischarged cargo at Tilbury Dock, London, and there are similar conditions at the Albert Dock. There is a scarcity of longshoremen, and the lighters have been commandeered to make a boat bridge. Upon this scarcity supervenes an unusual number of arrivals due to the clearing of the German commerce raiders from the seas. Conditions in France are similar, although German prisoners are being used to handle the cargoes.

There is a double application of these facts to the Government's shipping proposals. The intention is to reduce unreasonable freight rates. But under such conditions as these the rates do not appear unreasonable. Delays are costly, and incidental expenses can not be calculated on any ordinary scale. No Government could do anything to alleviate such local conditions across the ocean, and the increased costs, which are so serious to private management, would multiply still faster under public and inexperienced and disinterested control. In the second place, these are obvious and well-known conditions to all in the trade, but have been quite overlooked by those who thought that ships alone were necessary to carry cargoes. Terminals are as necessary to ships as to railways and to canals, but the terminals were as much an afterthought to the projectors of the New York State Canal as to the proposed Federal ships, with a consequent revision of the bill of costs. It is wholesome to be under the necessity of earning profits, and that is why it is dangerous to intrust public officials with unlimited power of spending tax money in commercial undertakings.

Again, in the course of another editorial, it is said:

The argument against Government shipping is as strong on theory as on facts, and has been formally draughted by the Boston Maritime Association. It recalls that freights are always dear during a war, and always collapse. The reason is that the war creates an artificial scarcity which disappears with its cause. Five million tons of shipping are now lying in harbors idle. To build more tonnage is only to waste money by creating superabundance, at a time when there is an equal scarcity of cargo through depression of trade due to the war. There are now tied up at Boston four steel steamships for which cargo can not be found, and the association has a list of 200,000 tons available if the rates would compensate for a round trip. The African and Australian tonnage can not extemporize trade hither, and they are importing much that they have been accustomed to export. Government ships are not the remedy for conditions so obscure, abnormal, and contradictory as these. It is better to endure brief abnormal conditions than to sink capital in committing Government to ungovernmental functions, opening the way to further objectionable innovations of the same sort. Tonnage is scarce to some places. Rates are high to some ports. But the burden falls upon the trade which bears it, while the loss of capital and taxes due to the Government line would fall upon those in no traceable relation to the speculation. Government could not possibly apply the remedy so well as the operations of those directly in the trade. They are concerned solely with economic considerations. Those assisting the Government to make a case have no responsibility and have many reasons for their action apart from the public interest.

And so I could go on almost indefinitely quoting matters of that character, which show that the difficulty is not due to a lack of ships, but due to other causes, such as I have indicated already, and such as are indicated by these editorials.

This bill is confessedly an emergency measure. The President himself makes that clear in his address on the subject, where he says:

It is not a question of the Government monopolizing the field. It should take action to make it certain that transportation at reasonable rates will be promptly provided, even where the carriage is not at first profitable; and then when the carriage has become sufficiently profitable to attract and engage private capital, and engage it in abundance, the Government ought to withdraw. I very earnestly hope that the Congress will be of this opinion, and that both Houses will adopt this exceedingly important bill.

So it is manifest that this bill is not intended as a permanent policy on the part of the Government but to meet an emergency. The question then arises, What is this emergency? It is not a lack of ships. The only emergency which anyone has been able to state is that rates are unusually high. Is that an emergency which justifies the Government in going into the business of carrying goods from this country to foreign countries? If so, whenever the price of wheat is raised to an excessive amount, the price of cattle to an excessive amount, or any other commodity, then that constitutes an emergency which justifies the Government in taking hold of the business.

But how about these high rates? They have been brought about in the main by obvious conditions. I grant you that the people who are engaged in the shipping trade have the ordinary amount of selfishness which attaches to humanity. Undoubtedly they desire to make as much out of their business as they can, and it may be that they have taken advantage of this situation to some extent and unduly lifted their rates, but that is one of the ordinary things which happen at a time like this.

Now, what are the conditions which should be expected to increase rates? These ships which ply between this country and foreign countries are in danger of being blown to pieces from mines with which the sea over there has been sown. They go in fear of capture and the expense incident to capture. There is the delay in the handling of ships. There is the increased cost of unloading. There is the increased cost of insurance and a variety of causes that it is impossible to enumerate, but which we can all realize exist, which have had a natural and to be expected tendency to raise rates.

But grant that there is a condition of existing high rates; is this measure calculated to reduce them? Let us look at it a moment.

I have already said that the entire tonnage of the world was 47,000,000 tons and that the loss of tonnage due to the war was something over 5,000,000 tons. The number of ships represented by this tonnage is more than 30,000—nearly 31,000 ships. A very large proportion—I do not know how many—are engaged in trade between this country and other countries.

Now, due to the condition I have described, these rates have become excessive, we will say. What does the Government of the United States propose to do? It proposes to put into the shipping business the sum of $40,000,000. How many ships will that purchase? Nobody has said that it will purchase more than a hundred. The best information I can obtain upon the cost of construction and the cost of purchase of ships at this time indicates that it will procure a tonnage capacity of about half a million tons—half a million against 47,000,000.

Mr. President, I do not see how that comparatively small addition can materially affect rates. Suppose the Government of the United States were to provide for running a freight train from New York to San Francisco once a month, through the year, at losing rates, in competition with the vast railroad business of the country; does anyone think that that would affect rates? There would be a scramble of people to get their goods aboard that train, but, with the vast business, the quantity that could be carried in that way would be so trifling that it would not affect rates at all.

So it does not appear to me that this addition to the tonnage capacity will materially affect rates. Indeed, it may have the effect of increasing rates. In all probability it has had the effect. In all probability the threat of the legislation has had the effect to increase rates, because the effect of it has been and will continue to be to discourage the investment of American capital which would have gone into this enterprise to a very large amount if it had not been for this threatened legislation. So the effect of it is to discourage American investment, and to that extent discourage shippers engaged in the trade, and in the end instead of adding to the tonnage capacity it is very likely to subtract from it.

Now, I call attention to the testimony upon that subject in the House hearings, pages 49 and 50. Mr. Edmonds testified. He was asked how large a merchant fleet this amount of money would afford.

Mr. EDMONDS. You mean how many ships would it buy?
Mr. SAUNDERS. Well, in tonnage, we will say. Of course the number of ships would depend on the size of the ships.
Mr. EDMONDS. I could not give you the tonnage. An ordinary eight to ten thousand ton passenger ship, according to the conditions, would cost from a million to a million and a half dollars, according to the way you build it.
Mr. SAUNDERS. From a million to a million and a half dollars?
Mr. EDMONDS. Yes. Now, if it is a freight boat it would cost to build in this country $600,000, of the same size. You might be able to build it, according to conditions, down to as low as $450,000.
Mr. SAUNDERS. With reference to the carrying trade, then, this $10,000,000——
Mr. EDMONDS. $40,000,000.
Mr. SAUNDERS. No, not $40,000,000; $10,000,000—would not get a very large fleet.
Mr. EDMONDS. No; the $10,000,000 would not. I have given it as $40,000,000. I have set it at the outside.

That is the only testimony I am able to find. Of course, the Senate declined to grant any hearings upon this vital subject at all, and the House contented itself with hearings which did not invite experts upon the subject at all to testify, but which confined the testimony to that of the Secretary of the Treasury, the proponent of the bill, and a statement of one or two Members of Congress. So, that is the only information of an authentic character I have been able to obtain upon that subject.

Mr. NELSON. Mr. President——

Mr. SUTHERLAND. I yield to the Senator for a question.

Mr. NELSON. Has the Senator observed what the Treasury Department states in its report sent in here, part 2, Executive Document 673? It was sent into the Senate on the 27th of this month. There are the names of 22 ships there offered for sale, and it gives the price of each and the net tonnage of each. Has the Senator observed that? Has the Senator noticed the fact that the prices given for those vessels amount to over $12,000,000 and that the net tonnage of the whole is only 87,972, less than 100,000 tonnage, costing over $12,000,000? Has the Senator noticed that document?

Mr. SUTHERLAND. No; I had not observed that; but I am obliged to the Senator from Minnesota for calling my attention to it. It indicates that the estimates I have given upon the subject are too large.

Mr. NELSON. The Senator will find it on page 102, Exhibit 76. There is the list. I commend it to the Senator.

Mr. SUTHERLAND. I thank the Senator for calling my attention to it.

Mr. President, I had not intended to discuss the practical features of this bill to the extent I have done. As I said, I rose primarily to discuss some legal and constitutional phases, and to those questions I desire now to address myself.

Let us see what this bill proposes to do. By section 1 it proposes—

That the United States, acting through the shipping board hereinafter created, may subscribe to the capital stock of a corporation.

Which is to be organized in the District of Columbia. Now, note what this corporation is to do:

Said corporation shall have for its object the purchase, construction, equipment, maintenance, and operation of merchant vessels to meet the requirements of the foreign commerce of the United States, or to charter vessels for such purposes.

Those are the purposes for which this corporation is to be formed. What is the relation of this corporation to the General Government? It is a mere agency. Because it is a corporation it is not any less nor any more an agency than if the same things were to be done by a Government board, or, indeed, by a single individual. So we may consider this bill stripped of the corporation feature, so far as the constitutional question is concerned.

It is manifest that the Government of the United States can not exercise the power through a corporation which it could not exercise through any agent or which it could not exercise through a Cabinet officer. The corporation, I repeat, is a mere agency through which the Government carries into operation this power.

Therefore the Government of the United States by this proposed legislation goes into the carrying business. The Government of the United States becomes a common carrier of goods, which is essentially a private business. To carry goods by railroad or by ship is no different in principle than to carry the same goods upon a cart. To carry a trunk from the Willard Hotel to the Union Depot has never hitherto been supposed to be a governmental function. It is private business. We are confronted at the very threshold of this legislation with the question, Has the Government of the United States any authority to engage in private business? If so, I want some proponent of this measure to point me to the language in the Constitution which confers any such power.

Now, the powers of this corporation are to be limited to these purposes by another provision of the bill. They are to be limited to the purposes that I have read and such as are necessarily incident thereto. Indeed, the corporation is not in substance a self-governing body, as an ordinary corporation would be. It is nominally so, but in effect it is not. It is under the dominating control of the shipping board, which, everybody will concede, is purely a governmental agency. Let me call attention to some of the provisions of the bill which show that—

The members of said shipping board, as incorporators, may for the purpose of carrying out the provisions of this act form a corporation of the District of Columbia by making and filing a certificate of incorporation—

And so on.

The members of the shipping board, therefore, set the machinery in motion. They incorporate the company. Then it provides that—

The stock owned by the United States shall be voted by the shipping board or its duly selected representative.

That is, the shipping board has control of the stock, and that stock constitutes a control of the corporation, because it must be 51 per cent; not less.

Trustees and officers are provided for for this corporation. They are merely figureheads, because another provision of the bill is that—

Such officers and trustees shall be subject to removal at any time by vote of a majority of the stockholders at any meeting thereof.

Not a regular or a called meeting. Whenever this shipping board, holding control of this stock, get together and hold a meeting, which it may do without notice, it may, without cause, remove every trustee, every governing officer of this corporation, and put others in their places. These officers are the mere creatures of this shipping board. While nominally they are given certain powers, in reality they may be shorn of every power at a word from this shipping board.

And again:

SEC. 3. That the United States, through the shipping board and with the approval of the President, is authorized to purchase or construct vessels suitable, in the judgment of the shipping board, for the purposes of such corporation.

Then it provides that they shall be transferred. This board of trustees is not even given the power to purchase the property of the corporation. The vessels which constitute the stock in trade of this corporation are not to be purchased by them. They have nothing to say about it. The shipping board, this governmental agency, is to purchase all the ships or construct the ships. The corporation has no power in that regard at all. The shipping board is the whole thing. Not only is this shipping board given the power to purchase ships, but they are given the power to go into the manufacturing business and put in any scheme they please within the limits of $40,000,000; to set up a shipyard if they please. There is no limitation upon it; they may construct vessels suitable in the judgment of the shipping board, but not in the judgment of the trustees of the corporation.

And again:

SEC. 4. That the shipping board is authorized to transfer the vessels purchased or constructed as herein provided to any such corporation in which the United States has become a stockholder as hereinbefore provided, and such corporation shall issue to the United States in payment thereof its gold bonds.

The trustees have nothing to say about it. The shipping board may purchase vessels or may construct a vessel and may impose those vessels upon this corporation, whether the trustees think it is a wise investment or not. They have nothing to say about it.

And again:

Such corporation shall make suitable provision for sinking fund and for the depreciation charges—

How?

under the rules and regulations to be prescribed by such shipping board.

And again, the shipping board is given the power—

to do all things necessary, whether specifically enumerated or not, to carry out the purposes of this act and protect the interests of the United States.

And again:

SEC. 8. That the President of the United States is hereby authorized to charter, lease, or transfer such naval auxiliaries—

And so on—

suitable for commercial use * * * to any corporation now or hereafter organized as in this act provided upon such terms and conditions as the shipping board, with the approval of the President of the United States, shall prescribe.

Mr. President, why was this corporation organized at all? It has no powers. It can exercise no control over the ordinary

functions of the corporation. The shipping board is the controlling body.

Not only is the shipping board the controlling body with reference to the business of this corporation, but by another extraordinary provision they are given power to make all rules and regulations not only to control this corporation, but all the sea traffic that comes into and departs from the ports of the United States; in other words, the shipping board is given the power to make rules and regulations which will control to a very great extent, within the limits of the general law, the activities of their competitors in the business.

Why, sir, since civil government was established upon the earth no such extraordinary provision has ever found its way into a law. What would be thought of the proposition to invest the Postmaster General of the United States, who is engaged in the parcel-post business, and to the extent that he is engaged in it is a competitor of the express companies of the United States—what would be thought of a proposition to invest that officer with the power of regulating and controlling the express companies of the United States, fixing their rates, regulating them to the extent that the Interstate Commerce Commission regulates them—to put in the hands of an officer of the Government engaged in competition the power to regulate and control a competitor? This is to be done really by three private citizens; that is, three citizens who are private except for their activities upon this board, because the three private citizens constitute the majority of the board.

Mr. President, this corporation is therefore, if it is anything, a mere device, an agency of the Government, by and through which the Government has entered the business of transportation. It constitutes an agency of the Government for this purpose in the same way as would an individual, a public officer, or a board with similar powers, as I have already stated substantially; in other words, suppose, instead of creating this corporation, which is a circumstance of no consequence in this consideration, Congress had passed a law proposing to put into the hands of an individual named $40,000,000 with which to buy ships to go into the carrying trade as an agent of the United States; the principle would be the same. At the very threshhold, therefore, of this discussion we are confronted with the pertinent and vital inquiry, Under what provision of the Constitution is this proposed enterprise to be justified?

Mr. President, this is a Government of enumerated powers. Congress can exercise no power that is not granted by the Constitution in express terms or implied as necessary and proper to carry the expressed powers into operation. Under the Constitution what are the powers? They are of two classes: First, there are the substantive powers, or what are called the expressed powers; and, second, there are the ancillary powers, or what have been generally designated as the implied powers. What are these ancillary powers as plainly shown by the language of the Constitution? They are simply powers which the Government may exert not as ends in and of themselves, but as the means of carrying the substantive or enumerated powers into operation. This is made clear by the language of the Constitution, whose very first provision is—now mark this language—

> All legislative powers herein granted shall be vested in a Congress of the United States.

Congress by that is not vested with all legislative power, but it is vested with such legislative power as is granted by the Constitution, which implies clearly a limitation upon its legislative power. In the case of the States, generally speaking, the Constitution confers all legislative power upon the legislature except such as is expressly withdrawn from it by prohibitory provisions. So before an ordinary legislative power can be denied to a State legislature we must find in the State constitution a prohibition against it. Exactly the converse of that is the rule with reference to the Constitution of the United States. Before the Congress of the United States can exert legislative power, it must not only not be forbidden by the Constitution, but it must be found expressly conferred in the Constitution. These powers the Constitution itself, with great care, proceeds to enumerate, and it concludes with this general power:

> To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States or in any department or officer thereof.

By the tenth amendment to the Constitution it is provided:

> ARTICLE X.
>
> The powers not delegated to the United States by the Constitution nor prohibited by it to the States are reserved to the States respectively or to the people.

Congress, therefore, in the exercise of its substantive powers, must confine itself strictly to the grants enumerated in the Constitution. It has a wide range of choice, it is true, as to the means which it shall adopt to this end. That has been declared over and over again by the Supreme Court of the United States, and never more clearly than by Mr. Justice Brewer, speaking for the court in the Kansas-Colorado case (206 U. S., 89). He says:

> But the proposition that there are legislative powers affecting the Nation as a whole which belong to, although not expressed in, the grant of powers is in direct conflict with the doctrine that this is a Government of enumerated powers. That this is such a Government clearly appears from the Constitution independently of the amendments, for otherwise there would be an instrument granting certain specified things made operative to grant other and distinct things. This natural construction of the original body of the Constitution is made absolutely certain by the tenth amendment—

To which I have just called attention—

> This amendment, which was seemingly adopted with prescience of just such a contention as the present, disclosed the widespread fear that the National Government might, under the pressure—

Now listen. Language could not have been more apposite if the learned judge had had this very bill in mind—

> This amendment, which was seemingly adopted with prescience of just such contention as the present, disclosed the widespread fear that the National Government might, under the pressure of a supposed general welfare, attempt to exercise powers which had not been granted. With equal determination the framers intended that no such assumption should ever find justification in the organic act, and that if in the future further powers seemed necessary they should be granted by the people in the manner they had provided for amending that act. It reads: "The powers not delegated to the United States by the Constitution nor prohibited by it to the States are reserved to the States, respectively, or to the people." The argument of counsel ignores the principal factor in this article, to wit, the people.

Not the States alone. The powers which are reserved, which are not granted to the United States, not delegated to the United States, are reserved not only to the States, but, in the alternative, to the people, because there may be powers that are denied the States. There may be powers that conceivably are not to be exercised by either Government, and in that case they are reserved to the people.

> Its principal purpose was not the distribution of power between the United States and the States, but a reservation to the people of all powers not granted.

Now, mark that—

> But a reservation to the people of all powers not granted. The preamble of the Constitution declares who framed it, "We, the people of the United States," not the people of one State but the people of all the States, and Article X reserves to the people of all the States the powers not delegated to the United States.

Mr. President, that throws a flood of light upon this question. The bill under consideration has nothing to do with any of the enumerated powers, unless it be with that power which authorizes Congress to regulate commerce. Nobody has pretended that there is any other grant of power to which it might by the remotest possibility be attached. Is this bill, therefore, a regulation of commerce? If it is, it is valid; if it is not, it is utterly void. There is no half-way ground. Either this bill is valid or it is void. If it is a regulation of interstate or foreign commerce, it is valid; if it is not a regulation of commerce, whatever else it may be, it is absolutely null and void.

Now let us read the commerce clause of the Constitution:

> To regulate commerce with foreign nations and among the several States and with the Indian tribes.

What is the power that is conferred? It is the power to regulate, not the power to do something else. When a power is sought to be exercised under that clause, that power must be regulation. The thing to be regulated is commerce and not something else. Therefore Congress can not regulate something which is not commerce. It can not regulate manufacturing; it can not regulate anything else except commerce; and it can not do with commerce anything that does not fall within the term "regulation." Congress is just as powerless to pass a law, under this provision of the Constitution, which undertakes to deal with commerce in some other way than by regulation, as it is to regulate an activity or a thing which does not fall within the term "commerce."

The pending bill undoubtedly deals with commerce, but does it regulate commerce? What is a regulation of commerce? Fortunately we have a multitude of authoritative definitions, all to the same effect, the most comprehensive of which, I think, was that stated by Mr. Justice Barbour, a justice of the Supreme Court of the United States, but at the time of making this statement a Member of Congress. His statement was as follows, and I call the attention of the lawyers of the Senate to his definition:

> To regulate commerce among the several States means the right to prescribe the manner, terms, and conditions on which that commerce should be carried on.

To engage in commerce is not to regulate it. The act and the regulation of the act are two wholly separate and distinct things. The Supreme Court of the United States has repeatedly defined the power, as in Gibbons *v.* Ogden (9 Wheat., 196, 197).

It is there defined as the power "to prescribe the rule according to which commerce should be carried on." There is in the case of Welton *v.* Missouri (91 U. S., 275–279) a rather more elaborate definition than that. That definition is as follows:

The term "regulate commerce" as it is used in the clause of the Federal Constitution authorizing Congress to regulate commerce means to prescribe rules by which it shall be governed; that is, the conditions upon which it shall be conducted.

How can the conducting of the business be regarded as a prescription of the conditions upon which it shall be conducted? The opinion continues:

To determine how far it shall be free and untrammeled, how far it shall be burdened by duties and imposts, and how far it shall be prohibited.

I read from Words and Phrases, volume 7, beginning at page 6041, some definitions which all bear out this definition which I have read. I read them because they carry the force of the definition by illustrations. Here is one:

To regulate means to adjust by rule, method, or established mode, to direct by rule or restriction, to subject to governing principles or laws—

Citing a number of authorities.

Again:

"Regulation" as used in the title of the ordinance for the regulation of street parades, etc., means the control and government thereof, the word necessarily implying that street parades are lawful, but that certain restrictions may be necessary to preserve the public from harm.

Now, let me pause at that point. Here is the power given to regulate street parades. If the government of that city should pass an ordinance providing for a street parade, instituting a street parade as a substantive thing, would that be a regulation of a street parade?

Again:

"Regulate" means to subject to governing principles; to rule; to govern.

"Regulate" as used in constitution, article 4, section 25—

That is, I suppose, the constitution of California—

declaring that the legislature shall not pass any special or local law regulating county and township business, or in a case where a general law is applicable, means to prescribe a rule for acting, to direct a mode in which a transaction shall be conducted, the word being derived from the Latin word "rego," signifying to guide or direct, through the noun "regula," a rule.

So that, according to that definition, to regulate means to guide or direct the activity or the thing by means of a rule.

Hence an act directing a board of supervisors of a city and county to pay a certain claim is invalid.

Why? Because it does not direct the way in which they shall do it by rule, but it directs the doing of it.

A right to regulate the running of cars means, according to the ordinary acceptance of the term "regulate," to prescribe rules or laws by which the running of cars within a city is to be governed; and the power may, without any strained construction, well apply to the means or force by which the cars are propelled. A right to "regulate the running" seems ex vi termini to imply the authority to regulate the power by which they are driven.

It may be conceded that the creation of a corporation to engage in or the regulation of a corporation already engaged in commerce may constitute a regulation of commerce. That need not be disputed. That is, it may be conceded that Congress may provide that corporations, in order to engage in interstate or foreign commerce, must be of a certain character, or even that they must be brought into existence under a law of the United States. I concede that for the sake of the argument, although I think there is some doubt about the power; but it may be conceded, so far as this bill is concerned, that Congress has that power—the power to say that only a certain character of corporation shall engage in interstate commerce; the power to say that only a corporation organized under the laws of the United States shall engage in interstate commerce. I think there is very grave doubt about that, because I think the purpose of the Constitution was simply to regulate a thing which had a rightful existence independently of the Federal Government, and I am very much disposed to think that the right to engage in trade on the part of the citizens of the State or an artificial creation of the State is a right which can not be taken away by Federal legislation. But if we may go that far and concede the power of Congress to that extent, that is not the effect nor the purpose of this bill. The bill does not provide for the organization of a corporation or corporations as a means by which the Government of the United States regulates commerce, but it provides for a corporation as a means or a device by which the Government itself undertakes to engage in commerce.

Mr. President, nothing like it has ever before been attempted in all our history. There is not only no constitutional warrant for any such step, but it is a socialistic experiment entirely outside of the purposes of the Federal Government, dangerous as a precedent and far-reaching in its consequences.

Mr. CHILTON. Mr. President——

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from West Virginia?

Mr. SUTHERLAND. I yield to the Senator from West Virginia so far as I can yield without losing any rights which I have to the floor.

Mr. CHILTON. I will keep within the rule. I simply want to ask the Senator a question. Does the Senator favor a subsidy to aid in building up a merchant marine?

Mr. SUTHERLAND. Mr. President, that is a subject about which I have not fully made up my mind.

Mr. CHILTON. The Senator admits that we must justify that upon the same clause or clauses in the Constitution upon which we would justify what is being done by this bill, does he not?

Mr. SUTHERLAND. No. It might be justified under the commerce clause of the Constitution.

Mr. CHILTON. Is not that the one the Senator is talking about?

Mr. SUTHERLAND. But the granting of money to an individual to conduct his own trade, to stimulate his own trade, to facilitate his trade, or stimulate trade generally, is a very different thing from the Government of the United States carrying on that trade.

Mr. CHILTON. If the Senator will answer just one other question while I am on my feet: Does the Senator distinguish between a bonus to railroads, like the Government granted to the transcontinental railroads years ago, and a subsidy, and what is being done here now? Are they not all of the same character?

Mr. SUTHERLAND. Oh, not at all, Mr. President.

Mr. CHILTON. Was that regulating commerce when the Government granted a bonus to a railroad company for the purpose of building a railroad? Was that regulating? Was it not aiding in it and taking a part in it and an interest in it?

Mr. SUTHERLAND. Mr. President, the grant of lands to the Pacific railroads is to be justified under a wholly different provision of the Constitution—the one which provides that the Congress of the United States may dispose of and make all needful rules and regulations for the territory and other property of the United States. It is under that clause. This was property of the United States, its public lands, and Congress was given the power to dispose of those lands; and, being given the power without limitations, Congress could dispose of them in any way it saw fit. It is no more a regulation of commerce to do that than the passage of the irrigation law is a regulation of commerce. The passage of the irrigation law was to be justified upon the same clause, because if the Government of the United States has the power to dispose of its lands, and those lands are arid, and they can not be disposed of without putting them into some other condition, it has the implied power to put them in a condition to be disposed of. The irrigation law simply provided for a method of furnishing water for those lands, and thereby putting them in a condition to be disposed of. It was under that clause of the Constitution that the Pacific lands were granted. It was under that clause of the Constitution that we passed the irrigation law.

Mr. CHILTON. Mr. President, will the Senator permit me to ask him one other question at this point?

The VICE PRESIDENT. Does the Senator from Utah further yield to the Senator from West Virginia?

Mr. SUTHERLAND. Yes.

Mr. CHILTON. I can understand how the Senator can possibly make a distinction—whether it is sound or not, the Senate will determine later—as to disposing of land or giving away the property of the United States. If the Senator wants to make that distinction between the property of the United States and the money which may be derived from that property, that is for him and not for me to criticize; but I do want to ask the Senator what he says as to that part of the transaction other than giving the property away, to wit, wherein the Government had an interest in the property and a certain right to the control of that property? The Senator recollects what that was. How does he reconcile that with the position he now takes?

Mr. SUTHERLAND. The Government, in effect, had a lien, just as it might have a lien upon any piece of property.

Mr. CHILTON. And appointed directors for the railroad.

Mr. SUTHERLAND. Now, wait. The Government had a lien, just as it might have a lien upon the Senator's property. If the Government of the United States were to obtain a judgment against the Senator, it would have a lien upon his property, which could be enforced by seizing the property and selling it, and then it would become the property of the United States to do with it as it pleased. It had a lien upon the Pacific Railway

property in the same way, not by a judgment but in a different way, but a lien, nevertheless, which it could enforce, and it could use all means that were necessary and proper to that end. The question of the Pacific Railroads is complicated by a variety of things. The Congress was evidently doubtful as to just what provision of the Constitution it could justify its action under. When the Pacific Railroad law was passed and the grants made we were undertaking to open up that country out there, and the Congress were driven to find some authority for it. They put it upon the war power, in the legislation. They provided that it was to be utilized to transport troops. They said it was to be utilized as a post road. They put it upon a variety of clauses.

Mr. FLETCHER. Mr. President, will the Senator yield to me for a question?

Mr. SUTHERLAND. Yes.

Mr. FLETCHER. What trouble does the Senator find in justifying this bill under the Constitution with reference to the provision for naval auxiliaries and military transports?

Mr. SUTHERLAND. Mr. President, the provision for turning over the naval auxiliaries to this corporation is a mere incident of it. It may or may not be done. It is not the primary thing sought to be done. I concede that if we were to pass a law such as is proposed by the Senator from Iowa [Mr. CUMMINS] in his substitute, providing for the expenditure of $40,000,000 to purchase ships as auxiliaries of the Navy, those ships when not in use by the Navy to be leased to private citizens, we would be within our power. We would be within the war power. We would not be within the provision of the Constitution authorizing us to regulate commerce; but that is not what this bill seeks to do. This corporation is organized and its purposes are declared. It is expressly provided that it is to be limited to those purposes. Those purposes are, in short, to purchase or construct merchant vessels and to engage in the mercantile carrying trade between this country and foreign countries. By what stretch of the imagination can that be tied to the war power—the authority to provide a navy? It has not the remotest connection with it. That being the object of the bill, there is a fugitive provision in it, merely incident to it, that when we have no need for a particular naval vessel we may turn it over to this corporation; but it is incidental.

It has been held to be within the constitutional power of Congress to provide for the incorporation of a bank as an instrumentality to enable the Government to conduct and carry on its fiscal operations; but in that case the power of the Government conferred by the Constitution, as interpreted by the Supreme Court, is to carry on the fiscal operations themselves. It is not to regulate such operations carried on by others.

Suppose the law had been interpreted by the Supreme Court to mean that the power of the United States was to *regulate* the fiscal operations of banks. Under that power the Government of the United States could not have established a bank because that would not have been regulation; but the power is different. It is not that of regulation. The power is to do the substantive thing—to carry on fiscal operations. If the provision in the Constitution had been not to regulate commerce but to carry on commerce, then of course the Government could do it.

Mr. SHIELDS. Mr. President——

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from Tennessee?

Mr. SUTHERLAND. I do.

Mr. SHIELDS. I understand the Senator to concede that any act of the Government which aids or facilitates commerce comes within the commerce clause of the Constitution.

Mr. SUTHERLAND. No, Mr. President; I do not concede that.

Mr. SHIELDS. Then perhaps I stated it too broadly. I understand the Senator does not controvert that the building of a lock or other improvement in a navigable stream to aid transportation comes within it.

Mr. SUTHERLAND. Yes; I do concede that—the building of a road, for example.

Mr. SHIELDS. Now, I understand that the Senator's view of the buying of these ships is that it is going into the transportation business, and that that is not regulation of commerce.

Mr. SUTHERLAND. My position is precisely that—that it is not a regulation of commerce.

Mr. SHIELDS. Is not the primary object of this bill not to go into the transportation business, but to aid the people of the United States in the transportation of their productions which they have for export and in the importation of things which they need from other countries; and is not the purchase and operation of ships a mere incident to that business; and in that sense is it not within the commerce clause an aid to commerce—a regulation of commerce by furnishing cheaper facilities of transportation?

Mr. SUTHERLAND. No, Mr. President. The Senator apparently thinks that anything the Government of the United States may do whose effect may be to facilitate or aid commerce is a regulation of commerce.

If that were so, then the building of a manufactory would be a regulation of commerce because it facilitates commerce. Indeed, commerce could not take place at all in many instances unless there was manufacturing. The effect of the law must be something more than merely to aid or facilitate commerce. The building of a road, as the Senator illustrates, the building of a lock, the clearing of a harbor, is a regulation of commerce because it is either providing an instrumentality or putting an instrumentality in a position to be used. But the difference between those cases and this is that the Government is not providing an instrumentality for foreign commerce. It is undertaking to become that instrumentality itself.

Mr. SHIELDS. Does it not do both?

Mr. SUTHERLAND. It incidentally may facilitate trade; but the primary object of it, the effect of it, the purpose of it, is to put the Government into that business. In other words, it puts the Government into the business of engaging in trade, and that is the object of it, although its incidental effect may be to facilitate, to make somebody's business more profitable, by giving cheaper rates. But that is not sufficient.

Mr. SHIELDS. That is a difference in construction. In my idea the primary object is to furnish transportation facilities for the commerce of this country.

Mr. SUTHERLAND. I am not making these propositions without having provided some sort of fortification of my position, and I hope the Senator will do me the honor to remain here until I come to those cases which deal with that.

Mr. SHIELDS. I certainly will. I do not think the Senator is not fortified, because it is not his habit to assert a proposition without being able to give authorities and reasons to support it.

Mr. SUTHERLAND. That is very kind of the Senator. I have said that in the case of the bank the power which the Government had was to carry on these operations and not merely to regulate them. A bank was therefore held to be a proper instrumentality to carry on these Government fiscal operations. The private business which it did was merely incidental to this governmental function.

If the Federal Government had been authorized to carry on trade, if this were the substantive power, then, undoubtedly, under the decision of the Supreme Court in the cases of McCullough against Maryland and Osborne against United States Bank, the Government might properly organize a corporation as a means of carrying on the trade, just as it properly organized a bank for the purpose of carrying on its fiscal operations; but I repeat, because this is the crux of the whole question, the power is to regulate commerce, not to carry it on.

A trade can not be carried on substantively under the guise of being a regulation when, in fact, the substantive thing is carrying on the trade.

It is the power to regulate the commercial transaction itself and regulate the agencies which are engaged therein. Regulation of an activity and the activity itself are two wholly separate and distinct matters. Congress is given the power to coin money, but suppose the right to coin money had been left to the States, as it might have been, and the Constitution had simply empowered Congress to regulate the coinage of money, would it be claimed under this language that the General Government could itself coin money? And, if it could not, could it create a corporation through the agency of which the Government would coin money? Congress is empowered to establish post roads. Suppose the provision had been simply to regulate post roads; would it be claimed under such language that Congress could build and establish these roads? The language of the Constitution was selected with extreme care. The framers found no difficulty, when it was desired to confer upon the Federal Government the power to do a thing, in saying so in precise terms.

We must look beyond the form of this bill to its substance. The Supreme Court said, in the case of Henderson *v.* Mayor (92 U. S., 268):

> In whatever language a statute may be framed, its purpose must be determined by its natural and reasonable effect, and if it is apparent that the object of this statute as judged by that criterion is to compel the owners of vessels to pay a sum of money for every passenger brought by them from a foreign shore and landed at the port of New York, it is as much a tax on passengers if collected from them or a tax on the vessels or owners for the exercise of the right of landing their passengers in that city, as was the statute held void in the passenger cases.

The Supreme Court has repeated over and over again that in determining whether a law is constitutional we are to determine what it is in substance and what it is in effect, no matter what its form may be. Congress can not take refuge in mere forms to usurp a power which it does not possess under the Constitution.

Tested by this same rule, this bill, it is true, creates a corporation, but its effect is to adopt the corporate device not as one of the means of regulating commerce but as an agency by which the Government engages in commerce. Of course, the Government can do nothing except through its agents. Under its authority to regulate commerce it may designate the character of the instrumentalities which may be used to carry on commerce.

But I repeat, as I said to the Senator a moment ago, this does not give the Government authority to become such an instrumentality itself. Congress has no authority to create corporations as a primary power, because that power has not been conferred by the Constitution. It may only create a corporation as a mean to a constitutional end, namely, as a means of carrying into operation some substantive power which has been devolved upon Congress. It can not create a corporation to carry into operation a power which the Government of the United States does not possess, and through that corporation carry into operation such power, any more than it can do the same thing through an official or a board.

To say that the actual transportation of commodities is a regulation of their transportation is to confuse all logical distinctions. To regulate commerce is a governmental function; and, therefore, if the carrying on of commerce is the regulation of commerce, then that also becomes a governmental function, and the same argument which gives the power to Congress must deny it to the citizen, since the citizen can not perform governmental functions.

Now, that may sound like a reductio ad absurdum, but I believe it to be logical and sound. If the carrying on of trade is a regulation of trade, then it is no less a regulation if the citizen is engaged in it; and if the carrying on of trade is a regulation of trade, and therefore a governmental function, upon what authority can the citizen do it? The citizen can not regulate trade, because that is a governmental function which belongs to Congress. He may do things that have the effect of facilitating trade, of aiding trade, but that is not a regulation within the constitutional meaning.

It has been held that transportation is commerce, and therefore Congress has the power to regulate transportation; but if the act of transportation constitutes a regulation of transportation, then we are driven to the reductio ad absurdum that every captain who sails a ship is regulating commerce and exercising a power which belongs alone to Congress.

The power to regulate a thing does not mean the power to establish or do the thing, but it means the power to govern the thing which the grant of authority to regulate presupposes to be already in existence. The existence of commerce is necessary to regulation, but it is not regulation itself.

Neither does the power to carry on commerce arise by implication from the power to regulate. They are separate and distinct powers. The right to do a particular thing implies the right to adopt any means to do that thing. It does not imply the right to do something entirely different or to adopt means for the doing of something entirely different. The carrying of goods from one port to another, therefore, may be regulated, but the act of carrying is not regulation. Whatever means are adopted by Congress, in the final analysis these means must result in regulation of commerce and not in commerce itself. In McCulloch *v.* Maryland (4 Wheat., 316) the Supreme Court said:

> The power of creating a corporation, though pertaining to sovereignty, is not like the power of making war or levying taxes or regulating commerce, a great, substantive, and independent power which can not be implied as incidental to other powers and used as a means of executing them.

But the power to carry on commerce, unlike the power to create corporations, is plainly in and of itself a great, substantive, and independent power equal in importance to any power conferred by the Constitution; and to say that Congress has been denied the substantive power of carrying on commerce but has the implied power to create a corporation through which the Government itself may carry on commerce is to juggle with all logical rules.

Mr. Prentice, a very excellent writer upon the subject of Federal power over carriers and corporations, in his work, page 138, quotes from Alexander Hamilton:

> A strange fallacy seems to have crept into the manner of thinking and reasoning upon the subject. Imagination seems to have been unusually busy concerning it. An incorporation seems to have been regarded as some great, independent, substantive thing; as a political engine, and of peculiar magnitude and moment; whereas it is truly to be considered as a quality, capacity, or means to an end. Thus a mercantile company is formed, with a certain capital, for the purpose of carrying on a particular branch of business. Here the business to be prosecuted is the end.

It is the business, I may interpolate, not the formation of the corporation, which is the end. The corporation is only the means to the end.

> The association, in order to form the requisite capital, is the primary means. Suppose that an incorporation were added to this, it would only be to add a new quality to that association; to give it an artificial capacity, by which it would be enabled to prosecute the business with more safety and convenience.

Then, further on, still quoting from Hamilton:

> "Thus," he said—

That is, Hamilton—

> "Thus," he said, "a corporation may not be erected by Congress for superintending the police of the city of Philadelphia, because they are not authorized to regulate the police of that city. But one may be erected in relation to the collection of taxes, or to the trade with foreign countries, or to the trade between the States, or with the Indian tribes—

But the corporation so erected must not merely be the agency through which the Government does business, for it has no power to do business.

It may be done, as in the case of the Luxton Bridge case, where a corporate form was authorized to enable citizens to do through the corporation that which Congress might have authorized them to do as individuals—

> "because it is the province of the Federal Government to regulate those objects, and because it is incident to a general sovereign or legislative power to regulate a thing, to employ all the means which relate to its regulation to the best and greatest advantage."

So I say, as Mr. Hamilton said with reference to the police of Philadelphia, we can not erect a corporation through which to regulate the police of Philadelphia, because we have no right to accomplish the end that this means is adapted to. So we can not organize a corporation to carry on trade, because we have no power under the Constitution to reach the end which is finally sought through the corporate form.

On page 149 he says:

> In this regard the power of Congress is limited, while the power of the State is unlimited. Whenever, under the Constitution, Congress can exercise a power, Congress can create a corporation to carry that power into execution, and, to the exclusion of the States, create corporations in the District of Columbia and all territory of the United States and in all countries subject to the jurisdiction of the United States.

It is unimaginable that the framers of the Constitution could have ever intended that a great power like that of engaging in trade should be exercised without a plain provision to that effect. It is an absurdity to say that the power to carry on business has been conferred by a provision which simply gives authority to regulate business.

Hitherto in this country the business of transportation is one which has been exclusively in private hands. If it is a function which could be performed by any government, that government is not the United States, because it has not been delegated, and is therefore, under the provisions of the tenth amendment, either reserved to the States or to the people.

The Supreme Court of the United States, in the case of South Carolina *v.* The United States (199 U. S., p. 450), said:

> To determine the extent of the grants of power we must therefore place ourselves in the position of the men who framed and adopted the Constitution and inquire what they must have understood to be the meaning and scope of those grants.

I want to read a paragraph or two further from that decision. The court says:

> Certain is it that modern notions as to the extent to which the functions of a State may be carried had then no hold—

That was at the time of the formation of the Constitution. Now we are to put ourselves in the place of the framers of the Constitution and inquire what they must have understood to be the meaning and scope of the grant. That is not my language. It is the language of the Supreme Court of the United States, and the Supreme Court proceeds to do that.

> Certain is it that modern notions as to the extent to which the functions of a State may be carried had then no hold. Whatever Utopian theories may have been presented by any writers were regarded as mere creations of fancy, and had no practical recognition. It is true that monopolies in respect to certain commodities were known to have been granted by absolute monarchs, but they were not regarded as consistent with Anglo-Saxon ideas of government. The opposition to the Constitution came not from any apprehension of danger from the extent of power reserved to the States, but, on the other hand, entirely through fear of what might result from the exercise of the powers granted to the Central Government. While many believed that the liberty of the people depended on the preservation of the rights of the States, they had no thought that those States would extend their functions beyond their then recognized scope, or so as to imperil the life of the Nation. As well said by Chief Justice Nott, delivering the opinion of the Court of Claims in this case (39 C. Cl., 284)—

The quotation is from Judge Nott, but is approved and adopted by the Supreme Court itself—

"Moreover, at the time of the adoption of the Constitution there probably was not one person in the country who seriously contemplated the possibility of government, whether State or National, ever descending from its primitive plant of a body politic to take up the work of the individual or body corporate. The public suspicion associated government with patents of nobility, with an established church, with standing armies, and distrusted all governments. Even in the high intelligence of the convention there were men who trembled at the power given to the President, who trembled at the power which the Senate might usurp, who feared that the life tenure of the judiciary might imperil the liberties of the people. Certain it is, that if the possibility of a government usurping the ordinary business of individuals, driving them out of the market and maintaining place and power by means of what would have been called, in the heated invective of the time, 'a legion of mercenaries,' had been in the public mind, the Constitution would not have been adopted, or an inhibition of such power would have been placed among Madison's amendments."

Can anybody conceive, looking back to the history of that time, to the political views which prevailed at that time, that the framers of the Constitution would have inserted a provision in the Constitution giving the Government of the United States the power to engage in the transportation business as a function of government? It is preposterous.

If, as Justice Nott says, they had suspected that any such power as that was wrapped up in anything in the granted powers, the Constitution would have been made plain by a prohibition against that interpretation or the Constitution never would have been ratified by the people. As was well said by the Supreme Court of Kansas in State against Kelly, Eighty-first Pacific Reporter, page 459:

It has been the policy of our Government to exalt the individual rather than the State, and this has contributed more largely to our rapid national development than any other single cause. Our Constitution was framed and our laws enacted with the idea to protecting, encouraging, and developing individual enterprise, and if we now intend to reverse this policy and to enter the State as a competitor against the individual in all lines of trade and commerce we must amend our Constitution and adopt an entirely different system of government.

The precise question was before the Supreme Court of Minnesota in the case of Rippe against Becker, Fifty-sixth Minnesota, page 100. That case involved the constitutionality of an act passed by the Legislature of Minnesota which provided for procuring of a site and the erection of a State elevator or warehouse for the public storage of grain, and so on. Let me read the syllabus:

Laws of 1893, chapter 30, entitled "An act to provide for the purchase of a site and for the erection of a State elevator or warehouse at Duluth for public storage of grain," etc., is not an exercise of the police power of the State to regulate the business of receiving, weighing, and inspecting grain in elevators. It has no relation to the regulation of the business, but provides for the State itself engaging in carrying it on.

That is the precise point which I have been urging all the way through. That answers the question of the Senator from Tennessee [Mr. SHIELDS]. Incidentally, of course, the procuring of the site and the building of an elevator was an aid to that character of business. Conceivably, it facilitated it; it was provided for the purpose of cutting down rates; but the bill provided that the State should do that thing. The Supreme Court of Minnesota said that, under the power to regulate, the doing of the thing was not justified. Now, let me read that:

The right of the State, in the exercise of its police power, to regulate the business—

Now, mind you, the police power of the State to regulate is the same as the delegated power in the Federal Constitution to regulate. The commerce clause of the Constitution in essence and effect is a police power or analogous to the police power, and in essence it is the same as the police power of the State to regulate.

The right of the State, in the exercise of its police power, to regulate the business of receiving, weighing, inspecting, and storing grain for others in elevators or warehouses, as being a business affected with a public interest, is now settled beyond all controversy. This power extends even to fixing the charges for such services. (Munn *v.* Illinois, 94 U. S., 113; Budd *v.* New York, 143 U. S., 517; 12 Sup. Ct., 468.)

And where a business is a proper subject of police regulation doubtless the legislature may, in the exercise of that power, adopt any measures they see fit, provided only they adopt such as have some relation to and have some tendency to accomplish the desired end; and if the measures adopted have such relation or tendency the courts will never assume to determine whether they are wise or the best that might have been adopted. (State *v.* Donaldson, 41 Minn., 74; 42 N. W., 781.)

Further along it is said:

It seems to us as plain as words can make it—too plain to admit of argument—that the provisions of this act have no relation or reference whatever to the exercise of the police power to regulate the "grain elevator" business. We can not discover, and counsel have failed to point out, a single provision of the act that has any relation to or any tendency to accomplish any such purpose. Aside from the provisions of sections 3 and 4 for what we may term a bureau of information as to the state of the markets and rates of transportation (which has no relation to the exercise of any police power, and the connection between which and an elevator of a capacity of 1,500,000 bushels, with "all necessary spur tracks, terminal yards, and other facilities to receive and ship grain" is not apparent), the evident sole purpose of the act is to provide for the State erecting an elevator and itself going into the "grain elevator" business. All the provisions of the act as to receiving, handling, storing, and delivering grain clearly have reference only to the management of the business conducted by the State in its own elevator. The keynote to the object of the law is, we apprehend, to be found in the last clause of section 4, above quoted, as to the intention of the act, and so far as relates to the right of the State under the police power to regulate this business, the position of defendants' counsel really amounts to this: That whenever those who are engaged in any business which is affected with a public interest—

I commend that language particularly to those who fancy that this legislation is valid. The courts are stating the position of counsel, who urged the validity of the law, and therefore they state the position of the proponents of this bill.

That whenever those who are engaged in any business which is affected with a public interest, and hence the subject of governmental regulation, do not furnish the public proper and reasonable service, the State may, as a means of regulating the business, itself engage in it and furnish the public better service at reasonable rates, or, by means of such State competition, compel others to do so.

The very statement of the proposition is sufficient to show to what startling results it necessarily leads. It needs no argument to prove that if, in the exercise of the police power to regulate this business, the State itself has a right to erect and operate one elevator at Duluth, it has the power to erect and operate 20, if necessary, at the same point, and also to erect and operate elevators at every point in the State where there is grain to be handled and stored.

Railways are also, under this same police power, the subjects of State regulation; and if it should be deemed that they were not furnishing the public with proper service, or charging unreasonable rates, it could with equal propriety be claimed that it would be a proper means of exercising the police power of regulating the business for the State itself to construct and operate competing railways. The hack business, the pawnbrokers' business, the manufacture and sale of intoxicating liquors, and numerous other kinds of business that might be named are also the subjects of State regulation; and, if counsel's contention is correct, we do not see why, as a means of "regulating" these kinds of business, the State itself might not engage in running hacks, pawnbrokers' shops, building and operating distilleries and breweries, or even running saloons.

That is what South Carolina has done, and I shall have occasion to comment upon that situation in a moment.

But further illustration can not be necessary. The police power of the State to regulate a business does not include the power to engage in carrying it on.

There is the crux of it.

Police regulation is to be affected by restraints upon a business and the adoption of rules and regulations as to the manner in which it shall be conducted.

While the jurists of continental Europe sometimes include under the term "police power" all governmental institutions which are established with public funds for the promotion of the public good, yet, as understood in American constitutional law, the term means simply the power of the State to impose those restraints upon private rights which are necessary for the general welfare of all and is but the power to enforce the maxim, "Sic utere tuo ut alienum non laedas."

The provisions of this act have no reference to the regulation, in any such sense, of the "grain-elevator business," and the right of the State to embark in the construction and operation of these works can not be predicated on the police power.

* * * * * * *

The time was when the policy was to confine the functions of government to the limits strictly necessary to secure the enjoyment of life, liberty, and property. The old Jeffersonian maxim was that the country is governed the best that is governed the least.

Our friends have departed from that. The maxim of the Democratic Party now is "that government is best which governs most."

At present the tendency is all the other way, and toward socialism and paternalism in government. This tendency is, perhaps, to some extent, natural as well as inevitable, as population becomes more dense and society older and more complex in its relations. The wisdom of such a policy is not for the courts. The people are supreme, and, if they wish to adopt such a change in the theory of government, it is their right to do so. But in order to do it they must amend the constitution of the State. The present constitution was not framed on any such lines.

Therefore, that act was held unconstitutional. It is true that another point was decided in the case, which had not any effect upon this principle. There was also a specific provision in the constitution which forbade the State engaging in the work of internal improvements, and it was argued that this was not a work of internal improvement. The court, however, held that it was, and held that it would be void under that provision of the constitution as well; but it was claimed upon both grounds that it was a regulation of the business and, therefore, within the police power, and also that it was not an internal improvement and, therefore, subject to the other provision. The court answered both against the contention of those who sought to sustain the law.

The State of South Carolina had a rather remarkable experience with reference to Government ownership. That State concluded some years ago to go into the saloon business, and proceeded to pass a law which gave the State control of the sale and disposition of liquor through what were called "State dispensaries." The effect of the law was practically to exclude private parties from that business. The question arose in

South Carolina as to whether or not that law was constitutional. The history of the decision of the court of South Carolina is a very interesting and somewhat remarkable one. The case first came before the supreme court, which consisted of three members, and is reported in Forty-first South Carolina, and also in Twenty-third Lawyers' Reports Annotated, at page 410, and is entitled "The case of McCullough against Brown, and some other cases," four cases altogether.

That case was elaborately argued and was decided by the Supreme Court of the State of South Carolina. Two of the judges joined in holding that the law was unconstitutional, because it undertook to put the State of South Carolina into trade, which they said was not a function of civil government. One judge dissented. The term of one of the judges who had joined in the majority opinion soon afterwards expired, and I think, under the laws of South Carolina, the legislature elects the judge. The Legislature of South Carolina, which was responsible for this law and which was desirous that it should be upheld, of course did not reelect the judge who had decided that their legislation was unconstitutional, but they proceeded to elect another judge who went upon the bench and joined with the dissenting judge in reversing the former opinion and holding the law to be constitutional.

I need say no more than that to indicate that the last decision is not entitled to quite as much weight as otherwise might have been the case. It appears also from going over these cases—and I have no other information except what I find in the cases themselves—that this matter was brought up at a special session of the court at which only this question was presented. The judge who had joined in the majority opinion having departed from the bench the new judge came in, and the new court proceeded to hold the law to be constitutional; but the remarkable thing about the last decision is that, notwithstanding the judges overruled the former decision, they agreed with all the reasoning of the former decision, to the effect that the State had no power to go into trade, but they based their decision upon other grounds. They said that if the State had undertaken to go into any other business than the saloon business the majority opinion in the former case would have been right, and they expressly approved the Minnesota case. Their whole decision is bottomed upon the proposition that the liquor business is one dangerous to society, which may be entirely prohibited, and, being within the power of the State to entirely prohibit, it may do anything short of that.

With that preliminary statement let me call the attention of the Senate to the language of the decision. I first read from the original decision, where the law was held to be unconstitutional.

Finally, the constitutionality of the dispensary act is assailed upon the ground that the legislature have undertaken thereby to embark the State in a trading enterprise, which they have no constitutional authority to do, not because there is any express prohibition to that effect in the constitution, but because it is utterly at variance with the very idea of civil government, the establishment of which was the expressly declared purpose for which the people adopted their constitution; and therefore all the powers conferred by that instrument upon the various departments of the government must necessarily be regarded as limited by that declared purpose. Hence when, by the first section of the second article of the constitution, the legislative power was conferred upon the general assembly the language there used can not be construed as conferring upon the general assembly the unlimited power of legislating upon any subject or for any purpose according to its unrestricted will, but must be construed as limited to such legislation as may be necessary or appropriate to the real and only purpose for which the constitution was adopted, to wit, the formation of a civil government. In this connection it is noticeable that the world "all" is not used in the section above referred to, but the language used is "the legislative power," meaning such legislative power as may be necessary or appropriate to the declared purpose of the people in framing their constitution and conferring their powers upon the various departments constituted for the sole purpose of carrying into effect their declared purpose. It is manifest from the numerous express restrictions upon the legislative will found in the constitution that the people were not willing to intrust even their own representatives with unlimited legislative power, but, as if not satisfied with these numerous express restrictions and perhaps fearing that some important right might have been overlooked, a general clause, not usually found in State constitutions, was inserted—

I invite particular attention to that, because it is an unusual provision in a State constitution, but a provision which exists in the Federal Constitution—

apparently designed to cover any such omissions, for in section 41 of article 1 it is expressly declared that "the enumeration of rights in this constitution shall not be construed to impair or deny others retained by the people, and all powers not herein delegated remain with the people."

I do not know that that provision exists in any other constitution except the Federal Constitution.

Now, upon well-settled principles of constitutional construction we are not at liberty to disregard this clause, but must give it some meaning and effect. It seems to us that the true construction of this clause is that, while there are many rights which are expressly reserved to the people with which the legislature are forbidden to interfere, there are other rights reserved to the people, not expressly but by necessary implication, which are beyond the reach of the legislative power unless such power has been expressly delegated to the legislative department of the Government. These views have not only the support of the highest authority in this country, as may be seen by reference to the cases of Citizens Savings & Loan Association of Cleveland *v.* Topeka (87 U. S.; 20 Wall., 655; 22 L. Ed., 455) and Parkersburg *v.* Brown (106 U. S., 487; 27 L. Ed., 238), but have been distinctly adopted by the supreme court of the State in Feldman *v.* Charleston (23 S. C., 57; 55 Am. Rep., 6), as well as by the courts of Massachusetts and Maine, as may be seen by reference to Allen *v.* Jay (60 Me., 124; 11 Am. Rep., 185) and Lowell *v.* Boston (111 Mass., 454; 15 Am. Rep., 39), and, what is more, they were applied to the vital power of taxation, a power absolutely essential to the very existence of every government. These cases substantially hold that, although there may be no express restrictions contained in a State constitution forbidding the imposition of taxes for any other purpose than a public purpose, yet such a restriction must necessarily be implied from the very nature of civil government; and hence the legislative department, under the general power of taxation conferred upon it, can not impose any tax except for some public purpose. Upon the same principle it seems to us clear that any act of the legislature which is designed to or has the effect of embarking the State in any trade which involves the purchase and sale of any article of commerce for profit is outside and altogether beyond the legislative power conferred upon the general assembly by the constitution, even though there may be no express provision in the constitution forbidding such an exercise of legislative power. Trade is not and can not properly be regarded as one of the functions of government. On the contrary, its function is to protect the citizen in the exercise of any lawful employment, the right to which is guaranteed to the citizen by the terms of the constitution, and certainly has never been delegated to any department of the government.

Now, note that—

Trade is not, and can not properly be, regarded as one of the functions of government.

That was the original case where the law was plainly held to be unconstitutional. Now I come to the case which overrules it. That is reported in Forty-second South Carolina, at page 22, and is entitled State against Aiken. After discussing the question of stare decisis, and reaching the conclusion that they were not bound to adhere to the former decision of their own court in a similar case, they say:

In the light of these cases we proceed to a consideration of the act of 1893. Before proceeding to a consideration of the specific objections urged against the constitutionality of the act, we desire to state at the outset that, in our opinion, the following propositions embody the principles governing this case—

Now, note—

(1) That liquor in its nature is dangerous to the morals, good order, health, and safety of the people, and is not to be placed on the same footing with the ordinary commodities of life, such as corn, wheat, cotton, tobacco, potatoes, etc. (2) That the State under its police power can itself assume entire control and management of those subjects, such as liquor, that are dangerous to the peace, good order, health, morals, and welfare of the people, even when trade is one of the incidents of such entire control and management on the part of the State. (3) That the act of 1893 is a police measure. We are frank to say that if we are wrong as to either of these propositions, the act should be declared unconstitutional. We will now cite authorities to sustain these propositions.

So you see the Supreme Court in this opinion held that the constitutionality of the act could be justified only upon the theory that the liquor business was one dangerous to society; that if it had not been there undoubtedly would be no power in the State to engage in it. Does anyone pretend that the carriage of goods is a business which is dangerous to morals or society? It is as legitimate a business as buying or selling merchandise or any other legitimate business.

Farther along in the case it is said:

It is contended that the foregoing section—

That is, the section which reserves the right not delegated to the people—

It is contended that the foregoing section prevents the legislature from embarking the State in a commercial enterprise. We have no doubt that if such was the object of the act, and it was not intended as a police measure, it would be unconstitutional, even in the absence of section 41, Article I. As we have said, if the act is not a police measure it is unconstitutional. It is quite a different thing, however, when trade is simply an incident to a police regulation. Buying and selling on the part of the Federal, State, and municipal Governments take place every day, and as long as the buying and selling are in pursuance of police regulations they are entirely free from legal objection. The Federal Government sells liquor and other articles that have been seized as contraband. Articles are purchased by the State to keep up the penitentiary and asylum and other public institutions and enterprises. We see it buying a farm to utilize the convict labor of the State, and selling the produce made on the farm. Municipal governments have the right to buy and dispose of property in administering their governmental affairs. The very distinction for which we contend is pointed out in the case of Mauldin *v.* City Council (33 S. C., 1). In that case the court showed it was not wrong for the city to buy and sell for a public purpose, but that the act only became illegal when it was for a private purpose.

That is what this is for, a private purpose.

We think the case was properly decided, and that the decision rested upon this distinction.

The case of Beebe *v.* State (6 Ind., 501) was upon the construction of a statute of Indiana somewhat similar to the act in question, and is relied upon as an authority to sustain the proposition that the State can not take direct control and management of the liquor traffic. In that case the court uses the following language: "The business—the manufacture and sale of liquor—was, at and before the organization of the government, and is properly at all times, a private pursuit of the people, as much so as the manufacture and sale of brooms, tobacco,

clothes, and the dealing in tea, coffee, and rice, and the raising of potatoes." This case is in conflict with the distinction made between liquor and the ordinary commodities of life, as enunciated in the case of Crowley *v.* Christensen, supra; Black *v.* Intoxicating Liquor, supra; State *v.* Turner (18 S. C., 106); and other authorities hereinbefore mentioned. If liquor is to be placed on the same footing with the articles mentioned in the Indiana case, then that decision was right; but if there is that distinction for which we contend, then the case is valueless as an authority, being decided on erroneous principles. The principles upon which that case was decided would have forced the court that rendered it to have declared null and void a statute entirely prohibiting the traffic in liquor, although there is no longer any doubt as to the constitutionality of such statutes.

The case of Rippe *v.* Becker (Minn., 57 N. W., 331)—

That is the case from which I have just read—

is also relied upon to sustain the constitutional objection to the act of 1893. The title of the act construed in Rippe *v.* Becker was, "An act to provide for the purchase of a site, and for the erection of a State elevator or warehouse at Duluth for public storage of grain." The syllabus of the case prepared by the court states: "The police power of the State to regulate a business is to be exercised by the adoption of rules and regulations as to the manner in which it shall be conducted by others, and not by itself engaging in it." The language of the court, as applying to that case, was proper, and we think—

Now, mark—

"the case was properly decided in the light of the distinction between liquor and the ordinary commodities of life which we have pointed out. There was nothing in the business dangerous to the health, morals, and safety of the people, and the act should have been declared null and void."

That is, they expressly approve the decision of the Supreme Court of Minnesota to the effect that under the power to regulate a business the State has no authority to go into the business, unless it happens to be one like the liquor business, which is dangerous to the morals of the community.

In the dissenting opinion it is said:

As a justification for the State entering into the business of buying and selling liquors, reference is made to the fact that the Federal, State, and municipal governments buy and sell articles without question as to their authority so to do; and reference is made to the practice of the penitentiary and lunatic asylum, both of which institutions buy articles for the support thereof, and sell the products of the labor of the inmates thereof—

I am reading from the dissenting opinion—

But this, as it strikes me, is a very different thing from the State's engaging in the liquor traffic. In the one case, the articles are bought for the purpose of carrying on the Government or the institutions above alluded to, and when no longer needed for such purposes, sold again, while under the dispensary legislation, liquor is bought, not for any governmental purpose, but for the express purpose of being sold again at a profit. It also seems to have escaped attention that the two institutions specifically referred to—the lunatic asylum and penitentiary—are both contemplated and provided for in the Constitution—the former expressly and the other by necessary implication, as may be seen by reference to sections 1, 2, Article XI, of the Constitution—and, therefore, any appropriate means for carrying them on may lawfully be provided for by statute.

So, taking these two cases together, it is perfectly plain that—and I have been unable, in my search, to find any to the contrary—under the power to regulate a thing the State can not do that thing. It would seem not to require any authority to sustain a proposition so plain.

Mr. SHIELDS. Mr. President——

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from Tennessee?

Mr. SUTHERLAND. Yes.

Mr. SHIELDS. The Senator has gone very exhaustively into the State cases on kindred subjects. I desire to ask him whether he has examined certain decisions of the Supreme Court of the United States on the commerce clause?

Mr. SUTHERLAND. I have examined them. The Senator refers to the case in One hundred and ninety-ninth United States Reports and the cases which preceded it?

Mr. SHIELDS. Those which I wish to call the Senator's attention to are the cases of California *v.* The Central Pacific Railway Co. (127 U. S., p. 1)——

Mr. SUTHERLAND. Yes; that case held that it was an exercise of the power to regulate commerce to provide the corporate form through which private citizens could do business.

Mr. SHIELDS. And also the case of Monongahela Navigation Co. *v.* United States (148 U. S.).

Mr. SUTHERLAND. Yes.

Mr. SHIELDS. And the case of Luxton *v.* The North Bridge Co.

Mr. SUTHERLAND. Yes. They held the same thing in those cases.

Mr. SHIELDS. The cases I have called the Senator's attention to are cited in the latest—and a very accurate and valuable—work on Constitutional Law, by Mr. Willoughby, as supporting this proposition:

The Federal Government has the undoubted power itself to own and operate, or to incorporate companies for the construction and operation of, roads, bridges, and other instrumentalities of interstate commerce.

Mr. SUTHERLAND. Does the author say there that it has the power to own and operate?

Mr. SHIELDS. Yes, sir. I will read it again.

Mr. SUTHERLAND. Mr. President, if the author means by that to assert the power of the Government to become a carrier of goods, I must take the liberty of disagreeing with him. He will search in vain for any authority which has ever held that. The authorities which I have read just now are plainly to the contrary. It is not a function of Government to engage in trade. Does the Senator think that for the United States to set up a mercantile establishment of its own in the District of Columbia would be a governmental function—to buy and sell groceries?

Mr. SHIELDS. Mr. President, I do not think so, nor does Mr. Willoughby say so, but, as held by these cases, that he practically digests it undoubtedly has the power to own and operate directly or to incorporate companies for the construction and operation of roads and bridges and other instrumentalities of interstate commerce, just as we contend it has the right to own and operate ships to facilitate the exportation of the products of the United States and the importation of such articles of commerce as we need. The primary object of this legislation is to aid and facilitate commerce in the sense of traffic and exchange of commodities, and not transportation, as a business. The latter is only an incident to the first.

Mr. SUTHERLAND. I have been standing on my feet for about an hour and a half attempting to establish exactly the contrary of that. Of course I can not assent to what the Senator has said. I assert that there is no case in the Supreme Court of the United States which holds that under the power to regulate commerce the Government of the United States may go into the business of carrying goods. It is obviously not a regulation of commerce. It is the doing of the thing which the Constitution by express terms limited the Government to regulating.

Mr. BORAH. Mr. President——

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from Idaho?

Mr. SUTHERLAND. I yield to the Senator as far as I may—for a question.

Mr. BORAH. I understand the Senator is not now arguing as to the policy of this measure, but as to the power of Congress to do that which we are proposing to do; and the Senator takes the position that, whether wise or unwise, we have not the power to purchase these ships under the commerce clause or any other clause of the Constitution, as I understand him?

Mr. SUTHERLAND. Oh, I would not say that we have not the power to purchase ships under some other power. We would have the power to purchase ships as auxiliaries to the Navy and incident to that.

Mr. BORAH. I mean to engage in commerce.

Mr. SUTHERLAND. No; not as a primary object.

Mr. BORAH. Suppose the United States had concluded, instead of having a corporation build the Pacific Railroad, the transcontinental railroad, to do it itself—does not the Senator think the Government could have done it?

Mr. SUTHERLAND. I am not sure that the Government could have built the Pacific Railroad. I am inclined to think the Government has the authority to build the railroad in Aalska, but that is under a totally different power. What I am arguing is that the Government can not engage in the business of carrying goods under the commerce clause of the Constitution. Now, we provided for building the railroad in Alaska. I doubt the wisdom of that. I voted against it. But we have the power to dispose of and make all rules and regulations for that property of ours. It is our property. We are not only in there as sovereign, but we are in there as proprietor; and we may do many things in Alaska that we can not do among the States of the Union. I may say to the Senator that the Pacific Railroad when it was authorized, with the exception of a very short part of it, ran through the Territories. Possibly that might have justified it in some particulars. It might have been justified as a military necessity.

Mr. BORAH. Exactly.

Mr. SUTHERLAND. Or as the establishment of a post road.

Mr. BORAH. Exactly.

Mr. SUTHERLAND. But that is not what this bill is.

Mr. BORAH. No; but suppose the Government conceived it to be its duty to provide for the emergency that existed by reason of the war, and that that emergency could be taken care of in part by building a road from the Atlantic to the Pacific as a military necessity, we will say, to begin with. Could not the Government have proceeded to operate that road and carry

on commerce and the ordinary duties of transportation companies?

Mr. SUTHERLAND. Mr. President, I will answer that by saying that if it could it would be in precisely the same way that a State government could sell goods which it had purchased for its institutions. Having the undoubted power to purchase goods, and having no longer any use for them in that governmental connection, it, of course, as an incident of that, could part with them. It is possible that if the Government had established a post road or a railroad under some power that would be appropriate, thereafter if it ceased to be useful under that power it could operate it. I am not prepared to say that that would not follow, but what I do say is that this bill proposes to embark the Government of the United States in the shipping business for the purpose of regulating commerce. It is not tied to any other power in the remotest way. It says so. The opening sentence of the bill says that the purpose of it is to enable them to go into the mercantile business of carrying goods from this country to foreign lands.

Mr. BORAH. I only wanted to have it appear that while I might entirely agree with the Senator, and I think I do, as to the question of policy, I want to reserve my judgment as to the question of power.

Mr. SUTHERLAND. I have the highest sort of regard for the opinion of the Senator from Idaho; but I have done some thinking and some investigation about this subject, and, if the Senator will permit me to say so, even his opinion to the contrary has not dismayed me.

Mr. BORAH. Mr. President, the reason I reserved my judgment instead of expressing it was because of my high regard for the opinion of the Senator from Utah. Otherwise I should have been very clear in my own mind that we had the power.

Mr. SUTHERLAND. I have one final authority that I desire to quote from and then I am through, so far as this branch of the discussion is concerned. It is One hundred and fifty-fifth Massachusetts, page 598. Of course I am driven to quote State authorities on this question because hitherto the question has never arisen in the Federal Government. At page 598 the legislature wanted to know of the justices of the Supreme Court of Massachusetts whether or not it would be constitutional to pass a law authorizing a certain town or towns to go into the business of buying and selling coal and wood. The majority of the court held to the contrary. One justice qualified it to some extent and one of the justices thought they had the power. This is the majority opinion, and it seems to have been concurred in, as I recall, by all but one of the justices. I observe that there were seven of them, and five of them concurred:

> Constitutional questions concerning the power of taxation necessarily are largely historical questions. The constitution must be interpreted as any other instrument with reference to the circumstances under which it was framed and adopted. It is not necessary to show that the men who framed it or who adopted it had in mind everything which by construction may be found in it, but some regard must be had to the modes of thought and action on political subjects then prevailing, to the discussions upon the nature of the government to be established, to the meaning of the language used as then understood, and to the grounds on which the adoption or rejection of the constitution was advocated before the people. We know of nothing in the history of the adoption of the constitution that gives any countenance to the theory that the buying and selling of such articles as coal and wood for the use of the inhabitants was regarded at that time as one of the ordinary functions of the government which was to be established. There are nowhere in the constitution any provisions which tend to show that the government was established for the purpose of carrying on the buying and selling of such merchandise as at the time when the constitution was adopted was usually bought and sold by individuals and with which individuals were able to supply the community, no matter how essential the business might be to the welfare of the inhabitants. The object of the constitution was to protect individuals in their rights to carry on the customary business of life rather than to authorize the Commonwealth or the "towns, parishes, precincts, and other bodies politic" to undertake what had usually been left to the private enterprise of individuals.
>
> * * * * * * *
>
> If there be any advantage to the inhabitants in buying and selling coal and wood for fuel at the risk of the community on a large scale, and on what has been called the cooperative plan, we are of the opinion that the Constitution does not contemplate this as one of the ends for which the Government was established or as a public service for which cities and towns may be authorized to tax their inhabitants.

Mr. President, there is one further thing I desire to say a word or two about.

Mr. WALSH. Mr. President——

The VICE PRESIDENT. Does the Senator from Utah yield?

Mr. SUTHERLAND. Yes.

Mr. WALSH. Before the Senator passes from that, will he give us his idea about the right of the Government of the United States to purchase stock in the Panama Railway Co. and become a stockholder in that corporation?

Mr. SUTHERLAND. Mr. President, the Supreme Court itself—I have forgotten the case now—has held that that was upon a wholly different ground.

Mr. WALSH. I think the Senator did not understand me. I am not speaking about the power to build the canal, but of the right of the Government of the United States——

Mr. SUTHERLAND. I understand the Senator.

Mr. WALSH (continuing). To purchase stock in the Panama Railway Co.

Mr. SUTHERLAND. When was the Panama Railroad purchased from the French Government?

Mr. WALSH. It was purchased at the time the work was commenced, in 1901 and 1902.

Mr. ROOT. The stock of the Panama Railroad Co. was owned by the French company which was engaged in the attempt to construct the canal, and when the Government of the United States bought the rights of the French company on the Isthmus the stock of the Panama Railroad came with it, the railroad being an indispensable adjunct and agency in the construction of the canal, just as much as a steam shovel.

Mr. WALSH. Mr. President——

Mr. SUTHERLAND. I do not want to consent to this colloquy if it affects my right in any way.

The VICE PRESIDENT. Unless some Senator objects, as far as the Chair is concerned, the colloquy may proceed.

Mr. SUTHERLAND. I do not know what Senator may object. Therefore I had better pursue my remarks.

The VICE PRESIDENT. The Senator is clearly within his right.

Mr. WALSH. The Senator spoke, however, if he will pardon me, about the conclusion reached by the Supreme Court of the United States in the Panama Canal case.

Mr. SUTHERLAND. Yes.

Mr. WALSH. If the Senator has not given to the Senate the views of the Supreme Court of the United States in this connection, it may be that it would be helpful in his discussion.

Mr. SUTHERLAND. The building of the Panama Canal was like the clearing out of a harbor, or like the building of a post road; it was an instrumentality of commerce; it was not commerce itself.

Mr. WALSH. No doubt. But the Supreme Court of the United States——

Mr. SUTHERLAND. The difference I have already stated. The Senator from Montana was not in, but in reply to a similar question I stated that the difference is between the United States Government furnishing an instrumentality of commerce and becoming itself an instrumentality of commerce.

Mr. WALSH. But the Supreme Court of the United States did in that case put their decision upon the broad ground, did they not, that Congress had a right to construct a canal, and therefore had a right to construct a railroad for the purpose of facilitating interstate commerce?

Mr. SUTHERLAND. They held that they had a right to construct this canal. The railroad was another matter.

Mr. WALSH. Might I in this connection refer to a few lines——

Mr. SUTHERLAND. I think, Mr. President, I must not yield for that purpose. The Senator will have ample time, of course, to do that.

Now, Mr. President, I call attention to one of the provisions of this bill, which is that—

> Said corporation and its capital stock shall, so long as the United States owns a majority of said stock, be free from all public taxes.

In the first place, I think that provision, if it is valid, is unwise; but I think it is both unwise and invalid, and being in the bill, of course, will lead to litigation and difficulty. The corporation is to be freed from all public taxes, which means, as the Senator from Florida [Mr. FLETCHER] very frankly conceded, that no property of this corporation can be taxed. In other words, he conceded, in answer to the question which I put to him, if this corporation, although 49 per cent of its stock may be owned by private individuals and although it is engaged in a private business in competition with private citizens, buys terminal facilities in New York or in Baltimore, under this provision of the bill those terminal facilities can not be taxed by the State, although the terminal facilities of a private company lying alongside can be taxed. He also conceded, which is obviously true, that if a citizen in Montana owns a block of stock in this corporation and is living in Montana and the laws of Montana provide that the shares of stock of corporations owned by its citizens may be taxed, no tax could be levied upon the shares of stock in this corporation so held.

In the first place, the provision is utterly unfair. Why should a corporation engaged in a private business enterprise

in competition with private citizens be relieved of the ordinary burdens which are borne by its competitors? Of course, the effect of it is to make competition more onerous. The conditions are bad enough as they are. The Government is going into this enterprise backed by the whole taxing power of the United States. It may run at a loss and recoup its losses by general taxation, an opportunity which no private citizen has. Confessedly, it is going to run at a loss, as stated by the Secretary of the Treasury. It is a venture of so much doubt that he does not expect private citizens to contribute to the stock, yet after those onerous conditions, those oppressive circumstances against the private competitor are written into the bill, it must go further and exempt his property from taxation.

Here are Kuhn, Loeb, & Co.—I use their name because the name comes to me—who for some reason or other desire to purchase $4,900,000 worth of this stock. They thereby take money which otherwise might go into enterprises in the State and be subject to taxation and put it into this enterprise. They may not invest for the purpose of making profits. There may be some other object. They or somebody else who makes the investment may think it is a desirable connection to be interested with the Government in an enterprise of this kind. At any rate, they make the investment. Upon what theory of justice should that $4,900,000 of money belonging to this firm be taken from the power of the State to tax? Upon what theory should the terminal facilities in New York be exempted from taxation when everybody else's property of a similar character engaged in the same business is subject to the tax? Upon what theory should the ships be exempt from taxation in their home ports when the ships of all private citizens engaged in the same business are subject to taxation?

The provision is utterly indefensible from a practical point of view. If that may be done and this principle is extended and the Government acquires all the railroads of the country, taking over property worth eighteen to twenty billion dollars, it may exempt that property from taxation and strip the States in many instances of one of the greatest sources of their taxation, and thereby add greatly to the burdens of the ordinary taxpayers whose rate of taxation must be increased to fill the gap that has been made by these exemptions.

Mr. President, that is the practical objection to it; but if the Government of the United States has the power to go into this business, as I have been trying to argue it has not, it has not the power to exempt such property as this from taxation. It may exempt the franchise of the corporation, the franchise to be a corporation organized in the District of Columbia from taxation in another State. Indeed, it need not write that into the law. It would be exempt under general principles. But I deny the power of the United States Government to go into a private business and thereby lay aside its sovereignty, as far as that business is concerned, and withdraw the property which it utilizes in that enterprise from State taxation, withdraw it from the power of the State to tax when the property is in the State.

The authority which is likely to be cited for that clause is the case of McCulloch against Maryland, Fourth Wheaton, page 316. The court there held that the States could not tax the bank, but it was careful to sum up in this language:

> The opinion does not deprive the States of any resources which they originally possessed. It does not extend to a tax paid by the real property of the bank in common with the other real property within the State, nor to a tax imposed on the interest which the citizens of Maryland may hold in this institution in common with other property of the same description throughout the State. But this is a tax on the operations of the bank, and is consequently a tax on the operation of an instrument employed by the Government of the Union to carry its powers into execution. Such a tax must be unconstitutional.

But they held that the tax could be imposed upon the property, and that it was not deprived of the right to tax the interest which the shareholders held in the institution.

In First Dillon, page 320, the case of the Union Pacific Railroad Co. against Lincoln County, Mr. Justice Dillon said what I shall read. The claim was made there that the State could not enforce taxes upon this railroad company's property, which had been incorporated under a law of the United States:

> The argument in support of this proposition is that the corporation was created by Congress and not by the State; that it was created because deemed by Congress a fit instrumentality or means of exercising the constitutional powers of carrying on, promoting, or facilitating the operations or executing the duties of the General Government, and that if it be such instrumentality or means it is settled that it is beyond the taxing power of the State.
>
> Reliance is placed upon the cases of McCulloch *v.* Maryland (4 Wheat., 316) and Osborn *v.* The Bank of the United States (9 Wheat., 738), in which it was held by the Supreme Court that this bank, "as the great instrument by which the fiscal operations of the Government were effected," and "as a public corporation, created for public and national purposes," was not, on its capital or in its operations, taxable by the States. In a word, it is claimed by the company that as respects immunity from taxation it stands precisely in the situation of the bank, and that taxation of it by the States is unconstitutional for the same reasons that in those cases the laws of Maryland and Ohio taxing the bank were adjudged to be invalid.
>
> The defendant controverts these propositions, and contends that the Union Pacific Railroad Co., though chartered by Congress, is essentially a "private corporation, whose principal object is individual trade and individual profit, and not a public corporation created for public and national purposes," and denies that it is an instrument, agency, or means of the General Government in such a sense as, on this ground, to exempt it by necessary implication from taxation by the States.
>
> The cases referred to undoubtedly establish the doctrine that no State has the right to tax the means, agencies, or instrumentalities rightfully employed within the States by the General Government for the execution of its powers; and this doctrine is adhered to and, when understood with the necessary qualifications, declared to be sound by the Supreme Court in its latest adjudications on the subject. (Thompson *v.* Pacific Railroad, 9 Wall., 579, 591; National Bank *v.* Commonwealth, ib., 353, 361.)
>
> The doctrine of the implied exemption of Federal instrumentalities from State taxation, its rationale, and its limitations, are so clearly stated by the learned justice assigned to this circuit, in the case last cited, that his observations may be advantageously extracted to aid our present inquiries. The case related to the right of the States to tax shares of the national banks, and "it is argued," says Mr. Justice Miller, "that the banks, being instrumentalities of the Federal Government, by which some of its important operations are conducted, can not be subjected to such State legislation. It is certainly true that the Bank of the United States and its capital were held to be exempt from State taxation on the ground here stated, and this principle, laid down in the case of McCulloch against the State of Maryland, has been repeatedly affirmed by this court. But the doctrine has its foundation in the proposition that the right of taxation may be so used in such cases as to destroy the instrumentalities by which the Government proposes to effect its lawful purposes in the States, and it certainly can not be maintained that banks or other corporations or instrumentalities of the Government are to be wholly withdrawn from the operation of State legislation. * * * The principle we are discussing has its limitation—a limitation growing out of the necessity on which the principle itself is founded. That limitation is that the agencies of the Federal Government are only exempted from State legislation so far as that legislation may interfere with or impair their efficiency in performing the functions by which they are designed to serve that Government. Any other rule would convert a principle founded alone in the necessity of securing to the Government of the United States the means of exercising its legitimate powers into an unauthorized and unjustifiable invasion of the rights of the States. It is only when the State law incapacitates the banks from discharging their duties to the Government that it becomes unconstitutional." (9 Wall., 361, 362.) The State legislation, then, to come within the operation of the principle must relate not simply to an agent, but to an agency of the General Government, and must be of a character which incapacitates the agency to perform or interferes with its efficiency in performing its duties to the Government, or it must (as in the case of a tax, which, if valid at all, is valid to any extent the State may see fit to press it) assert a principle in its nature antagonistic to the Federal instrumentality and which may be exercised to destroy it.

Further on the court says:

> The Government created the corporation and both authorized and aided the building of the road. It was to be constructed within the Territories of the United States; and if Congress was not the only power which could erect said corporation and authorize it to build the road therein, it is certain that no road could have been constructed through the national domain against the will of Congress.
>
> The purpose of Congress is manifest, not only from the nature of the legislative provisions but from the plain expression of it, both in the title and in the body of the incorporating act. It is declared in the eighteenth section that "the object of this act is to promote the public interest and welfare by the construction of said railroad and telegraph line, and keeping the same in working order, and to secure to the Government at all times—but particularly in time of war—the use and benefits of the same for postal, military, and other purposes," and to this end "Congress may at any time, having due regard for the rights of said companies named herein, add to, alter, amend, or repeal this act." And to the same effect is the title, which is, "An act to aid in the construction of a railroad, etc., and to secure to the Government the use of the same for postal, military, and other purposes."

Mr. OWEN. Mr. President, I rise to a point of order. We can not hear the Senator at all on this side.

Mr. SUTHERLAND. I do not think that is a point of order.

Mr. OWEN. No Senator has a right to occupy the floor mumbling to himself words which can not be heard on this side. We have a right to know what he is saying.

Mr. SUTHERLAND. The Senator's language may be parliamentary, but it is offensive. The Senator from Utah is not mumbling to himself.

The VICE PRESIDENT. The Chair knows of no way by which the Chair can compel a Senator to raise his voice.

Mr. SUTHERLAND. Perhaps the Senator from Oklahoma knows of some way by which he could compel the Senator from Utah to raise his voice.

Mr. OWEN. I think the Senate ought to compel it.

Mr. SUTHERLAND. Well, let the Senator from Oklahoma try. Shall I proceed, Mr. President?

The VICE PRESIDENT. The Senator from Utah will proceed. The Chair has no power to decide in what tone of voice a Senator shall discuss a question.

Mr. SUTHERLAND. The court concludes:

> 1. That the Union Pacific Railroad Co. is not an instrument of the Government in such a sense as exempts it, by implication, from the taxing power of the State through which its road may be located.
>
> 2. If it be in any sense a Federal instrumentality, the rights of the Government, under the incorporating act, are fully protected and reserved, and any rights derived from a sale for taxes, under State authority, are entirely subordinate to the original, paramount, and indefeasible rights of the General Government; can not destroy the cor-

poration nor incapacitate it from discharging any of its inalienable, fundamental, and organic duties to the Government. If so, then the case falls without the principle on which the corporation relies to sustain its application for an injunction.

I think I can discover in the more recent judgment of the Supreme Court evidences of a conviction on the part of the judges that the doctrine of implied exemption of Federal agencies from State taxation has been carried quite to its limit, and that it will not be pressed to embrace a case of the character of the one now under consideration.

The only other case to which I desire to refer is that of the Railway Co. *v.* Peniston (18 Wall.), and, with the permission of the Senate, I will not stop to read the extracts, but will insert them as a part of my remarks.

The VICE PRESIDENT. Without objection, permission to do so is granted.

The matter referred to is as follows:

That the Union Pacific Railroad Co. was created to subserve, in part at least, the lawful purposes of the National Government; that it was authorized to construct and maintain a railroad and telegraph line along the prescribed route; and that grants were made to it and privileges conferred upon it under condition that it should at all times transmit dispatches over its telegraph line and transport mails, troops, and munitions of war, supplies and public stores, upon the railroad for the Government whenever required to do so by any department thereof, and that the Government should at all times have the preference in the use of the same for all the purposes aforesaid must be conceded. Such are the plain provisions of its charter.

* * * * * * *

Admitting then, fully, as we do, that the company is an agent of the General Government, designed to be employed and actually employed in the legitimate service of the Government, both military and postal, does it necessarily follow that its property is exempt from State taxation?

* * * * * * *

Nothing, we think, in the past decisions of this court is inconsistent with the opinions we now hold. McCullough *v.* The State of Maryland and Osborn *v.* Bank of the United States are much relied upon by the appellants, but an examination of what was decided in those cases will reveal that they are in full harmony with the doctrine that the property of an agent of the General Government may be subjected to State taxation. In the former of those cases the tax held unconstitutional was laid upon the notes of the bank. The institution was prohibited from issuing notes at all except upon stamped paper furnished by the State and to be paid for on delivery, the stamp upon each note being proportioned to its denomination. The tax, therefore, was not upon any property of the bank, but upon one of its operations—in fact, upon its right to exist as created. It was a direct impediment in the way of a governmental operation performed through the bank as an agent. It was a very different thing, both in its nature and effect, from a tax upon the property of the bank. No wonder, then, that it was held illegal. But even in that case the court carefully limited the effect of the decision. It does not extend, said the Chief Justice, to a tax paid by the real property of the bank in common with the other real property in the State, nor to a tax imposed on the interest which the citizens of Maryland may hold in the institution. * * * But this is a tax upon the operations of the bank, and is, consequently, a tax upon the operations of an instrument employed by the Government of the Union to carry its powers into execution. Such a tax must be unconstitutional. Here is a clear distinction made between a tax upon the property of a Government agent and a tax upon the operations of the agent acting for the Government.

In Osborn *v.* The Bank the tax held unconstitutional was a tax upon the existence of the bank—upon its right to transact business within the State of Ohio. It was, as it was intended to be, a direct impediment in the way of those acts which Congress, for national purposes, had authorized the bank to perform. For this reason the power of the State to direct it was denied; but at the same time it was declared by the court that the local property of the bank might be taxed, and, as in McCulloch *v.* Maryland, a difference was pointed out between a tax upon its property and one upon its action. In noticing an alleged resemblance between the bank and a Goverment contractor, Chief Justice Marshall said: "Can a contractor for supplying a military post with provisions be restrained from making purchases within a State or from transporting the provisions to the place at which the troops were stationed? Or could he be fined or taxed for doing so? We have not heard these questions answered in the affirmative. It is true the property of the contractor may be taxed, and so may the local property of the bank; but we do not admit that the act of purchasing or of conveying the articles purchased can be under State control." This distinction, so clearly drawn in the earlier decisions, between a tax on the property of a governmental agent and a tax upon the action of such agent, or upon his right to be, has ever since been recognized. All State taxation which does not impair the agent's efficiency in the discharge of his duties to the Government has been sustained when challenged, and a tax upon his property generally has not been regarded as beyond the power of a State to impose. In National Bank *v.* The Commonwealth of Kentucky, when the right to tax national banks was under consideration, it was asserted by us that the doctrine can not be maintained that banks or other corporations or instrumentalities of the Government are to be wholly withdrawn from the operation of State legislation. Yet it was conceded that the agencies of the Federal Government are uncontrollable by State legislation, so far as it may interfere with or impair their efficiency in performing the functions by which they are designed to serve that Government.

It is therefore manifest that exemption of Federal agencies from State taxation is dependent not upon the nature of the agents, or upon the mode of their constitution, or upon the fact that they are agents, but upon the effect of the tax; that is, upon the question whether the tax does in truth deprive them of power to serve the Government as they were intended to serve it, or does hinder the efficient exercise of their power. A tax upon their property has no such necessary effect. It leaves them free to discharge the duties they have undertaken to perform. A tax upon their operations is a direct obstruction to the exercise of Federal powers.

In this case the tax is laid upon the property of the railroad company precisely as was the tax complained of in Thompson *v.* Union Pacific. It is not imposed upon the franchises or the right of the company to exist and perform the functions for which it was brought into being, nor is it laid upon any act which the company has been authorized to do. It is not the transmission of dispatches, nor the transportation of United States mails, or troops, or munitions of war that is taxed, but it is exclusively the real and personal property of the agent, taxed in common with all other property in the State of a similar character. It is impossible to maintain that this is an interference with the exercise of any power belonging to the General Government, and if it is not, it is prohibited by no constitutional implication.

Mr. SUTHERLAND. Now, I want to call attention also and to insert an extract or two from the case of South Carolina against United States in One hundred and ninety-ninth United States, and particularly pages 454, 461, and 463. In that case, while the Supreme Court respected the decision of South Carolina that the business was one in which the State could engage, it held that the property, although the property of the State, was subject to taxation by the United States. There is some language in that case which I will insert in the RECORD, which I think conclusively establishes that neither the Federal Government, which undertakes to deal with property in a quasi private capacity, can withdraw that property from the taxation of the State, nor, conversely, can the State withdraw such property from the taxing power of the United States.

The extracts are as follows:

Mingling the thought of profit with the necessity of regulation may induce the State to take possession, in like manner, of tobacco, oleomargarine, and all other objects of internal-revenue tax. If one State finds it thus profitable, other States may follow, and the whole body of internal-revenue tax be thus stricken down.

More than this. There is a large and growing movement in the country in favor of the acquisition and management by the public of what are termed public utilities, including not merely therein the supply of gas and water but also the entire railroad system. Would the State by taking into possession these public utilities lose its republican form of government?

We may go even a step further. There are some insisting that the State shall become the owner of all property and the manager of all business. Of course this is an extreme view, but its advocates are earnestly conteading that thereby the best interests of all citizens will be subserved. If this change should be made in any State, how much would that State contribute to the revenue of the Nation? If this extreme action is not to be counted among the probabilities, consider the result of one much less so. Suppose a State assumes under its police power the control of all those matters subject to the internal-revenue tax and also engages in the business of importing all foreign goods. The same argument which would exempt the sale by a State of liquor, tobacco, etc., from a license tax would exempt the importation of merchandise by a State from import duty. While the State might not prohibit importations, as it can the sale of liquor, by private individuals, yet paying no import duty it could undersell all individuals and so monopolize the importation and sale of foreign goods.

These decisions, while not controlling the question before us, indicate that the thought has been that the exemption of State agencies and instrumentalities from National taxation is limited to those which are of a strictly governmental character, and does not extend to those which are used by the State in the carrying on of an ordinary private business.

It is reasonable to hold that while the former may do nothing by taxation in any form to prevent the full discharge by the latter of its governmental functions, yet whenever a State engages in a business which is of a private nature that business is not withdrawn from the taxing power of the Nation.

Mr. President, just a final word or two in conclusion. If this bill passes, the question naturally arises, what ships can be bought? Either they must be the ships which are now in use or those which have been interned and are idle. If we buy the ships which are in use, we shall have added nothing to the sea-carrying capacity; we shall not probably have relieved the situation at all; we shall not have put more ships upon the ocean; we shall not have added to the tonnage capacity. It is not to be expected that the neutral countries, whose vessels are engaged in trade at a profit, will sell them to the United States, unless we are compelled to pay extravagant prices. Certainly it is not to be expected that England or France will sell, or that their citizens will sell their vessels with the consent of their Governments. They may be greatly needed in the carrying trade of those countries. If we do not buy those ships, if we can not buy them, or if it is thought unwise to buy them, then the only ships that we can turn our attention to are those so-called interned ships, which belong to the citizens of one or the other of the belligerent countries. It is made apparent by the testimony of Mr. McAdoo in House hearings, at page 26, that it was the intention of the Government, in proposing this bill, to purchase these interned vessels. If we undertake to do that, as has already been shown so clearly by the Senator from New York [Mr. ROOT] and the Senator from Massachusetts [Mr. LODGE], we will have bought a quarrel which may result in very serious consequences to the United States.

I want, in that connection, to call attention to the language of Mr. Lansing in his testimony before the Naval Affairs Committee. On page 205 he said:

Mr. LANSING. I think that the transportation of contraband to a belligerent port in a public ship of the United States would go much further than the mere matter of liability, and that it would be regarded an unneutral act.

And further:

Mr. TALBOTT. Would you include the South American ports?

Mr. LANSING. No, sir; I do not think there would be much difficulty about the South American countries. The only trouble is that a public ship that has on board private cargoes and private individuals is likely

to do some unneutral act on account of its cargo and on account of the people aboard.

Mr. WILLIAMS. That is, if destined to a hostile port or to a port of a belligerent?

Mr. LANSING. No; that is to a neutral port. For instance, the ultimate destination of the cargo might be a belligerent port, we do not know, and it might be taken to a neutral port for transshipment.

Mr. WILLIAMS. That is to say, if the Government or the shipper knew that was the intention, then it would be a violation of neutrality?

Mr. LANSING. Yes; if it was absolute contraband.

And further on:

Mr. TALBOTT. If German merchant ships were purchased by us and the purchase money went into the German treasury, how would that be considered by the English Government or the French Government or the Russian Government?

Mr. LANSING. The question of the transfer of vessels, I think, really rests on two conditions. If we can show in the purchase that it is a bona fide purchase and, in the second place, that it is not done to avoid capture, I believe the transfer can be made.

Again, on page 211:

Mr. WILLIAMS. Mr. Lansing, a while ago you said that the consequences of Government ownership of these vessels which might be acquired might or could be avoided by leasing. I will ask you to give us your opinion as to the liability that we would incur in a breach of neutrality by so conducting or operating these ships.

Mr. LANSING. We would not be operating them; the operation would be by private parties. Yet even in that case I can see that, if the private parties that operated them carried on a trade to a great extent in munitions of war to a belligerent country, there might be objection on the part of the other Government that the United States was actually giving aid to a belligerent.

Mr. TALBOTT. Could not that be easily obviated by not allowing munitions of war to be shipped on vessels of that character?

Mr. LANSING. Yes; but where are you going to stop in the matter of contraband?

Again, Mr. Lansing said:

Mr. LANSING. Of course, so far as that is concerned, you could limit your cargoes by providing that a Government-managed ship should not carry any contraband at all.

Mr. STEPHENS. But suppose it did?

Mr. LANSING. But a Government-managed ship could not do it and do any business.

Mark that statement.

Mr STEPHENS. Suppose the Government loaded a ship in New York with articles not contraband when loaded and started for a foreign port, and the cargo was declared contraband before it was landed?

Mr. TALBOTT. The Government would receive that information before the cargo was landed, and it would not be subject to seizure on the high seas.

Mr. LANSING. But if you do that it would practically eliminate any mercantile transaction with belligerents, because if you carry on your trade with European countries——

And that is the proposition of this bill—

It would include conditional contraband, and conditional contraband covers nearly everything. You would not have very much trade. For instance, foodstuffs are conditional contraband; also forage and grain; even clothing. All are conditional contraband.

It is plainly apparent from the statement of Mr. Lansing that he considers that if the United States should buy and operate these interned ships it would quite likely result in serious difficulty for the United States. Mr. President, it can not be otherwise. The countries in Europe engaged in war are as much in earnest about it as we were during our Civil War. They are striving to the utmost to achieve victory for their arms. The English Government is not going, if she can help it, to permit Germany to be assisted in such way as to make her a more formidable opponent in this war. She is not going to permit contraband articles to go into Germany if she can help it. If we buy these interned ships, we buy a quarrel with these countries that are not acting in as cool blood as we ought to be acting.

The declaration of London, which was quoted here, makes it perfectly clear that the rule which was accepted and which will be put into operation in England, France, and Germany, for that matter, is—I will quote the exact language—that—

The transfer of an enemy vessel to a neutral flag effected after the outbreak of hostilities, is void unless it is proved that such transfer was not made in order to evade the consequences to which an enemy vessel, as such, is exposed.

To what consequences are these vessels that are imprisoned in our ports exposed? They are exposed to the consequences of remaining idle in our ports or of going out upon the high seas and risking the hazard of capture. So that obviously, if one of these vessels is sold, the effect of the sale is to avoid those consequences to which it would otherwise be exposed. Undoubtedly it would be held in the prize courts of these countries that that was the purpose of the sale. We are to judge the purpose of people by the normal effect of what they do, of what they accomplish; and what they do by transferring vessels that are interned is to avoid the consequences as enemy vessels by lying idle in these harbors or of going out and being captured. Mr. President, it is a dangerous thing—I might go further and say it is a wicked thing—for this Government under such circumstances to contemplate the purchase of one of these vessels. And so, sir, viewed from whatsoever angle we may, this bill, if enacted into law, will set the Government adrift upon an ocean of difficulty and danger, the character and extent of which the wisest among us can not foresee. Not only is the bill bad but the methods by which its enactment is sought are worse. In vetoing the immigration bill a day or two ago the President used the following words, which I commend to the consideration of the Members constituting the majority of this body:

If the people of this country have made up their minds to limit the number of immigrants by arbitrary tests and so reverse the policy of all the generations of Americans that have gone before them, it is their right to do so. I am their servant and have no license to stand in their way. But I do not believe that they have. I respectfully submit that no one can quote their mandate to that effect. Has any political party ever avowed a policy of restriction in this fundamental matter, gone to the country on it, and been commissioned to control its legislation? Does this bill rest upon the conscious and universal assent and desire of the American people? I doubt it. It is because I doubt it that I make bold to dissent from it. I am willing to abide by the verdict, but not until it has been rendered. Let the platforms of parties speak out upon this policy and the people pronounce their wish. The matter is too fundamental to be settled otherwise.

I have no pride of opinion in this question. I am not foolish enough to profess to know the wishes and ideals of America better than the body of her chosen representatives know them. I only want instruction direct from those whose fortunes, with ours and all men's, are involved.

Mr. President, I inquire, in the language of the President, has any political party ever avowed a policy such as is set forth in this bill? Has any political party gone to the country upon it? Does this bill rest upon the conscious and universal assent and desire of the American people? Oh, no, Mr. President; the American people have not spoken, they have not been consulted upon this subject. No party has advocated it; no platform has declared in its favor. It is a hastily conceived and defectively constructed expedient which is sought to be put through a subservient Congress, because the pride of party solidarity has become superior to the wisdom of party statesmanship. It is a measure whose constitutionality is, to say the least, in the gravest doubt; whose effect will be to discourage the investment of American capital in the shipping business, drive more privately owned ships from the sea than it will put Government-owned ships upon the sea, and which is filled with the gravest menace to the peace of the country.

Mr. LODGE. Mr. President——

The VICE PRESIDENT. The Senator from Massachusetts.

Mr. OWEN. Mr. President, I rise to a point of order.

The VICE PRESIDENT. The Senator will state it.

Mr. OWEN. I make the point of order of no quorum.

The VICE PRESIDENT. The Senator from Oklahoma makes the point of order of no quorum. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Bankhead	Hollis	Owen	Sterling
Borah	James	Perkins	Stone
Bryan	Jones	Ransdell	Sutherland
Catron	Kern	Reed	Swanson
Chamberlain	La Follette	Root	Thornton
Chilton	Lane	Saulsbury	Tillman
Clapp	Lee, Md.	Shafroth	Townsend
Colt	Lippitt	Sheppard	Vardaman
Crawford	Lodge	Shields	Walsh
Culberson	McLean	Shively	Weeks
Dillingham	Martin, Va.	Simmons	White
Fletcher	Martine, N. J.	Smith, Ariz.	Williams
Gore	Nelson	Smith, Ga.	Works
Hitchcock	Overman	Smith, Md.	

The VICE PRESIDENT. Fifty-five Senators have responded to their names. There is a quorum present.

Mr. LODGE. Mr. President, it is my intent to make a few observations in regard to this bill, comparatively speaking, brief observations, and I had hoped that possibly some Senators on both sides would do me the honor to listen to me. But, Mr. President, I should not myself have made the point of order of no quorum. I should have been content to go on with the Senate comparatively empty, as it was a few minutes ago, because I realize that under this system of permanent sessions some must watch and some must sleep, and I should not have had the heart to disturb anybody's well-earned repose merely to hear a measure of great importance discussed.

I really regret, however, that I should not have the pleasure of seeing here at this moment the President's secretary, who was with us all last evening while I was present, and again this morning. I think it is of interest, while Congress is in process of conversion into a registry office, that we should have the visible symbol of this change attendant upon our debates. Of course it is too much to expect that the President should do it himself, and therefore, while the watchful waiter keeps his eyes fixed on the red panorama of Mexico, it is well

that he should have his secretary here to see that none of the lambs stray beyond the fold.

Mr. President, the senior Senator from Florida, [Mr. FLETCHER], in the long and very thorough speech which he made the other night, dwelt at the close upon the evil influence of "the interests." Whenever there is opposition to any Democratic legislation here, some combination or association of "interests" is always paraded. They come on like the stage soldiers in the old days who used to march on at one wing and across the stage and around behind the drop scene and march in again. I notice, however, that they are almost invariably American interests which serve in that capacity. In my time I have seen foreign steamship companies ably represented in Washington when immigration bills were pending. Nobody seemed particularly to object. In fact, the appearance of foreign interests, whether on the tariff or any other subject, never seems to trouble our friends on the other side; but it is always some American who is engaged in business, and perhaps is engaged also in committing the crime of being in successful business and making a little money at it, who is invariably trotted out as the sinister influence behind the opposition to some meritorious and benevolent Democratic measure.

Mr. President, I do not know whether the shipping interests in this country are against this bill or for it. None of them have been to me, and I should hesitate to deny that they had the right to come if they saw fit. It would not occur to me to suggest that this bill was being promoted because the agent of the Hamburg-American Line, as I was told by people who knew him, was about Washington this week. It would not occur to me to suggest that there were any moneyed interests behind this legislation because Mr. Max Warburg is a director of the Hamburg-American Line, I believe also one of the three directors of the German War Bank formed to finance those lines, and that he happens to be a brother, as I am told, of the distinguished head of our Federal Reserve Board. It would not occur to me to use that as an argument to show that there were sinister pecuniary interests behind this bill. Nor because the Senator from Florida saw fit to say that some great journals were controlled by Wall Street and the shipping combination, that the very few newspapers which have a good word for this are controlled by financial interests which would profit by its passage. I think, however, that although we are so considerate of foreign interests we may at least admit that there may be some honest Americans engaged in the shipping business who are honestly opposed to this bill and who have a right to be so, but who have the wisdom, knowing that they are looked on as a suspected class, to say nothing about it, which, so far as I am aware, has been the case in this instance.

Mr. President, I discussed—I was about to say the other day, but it was prior to the last adjournment; on the legislative yesterday, we will say—the value of these imprisoned German ships which it is apparently the intent of the administration to buy. I desire to-day to say a few words on another matter, and that is, first, the question of rates as presented to us, and subsequently something about the economic side of the proposition now before us.

In order to find out about rates I took the report of the Secretary of the Treasury and the Secretary of Commerce—one eminent in finance, both in the Treasury and out of it, and the other distinguished as a manufacturer. I felt that in their report I was certain to get the figures which I required for an intelligent study of the rates. So I took this document—the second part of document 673—and I turned to the first exhibit, "Increased Ocean Transportation Rates." The letter, addressed to the honorable the Secretary of the Treasury, says:

SIR: The following tables show the *sea trade* of the United States—

In my simplicity I thought that meant sea trade. I thought it meant all the sea trade. I went a little further and I noticed, at the head of the first column, the words "Exports to Europe." Then I ran down the list to get the figures that I wanted, and I found "Total exports by sea." It seemed to me that to classify exports to Europe as "total exports by sea" was rather strange, because I have not any very clear idea of how we can get exports from the United States to Europe except by sea. There is no all-land route yet that I am aware of. Therefore, I thought, when they said "total exports by sea," they meant all our exports by sea. I think the language tends that way. Then I observed that the figures given in this table did not agree with the Treasury reports, so I examined to see where the difference came, and I found these official figures were arrived at by deducting all exports to Mexico, Canada, Japan, and all other countries, which surprised me, because I had supposed that trade with Japan, at least, was "sea trade."

Mr. President, that loose language of classification, I confess, aroused my suspicion as to the accuracy of this report; so I went on to consider their comparison of freight rates, which occurs on page 23. The comparison of freight rates as made in this report between June and December, 1914, is, on the face of it, not a fair one. In making comparisons of any business we do not compare different months in the same year to reach a conclusion as to what the trade or business is over a certain period, but we compare the same months of different years, because there are different conditions affecting all trades, and especially export trade, in the different months. Of course, to make here an intelligent comparison which would be of any value, it would be necessary to make the comparison between December, 1913, and December, 1914.

The lowest freight rates on the trans-Atlantic always prevail between April and October, and June is probably the worst month in the world in the trans-Atlantic freight business. Owing to the fact that the year 1913 was one of the worst years in the freight business experienced for many years, the comparison for December of that year is not a fair one, and would not be an aevrage rate for that month. We should also take the rate for December, 1912. Therefore, I have made the following comparisons:

Taking the freight rates on various commodities for the month of December, 1912, 1913, and 1914, which can be verified, as I verified them, by reference to any newspaper publishing freight rates, for instance, the Journal of Commerce of New York, we will begin with grain rates as given in this table.

For December, 1914, it is given in the table of the Secretary of the Treasury and the Secretary of Commerce at 22.1 cents per bushel. Those are the figures given us by the Secretaries. In 1912, according to the published freight rates in the newspapers that print them, the freight rate on grain was 6½ to 10½ cents. In 1913, which was an exceptional freight year, 4 to 6 cents. In 1914, 9 to 10½ cents per bushel of 60 pounds. They compare that 22 cents with the July rate of 5 and 6. It will be seen that if you take December, 1912, for comparison, it is 10½.

Mr. POMERENE. Mr. President.

The PRESIDING OFFICER (Mr. HITCHCOCK in the chair). Will the Senator from Massachusetts yield to the Senator from Ohio?

Mr. LODGE. I yield.

Mr. POMERENE. Did I understand the comparisons the Senator is giving were a part of the month of December of each of the several years?

Mr. LODGE. Yes; but there is another point. These figures, taken from the published freight rates, the Journal of Commerce and other similar business papers, show 9 to 10½ cents per bushel of 60 pounds for December, 1914. The official publication says it is 22.1 cents. That could only be arrived at by taking the highest rate probably paid during the month, not taking an average, such as the shippers quote, but taking the highest rate and putting it in here as an average in the United States.

I take flour; 18 cents per 100 pounds in 1912 and 15 cents per 100 pounds in 1913; 25 cents according to the Secretary's table.

In December, 1914, 14 to 26 cents per 100 pounds, according to the figures of these newspapers.

Cotton, $1.20 to $1.90 per bale in 1912; $2.06 to $2.40 per bale in 1913. These are the limits; $1.87 to $2.88 in 1914. According to these figures here, it was $4.57 last December.

Mr. ROOT. The Secretary's figures?

Mr. LODGE. According to the Secretary's figures it is $4.57.

Provisions, which includes meat, 22½ in 1913.

Mr. ROOT. From what?

Mr. LODGE. From the freight rates for that year, from the Journal of Commerce. The freight figures were 22½, and they were 37 according to the Secretary's figures; 33 in 1914 according to the figures given in the papers publishing freight rates. It is perfectly obvious if anyone will take the trouble to make these comparisons that the averages given here in this publication can not in the least be depended upon. Of course, you can only guess at how they are obtained, but they appear to have been reached by taking some exceptional cargo or some exceptional rate and introducing that as the average. But, Mr. President, it makes it a little difficult to deal with a question of this sort when we find even the official figures apparently so misleading and so juggled. I shall return to that in a moment.

Before comparing these figures with the figures taken from the actual manifests of ships I wish to point out that the high

rates are due largely to extra expenses incurred, such as for coal, wages, and provisions; the higher cost of insurance owing to the war risk, and very heavy delays through congestion at the ports of discharge, arising partly from a shortage of labor through so many of the men having gone to the war, and also owing to the large quantities of provisions and material for the army, which of course receives preference in discharge at the principal ports.

Grain rates to-day to the principal ports in Europe are approximately from 16 to 18 cents per bushel of 60 pounds. The price of grain itself has advanced since the war began from under $1 per bushel to $1.46¾ for the May quotation.

Mr. POMERENE. To what point is the freight rate given? To England?

Mr. LODGE. Some to England. I am coming to that. I have them to England and to the Mediterranean ports. I have not the power of the Government at my command, and I could only get manifests to certain countries. I have the Mediterranean ports and the British ports. I have not been able to get rates to Bremen, which are extravagantly high, of course, because the risk is so much greater, and it is very hard to get those. I mean that the Bremen rates fluctuate very much, but of course the bulk of our exports have been going to Great Britain and to neutral ports, like those of Holland and the Mediterranean.

It should also be borne in mind that while the freight rates at the present time are very high, the regular lines crossing the Atlantic are not getting the benefit which it is generally understood they are getting by those not acquainted with the business. All these lines have passenger boats, combination passenger and freight steamers, and purely freight steamers. The only part of the line which is getting full benefit of the high rates, therefore, is the steamer carrying only freight. The large passenger steamers carrying passengers only are largely laid up on account of lack of business, except when employed by the various Governments in the transport of troops. Where they are running in order to provide accommodations for such passengers as desire to cross the ocean at the present time and also to take care of the mail, they are running at a loss. The combination passenger and cargo steamers, while making money on their freight are losing money on their passengers, so that the loss practically offsets the profit from the advanced freight rates. To get at a fair comparison, taking all these things into consideration, it would be only fair to divide the present freight rates in half in comparing the same with the rates existing prior to the war.

That is, the war conditions have doubled rates.

Mr. President, I was told the other day by a gentleman from Boston that one of the Great White Star boats, the Cedric or the Cymric, a passenger boat, went out, I think, last month with a full cargo at the very highest rates, such rates as had never before been earned. Yet she did not make as much profit on the voyage as she made on the voyage of the same period last year, carrying freight at comparatively low rates. Her passenger business was gone, and that is a ship of the precise type which constitutes the great bulk of the Hamburg-American fleet and the whole of the North German Lloyd fleet. They are ships that lose money no matter what the freight rates are unless they can carry passengers, for whose accommodation they were primarily built.

The highest rates that have been and are being paid since the war are paid to tonnage sailing under the American flag and particularly to Bremen and Gothenburg, neither of which ports is congested and where delays are not nearly so serious as those experienced by the regular lines at their ports of discharge, even allowing for delays on account of inspection by the allies' warships.

It is obvious, Mr. President, at once why ships under the American flag get higher rates than the others. They are covered by the neutral flag. They start with an assurance of safety or comparative safety which the others can not have. Therefore they are more sought after, of course, than any others.

I should like to state in this connection why it is that they get these high rates going to ports like Bremen or Gothenburg, where there is no congestion. It arises from the extreme danger of mines or capture in a North Sea voyage.

Now, let me give just two or three instances of what this congestion at the other end of the line means when they talk about extortionate rates. These are specific instances.

Heavy delays were incurred by the *Maryland* (A. T. Line) and the *Lancastrian* (Leyland Line) and in fact by all the steamers of the Leyland, Atlantic Transport, and other lines trading to London. In Liverpool delays are equally serious. The *Etonian* arrived loaded on the 23d of December and sailed January 14, having been in port 22 days. The *Dunsley* arrived at Liverpool on January 4 and had not sailed up to January 26; in port to that date 23 days. The *Saxon Monarch* arrived on January 14 and had not sailed up to January 26; delayed 13 days. In her case the owner states that the delay will probably be about 23 days, as she will not sail for a few days after the sailing of the *Dunsley*, which steamer preceded her. It will be noticed, therefore, that 23 days seems to be the average time that steamers are held in Liverpool. Under ordinary conditions they would be turned in 7 days.

You will notice therefore that 23 days seems to be the average time that steamers are held in Liverpool. Under ordinary conditions they would be turned in 7 days. Fourteen days' demurrage, 14 days of delay in Liverpool or any other of these congested ports is an enormous bill of expense, and the rates conform to that.

Sixteen days' delay, at the price paid for American tonnage for smaller steamers, say $45,000 per month, will easily show that no matter how high the freight rate to the various European ports may be there is a very large element of risk of loss in the business. Serious delays are also arising in the case of the *Samland*, *Missouri*, *Manitou*, and *Marquette*.

The delays are so costly, I may add, that I am informed that the London lines are seriously considering diverting the steamers from their regular trade on account of the heavy loss which these delays would cause.

I now wish to take up this matter of freight rates, which I have been discussing, a little more in detail, and in connection with the report of the Secretary of Commerce upon foreign freight rates. With the utmost respect for the Secretary of Commerce, it would seem on analysis that his report is based upon information supplied by brokers and shippers, who may perhaps wish to make it appear that the tonnage available for foreign business is so scant as to have forced rates to an utterly unreasonable point, to a point which makes business practicably impossible. This has been done in this way, rather than upon figures showing accurately at just what rates the export business has been handled since the outbreak of the European war. But, however this may be, I wish to present some statements that I have obtained, which give the number of steamers dispatched by the International Mercantile Marine Co.'s Lines—that is, the White Star Lines to Liverpool and the Mediterranean, Leyland Line to Liverpool, Leyland Line to Manchester, and Leyland Line to London, and their cargo capacity measured in tons of 40 cubic feet, together with the minimum and maximum rates on certain commodities, grain, flour, tobacco, wool, cotton, and provisions included.

The comparison which the Secretary of Commerce makes between the rates which prevailed from the 1st of August and those now prevailing is of no value whatsoever for this reason, that during the summer months, when the movement of cargo is light and ships are sailing with much of their cargo space empty, rates are generally lower than at any other time of the year, whereas in October, November, and December, when the movement of grain, cotton, and other bulk cargo starts in, ships are fully loaded and rates on such bulk cargo automatically advance. A proper comparison, as I have already pointed out, should be between the rates for a given month in 1913 and those for the same month in 1914. Rates on manufactured products are, generally speaking, much more stable than those on grain, cotton, and agricultural products for this reason, that all manufacturers sell for delivery over a long period and adjust their output so as to meet the demands of our local as well as foreign requirements. The manufacturer of sewing machines, for instance, finds he will be able to sell a certain percentage of his output in England or Australia, and he makes contract with the steamship lines under which they agree to handle for a period of, say, one year from the 1st of January all the sewing machines he has to ship. With the exporter of cotton, grain, tobacco, provisions, and other agricultural or bulk cargo the situation is quite different. The demand for such cargo is based not only upon the size of the crops here and our consequent ability to meet a demand from abroad, but also upon the size of the crops in Argentina, India, Australia, and elsewhere. If these crops happen to be good and American crops poor, our export of bulk cargo necessarily falls off and freight rates decline accordingly. In other words, the point I wish to make is this, that the ordinary cargo ships is built to take care of a certain amount of regular business composed of manufactured goods at fairly stable rates, which are always the same to all shippers, with a large amount of surplus space to take care of bulk cargo, grain, tobacco, lumber, and so forth.

When our crops are large, and the crop situation in other countries is such as to create a foreign demand for our surplus raw products, the ships carry full cargoes at good rates. When the contrary is true, they sail with much of their cargo space empty and carry raw products at low rates, frequently making unprofitable voyages.

I think I can show from the tables I shall ask to print just what cargo space these liners to which I have referred had available in 1913 and 1914. The space on most of the Leyland Line steamers has been considerably reduced on account of the fact that the *Bohemian, Devonian, Canadian, Cambrian, Iberian, and Etonian* have been fitted for the conveyance of horses for account of the British Government, and after loading cargo at Boston they proceeded to Halifax to load these horses.

Mr. FLETCHER. Mr. President, may I interrupt the Senator from Massachusetts?

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Florida?

Mr. LODGE. Certainly.

Mr. FLETCHER. Do I understand the Senator to claim that the present freight rates are not unreasonably high?

Mr. LODGE. Does the Senator mean unreasonably high in view of all the circumstances?

Mr. FLETCHER. Yes.

Mr. LODGE. My impression is that the rates are very natural under the circumstances.

Mr. FLETCHER. I should like to ask the Senator what he thinks would account for this situation, which relates to one instance which I neglected to mention in my remarks the other evening: A shipper of phosphates—and I believe Florida produces about 78 per cent of all the phosphate mined in the United States and over 50 per cent of all that is mined in the world, and therefore that is an industry which is quite important to us and to the country—writes me and asks me to endeavor to get ships so that he can move phosphate, which is not contraband. I referred that matter to the Secretary of Commerce, and I find the best quotation we can get for him is 45 shillings per ton from Fernandina to Hamburg or Rotterdam.

Mr. LODGE. If the Senator from Florida will permit me, there is a vast difference between Rotterdam and Hamburg.

Mr. FLETCHER. I mean now Rotterdam; but I am going to say that the same rate obtained before the war to Hamburg as to Rotterdam.

Mr. LODGE. Yes.

Mr. FLETCHER. That is what confused me at the time; but the rate now offered is 45 shillings a ton from Fernandina, Fla., to Rotterdam. I wrote to the shipper of phosphate in Florida to learn what his rate was before the war. This was on January 18, and he wrote me a letter, which I received a few days ago, saying:

> Before the war we were paying from 12 to 13 shillings from Fernandina to Hamburg and Rotterdam.

Now the rate is $10.80 a ton on phosphates and before the war it was $2.88 a ton. The rate, of course, prohibits the shipment, because the phosphate is scarcely worth the freight. I ask the Senator from Massachusetts what brings that condition about?

Mr. LODGE. The freight rate will not prohibit the shipment if the people want to pay, for the freight is almost invariably paid by the consumer; but I am not surprised at the rate being doubled. I am far from denying that there has been a reduction in the world's tonnage, with a consequent increase in rates resting on the law of supply and demand. Of course, that is perfectly obvious. I will give an illustration of the manner in which it works in the price of ships. Take those German ships which you are trying to buy; private parties tried to buy two of them early in the war. They were given a price, but the ships were subsequently withdrawn from sale by orders from Germany. These were two of the 15 to 20 year old small freighters, the very ships we are after now. Those ships were offered them for $125,000 apiece. The would-be purchasers were told, so I am informed, that the price would be higher to the German Government, and still higher to the United States Government. Then the whole business went off on the orders from Germany of withdrawal from sale of which I have just spoken. I inquired what those ships would bring to-day, and was told that they would easily bring $250,000 apiece. The price to the United States would be still higher, and yet it is proposed to saddle the people of the United States with those old, worn-out, obsolete boats at fancy war prices. Those ships have doubled in value, and they are an example of what is happening with all cargo carriers. There is, no doubt, I repeat, that there is a shortage in tonnage. I am only trying to demonstrate that the rise in freight rates is largely natural; that it is what is to be expected under war conditions; and that it is not going to be affected by a few ships put into service by the Government to carry freight at a loss, to be reimbursed by the taxpayers, for a few favored individuals who are able to get their products on board.

Mr. TOWNSEND. Mr. President——

Mr. LODGE. I yield, Mr. President, if I do not lose the floor by doing so.

Mr. TOWNSEND. Is there anything in the bill, or does the Senator from Massachusetts have any assurance that one of these boats, should it be purchased, will be used for carrying the phosphates of Florida to Rotterdam?

Mr. LODGE. I have no idea, Mr. President, who the favored shippers are to be. Being a Yankee, I suppose I could make a guess, but I have, of course, no certain knowledge as to who the favored shippers are to be.

Mr. ROOT. May I ask a question?

Mr. LODGE. Certainly.

Mr. ROOT. Apropos of the question put by the Senator from Florida [Mr. FLETCHER] and the subject which the Senator from Massachusetts has been discussing, I ask whether a very important element in producing a necessary increase of freight rates upon the eastbound freight is not the lack of return cargoes resulting from the enormous decrease of production in Europe by reason of the war and the withdrawal of so large a proportion of the people from production?

Mr. LODGE. Undoubtedly, the falling off in the imports is very marked.

Mr. FLETCHER. May I ask the Senator from Massachusetts another question?

Mr. LODGE. Certainly.

Mr. FLETCHER. I hesitate to interrupt the Senator, but——

Mr. LODGE. I have no objection to being interrupted if I do not thereby lose the floor.

Mr. FLETCHER. I think there is no point being made as to that.

Regarding this question of favoritism, however—because I happen to give facts from my own State which are within my own knowledge—does not seem to me to warrant the suggestion that Florida is to be favored in this sort of an enterprise. If the Senator who proposes that will examine the report of the Secretary of Commerce and the report of the Secretary of the Treasury, he will find that such complaints come from all over the country. All he has to do is to read the letter, and I would ask, if the Senator will permit me, whether he is giving figures within his own knowledge or, if he does not mind, would he inform us as to how he arrived at those conclusions?

Mr. LODGE. I have figures here, taken from ships' manifests. What I asked for were the actual amounts paid, and I got them from as many lines in Boston as I had time to do. These are the actual payments as shown on the ships' manifests.

Mr. FLETCHER. I wanted to bring that fact out.

Mr. LODGE. I will come to that.

Mr. FLETCHER. Of course it will be conceded that we can scarcely depend on the statements of interested parties.

Mr. LODGE. Of course, Mr. President, I did not mean to say that the Senator from Florida would be favored in phosphate exports. My point was that the amount of freight that these Government-owned ships would carry is a trifle compared even with your $50,000,000 spent; it is but a small part of the great volume of freight exports. You may drive American ships off certain lines, and thereby contribute still further to the deficiency of tonnage, but you are not going to affect the general price. The people who are fortunate enough to get their freight on Government ships, of course, will benefit by having the Government pay their freight; but, as a matter of fact, that is a benefit to the foreign consumer in nine cases out of ten. Those who do not get the Government boats, however, of course will be left just where they are now.

In regard to the matter of complaints, of which the Senator reminds me, I have not been able to go through them all thoroughly, but I have taken a few where the complainants mentioned the ports to which they wanted accommodations. These are the complaints which are embodied in the reports of the twin secretaries. I take some of these complaints, just a few—there are many more, some perfectly vague—to show what is required to fill the wishes of these complainants. They are as follows:

Number of ships necessary to remedy some of the complaints cited in the report of the Secretary of the Treasury and the Secretary of Commerce.

Routes.	Sailings.	Number of ships required.
New York to Scandinavian ports	Bimonthly	5
New York to Holland	do	4
Texas ports to South America	3 weeks	6
Baltimore to Argentina	do	6
Philadelphia to Uruguay	do	6
New York to Barcelona	do	6
New Orleans to Havre	Bimonthly	4
New York to Denmark	do	5
Savannah to Rotterdam	10 days	6
Savannah to Bremen	do	6
Wilmington to Bremen	Bimonthly	4
New York to Havre and continental	10 days	6
New Orleans to British ports	Bimonthly	8
Pensacola to Christiania	3 weeks	4
Baltimore to British continental ports	Bimonthly	8
New York to London	10 days	5
New York to Hamburg	do	5
New York to Liverpool	do	4
New York to Rotterdam	do	5
Southern ports to Bristol	Bimonthly	4
Baltimore to Rotterdam	do	4
Boston and New York to Buenos Aires		8
Boston to Liverpool	10 days	4
Galveston to continental ports	Monthly	3
New York to Wales	Bimonthly	6
Baltimore to Amsterdam (6), Italy (6), Norway (4), Belgium (4)	do	20
Boston to continental and British ports	do	12
Galveston to Bremen	do	4
New York to Aberdeen	do	4
		172

In all 172 steamers are asked for by these complainants, and probably most of them have not freight enough to fill half a ship. They want lines and sailings to the extent indicated, and these are only a part of the complaining letters.

Now, taking the steamers—and, of course, each man who writes such a letter thinks he is going to have one, and those happy few who get them will no doubt profit—172 ships are required to run those lines, based on some of these complaints. You can not get them even for the $50,000,000 proposed to be provided by this bill. You can not begin to supply those ships for that amount. Taking the cost at $50 a ton, which I believe is the usual estimate——

Mr. ROOT. For freighters alone.

Mr. LODGE. For freighters alone, and with all the money which the bill carries you would not get more than 50 or 60 ships out of 172. So that some of the complainants are going to be disappointed—I will not say which ones; I will not say from what States they come; but I have a strong suspicion that among the disappointed ones some will live in Boston and New York.

The rates which I am about to give are those at which the cargo actually moved. They are not guesswork or the arrangement of any expert or actuary; they are the figures at which the cargo actually moved, and are taken from the ships' manifests. Where two rates are given—for instance, 6½ cents to 6¾ cents—it will be understood that the lowest rate at which grain was carried in June, 1913, was 6½ cents, and the highest 6¾ cents, per bushel of 60 pounds. Similarly, in June, 1914, 2 cents to 3 cents—the lowest rate at which grain was carried was 2 cents and the highest 3 cents. Where there is but one rate, there was no variation during the month.

The Secretary of Commerce speaks of contracts having been repudiated by at least one of the steamship companies. This is not impossible, but so far as the companies of which I am now speaking are concerned and so far as I have been able to learn with reference to the business of the other companies, all contract obligations in existence when the European war broke out have been scrupulously observed. The fact that one company may have repudiated its contracts would seem scarcely a sufficient justification for resorting to Government ownership of steamers. I believe there is an old saying about hard cases making bad law.

It may be true that shippers of grain, cotton, and bulk cargo have found it impossible to secure room from certain ports before March and April, but this is not surprising, nor is it unusual. When there is an active demand from abroad for grain and cotton, exporters sell several months in advance, and engage their freight room accordingly, and it is not at all unusual during such times for shippers who at the last minute seek room for prompt shipment from the seaboard to find that there is no room available.

The highest charter rates so far paid have been those paid for American flag steamers, and the highest freight rates appear to have been those paid to American flag steamers for cotton to Bremen. A comparison of the rates ruling to Hamburg and Bremen before the outbreak of the war and those ruling at present is, however, manifestly absurd, for insurance on a steamer navigating the mine fields facing a German port, if procurable, would be practically confiscatory. So that to take the German rate, as has been done in some of the figures in this report, in order to show what freight rates are from the United States is absolutely unfair and misleading. The bulk of the exports have gone to England, to France, and to the Mediterranean ports.

These lines which I have named have had no serious complaints from any of their shippers about their inability to take care of their export business. On the contrary, they have managed to satisfy them all, and whilst it is true that there have been times when they have not been able to take all the cargo offered at the given moment, they have been able sooner or later to handle it.

The situation has been more or less confused on account of the large offerings of material meant for use in the field, which during normal times the steamship lines do not have. This army material, on account of the fact that its prompt movement is urgently required, carries a very high rate of freight, and it would be very unnatural for any lines not to give it preference on occasions to cargo paying a very much lower rate.

However unwise and dangerous the projects of this bill may be and however loosely its provisions may be drawn, I can not conceive it possible—and I have lately learned that many things are possible that I thought were impossible—I can not conceive it possible that we should put contraband and munitions of war on board a Government-owned ship. Contraband, of course, makes any neutral, no matter what the question is about its character—it may never have been anything but an American vessel—liable to seizure; but there is no provision in this bill against using Government-owned vessels for carrying contraband of war.

There are immense masses of munitions of war of all sorts passing out of this country, as we all know. They are going to the countries which happen to have command of the sea, and very valuable freight they make.

What would be the view of Germany if she found American Government-owned ships carrying munitions of war to the Allies? She would regard it, and would rightly regard it, as an unneutral and a hostile act. Because she does not happen to have command of the seas—and those opposed to her do—we are proposing, without a word to prevent it, to make Government-owned ships go into this trade. I do not mean merely cartridges and shells, but to take horses, to take blankets, to take shoes for the soldiers, which are being made in this country in large quantities. Take such articles on board of a Government-owned ship, and that would make it like any neutral ship a good prize, and would be, according to Germany's point of view—and rightly so, in my opinion—an unneutral if not a hostile act. Yet I was told no later than this morning that we never would be permitted to put into the bill a provision that the vessels operated under it should not carry contraband or conditional contraband of war, and that in the face of the statement of the counsellor of the State Department before the House committee, that it would be an unneutral act.

The present high rates, as I repeat in this connection, are not wholly due to the shortage of steamers; and I admit the great effect of that. They are to be accounted for in large measure by the fact that the steamers now being operated, as I have already pointed out with detail examples, are being delayed at the ports of discharge in England, France, Italy, and elsewhere. Some of the steamers of the lines that I have referred to, and from whose manifests I take these figures, have been held up in London from three to five weeks; and the latest information is that there is a large number anchored in the stream waiting for discharging berths. The advices from Genoa, Italy, are to the effect that there are about 60 steamers there now awaiting their turn to discharge at the piers, and that at Bordeaux a similar situation exists.

Those delays pile up the expenses to the ship faster than anything else, and they go with that uncertainty of loss staring them in the face. The Senator from North Dakota asked me what that exact loss was. I thought I had some estimates on it, but I remember now that I found it impossible to get exact figures, because it depends so much upon the character of the cargo and the need of delivery and the time, of course, and it is very hard to say just what it would be. The loss is very great, however, and it is, I think, evident to anyone who is at all familiar with the operation of ships that when they are held up for five or six weeks at their discharging ports, where under normal conditions they remain but a week, it will

take two ships to do the work that one ordinarily does; and that, of course, adds to the shortage of tonnage.

Mr. McCUMBER. Mr. President, will the Senator permit a question?

Mr. LODGE. Certainly.

Mr. McCUMBER. Would it not be a loss for each day at least equivalent to the sum that is paid by the Government for its leased ships, now idle in our waters here, which were used to transport our sailors to Mexico? I understand that amounts to about $1,000 per day, just doing nothing, for each one of the ships. Therefore, for 30 days, in the case of a ship of the same size, requiring the same amount of care, etc., would it not amount to about $30,000 loss?

Mr. LODGE. Why, certainly. That is a very happy illustration of it, because those ships were tied up; and of course in the case of the people whose ships are held up at Genoa, for instance, because they can not discharge cargoes, it is running against them every day just as it ran against us here on ships chartered to take our troops and supplies to Mexico.

Mr. President, these are the tables to which I have referred, and which I ask leave to have printed with my remarks.

The VICE PRESIDENT. Is there any objection? The Chair hears none, and it is so ordered.

[The tables referred to will be found at a later point in Mr. LODGE's speech.]

Mr. LODGE. I am going to put them in the RECORD and then explain them. They are in too great detail to read to the Senate, but I will read the following comparisons of the articles.

This is a pretty good test of how far we can depend on that report. I take July, August, September, October, November, and December for 1914, and I compare the rate as given in the Secretary's report with the actual rate as given by the manifest, the amount actually paid for moving the cargo. These ships go to London, as I have said—and I wish to repeat it—to London, to Liverpool, to Manchester, and to the Mediterranean ports. The Mediterranean rates are very high, for they are much higher even in time of peace.

Now, we take grain in July, 1914. The rate as given in the Secretary's report is 5.6 cents. The actual rate on this line of ships running from Boston was 3.5 cents. Even in July, before the war had begun, the Secretary's figures are far above those rates that were actually paid in Boston.

In August on grain the Secretary's rate is 5.7, and the actual rate as per manifest is 4.1.

In September the rate as given in the Secretary's report is 7.7; the actual rate, as given by the manifest, 4 cents.

In October the Secretary's report was 7 cents per bushel of grain; 6 cents is the actual rate.

In November, 16.1 cents, according to the Secretary's report; 7.2 cents for grain, according to the manifests.

In December, 22.1 cents, according to the Secretary's report; 11.4 cents according to the manifests.

Mr. TOWNSEND. Mr. President, does the Senator know where the Secretary got his information?

Mr. LODGE. That, of course, is mere conjecture. I think they got some information in New York. They asked for information from Boston. I can not find that they used it in making their so-called averages, but they certainly got information from New York, and it seems to me that what they did was to take the highest price of the highest cargo to the most dangerous port, where the greatest rate was charged, and gave that as the average rate per month. Now, none of these are ships going to Bremen, and if they had been ships going to Bremen the rate would have been very much higher. I quite understand that. I do not mean to say that the total rates would not show somewhat higher figures when averaged; but the trouble with the Secretary's figures, as I analyze them, is that the lower rates have been left out of the calculation.

[At this point a message was received from the President of the United States, which appears under its appropriate heading.]

Mr. LODGE. I now take flour per hundred pounds. The rate as given in the Secretary's report for July is 11.5 cents. The actual rate, as per manifest, is 12 cents. There they got the July rate lower than the actual rate, and July is their month for comparisons.

August, 13.6 cents in the Secretary's report; 13.1 cents in the manifest.

September, 22.3 cents in the Secretary's report; 17.8 cents in the manifests.

October, 26 cents in the Secretary's report; 18.5 cents in the manifests.

November, 26 cents in the Secretary's report; 19.3 cents in the manifests.

December, 35 cents in the Secretary's report; 19 cents in the manifests.

There is no explanation of those different discrepancies.

The figures of the manifests, which are the actual amounts paid, can not be disputed on those lines where there is a cargo capacity ranging from 100,000 to 50,000 tons, on which it is based. There can not be any mistake about those figures. Of course, there were variations. I have only taken a few lines, taking them entirely at haphazard; but such discrepancies as exist here show that you can not rely on the figures of the report, and yet they are what are furnished us officially.

Cotton, per bale, July, $1.15 according to the Secretary's report; 88 cents according to the manifests.

August, $1.15 according to the Secretary's report; $1.20 according to the manifests.

September, $1.26 by the Secretary's report; $1.44 according to the manifests.

There you see, these manifests show a higher rate than the Secretary gives.

Mr. SIMMONS. Mr. President——

The VICE-PRESIDENT. Does the Senator from Massachusetts yield to the Senator from North Carolina?

Mr. LODGE. Certainly.

Mr. SIMMONS. Mr. President, I understand the Senator from Massachusetts is reading altogether from the manifests of the ships sailing from Boston Harbor; is he not?

Mr. LODGE. Yes.

Mr. SIMMONS. I do not see, in the Secretary's statement, the rates from Boston.

Mr. LODGE. No; they were suppressed, apparently. Perhaps they did not conform to the official view of what the average freight rate ought to be.

Mr. SIMMONS. He gives the rates; but the Senator is reading the Boston rates, and then comparing them with the rates given by the Secretary.

Mr. LODGE. Ah, but the Secretary says these are the average rates from the United States to Europe. He does not say they are the average rates from New York.

Mr. SIMMONS. I was going to call the attention of the Senator to the fact that the Secretary gives the rates from New York, Baltimore, Philadelphia, Norfolk, New Orleans, and Galveston upon grain and cotton and meat and lard and probably some other products; but if the Senator will examine the rates from these different ports they vary very much.

Mr. LODGE. Certainly; they vary. I have said that.

Mr. SIMMONS. And I did not understand that the Senator was giving the average rate.

Mr. LODGE. I am giving the average rate from Boston; yes.

Mr. SIMMONS. The Senator is comparing the Boston manifests with the average rates given by the Secretary for the——

Mr. LODGE. In the table on page 23.

Mr. SIMMONS. I was reading from pages 13 and 14 of the Secretary's statement.

Mr. LODGE. I am taking what he says is the average increase in freight rates from the United States to Europe; and although he does not seem to have paid much attention to Boston, it is in the United States.

Mr. SIMMONS. I notice in the secretary's table on grain from New York to Liverpool, the rate on July 1st is 5 cents, and on the 19th 20 cents. The rate from Baltimore on grain is very different from that. It is 30 cents in January, and likewise the difference runs through the whole table. If the Senator is giving the average, of course the point I am making does not apply.

Mr. LODGE. Mr. President, I have taken the table which is the one the country would look at first, the average from the United States to Europe, and I am comparing it with the average from the second port of the United States as they appear in the absolute manifests; and I merely say that there are discrepancies which seem to me to indicate that these figures were not made up on the best information.

In October, for cotton, the secretary's figure is $2.10, and the actual rate from Boston was $1.44.

In November the rate given in the secretary's report is $3.39, and the rate from Boston was $1.74.

In December the rate as given by the secretary is $4.57, and the rate from Boston was $2.34.

Meats—I will ask to have that printed. The discrepancies exist there also, but they are not so very large, and I will not take the time of the Senate by reading them.

The VICE PRESIDENT. Without objection, it is so ordered.

The table referred to is, in full, as follows:

	Grain (per bushel of 60 lbs.).		Flour (per 100 lbs.).		Cotton (per bale 480 lbs.).		Meats (per 100 lbs.).	
	Rate as given in Secretary's report.	Actual rate as per manifests.	Rate as given in Secretary's report.	Actual rate as per manifests.	Rate as given in Secretary's report.	Actual rate as per manifests.	Rate as given in Secretary's report.	Actual rate as per manifests.
1914.	*Cents.*	*Cents.*	*Cents.*	*Cents.*	*Dollars.*	*Dollars.*	*Cents.*	*Cents.*
July	5.6	3.5	11.5	12	1.15	0.888	25	28.1
August	5.7	4.1	13.6	13.1	1.15	1.20	24.2	30
September	7.7	4	22.3	17.8	1.26	1.44	36	33.7
October	7	6	26	18.5	2.10	1.44	36.7	33.7
November	16.1	7.2	26	19.3	3.39	1.74	37	33.7
December	22.1	11.4	35	19	4.57	2.34	37	33.7

Mr. LODGE. Now, to show one or two other little variations from facts in the report. I have not had time to go into the details of this report; I merely wish to suggest the necessity of caution in dealing with it and its untrustworthiness as a basis for argument. On page 18 it says:

It has been stated that if the shipping bill is passed additional tonnage for our foreign trade can not be quickly obtained. This is incorrect. While we have made no effort to test the market for ship offerings, we have been assured by no less an authority than Mr. Bernard N. Baker, of Baltimore, a man of the best character and standing, who developed to a high degree of prosperity the American Transport Line, of which he was for many years president, and who is thoroughly familiar with the shipping trade, that many suitable and admirable ships for the purpose can be promptly secured.

That is dated January 27.

On January 27 I clipped this from a Baltimore dispatch:

BALTIMORE, *January 27, 1915.*

That the proposed shipping bill now being fought in the United States Senate was intended to create a permanent fleet and that not 10 really fit and suitable ships are now on the market, is the summing up to-day of this important legislation by Bernard N. Baker, who has been in frequent consultation with the administration leaders, both in the Cabinet and in Congress.

"It is not my idea," said Mr. Baker, "that safety and fitness in the character of the vessels should be sacrificed to any speed or hurry"—

Mr. Baker understands the shipping bill—

"I do not believe there are more than 10 vessels now for sale which are worthy of being included in any purchase to be made by the Government under the proposed act. I am in favor of building them here or having some built abroad."

That is what Mr. Bernard N. Baker said in a published report in the newspapers, but he appears in the Secretary's report as saying that many suitable and admirable ships for the purpose can be promptly secured.

Again, at the end there is attached to this report as Exhibit 76 a list of ships offered by the Merchant Marine Agency, J. V. McCarthy, manager, Boston, Mass., from which it will be seen there are 15 ships of English registry and 7 of German registry which he proposes to sell. I made some inquiries about Mr. McCarthy, who had 22 ships to sell, and I find that he has nothing substantially different from what he sent to Mr. McAdoo, but that when offers have been made for these ships from men interested in getting the ships Mr. McCarthy has been informed from abroad by the people whom he represents that the steamers have been withdrawn from sale. Those 22 ships which figure so handsomely in the report vanish when you try to buy them.

Mr. President, there are ships to be had; not ships that will add to the total tonnage of the world—that you can bring about only by building—but ships which will add to the tonnage between this country and the Atlantic, the North Sea, and Mediterranean ports, just where it is wanted. There are ships which can be taken from lines where they are not now profitable and added to the congested routes where there is a shortage of tonnage—between the United States, the North Sea, and the Mediterranean.

In the first place, we are doing something in the way of exports. Everything is not tied up here. I take from the Chicago Tribune of January 15 this extract from a news article:

Last week, for instance, there were exported from the seaports on both coasts of the United States a total of 8,000,000 bushels of wheat. During the same week one year ago the total exports were only 2,000,000 bushels. The demand from abroad has multiplied by four. Why should not the price be expected to jump?

These are initial prices in the Chicago market. But last week—this extract is dated January 15—we actually exported from the ports of the United States four times as much wheat as we did in the same week of last year. Somebody is carrying that wheat abroad. It is not going over by itself in sacks across the ocean. Somebody is carrying it, and they carry four times as much as they did last January one year ago.

Illustrating what I have said about getting ships from one route where business is light to routes where it is greatly needed, I quote from a letter from the secretary of the Boston Maritime Association, who says:

Since writing Senator WEEKS last we learned that the ships *Vincent* and *Pass de Balmaha*, both steel ships, which have been lying here for some time unchartered, have been sold to southern merchants for the cotton trade. They have in the last few days also come into the market for sailing tonnage, and there is some inquiry in that direction.

There were two ships in Boston lying idle. Somebody bought them, and the Government could have bought them if they wanted to buy ships like those that have been used in other trades. Those are ships of our coastwise trade, and they would not buy a quarrel with each of them.

I take from an article in the Boston Herald of January 16 on that point the following:

America's great coastwise tonnage steadily continues to furnish ships for the relief of our overseas commerce, left in the lurch by so many foreign carriers because of the European war. It is proving, just as the Herald predicted, that this coastwise fleet is worth far more than any wild scheme of Government ownership.

I am trying to demonstrate now that it is not necessary to go to these imprisoned German ships if the Government is to go into the shipping business; that there are other places she can buy. The Government can not buy quickly for an emergency and at the same time add to the world's tonnage. That can be done only by building ships, but the Government can get ships out of our coastwise trade, and if the Government did that then the people who had sold would build new ships, replace those which they had sold, and thus give much-needed employment in our shipyards.

The Boston Herald also says:

Within a few days after the Bremen cotton trade was opened, 12 American steamers were chartered from southern ports to Germany. Now an American sail ship, the *Vincent*, of Boston, has been secured for the same trade. The Boston-owned steamers, *Pacific* and *George E. Warren*, are leaving the coast for Transatlantic service. So is the steamer *Pleiades*, formerly of Boston, and a considerable fleet of New England schooners has been engaged within two or three weeks for the export of lumber to the United Kingdom, the Mediterranean, and South America. The Boston steamer, *Peter H. Crowell*, has taken a charter for West Indian trade, and the firm which owns this ship has ordered another of a like type from the Newport News shipyard.

Just what I said would happen. They take them out of the coastwise trade and put them into another route, as they can easily do by getting a foreign-trade license, and then they build new ships at home.

I ask that the rest of the article be printed without reading.

The VICE PRESIDENT. Without objection, it is so ordered.

The rest of the article is as follows:

Moreover, the Coastwise Transportation Co., it was stated yesterday, had closed an order for two modern freight steamers with a capacity of 8,000 tons, one to be delivered in 10 months and the other in a year from date.

If the ill-starred Government-ownership bill were not impending, there is no doubt that many more new American ships would be under construction. But the idea of the Government as a competitor is not encouraging to private capital and enterprise. Nevertheless the American people are finding that they are not wholly helpless, and that they have a maritime reserve of the utmost value in their coastwise fleet, incomparably the largest and most efficient in the world. American cargo steamers designed within the past two or three years have all been built with reference to the Panama Canal and the 5,000-mile voyage between our Atlantic and Pacific seaboards. This means that these ships are fit for any service in any ocean.

The pity of it is that when this European war broke out last August our Government did not take some decisive step to assure the immediate construction of a large fleet of American steamers. American yards were half empty then; they would have been glad to undertake the work, and a month or two hence many new cargo craft could have been in readiness.

But instead of such a straightforward, practical policy the mischievous Government-ownership bill was launched. Instead of building American ships with American labor and manning them with American officers and crews, foreign ships are to be bought and foreign labor utilized—if the scheme is not vetoed by Great Britain and France.

Mr. LODGE. Here is a statement from the American United Fruit Company. It is the statement of Mr. Andrew W. Preston, the president.

I was surprised to note that, in attempting to justify this bill after an ex parte hearing, Senator FLETCHER undertook to reflect upon the character of the ships recently given American registry by stating that the cargo space of most of those ships was employed by their owners exclusively for the transportation of their own goods and added nothing to the facilities of the American merchant marine for the transportation of general cargoes. While it is true that the United Fruit Company, to a large extent, furnishes its own northbound cargo, a tremendous advantage in competition with other lines, Government or otherwise, yet our company furnishes no part of the return cargo to ports of Central America.

AVAILABLE FOR EXPORTS.

The company's banana business requires frequent and regular trips to the United States, and the American merchants have the entire ships available for the goods which they export to Central America. Therefore, Senator FLETCHER's statement, like practically every argument that I have seen advanced in favor of this bill, is misleading and will not stand the test of a careful examination.

There has been a great deal of talk respecting the difficulty in procuring transportation to various ports. If anybody in any part of the country has any goods which they wish transported to any part of Central America, I wish they would communicate with our traffic department. We have had, still have, and expect to have, ample space for all cargo offered to us for transportation.

That is illustrative of the fact that there is unoccupied tonnage now on the Central and South American lines, and the Government could transfer from those routes where there is but little to do to the congested routes where there is more trade than there is cargo space.

Mr. President, to go from these questions of detail to a somewhat larger question, I want to say a few words on the general economic question of the merchant marine.

The existing conflict between the great European Nations, involving as opponents the two principal international maritime carriers, Great Britain and Germany, has served as an impressive object lesson to the American people of the troubles resulting from a policy of easy-going dependence upon the ships of foreign Nations to transport overseas the constantly expanding volume of their international commerce. We have had several such lessons within recent times, though none of them has been so vividly brought home to the whole people as this. At the time of the Boer War the commandeering of her merchant ships for Government service by Great Britain led to a dearth of cargo carriers, and freight rates went up all over the world. When the American fleet of war ships went around the world, we had the mortifying spectacle of an armada belonging to one Nation accompanied throughout its entire journey by a host of the merchant ships of other Nations converted into auxiliaries, colliers, and supply vessels.

The editorial and other articles appearing continuously in all our newspapers, and the legislation recently enacted by Congress, as well as that now pending, all bear evidence that the attention of the whole Nation is at present aroused on the question of the restoration of the American merchant marine, so that we may be relieved from the apprehension of preventable crippling of our agricultural, industrial, and commercial interests by reason of international disputes over which we have no control. As this comes just as the United States has gradually developed its agricultural and industrial organization to the point where it is economically self-sufficient internally, it only remains for us to address ourselves to that which is the complement of this development by determining how to make ourselves completely self-sufficient externally through the organization of our transportation facilities on the high seas, so that hereafter we shall be able to minimize the effect upon us of international disturbances in which we are not participants. It needs no demonstration to show that it is as essential for us to be self-sufficient in shipping as in manufacturing and agriculture. Just how best to accomplish this is the problem which confronts us.

The numberless propositions which from time to time are submitted through the columns of the press, and the multitude of bills constantly being introduced into Congress, suggest a bewildering confusion of ideas upon the subject. Nor is this surprising when we consider its magnitude and complexity, and the possibilities and limitations of the construction, management, and operation of modern vessels. Even our system of government, admirable as it is in most respects, does not conduce to a solution of the problem. The reference of proposed legislation to congressional committees, whose membership, with few exceptions, changes every two years, as is the case in the House, does not provide us with a body of men trained to understand even the rudiments of the factors controlling the problem of the world's competition for the international carrying trade. This difficulty is aggravated by the fact that a large preponderance of our legislators come from communities far removed from the sea, who, in the nature of things, have had no opportunity either to understand or actually to realize the situation.

During the period from about 1860 to the present time the tonnage under our flag engaged in international trade has been relatively decreasing. It is a peculiar coincidence, however, that it is almost precisely during the same period, at least from 1870 to the opening of hostilities in the war now raging in Europe, that another nation, Germany, which previously had almost no merchant marine, has gradually become the second greatest international carrier, even threatening the supremacy of Great Britain, the leading maritime nation. This result has been attained by Germany through the efficient work of her legislative machinery, combined with the enterprise of her citizens. Her permanent national boards on marine, industrial, and commercial affairs include a number of the leading men in these fields of endeavor working in conjunction with representatives of the legislature, with a staff whose world-wide researches are made the basis of constructive legislation. Somewhat analogous is the policy of the British Government with its world-renowned board of trade. These permanent organs of government are cruelly practical, look facts squarely in the face, realize that the world is dynamic, not static, a process, not a structure, and recognize that the country looks to them to formulate policies which shall keep pace with the evolution of commerce and of transportation and communication, which has been going on with ever-accelerating speed within the past 40 years. The results which have accrued from the settled policy of these two nations should commend the attention of the American people to their methods of procedure. Our past experience shows that the greatest obstacle to a large increase in our international tonnage is a lack of the proper agencies to secure accurate information on a problem surrounded with forces in a state of ceaseless ferment.

While it is true that the total tonnage of the ships flying the American flag engaged in trade between the nations is scanty in comparison with that of vessels of Great Britain and Germany engaged in the same occupation, yet, contrary to public belief, the aggregate tonnage of the United States employed in all trades, including that between the ports of our enormous extent of seaboard on the oceans (including Porto Rico and Hawaii) and on the Great Lakes is great, so great, indeed, that this country takes rank as easily the second maritime nation of the world, surpassed alone by Great Britain. The figures compiled by the United States Government show the total tonnage of all craft over 100 gross tons now carrying our flag to be in round numbers over 8,000,000, of which about 3,500,000 trade between Atlantic and Gulf ports; about 3,000,000 on the Great Lakes; about 1,000,000 between Pacific ports, the remainder being engaged in trade between this and other countries. This is about one and one-half times as great as the combined foreign-going and coastwise tonnage of Germany, more than three times the total tonnage of Norway, and twice the total tonnage of France and Italy combined. While it is likewise true that Germany's tonnage is almost exclusively engaged in international trade—her coastwise tonnage being practically negligible—and that the coastwise tonnage of Great Britain is small relatively to the tonnage of that country engaged in international trade, yet the assumption is fallacious that because over six-sevenths of the gross tonnage of the United States is engaged in our coastwise trade the coastwise routes and shipping of this country are comparable to the coastwise routes and shipping of other countries. As a matter of fact, almost all the trades in which our coastwise tonnage operates bear a close analogy in length of routes and size of ships operated thereon to many of the international routes and to the size of ships operated thereon of foreign nations, and bear no resemblance to the coastwise shipping of Great Britain even, which has the greatest coastwise tonnage in the world outside of our own. The steamers engaged in the coastwise trade of Great Britain are almost all under 1,000 gross tons, the large majority being much under this, and but few of the routes approximate 300 miles in length.

A tabulation of some of the distances between American ports to and from which our steamers operate direct, and the size of the ships employed on these routes, will illustrate this:

	Miles.	Gross tonnage of ship.
New York to Honolulu	6,700	12,000
New York to San Francisco	5,217	12,000
San Francisco to Honolulu	2,091	12,000
San Francisco to Alaskan ports	2,000	5,300
New York to Galveston	1,742	6,400
New York to Porto Rico	1,407	10,000
New York to New Orleans	1,344	10,000
New York to Jacksonville	979	4,500
New York to Savannah	708	6,200
New York to Charleston	736	4,500
New York to Norfolk	320	3,800
Baltimore to Jacksonville	772	3,600
Boston to Savannah	844	6,200
Boston to Baltimore	705	3,600
Boston to Norfolk	533	3,600
San Francisco to Portland, Oreg	400	5,000

Many of our coastwise routes exceed the distance of the routes traversed by British ships plying between ports in Great Britain and the ports of Norway, Sweden, Germany, Holland, Belgium, France, Spain, and even the Mediterranean ports, as well as the Baltic ports of Russia, the steamers covering these routes being classed, of course, by Great Britain as in the foreign trade.

The ships under the American flag in the international trades, excluding small craft, comprise less than 1,000,000 gross tons,

almost exclusively steamers engaged in line traffic running regularly between the same ports. In the trans-Atlantic trade there are six and in the trans-Pacific trade the same number, all very large ships. There are lines on the Atlantic and Pacific coasts trading between American and Cuban, Mexican, South American, and Canadian ports.

International carrying trade is a bargain in which no one can assume successfully to dictate all the terms. It is open to all nations, and it is impossible to compete there except on an equal basis. It behooves us, therefore, first of all to ascertain if our citizens are on a footing of equality with those of other countries, and if not, we must, perforce, so adjust ourselves as to overcome our disabilities if we may hope to fulfill the expectations of the country at large, and cease our search for a nostrum that will by magic produce a state of health. This should be done with sober consideration, and whatever legislation is enacted should be based on information accurately ascertained by men capable of grappling with the complexities of the problem without regard to the frantic and feverish clamors of amateurs charged with ardent emotionalism, and with less regard to the traditional dogmas of political parties adapted to economic conditions which belong to a dead era, otherwise no permanent headway will be made.

It is unfortunate that most of our people whose ideas form what is commonly designated as public opinion think in terms of the large Atlantic liners whenever they give consideration to merchant-marine affairs. Such steamers are most in evidence to the traveling public who pass through our large eastern seaports, and the size and magnificence of these craft make an emotional appeal to the eye and mind. Most of the large liners to-day in the international trades all over the world are under the British or German flags; in fact, Germany has a greater number of these large liners in proportion to her total tonnage than her rival.

Great Britain stands unrivaled, however, as the world's cargo carrier, and it is the tremendous number of her large and first-class tramp steamers, with their enormous cargo-carrying capacity, which gives her such a preponderance over every other country as a maritime nation. In all the seaports of this country, on both the Atlantic and Pacific, away from the usual berths of the large passenger steamers, the red ensign of Great Britain is everywhere in evidence, though hardly ever noticed by our traveling public. It would indeed be gratifying to every American to behold the United States flag at the stern of more of the large passenger liners than is now the case, but the most immediate need of this country is for cargo carriers, such as Great Britain possesses in abundance, so that our cotton, wheat, corn, and other products shall be carried in our own ships and the United States cease to be entirely dependent on the ships of other countries for this service. It is merely to scratch the surface of the problem to attempt to solve it by the acquisition of a few steamers running on regular routes with fixed schedule. The ship of the type of the tramp is the prime necessity in the international carrying trade, and the ownership and operation of this type of ship require a commercial machinery extremely complex. The tramp has no schedule. If a bad harvest in the United States cuts off the grain export, the tramp that has done the work in the North Atlantic may seek freight at the mouth of the Danube or South Russia, or in the Indian Ocean or the East Indies. Wherever freight is offering there she may go; for rice to Rangoon, for jute to Calcutta, or for sugar to Java. Much of the work of these vessels is of a seasonal character, a certain region shipping its products at a particular time only; California wheat is ready to ship at a different season from that of the Argentine Republic or India; the corn of the Mississippi Valley is ready to ship later than the wheat from the same region; there is a different sugar season for Hawaii, Peru, Java, Germany; there is a cotton season and a nitrate season, the latter being decided by the great demand for nitrate in the spring planting time of the Northern Hemisphere. It would be absurd, of course, to contemplate engaging in the international trade with this type of ship and to confine its operations to the carriage of our own exports and imports, for then the greater part of her time she would be proceeding in ballast, while her competitor of other nations roaming all over the world, with full cargoes most of the time and consequent greater earning power, would be able to underbid her in rate quotations on American cargoes.

Disregarding the numerous and spectacular theories submitted with complete assurance for public consideration by well-meaning but uninformed persons, a consideration of some of the plausible remedies advanced by reputable newspapers, prominent men, important chambers of commerce, and maritime associations, as well as practical steamship operators, amply demonstrate the difficulties encountered in any attempt to arrive at a diagnosis and obtain an infallible prescription for a cure of our present humiliating shipping status. These may be summarized as follows: (a) A revision of our antiquated navigation laws and the removal of all Government restrictions which handicap American shipping; (b) preferential duties on goods imported in American bottoms; (c) payment of subsidies, bounties, subventions, or mail contracts to American ships; (d) Government ownership and operation of ships.

In the present crisis in international relations the people of this coutry are in no mood to view complacently the familiar arguments which urge that it would be an economic loss to attempt to undertake to do for ourselves what the foreigner is able to do for us cheaper than we can. Even Great Britain, the great protagonist of free trade, has seen fit to abandon that cardinal principle of her economic policy when her interests were vitally in jeopardy, and has never adopted it where her shipping was concerned. The object lesson taught her by our Civil War, when her supply of raw cotton was cut off from the only source from which it could be procured, and the operatives of her cotton mills were starving from enforced idleness owing to a quarrel in which she had not interest and over which she had no control, has not been lost on her, judging by the strenuous efforts she has ever since been putting forth through grants of money by the National Government and by local commercial associations to stimulate the cultivation of this staple in her possessions in India, Egypt, and Africa. The opponents of this free-trade argument contend that while apparently sound it is based on too narrow a view of the problem, claiming that the ships of a nation are like the delivery wagons of a storekeeper, and no department store in the country would dream of intrusting to a rival the delivery of its own goods to its own customers. They furthermore point out that during the Napoleonic wars in Europe, when, between the Milan decrees of 1806 and the Berlin decree of 1807 of Napoleon, and the orders in council of the British Government of the same years, the United States, a neutral nation, suffered immensely in its trade at the hands of both contestants, although in no way involved in the issues at stake, demonstrated to the people of the United States that it was not advantageous to them to continue dependent upon European nations for most of their manufactured articles of consumption, contenting themselves with the production of raw materials, even though the foreigner could produce manufactured articles cheaper than they could themselves, in consequence of which they speedily readjusted their economic policy to overcome this.

Our navigation laws are contained in the national statutes pertaining to shipping and the rules of the supervising inspectors of steamboats made pursuant thereto, which have the force of law when approved by the Secretary of Commerce. Since the enactment of the statute of June 6, 1872, and subsequent amendments thereto, all materials of foreign production necessary for the construction of vessels built in the United States for the purpose of being employed in the foreign trade, or in the trade between the Atlantic and Pacific ports of the United States, or generally in the coastwise trade of the United States for not more than six months of each year, and all such articles necessary for the building of their machinery and all articles necessary for their outfit and equipment, may be imported free of duty. Until the passage of the act of August 24, 1912, all ships flying the American flag had to be built in American shipyards. By this act foreign-built ships were permitted to fly our flag if not more than five years old at the time of application for registry, but such ships had to confine their operations to trade with foreign countries or with the Philippine Islands. By the act of August 18, 1914, the restriction as to the limitation of five years has been removed, so that to-day foreign-built ships, regardless of age, are eligible to American registry to be engaged in the foreign trade. In the complete construction of but one large steel ship, the *Dirigo*, built by Arthur Sewall & Co., at Bath, Me., has the privilege of free foreign materials been availed of, and the results in this instance have not proven satisfactory. During the interval between the enactment of the statute of 1912 and the passage of the act of 1914 not a single foreign-built vessel made application for American registry, and thus far, January, 1915, during the operation of the latter act almost all of the 111 foreign-built ships, with an aggregate measurement of 396,990 gross tons, admitted to American registry are and have been owned by Americans. All of these ships have been operating from American ports, and notwithstanding that they have been officered by foreigners, these foreign officers have, perforce, been largely domiciled with their families in the United States, and as a necessary consequence the owners have been obliged to pay and feed them on a scale commensurate with that of the officers of similar ships under the American flag. In other words, the only reason for these American-owned foreign-going vessels being under foreign flags is due to the lower cost of foreign construction, from 30 to 40

per cent less than if built in American shipyards, with all that that involves in the way of earning dividends, providing for depreciation, and covering by insurance on the excess cost, and this having now been removed, there was nothing to interfere with the natural preference of the owners for their own national flag. To this limited extent the recent legislation has increased our tonnage without injury to our shipbuilding industry; but to claim this as even an approach to a solution of the problem is, of course, ridiculous, in view of the fact that more than 92 per cent of our exports and imports is carried in foreign bottoms. Furthermore, these foreign-built ships admitted to American registry by no means represent even the total number of vessels owned wholly or partially by Americans, a census privately taken a short time ago revealing 1,213,965 gross tons of shipping engaged in international trade owned and operated by Americans.

There are other legal restrictions which still remain as a handicap on American shipping, and though each is of minor importance yet it is contended that in the aggregate they interpose a formidable barrier against our capturing the share of the world's carrying trade to which we may legitimately aspire. By the statute enacted June 26, 1884, all the officers of vessels of the United States who have charge of a watch (which embraces all the licensed deck and engineer officers) must be United States citizens. British law has no such restriction, and aliens who have acquired certificates as officers can be employed on British ships, except those receiving allowances from the British Government by virtue of their being available in case of war as auxiliary cruisers, which are exceedingly few in proportion to the number of ships under the British flag. The effect of this statute is to restrict the number of licensed officers for American ships, and this inevitably tends to increase wages, so that the cost of operating an American ship owing to this legal restriction is increased. American ship officers, while admitting the greater liberality of British laws, insist that notwithstanding this practically all British licensed officers are citizens of Great Britain, few foreigners being able to avail themselves of the liberality of the law, owing to a lack of technical proficiency in the English language and the poor chance of securing a position even where able to qualify, or to retain a position when secured except under intolerable conditions. We should not be willing to change the law and lower thereby the pay of American officers, so that this provision of our statutes must be accepted as one of our conditions.

Under United States regulations there are 16 grades of marine engineer licenses for merchant steamers, varying according to routes and the type of engine. In Great Britain there are but two grades of certificates for licensed engineers required by law, with no variation as to routes and type of engine. It is significant that in the United States Navy, before the abolition of the Engineer Corps, but four grades of engineer certificates were provided for. To comply with legal requirements it takes at least six years to qualify for the position of chief engineer in the merchant marine of the United States, whereas in Great Britain this can be accomplished in a minimum of five years. As a matter of fact, it actually requires a longer period to qualify for this position on an American steamer than it would take the same man to become a physician or a lawyer even in those States where the requirements for admission to these professions are the most drastic. This, of course, likewise tends to restrict the market.

By the act of March 2, 1895, the admeasurement laws of the United States were brought into substantial accord with the laws of Great Britain and other maritime nations. They are not, however, precisely alike. The difficulty seems to arise not from lack of uniformity of the laws themselves, but from the varying constructions put by administrative officials in all countries upon certain phrases of marine architecture, such as "upper deck," "permanent closed-in space," "shelter space," "open to the weather," "under cover," etc., for which allowances have to be made in deducting from the ship's gross tonnage to arrive at her net tonnage. Mr. Robert Dollar, operating steamships on the Pacific coast and between Pacific ports and the Orient, some of which are under the American flag and others under the British, testified before a congressional committee that under the British rating one of his ships was classed as being 2,797 net tons, whereas if it were under the American flag it would be placed at 3,679, and that such a difference as this sometimes meant as much as $5,500 a year in wharfage, light, and other harbor dues, according to the foreign ports visited. In rebuttal the administrative officials of the United States Department of Navigation submit that according to American standards of measurement many ships are classed lower than they would be under foreign flags, dependent upon the build of the ship, and that British marine architects design ships to meet the requirements of the British administrative officials' methods so as to minimize the ship's tonnage.

American requirements as to the annual and other inspection of vessels are more or less mandatory, whereas the merchant shipping act of Great Britain is considerate, surveyors of ships in the performance of this duty being enjoined not unnecessarily to delay or detain a ship from proceeding on her voyage. This may mean a matter of considerable expense to an owner, for a ship when delayed for inspection is earning nothing to meet interest on investment or insurance and is under heavy expense for wages and subsistence of crew.

A ruling of the United States Steamboat Inspection Service of July 30, 1909, made it compulsory to have an auxiliary feed line enter all boilers of steam vessels through an opening and fitting entirely independent of the fitting and opening of the main feed. This requirement cost one steamship line $18,000. This is not required on foreign ships.

A ruling of the same bureau of June 30, 1914, requires fusible plugs fitted in all boilers of steam vessels except water-tube boilers. On one of our steamship lines it will be necessary to fit 1,160 plugs during the ensuing year at an initial cost of $5,120 and $2,500 annually for renewal, as they must be renewed every four months, not to mention the expense incident to the delay in carrying out these periodic requirements. No foreign country requires these fusible plugs.

American steamship operators complain that they are constantly being menaced with such governmental interference; that no sooner is one sweeping change precipitated, involving an expenditure of thousands of dollars per ship, than another order is promulgated, or a statute enacted by Congress, which necessitates the replacement of equipment just installed by other and different equipment, which, in turn, may as soon be ordered to be thrown aside and some other substituted; that it is impossible to expect to be able to compete with the ships of other nations under such conditions; and that the dread of these heavy expenditures makes American shipowners timid in their ventures. The Steamboat-Inspection Service retorts that these requirements develop as the result of actual experience in accidents aboard ship and that they are judged necessary for the safety of life at sea. The response to this is that Great Britain, Germany, France, Norway, and other nations are as much interested in the safety of life aboard their ships as we are aboard ours, and that if such requirements are absolutely necessary they should be made a matter of international agreement, so that all nations would be on a parity; otherwise, when we can not compete, the freight and passengers will be carried by the ships of other nations, and thus in an effort to regulate business ethics our purpose of building up our merchant marine will have been defeated.

By the act of March 3, 1913, American ships capable of engaging in international trade are required to carry one more licensed deck officer and one more licensed engineer than are required on British vessels. Repeated testimony was given before the Merchant Marine Commission that when vessels were transferred from the British to the American flag, or vice versa, the number of the unlicensed members of the crew were increased in the former case and decreased in the latter, showing that the local inspectors of steamboats at American ports invariably prescribe larger crews for American vessels than the Board of Trade Supervisors of Great Britain prescribe for similar ships when under their flag. It is contended, however, that while British law does not require these extra officers, British ships, as a matter of fact, carry them though they are not necessarily certificated officers. The license requirement, however, tends to limit the number of available men and thereby to enhance their wages. Where Chinese or coolie crews are carried an intelligent man of these races can be employed for such work, whereas if a licensed man is required such men would not be available. I point out this difficulty simply to show the obstacles and competition we must meet, not to suggest that we should lower our seamen's wages or employ Chinese or lascars, to which I am inherently opposed. An American marine manned by Chinese or lascars or by underpaid seamen would be of little worth. But we must find other ways of meeting such competition as that which I have described.

In addition to these legal impediments, there are other natural and artificial handicaps which weigh heavily on the American shipowner. Wages throughout the United States are higher than in any other country. This needs no demonstration. That the purchasing power of the American wage scale in the United States may or may not be greater than the purchasing power of the foreign wage scale in foreign countries does not help the American shipowner, who must pay higher wages to American ship officers and crews and at the same time compete with the ships of countries whose officers and crews

receive lower wages. The higher rates of wages prevailing in this country are doubtless in a measure due to our protective system, while the shipowner seeking to engage in the overseas trade has no protection in his favor. It is true that the American manufacturer has finally obtained a foothold in foreign markets in competition with foreign manufacturers, notwithstanding the higher wages paid the American operative, but this would not be possible were the Government to enact laws requiring a standard of employee with a certificate from the Government and regulating the number of employees in excess of that required by the foreign manufacturer. The American manufacturer's employees, if high-priced, are more efficient than the foreign lower-priced employees, and fewer of them are therefore required, and it is by this means and by improved standardization, by domestic competition, and by superior organization, that the difference in wages is counteracted. The fact remains, however, that Great Britain pays the highest wages in the world outside the new countries, such as the United States, Canada, Australia, and South Africa, and yet none of the other European nations with which she competes, all of which pay lower wages than herself, and some of which are almost as well developed commercially, has so far been able to wrest from her her supremacy.

The statutory standard scale of provisions on American ships is higher than those of other nations and must be and ought to be maintained. On American ships the food furnished generally has been much in excess of that prescribed by law, and is much better than the average workman ashore can afford to indulge in for himself and family, this being found necessary to attract and hold competent crews. Food is a matter of national taste, and doubtless the German, Italian, Japanese, or Chinaman is as well satisfied with the diet furnished him as he would be with the American bill of fare, but the higher standard of living obtaining throughout the United States, due to climatic conditions and the abundance and variety of our food supplies, imposes an expenditure upon the American shipowner that his competitor for the world's trade is not compelled to meet. This is another fixed condition which can not and ought not to be changed, but must be met by help in other ways.

It is even contended that a free trade or protective policy has no bearing on this problem, for while Great Britain is on a practically free-trade basis, her greatest rival on the high sea, Germany, is on a highly protective basis.

The statement and the tables which I have presented cover the points in the navigation laws which I wish to put into the RECORD, so that what our difficulties were may be seen. Some are of a character growing out of our condition, which we would not change if we could and which we could not if we would. As to others, there could be valuable modifications made in the law.

I now come to the second alternative proposed for the upbuilding of our merchant marine.

To overcome these disabilities of the American merchant marine the policy of exacting lower tariff rates of duty on goods imported in American vessels is extensively advocated, the leader of the Democratic Party in the lower house of Congress, Mr. UNDERWOOD, being particularly enamored of this remedy. This has the disadvantage that it might lead to retaliation on the part of foreign nations discriminated against, though a greater objection is that most of the commodities imported by us from South American countries, particularly, whose trade we seem to be most eager of all to capture, are on the free list; and, of course, there can be no such discrimination in our exports for the reason that the United States Constitution prohibits a tariff of any kind on these. It is even claimed by statisticians that, despite our high protective tariff, about 45 per cent in value and about 65 per cent in bulk of all our imports are nondutiable. If these figures are correct it is difficult to understand the potentialities of this scheme. The discriminating duties, as the report of the Mercantile Commission shows, are practically out of the question and would be wholly fruitless. They would be enormously expensive, by loss of revenue, which they would occasion, and they would bring no result, because they would be, as I have said, met at once by retaliatory duties in other countries.

The next alternative, providing for the payment of subsidies of large mail allowances, has been for a long time in issue between our political parties, and upon this they seem to have arrived at a deadlock. I wish to dwell here for a moment on the general question of subsidy.

I have heard it stated here and there that it was the duty of the Republicans not only to oppose this Government ship ownership bill, but to propose a measure in its stead. Memories are short. Why, Mr. President, the Republican Party for the last 20 years has been doing nothing in this direction, except presenting measures for the encouragement of the merchant marine, and the method and policy they have adopted has been the method and policy of subsidy. Such American ships of consequence in the foreign trade as to-day fly our flag are there solely because they receive very modest mail subsidies. That is all that ever put them there or ever kept them there. That is the policy of the Republican Party; it always has been; and it is to-day. We offer that as a policy in contradistinction to the one proposed of Government ownership.

The United States to-day pays no direct subsidies to steamship lines, but does indirectly subsidize, as I have just said, some of her steamship companies by liberal mail allowances. Under the general statute for the sea conveyance of United States mails, steamers flying the American flag are paid 80 cents a pound for letters and postcards and 8 cents a pound for other articles, as against 35 cents a pound for letters and postcards and 4½ cents a pound for other articles when carried by ships under foreign flags. Under the ocean-mail act of March 3, 1891, contracts are made for the carriage of mails on American steamers, the remuneration being on the basis of mileage and the speed of the steamers, regardless of the quantity of mail carried. There are at present six of these contracts—two being from New York to Venezuela, one from New York to Southampton, England, one from New York to Mexico and Havana, Cuba, one from Boston to Jamaica, and one from San Francisco to Australia. The total payments for these six contracts for last year amounted to $1,144,630, an excess of $157,818 over the sum that would have been allowable to the beneficiary companies even at the 80 cents and 8 cents rates under the general statute if they had not been under contract arrangement and had conveyed the same amount of mail matter, and, of course, a much larger excess if these mails had been carried at the rates paid to foreign steamship lines. Certain burdensome conditions, considered to be of advantage to the Nation, have to be fulfilled by the steamers participating in these mail contracts, which it is claimed offset the excess amount paid for the service.

Let us now consider what is done by foreign countries in this direction. Great Britain pays $1,500,000 annually to merchant seamen enrolled in her naval reserve, $350,000 as annual retainers for the seamen who drill seven days a year with the fleet, and $95,000 a year to merchant seamen as Royal Naval Volunteers. These appropriations, while intended primarily to provide a supply of seamen upon which the navy may draw to obtain the crews to man the war vessels during hostilities, are of much assistance to the merchant marine. Great Britain also pays admiralty subventions amounting to about $400,000 annually to about 20 fast steamers, built according to Government plans and specifications, so that they can be readily converted into auxiliary naval cruisers. In addition to this, the Cunard Line receives an annual subvention of $729,999, in return for which the Government requires the right to purchase or lease any vessel owned by that company; and when the fast ships of the German lines had eclipsed the Cunard steamers in speed and the supremacy of British shipping on the north Atlantic was challenged, the British Government lent to the Cunard Co. $12,660,000 at 2¾ per cent for the construction of the steamers *Lusitania* and *Mauretania*. All of these allowances by the British Government are exclusive of payments made for the carriage of mails, which are on a liberal scale. In Germany the North German Lloyd Co. receives about $860,000 annually for maintaining a service between Germany and East Asia, and over $500,000 annually for a service between Germany and Australia; the German East Africa Co. receives $321,300 annually for a service between Hamburg and Cape Town; in return for these payments these companies carry mails, though there is no pretense that the cost of doing so is commensurate with the sums paid. France disburses over $6,000,000 annually in payment of bounties to shipowners and shipbuilders; Italy pays navigation bounties of over $60,000 annually; and Spain, $1,300,000 annually; Austria and Russia refund all Suez Canal dues disbursed by their steamers, amounting to $375,000 and $334,750 annually, respectively; and France makes a special allowance to her ships for canal tolls. Not a single British or German tramp ship receives monetary assistance from the Government. These vessels, however, share in the general policy of national encouragement of shipping, as they have been constructed in shipyards and their engines built in machine shops developed by the grants to the large steamship lines.

Whether the payments made by Great Britain and other foreign countries to their shipowners and seamen can be termed subsidies has been a subject of much debate in this country. It is doubtless true that the British contract mail system, in operation in some of its features for about 80 years, is theoretically political and military, but it has none the less helped to develop British shipping, shipbuilding, and commerce, as it was intended that it should do. Bounties, subsidies, or sub-

ventions are all terms used for payments made for some kind of value received, irrespective of the policy which may be involved—in one case the carriage of mails, in another the maintenance of national defense, or yet another the encouragement of trade—and it sometimes occurs that where a given sum is granted as a subsidy it is very difficult to analyze it into its component parts and say that so much of it is paid as a postal subsidy, so much for admiralty purposes, or so much for the encouragement of trade. British policy has usually been to subsidize ships for postal or admiralty purposes only and to exclude all consideration of trade interests, but even in the British case rapid postal communication has mainly, and in fact necessarily, followed the lines of great commercial traffic. There seems to be little doubt that a general result of these mail subsidies has been that the fast mail ships have developed a trade for the company which warranted the employment later on of intermediate passenger and cargo steamers.

It is odd that the greatest opponents of subsidies to American ships, the residents of the interior of the country, are unanimously in favor of the maintenance and extension of our rural post delivery, although the Post Office Department reports that this service now costs $53,000,000 annually and returns but $10,000,000; and with similar inconsistency these same people are demonstratively enthusiastic for the construction at national expense of mammoth reclamation projects for the benefit of the farmers of the arid West.

Some writers contend that as a nation's merchant marine increases so her commerce expands; that trade follows the flag, and that every ship is a missionary of trade. Belgium, however, has imports and exports which reach about $1,750,000,000 a year, yet she has no navy and her merchant marine comprises but 97 steamers, with a total gross tonnage of 176,000; Holland has a small navy, and its merchant marine consists of but 376 steamers of 576,000 gross tons, yet she has a foreign trade of about $2,500,000,000 annually. Even our own experience would seem to contradict the aphorism, in that with an export and import trade of about $4,250,000,000 annually, we have less than 1,000,000 gross tons of shipping engaged in overseas trade.

The remedy proposed in the Government ownership and operation of ships put forward by the present administration, with the naïve announcement that the project is submitted as a substitute for the alternative methods of subsidy, bounty, subvention, etc., which the Democratic Party is and always has been uncompromisingly opposed to, may seem exceedingly specious on the surface, but is simply a pretext and a disguise. That such a scheme is not akin to a subsidy is, of course, pure subterfuge, not entitled to serious refutation. Only the most unsophisticated could fail to perceive this. Practical men are under no delusions as to ventures of this kind. However, it is unnecessary to speculate upon this point. The Government is already in the steamship business in its ownership and operation of the steamship line of the Panama Railroad Co. This line operates six large steamers between New York and Colon, the Atlantic entrance to the Panama Canal, and does not confine its operations to the carriage of canal supplies, but carries on a general steamship business, connecting with other steamship lines for the through carriage of freight and passengers.

The vice president of this line testified last August, before the Committee of the House of Representatives on Naval Affairs, that four of the steamers operated by the line, two of which cost $650,000 each and the other two $750,000 each, had been lent to the steamship company for a period of years by other Government departments without charge for charter, or without any obligation on the part of the steamship line to provide for depreciation, insurance, or interest on the value of the ships, in consideration that the rates on cement carried by the line for the construction of the canal would be at a figure lower than could be secured from outside foreign lines. He also stated that on the two steamers owned by the line no provision had ever been made for insurance or interest on investment. In explanation of the terms under which the four Government ships had been lent to his line, he stated that it had been considered that the difference between the normal and the reduced rate of freight charged on Government supplies equaled the charges of interest and depreciation (of course, the Government never insures any of its property; losses being made up by appropriations where there is no accrued surplus), and there was therefore no necessity for taking money out of one pocket of the Government and putting it into another. An analysis of the relations of this steamship line with the Government in this transaction demonstrates that, in its most successful year, with a preference in the carriage of supplies for the construction of the canal assuring constantly full cargoes, and even allowing to the steamship line on the large quantities carried by it the highest rates charged by outside lines on smaller quantities, with large mail payments at more than double the rates payable to foreign lines for the same service, and a complete control of a large passenger traffic embracing canal employees on recurring furloughs, the Panama steamship line, if it had to provide for depreciation, interest, and insurance on all its floating equipment, can not make a better showing than other American steamship lines with few, if any, of these advantages. This is all the Government ownership and operation of steamship property has to offer in return for its destruction of individual initiative, a Nation's greatest asset. Furthermore, the most extreme advocates of the necessity of governmental assistance to American steamship lines to enable them to compete successfully with foreign lines, need theorize no longer; the Government has furnished in the operation of this Panama steamship line the most complete and conclusive demonstration that without such assistance it is impossible to earn a living wage. This doubtless explains the absence of shipowners at the recent hearings of the Committee on Merchant Marine and Fisheries of the House of Representatives on the Government ownership bill now pending before Congress, when not a single one appeared in response to the invitation sent out by the committee; apparently, shipping men are waiting for the activities of the Government in the domain of commerce to be diminished, rather than increased. The maintenance of a merchant marine and the exploitation of the markets of the world, correlated activities, attract the minds of men versed in the intricacies of business enterprise, but with the threat of Government competition private capital will inevitably retire from an unequal contest. The most sincere votaries of Government ownership and operation of public utilities shrink from the proposition that the Government embark in this world-competitive enterprise, realizing that either the public would have to face an enormous deficit to sustain it, or that the wages of crews would have to be reduced.

The many bills before Congress in relation to our shipping attest the lack of proper coordination. It is one thing to set forth a policy for the stimulation of the American merchant marine—I believe in the subsidy policy, which every other civilized maritime nation except ours has adopted—but there is a great deal more to do in order to build up that marine, and it is for that reason that I say that we need better coordination of the authorities called upon to deal with the marine. It is for that reason I am going to point out what the two great maritime nations, Great Britain and Germany, have done in this direction.

In Germany the quays and wharves, sidings, railway connections, warehouses, arrangements for loading and unloading, with special areas set aside for industrial plants adjacent to the wharves, are treated as a comprehensive whole. The German method of having a proportion of its governmental boards appointed from the membership of chambers of commerce or kindred bodies is not adapted to our system of administration; there are historical and traditional reasons which would prevent the people of this country from accepting this idea, even though the functions of such appointees were merely consultative. It savors too much of the relation of guardian to ward or counsellor to client. The British system, which is a compromise between our own and the German method, would be more acceptable to the people of this country. The Board of Trade of Great Britain is practically the censor of the lawmaking power of that nation in connection with its merchant marine, and we never hear of any friction between that body and Parliament, for the reason that the latter has confidence in the experts of the former, who are selected for their experience and special fitness. The work now being performed by our Department of Labor, since its dissociation from the Department of Commerce, in its investigations already completed and those now being undertaken, are evidence of what might be expected by a similar policy in favor of our merchant marine. That all the marine affairs of our Nation might be properly correlated there should be a bureau or a department which should have jurisdiction not only of the work now being performed by the Bureau of Navigation, Steamboat-Inspection Service, and shipping commissioners, but also that of the Bureau of Life Saving, Lighthouses, Marine Hospitals, Anchorage Grounds, Coast and Geodetic Survey, Weather Bureau, hydrographic work, and even over our rivers and harbors.

I have advocated no particular method in what I have said as to how to overcome the difficulties which for the past 50 years have proved an insurmountable obstacle to this country regaining its former ascendancy on the ocean.

I have stated the Republican policy in general terms. I have no time to go into the details in support of it, but I wish to

make this one further suggestion, that complex as the conditions are—and I am now going beyond the remedy of subsidies—they are not beyond the possibility of comprehension or remedy; Great Britain and Germany have not found them so. The one suggestion, apart from the Republican policy which I have mentioned, is that this country should have a permanent bureau or department of marine. Should the investigations of such a department as is here outlined demonstrate that it would be impossible to realize our national aspiration for the restoration of our merchant marine to a point commensurate with our importance as a world power except under conditions which we would not be willing to incur, it would thereafter be incumbent upon us to cease bewailing our maritime impotence and to resign ourselves to an acceptance of all that the consequences imply. The country would then, however, at least understand the problem, which there is abundant contemporary evidence is not now the case. It is certain, at least, that such difficult conditions and such complex problems can not be met by a crude bill hastily prepared by men who have never investigated the subject. Whatever else this bill may do, it will not build up the American merchant marine.

There will never be any private competition where Government-owned ships run. On those routes American private vessels would be excluded. It is impossible to compete with a competitor who is willing to incur indefinite losses, because the taxpayers of the country pay the losses.

Mr. President, I had intended to ask leave to put in some extracts from the report of the Merchant Marine Commission as showing the difference in costs with which we had to contend; but I have spoken more than two hours, and I do not mean to burden the Senate or myself this afternoon by going further into statistics of that kind. I shall reserve them for another opportunity. I wish, however, in conclusion, to make one or two observations of a general character.

In the first place, I wish to emphasize the absolute futility of this bill as a means to give any real relief whatever to the present situation except to the favored few who succeed in getting their products on board Government-owned ships. Unless the real purpose of this bill is simply to buy the German ships in order to give to the German lines, the German war bank, which has taken them over, and the bankers interested in them on both sides of the Atlantic, thirty or forty millions of the money of the American people—which I am slow to believe, because it would be an unneutral act of a flagrant kind, and due to the worst possible motives—if this is not the case, then the only ships in the German collection in any degree or under any possible pretense fit for the alleged purposes of this bill would be the freight boats of the Hamburg-American Line.

The total tonnage of those boats, 10 in number—I gave the list the other day—is 56,504 tons. If we add the two Hanser boats, 10,621 tons, we have 67,125 tons as the total tonnage of the German ships, for the most part too old, too small, and too obsolete for the trans-Atlantic trade, as all that are available among the German ships for the alleged purposes of this bill. As a mere business proposition it would be monstrous to load the taxpayers of the United States with such boats as these, unfit for the service desired and bought at war prices, twice or three times their real value.

Mr. President, in what I have said to-day I have tried to discuss the question of freight rates. I have also tried to show very inadequately, because it is an immense subject, something in regard to the economic features of this proposition. I have sought to point out that it would have no effect in building up American shipping; that on the contrary it would contract it; that it would be run at a loss to the Government, and the losses would be paid by the taxpayers. But, Mr. President, all these objections, the deep objections which I have to Government ownership, the grave objections which every consideration of this bill from the economic point of view presents, all these are as nothing, as dust in the balance, compared to the dangers involved in this bill by the plan of buying those German ships or any of them, or English ships or any of them, or any belligerent ships at all. Whatever relief you could give to a small number of shippers would be nothing in comparison with the ills which you will bring upon the country by this attempt.

Mr. President, I am no alarmist by nature, but I am alarmed, deeply alarmed, by the possibilities contained in this bill. Here we are in the last days of a dead Congress, whose successors have been elected, trying to crush through, with all the force of a majority reckless of consequences, a bill which uncontradictedly proposes to buy ships which have escaped to our ports for the purpose of avoiding capture. The President can find no popular mandate for a literacy test in the immigration bill, and stated, out of the abundance of his knowledge, that it had never been proposed by a political party. It was proposed in precise terms, as the Senator from New Hampshire [Mr. GALLINGER] has shown, by the Republican Party in 1896. We went to the country on that and the other issues of the day and were not defeated. The test has received the support of overwhelming majorities in two Congresses of both Houses and Senate, but apparently in the President's mind the Members of the House and Senate are men who get together here and vote their own fanciful opinions without any regard to the constituencies behind them.

It has been my observation, Mr. President, extending over a number of years now, that the Members of the House and Members of the Senate generally try to represent what they believe to be the opinions of their constituencies. Perhaps an occasional thought of reelection drifts across their minds and leads them to seek to fulfill the wishes of their constituency. The view of the President, however, seems to be that we represent nothing, and that is a very natural view for him to take in the process of converting us into a machine of record.

There certainly is no popular demand that I know of behind this bill, and no party ever suggested it, for this condition of a world war and no American merchant marine never existed in conjunction before. That is the measure and those are the circumstances under which we are asked to pass a bill which, if carried out by the purchase of belligerent ships, imprisoned German ships escaping from capture, will bring us into international complications of the gravest kind. Great Britain has protested against the sale of the *Dacia* and the transfer of her flag; and her view of the transfer of belligerent flags to neutrals in time of war has been a liberal view, like our own. Her view and ours upon this question have always been much the same.

Mr. GALLINGER. Mr. President, will the Senator permit a question?

Mr. LODGE. Certainly.

Mr. GALLINGER. I will ask the Senator if he knows why the *Dacia* does not sail?

Mr. LODGE. Mr. President, it is not fair for the Senator from New Hampshire to ask me, ignorant as I am of the purposes of this administration, to rend the veil of mystery and secrecy which overhangs the conduct of our foreign relations covering them with a darkness which is not equaled, I think, in any European Government to-day. I do not know why they do not let the *Dacia* go; but I know that Great Britain has taken a position, as stated in the newspapers this morning, against the *Dacia's* being allowed to go. England holds that it is not at all a question of whether the sale of the *Dacia* is a bona fide sale for commercial purposes. She is an imprisoned ship. By taking our flag she escapes from the danger of capture under which she now rests; and that, to the extent to which it goes, is a change in the balance of conditions created by the war, and on those sound grounds England would not recognize it.

Russia and France have made a protest—I think they made it more than once—a formal protest, going much further, adhering to the old doctrine of France, Russia, and Germany that after the outbreak of hostilities the transfer of a belligerent flag to a neutral can not be recognized. Those protests are here in the State Department. It means that if those ships go out of our ports after the Government has bought them, flying the American flag, France and England and Russia will decline to recognize that they are American ships, but will regard them as German ships, good prize, liable to be captured, or to be sunk if they resist.

The Senator from Montana [Mr. WALSH], in his very able speech—and he always speaks with great clearness and force and cogency in dealing with a large question of international law—after demonstrating what I think we all admit, that the English doctrine and our doctrine have been much more liberal in this respect than the continental doctrine, the French, German, and Russian doctrine, then said—I do not pretend to quote him exactly, but substantially—that it was unbelievable that England, at a moment's notice, would change her attitude. All these powers are now operating, be it remembered, under the terms of the declaration of London—that is, as between themselves; and under the specific terms of the declaration of London, as the Senator from Utah showed only a little while ago, every one of these ships that were avoiding capture in our ports is liable to be treated as a ship whose flag has not been transferred after we as a Government or some of our citizens have purchased her. But more than that, Mr. President, how can anyone say that England would not change her long-maintained doctrine? Have we so utterly forgotten our own history?

Why, Mr. President, there are plenty of men in this Chamber who can recall, as boys at least, the *Trent* affair, which brought

this country to the very verge of war with England. Lord Palmerston began by saying—supposing at the moment that a vessel with the envoys was likely to be stopped in the Channel—that he did not see how England could make any objection, because that was English doctrine for which they had gone to war with us in 1812. Then came news of the *Trent* affair. Under the stress of that incident they first shifted to the extraordinary proposition that it would have been no breach of international comity, no hostile act, if Commodore Wilkes had captured the ship and taken it into port; but even English Crown lawyers could not stand on that theory very long, and they came in a few days straight to the ground for which we had gone to war in 1812, that the flag covered the ship, and that we could not permit a belligerent to take men out of her. The ministry adopted our doctrine, and we were on the verge of war with England during those bitter 40 days when Lincoln was trying to extricate us, as he did extricate us by his wisdom and courage. England had shifted in a moment the doctrine for which she had fought and which she had maintained ever since 1812.

When nations are fighting for their lives, when they think their most vital interests are endangered, they are not likely to permit an enemy to receive the most powerful aid which a neutral is capable of giving. They will take a great risk before they will accept it.

I have heard it said that it is the belief of this administration that if we should buy those ships and send them abroad, when it came to the point England and France and Russia would not do what they say they will do, because they will be afraid of offending us. Why, Mr. President, that is the same idea that took us down to Vera Cruz—the idea that nobody in Vera Cruz would fight. Any man who did not think the facts ought to be made to suit his will would have known that the people of Vera Cruz would fight, and they did fight, and we floundered into bloodshed there, with the loss of 19 American lives and about a hundred Americans wounded, and two or three hundred Mexicans killed and wounded. If you are going to depend upon the theory that people will not resist when all that is dear to them is at stake, you are making a most fearful mistake. If we go on under this bill and buy those ships, I say in all soberness—for it is this which makes me so intense in my opposition to this bill—if we go on and buy those German ships and try to sail them under the American flag when they are ships escaping capture in an American port, you have started this country on the highway to war, not with one nation, but with four.

Tables referred to in speech giving rates taken from actual manifests of ships sailing from the port of Boston.

LIVERPOOL.

1 Not carried.

Mr. KERN. Mr. President, I ask unanimous consent that at 12 o'clock to-night the Senate take a recess until 10 o'clock Monday morning.

The VICE PRESIDENT. Is there objection? The Chair hears none. It is so ordered.

Mr. PERKINS. Mr. President, I send to the desk two telegrams, which I ask to have read.

The VICE PRESIDENT. The Secretary will read the telegrams.

The Secretary read as follows:

SAN FRANCISCO, CAL., *January 26, 1915.*

Hon. GEORGE C. PERKINS,
United States Senate, Washington, D. C.:

Shipowners' Association of Pacific Coast, comprising vast majority of owners and managers of vessels engaged in Pacific coastwise trade, although not affected directly by so-called ship-purchase bill, protest most strongly against this bill or any bill of like character, deeming its proposals to be most dangerous and un-American—Government competition surely antagonistic to private enterprise. Urge your valuable aid and influence against such bills.

SHIPOWNERS' ASSOCIATION OF PACIFIC COAST,
OLIVER J. OLSON, *President*,
W. F. SULLIVAN, *Secretary*.

SAN FRANCISCO, CAL., *January 26, 1915.*

Hon. GEORGE C. PERKINS,
United States Senate, Washington, D. C.:

We respectfully protest against passage ship-purchase bill in present form as being too radical departure from established customs of Government and having too strong tendency toward discouraging private interests from building and operating American ships for foreign trade, as no private company could compete with Government lines. Believe this would be fully confirmed if public hearings would be held before any further action by Government.

SAN FRANCISCO CHAMBER OF COMMERCE.

Mr. PERKINS. Mr. President, the membership of those two organizations represent nine-tenths of the shipping interests of the Pacific coast, comprising the State of California, the State of Oregon, the State of Washington, and a portion of Alaska. I have prepared an address on the bill, and if I were in good health I would deliver it, but I feel that I can not do justice to it, and I will therefore ask my friend from South Dakota [Senator CRAWFORD] to read for me the address which I have prepared. I beg leave to state that I have not received one letter or telegram favoring the passage of the pending bill.

The VICE PRESIDENT. The Chair assumes that there will be no objection, and the Senator from South Dakota will read the address of the Senator from California.

Mr. FLETCHER. Mr. President, I desire to say that we are very glad on this side to accommodate the distinguished Senator from California, whom we love quite as much and as sincerely on this side as he can be loved and revered on the other side.

Mr. PERKINS. I thank the Senator from Florida.

Senator CRAWFORD read Mr. PERKINS's speech, as follows:

Mr. PERKINS. Mr. President, throughout the 22 years that I have been in Congress I have earnestly supported and voted for every measure which I regarded as practical for the benefit of our merchant marine. I would gladly vote for any bill, even though offered by Senators on the other side, if it appealed to me as a business proposition and as one calculated to upbuild the merchant marine of the United States. But I can not support the measure now pending because it fails to commend itself to my judgment as a business man and as one not unfamiliar with ocean trade and navigation.

I was born in a region which for nearly 300 years has been famed the world over for its ships and sailors—in the State of "hundred-harbored Maine." Nature designed Maine and all maritime New England for shipbuilding and ship owning, and there on the coast of New England year after year up to a recent period were launched annually one-half or more of all the ships constructed on the seacoast of the United States. The first American line of battleship—it bore the proud name *America*—was built for Commodore Paul Jones in Portsmouth, N. H., only a few miles from my native town. There, too, the famous *Kearsarge* was launched, and Boston, but 50 miles away, produced *Old Ironsides*, the immortal *Constitution*, and Admiral Farragut's flagship, the *Hartford*.

The sea and its ships mean much to the people of New England. The ocean is their heritage, and nowhere has there been keener regret or heavier loss because of the years of decline of American shipping in the over-seas trade. This has involved the crippling of a noble and profitable industry. It has meant the driving of brave and hardy men from their natural calling into unfamiliar and often uncongenial employment. It is a sad and significant fact that while population has grown elsewhere, it has actually decreased in many of the coast towns and counties of Maine and New England. Ports that were once active are now idle and empty. Ships and yards are gone, and young men, who with a proper opportunity would be shipwrights and sailors, as their fathers were before them, have been prevented by the loss of our ocean fleet from following the vocation which they loved, wherein they preferred to gain their livelihood.

SHIPBUILDING IN MAINE AND CALIFORNIA.

It is true that Maine and all New England long since ceased to produce ship timber in the former abundance, but there are yards in Maine and many more yards in the other States of New England where ships were built of iron and are now built of steel. When this change was made and new materials and new methods came in the master builders found that many of their best mechanics in the construction of metal ships were men who had wrought in wood before. The art of the shipbuilder, of the shipowner, and of the sailor has been handed down with pride generation after generation in New England, from father to son. In no other part of the world could one find a more thoroughly skilled maritime population inured to the sea, to its hazards and hardships.

Many of the shipbuilders and seamen of New England went years ago, as I did, to our Pacific coast, and there in the pursuit of their calling have been joined by active and enterprising men from other maritime nations. American shipping, mostly engaged in foreign commerce, now documented on the Pacific coast amounts to 1,084,640 tons, of which by far the greater part, or 580,506 tons, belongs to the State of California, which now owns more ocean shipping than any State in the Union, with the single exception of New York.

Shipyards have sprung up on the Pacific seaboard, the largest of which are on the Bay of San Francisco and on Puget Sound. It was a California yard, the Union Iron Works, of San Francisco, which launched the two most famous vessels of the Span-

ish War, one Admiral Dewey's flagship, the *Olympia*, and the other the immortal *Oregon*.

Shipbuilding and navigation would have grown and flourished to a far greater extent in New England, New York, and other States of the Atlantic seaboard, and on the Pacific coast also, if the national policy of the United States toward ships employed in foreign commerce had been favorable and not hostile. We have protected nearly everything else by national laws in the last 60 years, but we have neglected our maritime industry, and we are facing to-day in the crisis of this great war the natural results of our national shortsightedness.

For years, as Senators know, the building of vessels for trade overseas has almost ceased in the United States. The building of smaller ships for coastwise commerce has continued and the coastwise navigation laws, often assailed but never repealed, have saved a remnant of shipbuilding and navigation in America. Though we have almost lost our ocean fleet, we have kept our coast fleet, and for that some building has continued in New England. It is a source of employment and prosperity in some communities, though less in Maine now than in her sister State of Massachusetts. It is still advantageous to build ships for coastwise commerce in New England, because the climate is favorable during most of the year. There are deep ports, and, above all, an abundance of skilled labor. Good wages are commanded by the workers in the shipyards of the New England States, and almost every mechanical trade is represented in the construction of a vessel. Pattern makers, machinists, boiler makers, riveters, calkers, carpenters, painters, riggers—these are some of the callings that are employed. They demand intelligence and faithfulness, and these mechanics are good citizens, an honor to any community and of great value to our country in peace or war. Equally valuable also are the services of the officers, the engineers, and the seamen who navigate and drive the ships.

I can recall the time when half a million tons of shipping were built in a year in the United States, the greater part of this for foreign commerce. In the year 1852, when, a sailor boy from Maine, I shipped before the mast for foreign voyages, no fewer than 255 sailing ships and barks of a type especially designed for over-seas commerce were launched in the United States. In the following year, 1853, 270 ships and barks were built; in 1854, 334; and in 1855, 381. The total product of our shipyards in 1855, the high-water mark of our maritime commerce was 583,450 tons.

AMERICA SUPREME IN SAIL AND STEAM.

Those were years when a young man was proud to be a sailor beneath the American flag, which floated triumphantly over the best ships in the world, in every ocean. Those were the years when American vessels carried three-fourths or more of our own country's commerce and a considerable part of that of other nations. In the four years during which I followed the sea I made several voyages out of New Orleans and Mobile to Great Britain, Norway, Sweden, and France. On two of the voyages the ship on which I was serving brought cargoes of iron rails, one from Gothenberg, in Sweden, and one from Cardiff, in Wales; both cargoes were landed at New Orleans. Another cargo was of salt, from Liverpool to New Orleans, and another of lumber, from St. John, New Brunswick, to Ireland. I only mention this to show the great difference between then and now in exports and imports. The ships I sailed on were in competition with the famous Black Ball Line from New York to Liverpool, the White Star Line, the Anchor Line, and other sail ships plying out of New York to Europe, while the celebrated Collins Line of American trans-Atlantic steamers was making its swift trips across the ocean, regularly beating the British Cunarders and carrying under the American flag the best passenger traffic and the most valuable merchandise.

In that period the United States stood supreme both in sail and in steam. American steam lines ran to the West Indies and up the Pacific coast from the Isthmus of Panama, and the British Government was sending naval officers to the United States to discover why American steamships, as American sail ships had been before, were so superior to British steamships in their speed, power, and efficiency.

During those years at sea I made a voyage around Cape Horn to the Pacific on the good ship *Galatea*, built by the McKays at Chelsea, Mass. Later I became associated with the shipping firm of Goodall, Perkins & Co. in San Francisco, with which I continued to operate steamships and sailing vessels until my election to the Senate in 1893.

I count myself fortunate to have lived and to have borne some modest part in the most glorious era in the maritime history of the United States. I was a sailor by choice and profession, a merchant trader by necessity, and a politician by accident. If I have been successful in the shipping business on the Pacific coast, it has been due entirely to my association with my partners, men of long experience as seafaring men. I recall the great losses suffered through the destruction of American ships by the Confederate cruisers *Alabama*, *Florida*, and *Shenandoah*, whose depredations frightened shipowners into transferring many noble vessels from the Stars and Stripes to the King George's red ensign of Great Britain. Our shipping suffered terribly because of the Civil War, but the loss need not have been irretrievable. Other industries suffered, but were soon restored, and it might have been the same with our merchant marine if the policy of national protection that has done so much for manufacturing and for agriculture had only been extended to it many years ago.

GOVERNMENT OWNERSHIP AN UNWISE POLICY.

Passing now to the pending bill (S. 6856) to authorize the United States, acting through a shipping board, to subscribe to the capital stock of a corporation to be organized under the laws of the United States or of a State thereof or of the District of Columbia, to purchase, construct, equip, maintain, and operate merchant vessels in the foreign trade of the United States, and for other purposes—the bill introduced by the senior Senator from Florida and proposed amendments by the senior Senator from Missouri—I regret that I can not believe that it is constructed on lines that will restore maritime commerce to the United States. It involves a radical innovation in the policy of the American people, who have hitherto preferred that their Government should not embark in business undertakings which could be left to private capital and individual enterprise. The proposed bill is not to be compared with the ocean-mail act of 1891, fathered and advocated by that splendid statesman and devoted patriot, the late Senator William P. Frye, of Maine, or with the proposed bills amending and strengthening the act of 1891, introduced and advocated by Mr. GALLINGER, the distinguished senior Senator from New Hampshire. This legislation for the encouragement of American steamship service, carrying the United States mails in naval-reserve ships to the ports of other countries and other continents, is framed on lines that have proven successful in the maritime experience of our own Government. I am profoundly convinced out of a lifelong study of the question that the best interests of our country would be most surely served by the enactment of the bills long and ably urged here by Senator GALLINGER, whose devotion to the restoration of our merchant shipping and whose knowledge of the subject have never been surpassed by any of the public men of the United States.

I do not believe that private capitalists will deem it wise or expedient to invest their funds in a shipping corporation in partnership with the United States Government, for the reason that success must depend upon the economy, the knowledge, and the skillful management of those engaged in the conduct of the business. In my opinion, it would be just as unreasonable for the Government of our country to go into partnership in manufacturing with the owners of factories or into partnership with the farmers. We have not applied this principle of Government ownership and control to those other businesses which have been protected by the Government and have become great and prosperous. Why should we put our Government in competition with ocean shipowners and shipbuilders of the country, who have been denied protection and encouragement and are less able to compete with the United States Treasury than almost any other class of business men in the land?

SHIPOWNERS HAVE HAD NO FAIR CHANCE.

I have heard it said that the Government ought to go into this ocean shipping business because the shipowners and shipbuilders of the country have been given an opportunity and have not taken advantage of it. This is most untrue and unjust. The reason why, with all our factories, all our farms, we have few or no ocean ships is because the shipowners and shipbuilders of America have not been given an equal opportunity with our fellow citizens in other great industries. I believe in the Republican policy of protection alike to manufacturing and to agriculture. It has produced wonderful results in both fields of endeavor. It has been applied to our coastwise shipping, including that on the Great Lakes, and it has produced wonderful results there also. Our coastwise tonnage under the American flag to-day is $6,852,536, or, next to the fleet of Great Britain, the very largest mercantile tonnage in the world, surpassing the entire tonnage of the German Empire and amounting to about three times the tonnage of France, Norway, or Japan.

When I was a boy and a young man at sea our American shipping employed in distant voyages to foreign countries and around Cape Horn to the Pacific Ocean equaled the tonnage of our coastwise fleet on the Atlantic, the Pacific, the Great Lakes, and the rivers combined. Our deep-sea tonnage ought

naturally to be equal to-day to our coastwise tonnage, which has had the constant and active competition of the greatest railroad systems in the world. The reason, and the only reason, why American ocean shipping has not increased as American coastwise shipping has grown is that our ocean shipping has not been protected or encouraged by the Government of the United States.

It is sometimes urged on the other side of this Chamber that for this neglect the Republican Party is responsible. It is true that during most of the years since 1861 the Republican Party has controlled our National Government. But the leaders of the Republican Party have not forgotten or neglected the merchant marine. They have endeavored again and again, as did Senator Frye and as Senator GALLINGER has long been doing, to apply to ocean shipping in some way the principle of protection that has been so constantly and successfully applied to agriculture and to manufacturing. Unfortunately, in these efforts a small part of the Republican Senators and Representatives have not followed their party and have not been willing to apply to the ocean shipping industry of America the protection which they demanded and received for the agricultural industries of their constituents.

I trust that this great war in Europe has brought a wider vision to some of our Republican friends of the Middle West and the Northwest, and that they may be willing now and hereafter to recognize ocean shipbuilding and navigation as American industries of some value even to the farmers who grow wheat and corn and cotton in the interior and Southern States of the United States.

JUST WHAT WAS PREDICTED.

It is affirmed by the advocates of the proposed bill for a Government-owned merchant marine that there is a great shortage of ships for the export trade of the United States and that there has been an enormous increase in the rates of freight demanded by the ocean shipping companies, which are chiefly foreign. A report upon this subject, in which very emphatic language is employed, has recently been presented to the Senate by the Secretary of the Treasury and the Secretary of Commerce. I am not going to combat the assertions of that report, though some of them may seem extreme and unwarrantable. But I do wish to remind the Senators on the other side that one argument advanced on this side year after year for some reasonable national protection and encouragement to American ocean shipping has been that in the event of a great foreign war, in which the foreign Governments that were our principal ocean carriers might be involved, their ships would be withdrawn and we should be left without the means of delivering our own goods to our own customers.

Again and again have I stated this argument and uttered this warning in this Senate Chamber. Very much to my regret and disappointment, it has appeared to fall on deaf ears. Sometimes it has even been denied that any such great war was possible. We have lived and we have learned. We are now face to face with the consequences of the greatest and most terrible conflict which the world has ever known, and every word that was said by the distinguished and lovable Senator Frye, of Maine, by Senator Hanna, of Ohio, by Senator GALLINGER, of New Hampshire, and other Senators on this side of the Chamber, has been overwhelmingly confirmed in the far-reaching results of this European struggle. The ears that were deaf are deaf no more.

When the Senator from Florida, the chairman of the Committee on Commerce, who has introduced this bill, was advocating it the other day in this Chamber it was a matter of interest and gratification to observe how fully and earnestly he quoted and indorsed the reports of the Senator from New Hampshire on the importance of a merchant marine in peace and war. There is no difference, no dispute, now on this question between the two sides of this Chamber. All doubters are silenced. It is impossible for any honest and patriotic public man to deny, in the light of what has happened since August last, that the possession of merchant ships, of shipyards, of skilled mechanics, of seagoing officers and sailors, is indispensable to the security and prosperity of the United States.

On this great truth we are all at last agreed. Our difference now is only as to the means by which an all-essential result shall be accomplished. The Senator from Florida, and those Senators on his side who stand with him, contend that a merchant fleet can be created for the exigencies of this war only through Government purchase, building, ownership, and operation. I believe, on the contrary, that this would be a slow, a wasteful, and an ineffective way. I believe that the Government can not move so quickly or strongly in this matter as can experienced and competent ship-owning corporations, which, fortunately for us, do exist on both the Atlantic and the Pacific seaboards.

UNWISE PROVISIONS OF THE BILL.

This proposed bill has already been much amended. It originally provided that the shipping board should be made up of the Secretary of the Treasury, the Postmaster General, and the Secretary of Commerce—three members of the Cabinet who would almost certainly be gentlemen without the slightest experience in ocean trade. This was so unwise and unworkable that the provision has been changed, and the shipping board is now to be composed of the Secretary of the Treasury, the Secretary of Commerce, and three civilians experienced in the shipping business to be appointed by the President. To this extent the bill has been improved, but it is still imperfect and unsatisfactory.

The proposed compensation of $6,000 a year for each civilian member of the board will not properly compensate ship managers of the requisite ability and experience. To undertake this work they should be the foremost men of their calling in America. Such men can not be obtained for the compensation stipulated in this bill, unless they are to be asked to make a great personal sacrifice when they enter the service of the Government.

Moreover, the proposed shipping board must create the requisite executive and technical organization from the very beginning. This would almost inevitably be a matter of months. A great steamship business demands an organization not unlike that of a great railroad system. It can not be improvised in an emergency.

Such organizations already exist in the coastwise and foreign-going steamship service in this country. There are trained and capable expert managers this very day in charge of American steam fleets in coastwise and foreign commerce on the Atlantic and Pacific Oceans. Some of our coastwise shipping companies are among the largest, strongest, and most ably administered steamship establishments in all the world. They are organizations that, receiving their orders to-day, can act to-day and to-morrow. But week after week must elapse before a shipping board like that contemplated in this bill can organize its force, arrange its methods, and prepare to render efficient service. The only Government shipping organization that exists in ordinary trade is the Panama Railroad Steamship Co., operating a few steamers between New York and Balboa, and this fleet and its organization are very much smaller than most of the coastwise steamship organizations of the United States.

Valuable time will be lost if this bill is passed and the creation of our merchant marine is left to the inexperienced and cumbrous methods of the Government. There are men, American citizens, in New York, Boston, Philadelphia, Baltimore, New Orleans, San Francisco, and Seattle and other Puget Sound ports, who know the steamship business in every detail and are operating day after day fine steamships that successfully ply in foreign and domestic commerce. If it is true that grain and cotton and provisions are piling up on our seaport wharves, unable to find cargo room, unable to move because foreign shipping companies will not or can not carry them, why wait upon the tardy and uncertain organization of a semipolitical shipping board? Why not give reasonable national protection and encouragement at once to informed and able American citizens who know the shipping trade, and thus make it possible for them to do what can be done in the quickest and surest way and arrange shipping services that will serve the need of the American people?

If there are any ships in existence beyond those ships now employed that can be secured in this emergency, it will be just as lawful and just as practicable for these experienced American shipowners to secure and use them as it would be for the Government itself. These men already know by heart the business which the Government would be slowly and painfully learning. The proposed shipping board would contain two gentlemen of high political rank who, however able and distinguished they may be in other things, are without experience in and knowledge of the different trade of ocean shipowning and navigation. With these gentlemen are to be joined three others who may have experience, but are supposed to give the benefit of it for a wholly inadequate compensation—only three from among the many practical and capable ship managers of the United States.

If the emergency is as serious, as appalling, as the report of the Secretary of the Treasury and the Secretary of Commerce represents, it would justify the immediate summoning to Washington of all the best shipowners and shipbuilders of the Nation from all alongshore, down the Atlantic, along the Gulf

of Mexico, up the Pacific. But Government ownership and control would not help and encourage such men as these. Rather would it paralyze their energies. If prompt and great results are to be achieved, give these men the encouragement of the Government, give them its good will, its help where help is needed, but leave them free to act in details as their own initiative and judgment may best determine.

UNEQUAL TO A REAL EMERGENCY.

I can but insist that not only is the plan of the proposed bill a wrong one, but that it is wholly inadequate for a real emergency. The amount which is set aside for the acquisition of vessels is $30,000,000. This sum may seem a large one, but it should be remembered that the proposed ships are to be bought outright if they can be discovered. Indeed, a sum of $30,000,000 at the present time, with ocean steamers everywhere commanding enhanced prices because of the needs of commerce and the requisition of hundreds of ships for the auxiliary service of belligerent Governments, would probably secure no more than about 60 steamers, costing $500,000 each, with a cargo capacity each of not more than 10,000 tons. A fleet of 60 steamers may seem a large fleet to those not familiar with ocean business, but, as a matter of fact, it would be a smaller fleet by far than is controlled by any one of several of the various trans-Atlantic steamship companies. It would not be a dominating factor in ocean trade; indeed, under present circumstances it would scarcely be an appreciable factor.

With 60 ships at its disposal the Government of the United States could not begin to hope to control the shipping situation at all the seaports on the Atlantic and Gulf coasts, to say nothing of those on the Pacific Ocean. These 60 steamers might enable some fortunate, favored shippers to secure temporarily reduced and preferential rates, but when these Government ships had sailed on their long voyages, rates would go up again, and the net result would be utterly ineffective and disappointing.

But where, it may be asked, are 60 additional steamers to be secured? As other Senators have shown and as foreign Governments have warned us, they can not safely be taken from the interned fleets of belligerents, and all neutral ships—American and foreign—that are fit and available for the carrying of our commerce are already open to charter for that commerce, or are actually engaged in carrying it. All that the Government of the United States could do in pursuance of the policy of purchase, ownership, and operation would be to take over into the Government service 60 steamers of those that are now employed.

This would be no net gain—no real advantage. We should have embarked upon a very radical and dangerous experiment without any real gain to our country, any large relief to our commerce, any enduring power to our flag. If we took American ships of over-seas or coastwise companies, we should be taking ships already available. Not a day now passes without the announcement that some of the larger steamers of the coastwise organizations have been chartered for export commerce—for provisions or grain or lumber or cotton. Not only are these coastwise steamers being steadily employed, but large drafts are being made upon the heavier sail craft under the American flag—upon our remaining ships or barks or schooners. Scores of these vessels, regularly employed in coastwise trade, are now loading or have already cleared for the United Kingdom, the Continent, or South America. The American merchant marine which we do possess—the merchant marine that owes its existence to our prudent and beneficent coastwise laws—is responding loyally in this emergency. Why interfere with it—why force these brave and enterprising men to face the disastrous business competition of their Government.

It is asserted that the freight rates charged, particularly by foreign shipping companies, are excessive—far higher than those rates were before the war began. But in fairness it should be remembered that the cost of coal, provisions, wages, has enormously increased, that insurance has risen, and that floating mines are a deadly menace in the waters around the United Kingdom and along the coasts of northern Europe. These extraordinary costs, these hazards, must be faced by Government-owned ships no less inevitably than by the ships of private owners.

THE BILL WOULD FAIL OF ITS PURPOSE.

I am opposed to this proposed measure because the very principle of Government purchase, ownership, and operation of merchant shipping is an unsound principle, contrary to our traditions, repugnant to our business sense. I am opposed to it, moreover, because the adoption of such an expedient is absolutely unnecessary, and will not create any additional tonnage that might be secured in some other sounder and safer way. The international difficulties and dangers involved have been ably considered by distinguished students of international law, Senator ROOT, of New York, and Senator BURTON, of Ohio, and by other Senators. I speak from the standpoint of one who has been a sailor, a shipowner, a business man.

It seems to me too much emphasis can not be given to the international complications which may arise should this pending bill become a law. Should the pending bill pass the vessels thereby placed under the control of a shipping company (of which company the United States Government will own more than 50 per cent of stock) will have to be placed under one of three classes: The class of private vessels; the class of public vessels; or a class hitherto unknown or recognized, a class of vessels that are partly public and are partly private.

In case the vessels are placed in the class of private vessels, pure and simple, the vessels will have none of the immunities of public vessels, but will be subject to all the restrictions, searches, detentions, appearances in prize courts, and so forth, to which other private vessels (that is, merchant vessels) are subject, and will be liable to the same sources of pecuniary loss. Being private vessels, pure and simple, and being therefore under the command of merchant captains and manned by merchant crews, the Government will not be able to guarantee their cargoes any more than it is now able to guarantee the cargoes of ordinary merchant ships. If our Government is willing to have vessels in which it has a majority of ownership treated in this way, it may be that international conflict may be averted; but, in this case, it would seem necessary, in the interests of fair dealing, to inform the Congress and the people clearly of this fact before the bill is put to vote, in order that they may decide intelligently whether or not they wish their ships to be treated as ordinary merchant ships.

In case the vessels are classed as public vessels, they will enjoy the rights and immunities which all public vessels, such as naval vessels and Government transports, enjoy, and will be exempt from search by our law. But if they carry cargo, our Government will not be able to guarantee those cargoes any more than the Government can now guarantee the cargoes of merchant ships unless they are placed under the command of naval officers, which it will be impracticable to do, because we have not enough officers for our distinctively naval ships. Therefore, belligerents will insist on searching them as merchant ships. The United States will then be forced to go to war, as it did in 1812, or to reverse its policy and permit its public vessels to be searched.

This principle was acknowledged when Secretary Seward immediately responded to the demand of the British Government for the surrender of Mason and Sidel, who were taken from an English ship by one of our naval vessels.

In case the vessels are put in the new class, in which each vessel is partly public and partly private, they will form a class of which, as yet, international law has no cognizance. In international law vessels are classed as either public or private. If it be attempted to class these vessels as both public and private, with the intention that they should have the special privileges and exemptions of public vessels and yet have the money-making attributes of merchant vessels, the various foreign countries, especially those now engaged in war, would probably protest, and assert, with reason, that here is an attempt to take away their right of search by disingenuously claiming a public character for vessels that are essentially merchant vessels, because they are assumed to be money-making vessels. In this case the United States would be put in exactly the same quandary as they would be put in if they declared the vessels to be wholly public vessels. In other words, this attempt would result in the United States claiming for the ships a public character and in foreign Governments denying that public character. One side or the other would have to yield or the United States would be forced into war. It is inconceivable that foreign belligerent Governments would surrender their right to search vessels of this character.

No Senator in this Chamber can be more desirous than I am of the creation of a great merchant marine. I have myself seen our merchant shipping in the height of its strength and glory, and I have grieved at its long and humiliating decline. I am not disposed to insist on any particular method to restore our shipping. I should be glad to join with my fellow Senators in any honest method that gave promise of success. I am utterly opposed to considering such a great and urgent question as a mere party question. It is a subject which always—and all the more now, in the shadow of this great war—we should treat as a matter of patriotism, not of partisanship.

But this radical proposal of Government purchase, ownership, and operation is so offensive to me that I can not assent to it. I can not agree that the Government of the United States should be hastily launched into one of the most difficult and technical of all business undertakings, when there are private

citizens who are competent and willing to assume the task if our Government will give them the equivalent of the protection and encouragement which it has successfully bestowed upon other national industries.

I can not assent to this bill, because I profoundly believe that it would utterly fail to justify the hopes and expectations of its authors. It can not appreciably add to the amount of shipping available. It can not operate that shipping any more economically than—or so economically as—experienced and able private shipping managers. It will inevitably plunge us into serious difficulties with foreign Governments, and thus retard our commerce instead of increasing it, if it does not actually embroil us in the war.

WHY NOT A BETTER PLAN?

It is not even now too late for a sane and safe course to be adopted. For a great many years the Senators on the other side of this Chamber have been urging a policy of "free ships" for the upbuilding of our merchant marine. In the month of August last, in the pressure of an emergency, their policy was embodied into law in a form so liberal that foreign-built ships can now be admitted to American registry for over-seas commerce, retain their foreign officers, and be exempt, moreover, from compliance with our inspection and measurement laws. That policy has proved a disappointment in the number of ships which it has brought under our flag, but it is the law of the land; it has had and will continue to have a fair and honest trial.

Why can not the Senators on the other side of this Chamber yield some of their prejudice in this critical hour, and join with us on this side in legislaton requisite to make a fair and honest trial of the policy of national mail subsidies or subventions to regular lines of steamships or to steamships approved by the Navy Department as fit for auxiliary use in time of war?

This is the policy of other Governments. In a small, inadequate way, under the ocean mail law of 1891, it has been the policy of our own Government. It has succeeded thus far wherever it has been tried. If the Senator from Florida had brought out from the Committee on Commerce any proposal less radical than that of Government purchase, ownership, and operation of a merchant marine, I am certain that he would have been met half way by the Senators on this side of the Chamber. Why can not he and his colleagues meet us half way now? The opportunity is a great one; the need is urgent. The creation and restoration of American ocean shipping can be made to date from this year 1915. Nobody can know how long this unhappy war will last, what suffering it may involve, to what necessities it may finally drive us. But one thing must be certain, that whether the war is a short war or a long one, we shall need American ocean ships for the security of our commerce, for the strengthening of our Navy, for the perpetuation of the race of American ship mechanics and American sailors, who now, as always, are an honor to their country, the best men of their profession in the world. Give our shipyards a chance to build our ships; give our officers and sailors a chance to sail them. Give them equality of opportunity with their foreign competitors—the same equality of opportunity which our laws have long sought to give to the millions of Americans engaged in agriculture and manufacturing. Trust the enterprise, the courage, the perseverance, the skill of individual American citizens, and you will not be disappointed.

Government control, Government ownership of our merchant marine means a paralysis of individual effort, a destruction of personal ambition, and an indefinite postponement of the day we all desire, when the Stars and Stripes shall stream victoriously again on every ocean of the world.

[Mr. SMITH of Michigan addressed the Senate. See Appendix.]

Mr. STONE. Mr. President——

The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from Missouri?

Mr. SMITH of Michigan. For a question, of course.

Mr. STONE. Not for a question. I wish to ask the Senator if he desires to go on further to-night?

Mr. SMITH of Michigan. I do not desire to go on further; I am very tired.

Mr. STONE. I should like to have a short executive session, the Senator retaining the floor.

Mr. SMITH of Michigan. And then a recess?

Mr. STONE. Oh, yes.

Mr. SMITH of Michigan. All right; I have no objection, the understanding being that I still have the floor.

EXECUTIVE SESSION.

Mr. STONE. I move that the Senate proceed with the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 10 minutes spent in executive session, the doors were reopened.

PETITIONS AND MEMORIALS.

Mr. PERKINS presented petitions of sundry citizens of Los Angeles, Cal., praying for the enactment of legislation to prohibit the exportation of ammunition, etc., which were referred to the Committee on Foreign Relations.

He also presented petitions of the Central Labor Union of Alameda County and of Street Car Men's Local Union of Oakland, in the State of California, praying for the passage of the immigration bill over the President's veto, which were ordered to lie on the table.

Mr. GALLINGER presented a petition of the congregation of the Methodist Episcopal Church of West Rindge, N. H., and the petition of Samuel H. Drury, of St. Paul's School, Concord, N. H., praying for the enactment of legislation to regulate interstate commerce in the products of child labor, which were referred to the Committee on Interstate Commerce.

He also presented a memorial of the Central Labor Union of Portsmouth, N. H., remonstrating against any change being made in the locomotive-boiler-inspection law, which was referred to the Committee on Interstate Commerce.

He also presented the petition of Emil Ramig, of Bedford, N. H., praying for the passage of the so-called immigration bill, which was ordered to lie on the table.

He also presented the petition of Albert Artzt and 59 other citizens of Manchester, N. H., praying the enactment of legislation to prohibit the exportation of ammunition, etc., which was referred to the Committee on Foreign Relations.

Mr. McLEAN presented petitions of sundry citizens of Danbury, Bethel, Hartford, and Clinton, all in the State of Connecticut, praying for the enactment of legislation to prohibit the exportation of ammunition, which were referred to the Committee on Foreign Relations.

Mr. BRISTOW presented a petition of sundry citizens of Lebo, Kans., praying for national prohibition, which was referred to the Committee on the Judiciary.

He also presented a petition of sundry citizens of Arma, Kans., praying for the extension of the work of the Bureau of Mines, which was referred to the Committee on Mines and Mining.

He also presented memorials of sundry citizens of Newton and Cleburn, in the State of Kansas, remonstrating against excluding certain publications from the mails, which were referred to the Committee on Post Offices and Post Roads.

He also presented a memorial of sundry citizens of Rosedale, Kans., remonstrating against the enactment of legislation proposing to exempt Catholic publications from the mails, which was referred to the Committee on Post Offices and Post Roads.

He also presented petitions of sundry citizens of Bird City, Cheney, Herington, Bremen, Marysville, and Netawaka, all in the State of Kansas, praying for the enactment of legislation to prohibit the exportation of ammunition, etc., which were referred to the Committee on Foreign Relations.

Mr. BRANDEGEE presented petitions of Torrington, Danbury, and Rockville, of Local Branch No. 84, Workmen's Sick and Death Benefit Fund, of Meriden, and of Schiller No. 117, F. of A., of Meriden, all in the State of Connecticut, praying for the enactment of legislation to prohibit the exportation of ammunition, etc., which were referred to the Committee on Foreign Relations.

He also presented petitions of sundry citizens of Chester, Clinton, Saybrook, Deep River, Essex, Westbrook, Old Saybrook, and Madison, all in the State of Connecticut, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented a petition of the Trades Council of New Haven, Conn., praying for the enactment of legislation to regulate the interstate shipment of convict-made goods, which was ordered to lie on the table.

Mr. BURLEIGH presented a petition of the German-American Alliance of Waterville, Me., praying for the enactment of legislation to prohibit the exportation of ammunition, etc., which was referred to the Committee on Foreign Relations.

Mr. O'GORMAN presented petitions of sundry citizens of Rome and Dunkirk, in the State of New York, praying for the enactment of legislation to prohibit the exportation of ammunition, etc., which were referred to the Committee on Foreign Relations.

He also presented a memorial of the Holy Name Society of St. Patrick's Church, of Watervliet, N. Y., remonstrating against the existing conditions in Mexico, which was referred to the Committee on Foreign Relations.

Mr. TOWNSEND presented petitions of sundry citizens of Michigan, praying for the enactment of legislation to prohibit the exportation of ammunition, etc., which were referred to the Committee on Foreign Relations.

He also presented memorials of sundry citizens of Michigan, remonstrating against the exclusion of certain matter from the mail, which were referred to the Committee on Post Offices and Post Roads.

He also presented a memorial of Pomono Grange, Patrons of Husbandry, of Rosedale, Mich., remonstrating against any change being made in the free rural delivery system, which was referred to the Committee on Post Offices and Post Roads.

Mr. ROBINSON presented petitions of sundry citizens of Batesville, Ark., praying that an appropriation be made for the construction of seven locks and dams on the upper White River, which were referred to the Committee on Commerce.

Mr. ROOT presented petitions of sundry citizens of New York, praying for the enactment of legislation to prohibit the exportation of ammunition, etc., which were referred to the Committee on Foreign Relations.

He also presented memorials of sundry citizens of Buffalo and Niagara Falls, in the State of New York, remonstrating against the exclusion of certain matter from the mail, which were referred to the Committee on Post Offices and Post Roads.

He also presented petitions of sundry citizens of New York, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. POINDEXTER presented petitions of George Valar, Henry Wegner, Herman F. Weber, Gottlieb Ellinger, and sundry other citizens of Tacoma; of Henry Nickels, of Odessa; of Joe Kress, of Enumclaw; of F. Gerstmann, of Puyallup; and of R. Fechtner, of Chehalis, all in the State of Washington, praying for the enactment of legislation to prohibit the exportation of ammunition, etc., which were referred to the Committee on Foreign Relations.

He also presented a petition of West Union Grange, No. 527, Patrons of Husbandry, of Willapa, Wash., praying for the enactment of legislation to place an embargo upon foodstuffs shipped to belligerent nations engaged in the present war in Europe, which was referred to the Committee on Foreign Relations.

He also presented a petition of Local Lodge No. 7, Independent Order of Odd Fellows, of Seattle, Wash., praying for the enactment of legislation to provide pensions for civil-service employees, which was referred to the Committee on Civil Service and Retrenchment.

He also presented memorials of A. Pavot, Edward Israel, George W. Gaynor, and sundry other citizens of Grant County, Ind., remonstrating against prohibition in the District of Columbia, which were referred to the Committee on the District of Columbia.

Mr. SHIVELY presented petitions of the Ladies' Aid Society of the Evangelical Church, of the Young People's Christian Endeavor of the Elkhart Castle United Brethren Church, of the Ladies' Aid Society of the First Evangelical Church, and of the Castle United Brethren Church, all of Elkhart, in the State of Indiana, praying for the enactment of legislation to provide Federal censorship of motion-picture films, which were referred to the Committee on Education and Labor.

He also presented a petition of the Federal Central Labor Union, of Elkhart, Ind., praying for the enactment of legislation to regulate the interstate shipment of convict-made goods, which was referred to the Committee on Interstate Commerce.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. NORRIS:

A bill (S. 7490) granting an increase of pension to John Jenkins; to the Committee on Pensions.

By Mr. JONES:

A bill (S. 7491) granting an increase of pension to Catherine Goodwin (with accompanying papers); and

A bill (S. 7492) granting an increase of pension to Abbie Sloggy (with accompanying papers); to the Committee on Pensions.

By Mr. GALLINGER:

A bill (S. 7493) granting an increase of pension to Helen D. Longstreet; and

A bill (S. 7494) granting an increase of pension to Charles Woodward (with accompanying papers); to the Committee on Pensions.

By Mr. WALSH:

A bill (S. 7495) for the relief of Kate Canniff (with accompanying papers); to the Committee on Claims.

By Mr. McLEAN:

A bill (S. 7496) granting an increase of pension to Elizabeth Propson (with accompanying paper); to the Committee on Pensions.

By Mr. BRISTOW:

A bill (S. 7497) granting an increase of pension to Todd L. Wagoner (with accompanying papers); to the Committee on Pensions.

By Mr. BURLEIGH:

A bill (S. 7498) granting an increase of pension to Daniel D. Anderson; to the Committee on Pensions.

By Mr. O'GORMAN:

A bill (S. 7499) granting an increase of pension to William H. Terwilliger; to the Committee on Pensions.

By Mr. SHIVELY:

A bill (S. 7500) granting an increase of pension to Oliver P. Lockhart (with accompanying papers); to the Committee on Pensions.

By Mr. COLT:

A bill (S. 7501) granting an increase of pension to Hattie E. Lawton (with accompanying papers); to the Committee on Pensions.

By Mr. SHIVELY:

A bill (S. 7502) granting an increase of pension to John L. Epperson; to the Committee on Pensions.

ADVISORY COMMITTEE FOR AERONAUTICS.

Mr. TILLMAN. Mr. President, I ask unanimous consent to introduce two important joint resolutions, which I shall ask to have read or not, as the Senate desires. I want to have one printed in the RECORD anyway and referred to the Committee on Naval Affairs, and ask that the other be referred to the Committee on Military Affairs.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the joint resolution will be printed in the RECORD and referred as requested.

The joint resolution (S. J. Res. 229) to authorize the appointment of an advisory committee for aeronautics was read twice by its title and referred to the Committee on Naval Affairs and ordered to be printed in the RECORD, as follows:

Joint resolution (S. J. Res. 229) to authorize the appointment of an advisory committee for aeronautics.

Whereas the United States is the only Nation of the first class that does not have an advisory committee for aeronautics to advise and direct in relation to experimental work of the Government and to provide for the cooperation of governmental and private activities in relation to the unsolved problems of aeronautics; and

Whereas the United States invented and led in the early development of the heavier-than-air flying machines, but nothing being done by the Government to develop the art and to encourage and assist American inventors and manufacturers beyond the purchase of a few flying machines and the establishment of a small plant at the Washington Navy Yard, it has fallen behind owing to the policy of inaction and the lack of appreciation of the wisdom of utilizing all of the technical ability and the inventive genius of the Nation; and

Whereas under the guidance of an advisory committee for aeronautics continuity of purpose and action in the development of this science and art is practically guaranteed, unaffected by the change of individuals in administrative positions in the executive departments of the Government; and

Whereas the expenditure of money appropriated could be more wisely made, and economies secured by the prevention of duplication of investigation and experiment, and the development of aeronautics in America placed upon a strong foundation through the influence of a suitable advisory committee; and

Whereas the establishment of such committee would be in the line of the best practice of European nations, such as Great Britain, France, and Germany, all of which have made remarkable progress in aviation under the spirit of cooperation of governmental and civil agencies; and

Whereas under existing law—section 9 of the act approved March 4, 1909 (35 Stat., p. 1027)—it is unlawful for the President or any Government official to appoint a committee, commission, or board on aeronautics without authorization by Congress: Therefore be it

Resolved, etc., That an advisory committee for aeronautics is hereby established, and the President is authorized to appoint not to exceed 14 members, to consist of 2 members from the War Department, from the bureau in charge of military aeronautics; 2 members from the Navy Department, from the bureau in charge of naval aeronautics; a representative each of the Smithsonian Institution, of the United States Weather Bureau, and of the United States Bureau of Standards, together with not more than 7 additional persons who shall be acquainted with the needs of aeronautical science, either civil or military, or skilled in aeronautical engineering or its allied sciences, 3 of whom may be residents of the District of Columbia, and the others shall be inhabitants of some State, but not more than 1 of them from the same State: *Provided*, That the members of the advisory committee for aeronautics, as such, shall serve without compensation: *Provided further*, That it will be the duty of the advisory committee for aeronautics to supervise and direct the scientific study of the problems of

fight with a view to their practical solution, and to determine the problems which should be experimentally attacked, and to discuss their solution and their application to practical questions. In the event of a laboratory or laboratories, either in whole or in part, being placed under the direction of the committee, the committee may direct and conduct research and experiment in aeronautics in such laboratory or laboratories: *And provided further*, That rules and regulations for the conduct of the work of the committee shall be formulated by the committee and approved by the President.

SEC. 2. That the sum of $5,000 a year, or so much thereof as may be necessary, for five years is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to be immediately available, for experimental work and investigations undertaken by the committee, clerical expenses and supplies, and necessary expenses of members of the committee in going to, returning from, and while attending meetings of the committee: *Provided*, That an annual report to the Congress shall be submitted through the President, including an itemized statement of expenditures.

By Mr. TILLMAN:

A joint resolution (S. J. Res. 230) to authorize the appointment of an advisory committee for aeronautics; to the Committee on Military Affairs.

AMENDMENTS TO AGRICULTURAL APPROPRIATION BILL (H. R. 20415).

Mr. JONES submitted an amendment proposing to appropriate $2,140 for investigations of fruit rot and spot and apple mildew, intended to be proposed by him to the agricultural appropriation bill, which was referred to the Committee on Agriculture and Forestry and ordered to be printed.

Mr. GALLINGER submitted an amendment proposing to appropriate $3,000,000 for the examination, survey, and acquisition of lands under the provisions of the act of March 1, 1911, etc., intended to be proposed by him to the agricultural appropriation bill, which was referred to the Committee on Agriculture and Forestry and ordered to be printed.

RIVER AND HARBOR APPROPRIATION (H. R. 20189).

Mr. SAULSBURY submitted an amendment intended to be proposed by him to the river and harbor appropriation bill, which was referred to the Committee on Commerce and ordered to be printed.

Mr. MARTINE of New Jersey (for Mr. SMITH of South Carolina) submitted an amendment intended to be proposed to the river and harbor bill, which was referred to the Committee on Commerce and ordered to be printed.

Mr. SHEPPARD submitted an amendment intended to be proposed by him to the river and harbor appropriation bill, which was referred to the Committee on Commerce and ordered to be printed.

RECESS.

Mr. KERN. Under the previous order of the Senate, I move that the Senate take a recess until Monday morning next at 10 o'clock.

The motion was agreed to, and (at 11 o'clock and 15 minutes p. m. Saturday, January 30, 1915) the Senate took a recess until Monday, February 1, 1915, at 10 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate January 30 (legislative day of January 26), 1915.

UNITED STATES MARSHAL.

Stanley H. Trezevant, of Memphis, Tenn., to be United States marshal for the western district of Tennessee, vice J. Sam Johnson, whose term has expired.

ASSAYER IN CHARGE OF THE MINT.

Ed Ryan, of Goldfield, Nev., to be assayer in charge of the mint of the United States at Carson, Nev., in place of Andrew Maute, superseded.

APPOINTMENTS, BY TRANSFER, IN THE ARMY.

Second Lieut. Walter C. Gullion, Twelfth Cavalry, to be second lieutenant of Infantry, with rank from June 12, 1914.

Second Lieut. John B. Thompson, Fourteenth Infantry, to be second lieutenant of Cavalry, with rank from June 12, 1914.

APPOINTMENTS IN THE ARMY.

CHAPLAIN.

Rev. Clifford Lore Miller, of Vermont, to be chaplain, with the rank of first lieutenant, from January 28, 1915, vice Chaplain Frederick L. Kunnecke, Second Field Artillery, wholly retired September 28, 1914.

MEDICAL DEPARTMENT.

Acting Dental Surg. James Francis Feely, Dental Corps, to be dental surgeon with the rank of first lieutenant from January 27, 1915, to fill an original vacancy.

APPOINTMENTS AND PROMOTIONS IN THE NAVY.

William E. Stevens, a citizen of California, to be an assistant surgeon in the Medical Reserve Corps of the Navy from the 23d day of January, 1915.

Anderson C. Dearing, a citizen of Kentucky, to be a second lieutenant in the Marine Corps from the 26th day of January, 1915.

Ensign Ernest J. Blankenship to be a lieutenant (junior grade) in the Navy from the 5th day of June, 1914.

POSTMASTERS.

ARIZONA.

G. Lindley Gollands to be postmaster at Chandler, Ariz. Office became presidential January 1, 1915.

E. F. Thompson to be postmaster at Kingman, Ariz., in place of J. N. Coheneur. Incumbent's commission expired January 10, 1915.

ARKANSAS.

Henry Clay Maples to be postmaster at Green Forest, Ark., in place of Andrew J. Tabor. Incumbent's commission expires February 1, 1915.

John B. Thompson to be postmaster at Sulphur Springs, Ark., in place of Laura C. Hutton. Incumbent's commission expired January 19, 1915.

CALIFORNIA.

Charles B. Fair to be postmaster at Lindsay, Cal., in place of Matthew W. Grace. Incumbent's commission expires February 23, 1915.

Ralph P. Giddings to be postmaster at Turlock, Cal., in place of John L. Brown. Incumbent's commission expired January 11, 1915.

Luella Mann to be postmaster at Boulder Creek, Cal., in place of Daniel R. Trout, removed.

Johnnie L. Murphy to be postmaster at Madero, Cal., in place of W. L. Williams. Incumbent's commission expires February 14, 1915.

C. D. Radcliffe to be postmaster at Merced, Cal., in place of C. F. Neumann. Incumbent's commission expires March 2, 1915.

E. W. Wilson to be postmaster at Fowler, Cal., in place of Josephine Priest. Incumbent's commission expires February 14, 1915.

CONNECTICUT.

Charles F. Greene to be postmaster at Bridgeport, Conn., in place of W. H. Marigold. Incumbent's commission expired February 1, 1914.

FLORIDA.

F. Bartow Swearingen to be postmaster at Fort Meade, Fla., in place of Leslie D. Roberts, removed.

GEORGIA.

Frank L. Asbury to be postmaster at Clarkesville, Ga., in place of Oscar M. Mauldin. Incumbent's commission expired December 19, 1914.

Julien V. Frederick to be postmaster at Marshallville, Ga., in place of Julien V. Frederick. Incumbent's commission expired January 19, 1915.

Josephine M. Gray to be postmaster at Adairsville, Ga., in place of Clifford H. Dyar. Incumbent's commission expires February 6, 1915.

IDAHO.

Patrick T. Sweeney to be postmaster at St. Maries, Idaho, in place of Edgar T. Hawley, removed.

ILLINOIS.

William M. Cannedy to be postmaster at Greenfield, Ill., in place of Carson T. Metcalf, removed.

J. W. Clendenin to be postmaster at Monmouth, Ill., in place of Clarence F. Buck. Incumbent's commission expires February 1, 1915.

Albert E. Gent to be postmaster at Brighton, Ill., in place of M. Spencer Brown. Incumbent's commission expires February 23, 1915.

James Lafayette Molohon to be postmaster at Divernon, Ill., in place of William W. Taylor. Incumbent's commission expires February 16, 1915.

Conrad Scheer to be postmaster at Crete, Ill., in place of George Hoffman, deceased.

George W. Spunner to be postmaster at Barrington, Ill., in place of Henry K. Brockway. Incumbent's commission expires February 17, 1915.

Frank P. Williams to be postmaster at Carrollton, Ill., in place of Joseph H. Pierson, resigned.

INDIANA.

Frank Billings to be postmaster at Morocco, Ind., in place of James P. Clark. Incumbent's commission expires February 6, 1915.

R. William I. Boggs to be postmaster at Veedersburg, Ind., in place of Edward Patton. Incumbent's commission expires February 6, 1915.

Thomas C. Dowling to be postmaster at New Haven, Ind., in place of Willard Lucas. Incumbent's commission expires February 6, 1915.

Eugene Kelley to be postmaster at Waterloo, Ind., in place of Norman T. Jackman. Incumbent's commission expires February 16, 1915.

Charles K. Lewis to be postmaster at Russiaville, Ind., in place of Eli W. Sherwin. Incumbent's commission expires February 23, 1915.

William L. McMillen to be postmaster at Brook, Ind., in place of Fred B. Snyder. Incumbent's commission expires February 16, 1915.

Winfield S. Sanders to be postmaster at Westport, Ind. Office became presidential January 1, 1915.

IOWA.

Eliza Ann Butler to be postmaster at North English, Iowa, in place of J. W. Hadley. Incumbent's commission expires February 1, 1915.

Peter H. Goslin to be postmaster at Clarion, Iowa, in place of Robert P. Osier, resigned.

S. M. Hutzell to be postmaster at Victor, Iowa, in place of William H. Bowman. Incumbent's commission expired January 19, 1915.

Maurice Moroney to be postmaster at Earlville, Iowa, in place of Philip M. Cloud. Incumbent's commission expired January 18, 1915.

Caroline Y. Smith to be postmaster at Leon, Iowa, in place of Millard F. Stookey. Incumbent's commission expired December 20, 1914.

KANSAS.

Harry M. Brodrick to be postmaster at Marysville, Kans., in place of Samuel Foster. Incument's commission expires February 8, 1915.

J. A. Carson to be postmaster at Erie, Kans., in place of J. T. Coles. Incumbent's commission expired January 10, 1915.

Oscar Lundy Clarke to be postmaster at Washington, Kans., in place of C. E. Ingalls. Incumbent's commission expires February 23, 1915.

Michael A. Frey to be postmaster at Junction City, Kans., in place of Jacob B. Callen. Incumbent's commission expires February 1, 1915.

George Harman to be postmaster at Valley Falls, Kans., in place of O. F. Falls. Incumbent's commission expires February 23, 1915.

Harlan W. Marmon to be postmaster at Barnes, Kans., in place of Connie Collins. Incumbent's commission expired January 19, 1915.

Charles A. Taschetta to be postmaster at Leavenworth, Kans., in place of W. I. Biddle. Incumbent's commission expired January 19, 1915.

LOUISIANA.

Burnside Capers to be postmaster at Arcadia, La., in place of Paunie Glover. Incumbent's commission expired January 13, 1915.

Ulysses J. Marcotte to be postmaster at Cottonport, La., in place of Leo J. Roth. Incumbent's commission expires March 2, 1915.

Joseph P. Troschair to be postmaster at Opelousas, La., in place of G. L. Lassalle. Incumbent's commission expires February 8, 1915.

MARYLAND.

William J. Ford to be postmaster at Lonaconing, Md., in place of John McFarland. Incumbent's commission expires February 1, 1915.

David H. Hastings to be postmaster at Lutherville, Md., in place of David H. Hastings. Incumbent's commission expires March 2, 1915.

MASSACHUSETTS.

Anthony J. Crean to be postmaster at Turners Falls, Mass., in place of Frank E. Briggs. Incumbent's commission expires February 1, 1915.

Josiah W. Earle to be postmaster at Cohasset, Mass., in place of Josiah W. Earle. Incumbent's commission expired January 6, 1914.

George W. Jones to be postmaster at Falmouth, Mass., in place of George W. Jones. Incumbent's commission expired January 24, 1914.

Thomas G. O'Connell to be postmaster at Wakefield, Mass., in place of Stanley B. Dearborn. Incumbent's commission expires February 1, 1915.

George L. Olivier to be postmaster at New Bedford, Mass., in place of Frank C. Barrows. Incumbent's commission expired December 14, 1914.

Charles D. Smith to be postmaster at Gloucester, Mass., in place of Charles D. Brown. Incumbent's commission expired January 10, 1915.

Sidney M. Towle to be postmaster at Duxbury, Mass., in place of Elisha Peterson. Incumbent's commission expired June 25, 1913.

MAINE.

Guy H. Hunt to be postmaster at Newport, Me., in place of William M. Stuart. Incumbent's commission expired January 23, 1915.

MICHIGAN.

Charles Davidson to be postmaster at Richmond, Mich., in place of Charles H. Heath. Incumbent's commission expires February 1, 1915.

John C. Downing to be postmaster at Vermontville, Mich., in place of H. H. Curtis. Incumbent's commission expires February 1, 1915.

Edward G. Scott to be postmaster at Iron River, Mich., in place of Robert H. Barnum. Incumbent's commission expired January 11, 1915.

MINNESOTA.

Adolph C. Gilbertson to be postmaster at Ironton, Minn. Office become presidential July 1, 1914.

Andrew Rotegard to be postmaster at New Richland, Minn., in place of Anton O. Lea, resigned.

Thomas Zeien to be postmaster at North Branch, Minn., in place of George W. Powell. Incumbent's commission expires February 1, 1915.

MONTANA.

William C. Bernard to be postmaster at Harlem, Mont., in place of Louden Minugh. Incumbent's commission expired January 13, 1915.

Mary Bonham to be postmaster at Ismay, Mont. Office became presidential January 1, 1915.

Presley L. Herring to be postmaster at Glasgow, Mont., in place of Mary L. Boehnert, removed.

George C. Milburn to be postmaster at Darby, Mont. Office became presidential January 1, 1915.

Hans A. Nelson to be postmaster at Joplin, Mont. Office became presidential January 1, 1915.

Stephen J. Rigney to be postmaster at Cut Bank, Mont., in place of Bruce R. McNamer, resigned.

MISSISSIPPI.

Joseph E. Saucier to be postmaster at Bay St. Louis, Miss., in place of Richard Mendes. Incumbent's commission expires March 3, 1915.

MISSOURI.

Harry B. Adkins to be postmaster at Weston, Mo., in place of James H. Turner. Incumbent's commission expires February 23, 1915.

Thomas C. Bassore to be postmaster at Rogersville, Mo. Office became presidential January 1, 1915.

Samuel T. Breckenridge to be postmaster at Bosworth, Mo., in place of Taylor Ray. Incumbent's commission expired January 18, 1915.

John Gable to be postmaster at Browning, Mo., in place of Charles E. Rinehart. Incumbent's commission expires February 23, 1915.

George P. Hicks to be postmaster at Callao, Mo., in place of John W. Ayers, resigned.

Samuel J. Jamison to be postmaster at Rich Hill, Mo., in place of George P. Huckeby, resigned.

Horrell Johnson to be postmaster at New Madrid, Mo., in place of George H. Taylor. Incumbent's commission expires February 1, 1915.

Nesbert W. Lemasters to be postmaster at Oak Grove, Mo., in place of Eugene E. Wyatt. Incumbent's commission expires February 1, 1915.

John H. Taylor to be postmaster at Chillicothe, Mo., in place of John L. Schmitz. Incumbent's commission expires March 2, 1915.

Francis M. Traughber to be postmaster at Centralia, Mo., in place of Edward J. Schmidt. Incumbent's commission expires February 1, 1915.

Robert K. Wilson to be postmaster at Jackson, Mo., in place of Henry Puls, resigned.

NEBRASKA.

Anton J. Glodowski to be postmaster at Platte Center, Nebr. Office became presidential January 1, 1915.

Frank Howard to be postmaster at Ravenna, Nebr., in place of Charles Miner. Incumbent's commission expired February 2, 1914.

NEW JERSEY.

Hunn Livingston to be postmaster at Allentown, N. J., in place of Emma Cafferty. Incumbent's commission expires February 16, 1915.

William T. Nash to be postmaster at New Egypt, N. J., in place of William Chambers. Incumbent's commission expired December 14, 1914.

Marcellus Parker to be postmaster at Manasquan, N. J., in place of James P. Van Schoick. Incumbent's commission expired January 26, 1915.

David A. Power to be postmaster at Metuchen, N. J., in place of Howard I. Campbell. Incumbent's commission expires March 3, 1915.

Addison Robbins, jr., to be postmaster at Hightstown, N. J., in place of Charles E. Stults. Incumbent's commission expires February 1, 1915.

Alexander H. Sibbald to be postmaster at Park Ridge, N. J., in place of Erving Van Houten. Incumbent's commission expires March 3, 1915.

Carl Shurts to be postmaster at Lebanon, N. J. Office became presidential October 1, 1914.

NEW YORK.

George F. Cornell to be postmaster at Rosebank, N. Y., in place of John J. Roehrig. Incumbent's commission expired February 25, 1914.

H. Blake Stratton to be postmaster at Monticello, N. Y., in place of Harrison Beecher. Incumbent's commission expired December 13, 1914.

NORTH CAROLINA.

W. M. Goodson to be postmaster at Marion, N. C., in place of Clarence M. McCall. Incumbent's commission expired January 27, 1915.

C. F. Mitchell to be postmaster at Winton, N. C. Office became presidential January 1, 1915.

N. Henry Moore to be postmaster at Washington, N. C., in place of Hugh Paul. Incumbent's commission expires March 3, 1915.

Thomas J. Orr to be postmaster at Matthews, N. C. Office became presidential January 1, 1915.

Christopher H. Peirce to be postmaster at Faison, N. C. Office became presidential January 1, 1915.

William J. Roberts to be postmaster at Shelby, N. C., in place of Barnabas A. Baber. Incumbent's commission expires March 2, 1915.

NORTH DAKOTA.

A. O. Dahl to be postmaster at Plaza, N. Dak., in place of Ben H. Wilkins, resigned.

OHIO.

Levi E. Bierer to be postmaster at McComb, Ohio, in place of Samuel H. Bolton. Incumbent's commission expired January 23, 1915.

Joseph E. Blackford to be postmaster at Martins Ferry, Ohio, in place of George G. Sedgwick. Incumbent's commission expired January 23, 1915.

Edward L. Hauser to be postmaster at Girard, Ohio, in place of Edward J. Lewis. Incumbent's commission expires February 23, 1915.

Horace E. McConnell to be postmaster at Milford Center, Ohio, in place of Louis C. Burnham. Incumbent's commission expires February 23, 1915.

James W. Stoneburner to be postmaster at Roseville, Ohio, in place of Elmer Sagle. Incumbent's commission expires February 1, 1915.

Roscoe Vance White to be postmaster at Middlefield, Ohio, in place of Albert A. White. Incumbent's commission expires March 3, 1915.

William A. Zellars to be postmaster at Freeport, Ohio, in place of Delmer M. Starkey, removed.

OKLAHOMA.

H. E. Derwin to be postmaster at Guthrie, Okla., in place of Wilburn M. McCoy. Incumbent's commission expires March 3, 1915.

Lee B. Fitzhugh to be postmaster at Sand Springs, Okla. Office became presidential January 1, 1915.

Frederick McDaniel to be postmaster at Bartelsville, Okla., in place of Millard T. Kirk. Incumbent's commission expired January 27, 1915.

C. D. Snider to be postmaster at Waurika, Okla., in place of John L. Morgan, removed.

OREGON.

Lizzie M. Perkins to be postmaster at Gardiner, Oreg. Office became presidential January 1, 1915.

PENNSYLVANIA.

George J. Eppley to be postmaster at Hershey, Pa., in place of Martin L. Hershey, removed.

RHODE ISLAND.

John B. Sullivan to be postmaster at Newport, R. I., in place of Robert S. Burlingame, resigned.

SOUTH CAROLINA.

Micheal P. Healy to be postmaster at Navy Yard, S. C. Office became presidential January 1, 1915.

TENNESSEE.

J. T. Patten to be postmaster at Dickson, Tenn., in place of Albert S. Scott, removed.

TEXAS.

Andrew Barton to be postmaster at Kilgore, Tex., in place of Evans H. Angell. Incumbent's commission expires February 6, 1915.

B. G. Edwards to be postmaster at Forney, Tex., in place of Walter S. Yates. Incumbent's commission expired December 16, 1914.

Sam H. Little to be postmaster at Eagle Lake, Tex., in place of George S. Ziegler. Incumbent's commission expires February 6, 1915.

B. H. McKinnon, jr., to be postmaster at Canton, Tex., in place of Jacob J. Utts. Incumbent's commission expires February 16, 1915.

C. C. Powell to be postmaster at Clarendon, Tex., in place of Charles J. Lewis. Incumbent's commission expires February 1, 1915.

W. A. Smith to be postmaster at Gatesville, Tex., in place of Harry Harris. Incumbent's commission expires February 23, 1915.

W. B. Stradley to be postmaster at Paducah, Tex., in place of Auguste Dumont. Incumbent's commission expired June 21, 1914.

VERMONT.

John J. Gallagher to be postmaster at Hardwick, Vt., in place of John E. Sullivan. Incumbent's commission expires February 1, 1915.

Daniel H. Gray to be postmaster at Bellows Falls, Vt., in place of Joshua H. Blakley. Incumbent's commission expired January 20, 1915.

VIRGINIA.

Levi B. Davis to be postmaster at Roanoke, Va., in place of Luther G. Funkhouser. Incumbent's commission expires February 1, 1915.

Wirt Dunlap to be postmaster at Blacksburg, Va., in place of Byrd Anderson, deceased.

WASHINGTON.

Richard H. Lee to be postmaster at Wilsoncreek, Wash. Office became presidential January 1, 1915.

Freeborn S. Lewis to be postmaster at Port Angeles, Wash., in place of E. E. Fisher. Incumbent's commission expires February 1, 1915.

Elmer McBroon to be postmaster at Chehalis, Wash., in place of Dan W. Bush. Incumbent's commission expires February 1, 1915.

J. H. McCourt to be postmaster at Sequim, Wash. Office became presidential January 1, 1915.

Fenton Smith to be postmaster at South Bend, Wash., in place of Frank R. Wright. Incumbent's commission expires February 14, 1915.

WEST VIRGINIA.

Margaret McGugin to be postmaster at Ravenswood, W. Va., in place of William H. Latham. Incumbent's commission expires February 1, 1915.

George H. Merchant to be postmaster at Cairo, W. Va., in place of J. E. Overton. Incumbent's commission expires February 1, 1915.

Hayes Sapp to be postmaster at Newburg, W. Va., in place of W. Osborne Parriott. Incumbent's commission expired January 20, 1915.

WISCONSIN.

E. F. Butler to be postmaster at Mosinee, Wis., in place of W. N. Daniels, resigned.

WYOMING.

Thomas W. Keenan to be postmaster at Pinebluff, Wyo., in place of Charles W. Johnson. Incumbent's commission expires March 3, 1915.

W. M. Wolfard to be postmaster at Encampment, Wyo., in place of Henry D. Ashley, resigned.

CONFIRMATIONS.

Executive nominations confirmed by the Senate January 30 (legislative day of January 26), 1915.

UNITED STATES ATTORNEY.

James A. Smiser to be United States attorney for the district of Alaska, division No. 1.

PROMOTIONS IN THE REVENUE-CUTTER SERVICE.

Third Lieut. Russell Lord Lucas to be second lieutenant.
Third Lieut. Wilmer Hake Eberly to be second lieutenant.
Second Lieut. Howard Eugene Rideout to be first lieutenant.
Second Lieut. Frank Lynn Austin to be first lieutenant.

HOUSE OF REPRESENTATIVES.

FRIDAY, *January 29, 1915.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

We bless Thee, Almighty God, our heavenly Father, for the degree of civilization which, under Thy providence, as a people we are permitted to enjoy, but we realize that with every advance toward a higher order come new and complicated problems which must be solved; but, as our fathers met the problems of their day and solved them, help us, we beseech Thee, with patriotic fervor and a high conception of statesmanship to meet the questions of our day and adjust ourselves to the new conditions in accordance with Thy will. In the name of Jesus Christ our Lord. Amen.

The Journal of the proceedings of yesterday was read and approved.

EXTENSION OF REMARKS.

Mr. BARTLETT. Mr. Speaker, I ask unanimous consent to extend my remarks upon the amendment that I offered on yesterday to the appropriation bill, on page 72, line 2.

The SPEAKER. The gentleman from Georgia [Mr. BARTLETT] asks unanimous consent to extend his remarks in the RECORD on the amendment which he offered to the bill yesterday, as designated. Is there objection?

There was no objection.

Mr. HAY. Mr. Speaker, I ask unanimous consent to extend my remarks on the subject of the Army.

The SPEAKER. The gentleman from Virginia [Mr. HAY] asks unanimous consent to extend his remarks on the subject of the Army. Is there objection?

There was no objection.

Mr. TOWNER. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing a short speech delivered night before last by Congressman SLOAN, of Nebraska, on William McKinley. I think it is appropriate on the anniversary of his birth to publish it.

The SPEAKER. The gentleman from Iowa [Mr. TOWNER] asks unanimous consent to extend his remarks by printing a short speech by the gentleman from Nebraska [Mr. SLOAN] on William McKinley. Is there objection?

There was no objection.

Mr. TREADWAY. Mr. Speaker, I ask unanimous consent to extend my remarks in reference to the navigation of the Connecticut River.

The SPEAKER. The gentleman from Massachusetts asks unanimous consent to extend his remarks in the RECORD in reference to the navigation of the Connecticut River. Is there objection?

There was no objection.

NAVAL APPROPRIATION BILL.

Mr. PADGETT. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 20975, the naval appropriation bill; and, pending that, I wish to make a statement and to ask if an agreement can be reached relative to the time. In discussing the matter with my colleagues on the committee it was the idea that we should conclude general debate with the adjournment of the House to-day. I wanted to ask unanimous consent that the House sit until 6 o'clock this evening and then recess until 8, and then sit until 11 o'clock to-night for general debate only upon the bill, and that on the adjournment to-night the general debate be closed.

The SPEAKER. The gentleman from Tennessee [Mr. PADGETT] moves that the House resolve itself into Committee of the Whole House on the state of the Union to consider House bill 20975, the Naval appropriation bill, and, pending that, he asks that at 6 o'clock the House stand in recess until 8 o'clock and have a session running not past 11 o'clock, and that when the House adjourns to-day the general debate on the Naval appropriation bill shall be considered as finished.

Mr. BUTLER. Mr. Speaker, reserving the right to object, I would like to ask the chairman of the committee whether he has determined that this general debate shall be finished to-day?

Mr. PADGETT. That is the idea; to close it with adjournment to-night.

Mr. BUTLER. Since I had my conversation with the chairman several members of the committee, some upon that side of the House and some upon this side, have requested me, if possible, to secure them some time. Now, they can not all be heard if we adjourn to-night at 11 o'clock. I have no disposition at all to delay this debate, for I have nothing myself to say, but I would like very much if these gentlemen having views to express could have the opportunity to express them. The gentleman from Texas [Mr. SLAYDEN], for example, one of the long-time Members, desires to say something on this bill. I think the opportunity should be given him. But if it is proposed to limit the general debate, I do not see how I can find time for him, much to my regret. I concede that the chairman of the committee has much to do with the fixing of the time. I only tell him what I have learned to be the wish of some of the Members of the House.

Mr. PADGETT. I will state to the gentleman that several Members spoke to me with reference to the time, and among them the gentleman from Texas [Mr. SLAYDEN], who spoke some days ago. I said to all of them that I would be glad to do the best I could, but that I could not make any promise as to a definite time with anyone else. The requests that have been made upon me, so far as the time I would control, is more than consumed by requests from the members of the committee.

Mr. BUTLER. Will the gentleman tell me what his ideas are as to the division of time?

Mr. PADGETT. If we carry out the program until 11 o'clock, that would give 10 hours for debate.

Mr. MANN. About nine.

Mr. BUTLER. About nine hours.

Mr. PADGETT. Between 9 and 10 hours.

Mr. MANN. Why not run right along; what is the object of taking a recess from 6 until 8?

Mr. PADGETT. I am perfectly willing to eliminate the recess.

Mr. MANN. We did that the other day, and had a satisfactory audience all the time.

Mr. PADGETT. I will modify my request, Mr. Speaker, and eliminate the recess from 6 to 8.

Mr. BUTLER. That will give us 11 hours' debate.

Mr. MANN. We always lose some of the time.

Mr. BUTLER. Now, will the chairman give me his idea as to the division of time?

Mr. PADGETT. There has been nothing said about that as yet, because I wanted to see if we could agree on the general time. In discussing the matter with the gentleman from Pennsylvania [Mr. BUTLER] and the gentleman from Massachusetts [Mr. ROBERTS] on that side of the House, and with the gentleman from Missouri [Mr. HENSLEY], representing certain members on the committee in sympathy with his views, it was suggested that Mr. HENSLEY should control four hours of the time and that the remainder of the time be divided between the gentleman from Pennsylvania [Mr. BUTLER] and myself, each of us to yield one-half hour to the gentleman from California [Mr. STEPHENS], a member of the committee, and, as I understood it, we would yield one hour to the gentleman from Massachusetts [Mr. GARDNER].

Mr. BUTLER. Is the gentleman from Tennessee willing to yield one-half hour to the gentleman from Massachusetts?

Mr. PADGETT. Yes; and the remainder would be divided equally among us for distribution.

Mr. MANN. I would like to make this suggestion: That the gentleman ask unanimous consent that general debate be closed at the adjournment of the session to-day, without fixing the time, with the understanding that we shall run along and that the bill shall not be read under the five-minute rule to-day.

Mr. SLAYDEN. Mr. Speaker, I want to submit a suggestion in connection with this debate. There is not a bill, in all probability, which will come before this House which provokes greater interest or about which gentlemen more earnestly desire to express themselves in real pertinent debate than this naval bill. I can see no impropriety whatever in confining general debate to the bill itself. In the present state of business in the Congress—the advanced situation in the House and the absolutely unadvanced situation in another body—I can see no reason why there should not be a reasonable extension of time in this House for debate. I can not see why, if there is to be a limit, debate should not run until 11 o'clock to-night and the House begin at 10 o'clock to-morrow and close general debate, unless some reason should develop here why it should not be done at 10 o'clock to-morrow. That would be an extension of an hour suggested by the gentleman, and I submit a request for unanimous consent that that shall be done and that I shall be allowed one hour. I hope that no gentleman will think that I am indulging in vanity in submitting this request. I rarely trespass on the House for prolonged discussion on any question. I do not think in the whole course of my career when an appropriation bill was up that I have asked that I should be given an hour's time, but this time, because I really want to say something about the bill and some features of it, I am going to submit the request that the time be extended beyond that suggested by the committee by two hours.

The SPEAKER. What is the gentleman's request?

Mr. SLAYDEN. That debate run until 11 o'clock to-night, and then begin at 10 o'clock to-morrow morning and general debate run until 12 o'clock noon.

The SPEAKER. Does the gentleman from Tennessee accept that as an amendment to his request?

Mr. PADGETT. I want to suggest another matter. If the House runs continuously until 11 o'clock with the recess eliminated, I will agree to yield to the gentleman from Texas half an hour, and the gentleman from Missouri [Mr. HENSLEY] will yield him half an hour, and thus take care of the gentleman from Texas out of the additional two hours that we get by eliminating the recess.

The SPEAKER. The Chair will state the request of the gentleman from Tennessee. The gentleman from Tennessee asks unanimous consent that debate run until 11 o'clock to-night; that he control one half of the time and that the gentleman from Pennsylvania [Mr. BUTLER] control one-half, minus four hours that is controlled by the gentleman from Missouri [Mr. HENSLEY]; that the gentleman from Tennessee and the gentleman from Pennsylvania agree to yield one-half hour to the gentleman from California [Mr. STEPHENS]; that the gentleman from Tennessee and the gentleman from Pennsylvania agree to yield one-half hour each to the gentleman from Massachusetts [Mr. GARDNER] and the gentleman from Tennessee, and the gentleman from Missouri agree to yield 30 minutes each to the gentleman from Texas [Mr. SLAYDEN].

Mr. SLAYDEN. Mr. Speaker, I submitted a request for unanimous consent to let debate go on until noon to-morrow and begin one hour earlier. I think that request is reasonable.

The SPEAKER. The trouble is that the gentleman from Tennessee submitted a unanimous consent first.

Mr. SLAYDEN. I will wait, then, until his request is objected to.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

Mr. SLAYDEN. I object.

Mr. BUTLER. The gentleman will have the hour that he requested, and I hope he will not object.

Mr. SLAYDEN. I want to say in reply, Mr. Speaker, that I spoke to the gentleman from Tennessee six weeks ago for time, and he advised me a few minutes ago that I could not get any.

Mr. PADGETT. I told the gentleman that I would do the best I could, but the members of the committee had called for all the time that I had.

Mr. MANN. Mr. Speaker, we have extended the time for the gentleman from Texas, and I hope the gentleman will not object. It is rather inconvenient to meet at 10 o'clock in the morning.

Mr. SLAYDEN. Mr. Speaker, let me understand, please, whether the gentleman from Tennessee has made any modification whatever of his request, and what it is?

The SPEAKER. The Chair will again state the request of the gentleman from Tennessee. Gentlemen will have to give close heed or they will not understand it, it is so long.

Mr. SLAYDEN. I beg the Speaker's pardon. My attention was distracted for the moment by a Member who spoke to me.

The SPEAKER. The gentleman from Tennessee asks unanimous consent that the general debate on this naval appropriation bill run until 11 o'clock to-night——

Mr. MANN. Until the House adjourns to-night.

The SPEAKER. Until the House adjourns to-night, and that the gentleman from Tennessee [Mr. PADGETT] control half the time and the gentleman from Pennsylvania [Mr. BUTLER] the other half, minus 4 hours to be assigned to the gentleman from Misssouri [Mr. HENSLEY], and that the gentleman from Tennessee [Mr. PADGETT] and the gentleman from Pennsylvania [Mr. BUTLER] each agree to give 30 minutes to the gentleman from California [Mr. STEPHENS] and 30 minutes to the gentleman from Massachusetts [Mr. GARDNER], and that the gentleman from Tennessee [Mr. PADGETT] yields 30 minutes to the gentleman from Texas [Mr. SLAYDEN] and the gentleman from Missouri [Mr. HENSLEY] yields 30 minutes to the gentleman from Texas [Mr. SLAYDEN], and that the general debate close when the House adjourns to-night.

Mr. SLAYDEN. Mr. Speaker, I withdraw my objection.

Mr. HENSLEY. I desire to inquire whether or not at any time—say, for instance, when three or four hours have been consumed—if those gathered here should conclude that they wanted to adjourn, that would cut off the general debate entirely?

Mr. MANN. It undoubtedly would; but I take it that the House will not be so discourteous.

Mr. BUTLER. We will endeavor to see that it does not adjourn.

Mr. HENSLEY. Very well.

The SPEAKER. The gentleman from Texas withdraws his objection.

Mr. HAMLIN. Mr. Speaker, reserving the right to object, I did not understand that the request submitted by the gentleman from Tennessee confined the general debate to this bill.

Mr. BUTLER. It did not.

Mr. HAMLIN. I think it ought to be so confined.

Mr. MANN. I think it probably will be, because you can not get time in any other way.

Mr. HAMLIN. I think it ought to be confined, and I think the unanimous-consent agreement ought to include that.

The SPEAKER. Does the gentleman from Tennessee include that in his request?

Mr. PADGETT. No; I do not care to complicate the request in that way.

Mr. ROBERTS of Massachusetts. I want to know if it is distinctly understood that there is to be no reading of the bill under the five-minute rule to-day?

Mr. MANN. That is not a part of the request, but that was the gentleman's statement.

Mr. ROBERTS of Massachusetts. I understand it; but the Chair did not put it.

Mr. MANN. The gentleman's statement is sufficient. It does not need to be a part of the request.

Mr. WITHERSPOON. Reserving the right to object, I do not like that part of the agreement at all which confines the time controlled by the gentleman from Missouri [Mr. HENSLEY] to four hours, and I want to submit to the gentleman from Tennessee that that is not a fair division of time. This method of taking six hours of the time and dividing it up between the gentleman from Tennessee [Mr. PADGETT], who favors the bill, and the gentleman from Pennsylvania [Mr. BUTLER], who favors the bill, and the gentleman from California [Mr. STEPHENS], who also favors the bill, giving those who favor the bill six hours and those who oppose it four hours, is an unfair division of the time.

Mr. MANN. I should like to say to the gentleman from Mississippi that we do not consider that that side of the House is entitled to control time both in favor of and opposed to the bill. We do not figure on the time granted to the gentleman from Pennsylvania [Mr. BUTLER] as all in favor of the bill.

Mr. BUTLER. I do not think that all the gentlemen who have spoken to me are in favor of the bill.

Mr. MANN. We do not intend to be compelled to go over to that side of the House to ask anybody for time.

Mr. BUTLER. Let me say to my friend from Mississippi that I imagine some of the gentlemen who have asked me for time are opposed to this bill. I have not asked them whether they favor or oppose the bill. They want to speak on it, and I shall apportion the time as gentlemen have applied to me, without asking them whether they are for the bill or against it.

Mr. WITHERSPOON. Let me get through. I am not through yet. I desire to make a few further remarks. In addition to that the Naval Affairs Committee have gone into a very exhaustive examination of the questions which this House is to consider, and I think there are about 1,200 or 1,300 pages of printed testimony taken. A great many new, and in my opinion very important, facts have been developed, and it is absolutely necessary that this House should be put in possession of those facts if they are to vote according to the facts of the case, and it is an utter impossibility for the testimony, which I think shows that this bill ought to be materially amended, to be presented in four hours. Now, it is not going to hurry things along very much to cut down the debate an hour or two. We will not lose much in furthering the business of the session to extend the debate an hour or two. That does not make any material difference, and I think it is perfectly reasonable for those of us who oppose this bill to ask that we be given five hours instead of four, and I appeal to the gentleman from Tennessee to agree that Mr. HENSLEY may control five hours of the time.

Mr. PADGETT. I will state to the gentleman that the universal practice up until last year has been that the time has been divided between the two parties of the House. Out of courtesy to the gentleman, last year I departed from that practice and asked that the gentleman should control a certain portion of the time, and this year I have done the same thing; and, discussing the matter with the gentleman from Missouri [Mr. HENSLEY], the four-hour agreement we reached was satisfactory. I can not modify my agreement.

The SPEAKER. Is there objection?

Mr. FOWLER. Mr. Speaker——

The SPEAKER. For what purpose does the gentleman from Illinois rise?

Mr. FOWLER. To reserve the right to object, in order that I may get some information. I desire to ask the chairman of the committee if any portion of the time for general debate has been awarded to anyone who is in favor of making some provision in this bill for high-explosive shells?

Mr. PADGETT. There is a provision in the bill for armor and armament, and it embraces all kinds of shells and is not limited to any kind.

Mr. FOWLER. Mr. Speaker, I do not desire to delay the House a moment, but I desire to have an opportunity to present the question of high-explosive shells when we reach that part of the bill. I ask that there might be embodied in this request 20 minutes, and that I may have the right to devote that time to this question.

Mr. PADGETT. I think the gentleman can be cared for under the ordinary rules of the House under the five-minutes' debate. I do not wish to embarrass the general debate in any way with an agreement in reference to the five-minute rule.

Mr. MADDEN. I presume it is the intention of the committee to be rather liberal under the five-minute rule.

Mr. PADGETT. I think the gentleman will bear me witness we have always been.

The SPEAKER. Is there objection?

Mr. BARKLEY. Mr. Speaker, reserving the right to object, I do not desire to delay the consideration of this bill, but I have been attempting for several days to get at least 15 minutes in which to discuss this measure. The chairman of the committee has informed me that the committee has taken up all of its time practically which has been promised to others, so the chances are I can not get that 15 minutes from him. Of course, I realize that whatever I may say upon this bill may not be very important to this House, but there are some opinions on naval matters which I would like to have an opportunity of expressing, and if I can not obtain the 15 minutes during the general debate I shall ask unanimous consent during the consideration of the bill under the five-minute rule to speak at some proper place.

The SPEAKER. Is there objection?

Mr. GARDNER. Mr. Speaker, I understand the gentleman from Kentucky is opposed to the bill. I am willing to yield the gentleman a quarter of an hour of my time. An hour is more than I shall probably consume.

Mr. BARKLEY. I am very much obliged to the gentleman.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none. [Applause.]

Mr. RAKER. Mr. Speaker——

The SPEAKER. For what purpose does the gentleman rise?

Mr. RAKER. Before the House goes into the Committee of the Whole House on the state of the Union I want to submit a unanimous-consent request.

Mr. MANN. Not now.

Mr. RAKER. It is only to correct the RECORD.

The SPEAKER. The motion of the gentleman from Tennessee is pending. Unless he would agree to withhold it——

Mr. RAKER. It is to correct the RECORD.

Mr. MADDEN. I object.

The SPEAKER. The gentleman from Illinois objects, and the question is on going into the Committee of the Whole House on the state of the Union.

The question was taken, and the motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 20975, the naval appropriation bill, with Mr. HAY in the chair.

The CHAIRMAN. The House is in the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 20975, which the Clerk will report.

The Clerk read as follows:

A bill (H. R. 20975) making appropriations for the naval service for the fiscal year ending June 30, 1916, and for other purposes.

Mr. PADGETT. Mr. Chairman, I ask unanimous consent that the first reading of the bill be dispensed with.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. PADGETT. Mr. Chairman, as the Members of the House are well aware, my voice is in very bad shape owing to a continued attack of laryngitis, and I regret that it encumbers very much my ability to speak. I shall not devote a great deal of time to a discussion of this matter, but will be pleased to answer as best I can any questions that any Members may desire to ask. I wish to say, however, Mr. Chairman, that during the consideration of the bill under the five-minute rule I hope to be able to give to the committee information upon any item in the bill as we may have it under consideration at the time, and for that reason I shall not at attempt at this time to make any extended remarks. I have filed with the bill a very extensive report, going into great detail of explanation of the various items in the bill. Last year the bill as it became a law carried $144,492,453.53. The bill this year as reported and now pending before the committee carries $148,589,786.88, an increase of $3,721,070.27, and I may add, as the committee is well aware, last year we sold the two old battleships, the *Idaho* and the *Mississippi*, for $12,535,275.96, and in lieu of the two which were sold we authorized the construction of a third dreadnaught, and in this bill the sum of $5,727,410 is included for the construction of this additional ship, and it is embraced in the total of the $148,000,000 that I mentioned. In other words, if you credit the Navy with the sale of the ships in the amount of $12,535,000, which went into the Treasury last year, and deduct $4,635,000 that was taken out of that sum for the construction of the additional ship last year, and the $5,727,410 embraced in the bill this year for the construction upon that additional ship, it leaves an amount in this bill of $142,833,376.88. The bill recommends the construction of 2 battleships, 6 torpedo-boat destroyers, 1 large seagoing submarine, 16 smaller submarines but of good radius of action, 1 transport, 1 hospital ship, and 1 fuel ship. The total cost of the new construction authorized is $53,168,828, and on the first year's construction, because these appropriations are not all made at the time of authorization, but only an amount sufficient to carry on the work during the year, there is appropriated the sum of $22,903,998.

Mr. STAFFORD. Will the gentleman yield?

Mr. PADGETT. I will.

Mr. STAFFORD. It might be very interesting to the committee if the chairman can give the information as to what amount of money is being expended each year, or for the last year, the present year, and the future year in actual naval construction on new projects.

Mr. PADGETT. Well, I will see if I have that here, and I will try to get it for the gentleman.

The amount recommended in this bill to carry on the new construction heretofore authorized is $23,805,803, and the amount necessary to carry on the construction herein recommended is $22,903,998. You will find that in the third paragraph of the second page of the report. I do not have before me the cost of new construction that was recommended last year, but if I remember correctly it was something about $43,000,000 or $44,000,000. It will appear in the report filed with the bill last year.

Mr. STAFFORD. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Yes, sir.

Mr. STAFFORD. So, according to the statement just made, if all the money appropriated in this bill for the next fiscal year be realized there will be at least $45,700,000 that will be expended?

Mr. PADGETT. It is about that sum. The total is $46,109,801. That appears in the same paragraph of the report that I referred to, just a line or two below.

Now I call attention to the fact that of the annual appropriations made in the bill for the last fiscal year there is $1,800,000 of unobligated balances, and of these unobligated balances we have made available $800,000 on account of the construction of submarines, and we have reappropriated $1,000,000 for aeronautics, in its broadest and widest terms, embracing dirigibles and aeroplanes, and so forth.

Mr. GOULDEN. Mr. Chairman, will the gentleman yield right there?

Mr. PADGETT. Yes.

Mr. STAFFORD. The gentleman has just stated that a million dollars for aeronautics is not only for aeroplanes but also for dirigibles.

Mr. PADGETT. Balloons, also.

Mr. STAFFORD. It was stated in the consideration of the Army appropriation bill that one of these dirigibles costs as high as a million dollars, so that there would not be any money for aeroplanes left. All would be used for dirigibles.

Mr. PADGETT. The cost of some, I understand, amounts to only $89,000.

Mr. ROBERTS of Massachusetts. I understand the small ones cost only $2,000.

Mr. STAFFORD. The Zeppelins, it was stated during the consideration of the Army appropriation bill, cost as much as $1,000,000.

Mr. PADGETT. On page 286 of the hearings you will find an itemized statement in which it appears that one dirigible, under Steam Engineering, is estimated at $60,000; under Construction and Repair, $112,000; under Ordnance, $2,000; and under the Bureau of Navigation, $600, so that it would be about $174,600.

Mr. GARDNER. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Yes.

Mr. GARDNER. I think perhaps the confusion arises from the fact that it was testified before the Committee on Military Affairs by Gen. Scriven that a Zeppelin would cost a million dollars. I understand that the proposed dirigible is one of the other types instead of a Zeppelin. It is one of the smaller types.

Mr. PADGETT. Yes; it is not of the larger and more expensive type.

Mr. GOULDEN. Mr. Chairman, it was on that very subject that I wanted to ask the chairman of the committee a question, if I understood the matter properly, as to the development of aviation for naval purposes. What is the total amount recommended in this bill of unobligated balances and new appropriations? What is the exact amount available for 1915–16?

Mr. PADGETT. I will say to the gentleman that heretofore Congress has been appropriating for aviation under lump-sum appropriations, carried under the Bureaus of Steam Engineering and Construction and Repair, just an indefinite amount of a lump-sum appropriation, given to those bureaus for general work. The committee thought it wise to segregate areonautics and to make it separate and apart by itself, feeling that it had reached a stage of development where it was deserving of separation and emphasis; so that we put it in a clause by itself, under the office of the Secretary of the Navy, with authority for him to distribute the total appropriation to the various bureaus as might be needed. And we have, as I stated a moment ago, made available for that purpose the sum of $1,000,000. I understand that last year we expended something over $200,000 for aeronautics.

Mr. GOULDEN. The chairman realizes how important this item is?

Mr. PADGETT. Yes; and the present year something like $300,000 will be expended. We have made available a million dollars for the coming fiscal year.

Mr. GOULDEN. I notice that the department asked for $1,187,600.

Mr. PADGETT. That was not the department. That was Capt. Bristol, the officer in the department who has charge of that particular service, and he stated that he could use $1,187,000. I will also call your attention to the fact that Capt. Bristol stated that he had an unexpended balance at the present time of $350,000, or about that amount, and we have added a million dollars, so that from now until the close of the fiscal year 1916, which would be a year from next July, we will have $1,350,000 which would be available for that purpose.

Mr. GOULDEN. I am sure none of us anticipate a war; we all hope there will be none, anyway; but I am quite confident that this is a very important branch of both the Army and the Navy, and I think it should be developed as rapidly as possible. I have no doubt that the Naval Committee has taken the matter under full advisement, and that this embodies the wisdom of the members.

Mr. PADGETT. For certain purposes we regard it as a very valuable aid for service in the Navy, and we have taken an advanced step.

Mr. GOULDEN. I am glad to hear it. I want to ask another question, if I may. I see you have provided for 17 submarine torpedo boats, 1 of the seagoing type. Will the gentleman kindly tell us the difference in the cost between the latter—the seagoing type—and the former?

Mr. PADGETT. Yes. The bill stipulates the limit of cost of the seagoing type. It is a large boat, from a thousand to twelve hundred tons displacement, and the limit of cost is fixed at $1,400,000. The other boats will be about 500 or 600 tons displacement, and the limit of cost is fixed at $550,000 each, or a difference of $850,000 in limit of cost.

Mr. GOULDEN. This is quite an item, and it has developed that the best use that they can be put to is in connection with the defenses of the harbors and the coast.

Mr. PADGETT. The submarine is a boat and an implement of war that is developing very rapidly. The boat that was considered and developed last year is not the boat that is in mind to-day. Last year, as I stated, the Congress authorized the construction of a seagoing vessel, jumping at one stroke from a boat of about 600 tons displacement to about 1,200 tons displacement. That is largely experimental. And the experts of the department, from their study of the matter, from the investigations that they have made, and from the drawings, feel that they have worked out the solution of the question, but there is nothing that succeeds like success itself.

Mr. GOULDEN. I am delighted to hear the gentleman say that, and sincerely hope that the genius of our naval experts may be rewarded. Can the gentleman tell us without much trouble the exact amount appropriated for submarine torpedo boats—that is, approximately—in this bill?

Mr. PADGETT. Yes. The total cost would be 16 at $550,000 each, and 1 at $1,400,000.

Mr. GOULDEN. That answers my question satisfactorily.

Mr. PADGETT. Now, then, for this purpose we have recommended for the first year $3,405,000, and in addition we have reappropriated $800,000, making $4,205,000 that has been appropriated for the first year's construction. It takes about 30 months to build a submarine, but on account of the difficulties we have experienced with contractors they have taken a much longer time. This is a machine of very delicate construction, very complicated machinery and mechanism, and there are many difficulties that have to be encountered and overcome. Our experience has been with the contractors, and there are only two in this country—the Electric Boat Co. and the Lake Boat Co.—that undertake to build these submarines——

Mr. GOULDEN. The gentleman, I am sure, realizes how important this is to the great city and its magnificent harbor which I have the honor to represent in part here, and therefore these questions are asked. I wanted full information with the desire that it go into the RECORD, and I thank the gentleman for his courteous and instructive replies. I feel that the immense commerce of New York demands from the National Government the greatest protection possible.

Mr. GARDNER. Mr. Chairman, I understood the gentleman to say that in this bill a million dollars is appropriated for aeronautics, and in addition $300,000 is available from unobligated balances?

Mr. PADGETT. For the last fiscal year.

Mr. GARDNER. Does that make $1,300,000 in all?

Mr. PADGETT. Yes, sir.

Mr. GARDNER. Now, I did not understand the chairman's report in that way. If you will turn to page 287 of the hearings, the hearings of Capt. Bristol, at the bottom of the page, you will find that he says there is only about $350,000 now available for expenditure.

Mr. PADGETT. I understand that. Now, then, we have made available $1,000,000 for the next fiscal year, and as I stated a moment ago, from the present time until the close of the fiscal year, June 30, 1916, there will be a total available of $1,350,000.

Mr. GARDNER. But the gentleman's report and the gentleman's bill say that the million dollars is appropriated out of the total unobligated balances.

Mr. PADGETT. Annual balances—June, 1914. These are unexpended balances of the fiscal year 1915. The unappropriated balances that we have made available are for the fiscal year that is past—1914.

Mr. GARDNER. That is satisfactory. Only I wanted to have a definite understanding, because it was not clear to me from the report. Is the gentleman ready to have me ask one or two questions which I have on my mind?

Mr. PADGETT. Yes, sir.

Mr. ROBERTS of Massachusetts. Will the gentleman yield for just a moment before we leave this subject of aeronautics?

Mr. GARDNER. Yes, sir.

Mr. ROBERTS of Massachusetts. I understand the chairman of the committee to say that for the fiscal year ending June 30, 1915, there will be $350,000 available for aeronautics?

Mr. PADGETT. No; he says he has at the present time $350,000 available for use during the remainder of this fiscal year.

Mr. ROBERTS of Massachusetts. Capt. Bristol means by that that $350,000 of the lump sum for Steam Engineering and Construction and Repair have been allotted for aeronautics. I want to call the attention of the chairman of the committee to this condition of affairs which may develop at the end of this fiscal year, as it did at the end of last fiscal year. At the end of last fiscal year—June 30, 1914—we had unobligated balances of about $2,000,000, so we were informed by the Secretary of the Navy. Those unobligated balances were largely in Steam Engineering and Construction and Repair; the two items up to the present time carrying the money for aeronautics. If the same condition holds for this year, there will be something like $2,000,000 on June 30, 1915, of those appropriations unobligated which can be used, if the Secretary so wishes, for aeronautics during this year. Now, it is wholly up to the department whether the $350,000 that has been allotted for aeronautics is the limit of the amount that shall be spent for the fiscal year.

Mr. PADGETT. The Secretary stated in that connection that if he had more money available he could not spend it at the present time, because he can not get machines abroad, and there is no one in this country prepared to manufacture them at the present time.

Mr. ROBERTS of Massachusetts. Now, if the chairman will pardon me just a moment, reference has been made to the item and the statement of Capt. Bristol, showing the probable expenditure of the $1,000,000 which we have appropriated, and reference to that shows that a considerable proportion, running, if my memory serves, into $100,000 or $200,000, will be needed to handle aeronautics, in the way of sheds and stations and other accessories that are needed for air craft. If the money is available and can be used out of this year's appropriation, those accessories can be provided this year; and when the $1,000,000 appropriation takes effect it is probable that that can all be spent for air craft, and none of it be needed for the accessories.

Mr. GARDNER. Will the gentleman turn to page 39 of his report?

Mr. PADGETT. Yes.

Mr. GARDNER. The gentleman will find that there are 21 first-line battleships included in the table on that page.

Mr. PADGETT. Yes.

Mr. GARDNER. I take it that that table comes from the new Navy Yearbook. At all events, it corresponds with the Navy Yearbook table.

Mr. PADGETT. Yes; it is taken from that.

Mr. GARDNER. Is it not true that the *Arizona*, *California*, *Idaho*, *Mississippi*, *Nevada*, *Oklahoma*, and *Pennsylvania* have never as yet been completed?

Mr. PADGETT. I think that is correct.

Mr. GARDNER. That is correct.

Mr. PADGETT. Yes.

Mr. GARDNER. That brings the number down to 14. Now, is it not also true that the *Kansas*, *Minnesota*, *New Hampshire*, and *Vermont* belong to the second line?

Mr. PADGETT. Last year in the Navy Yearbook they were placed in the first-line battleships. It was only last year that the Navy Yearbook had a heading, "First-line battleships." Prior to that time they used the designation "First-class bat-

tleships." I have looked back a number of years, and I find that the ships the gentleman mentions have been classified all the while under "First-class battleships." In the last year's Navy Yearbook they were put down under "First-line battleships," and this year they are put down under "First-line battleships."

Mr. GARDNER. Mr. Chairman, I hold in my hand a publication of the Navy Department called Ships' Data, United States Naval Vessels, bearing date January 1, 1914. I hold in the other hand Navy and Marine Corps List and Directory, dated January 1, 1915, and in both these publications I find that the *Kansas*, *Minnesota*, *New Hampshire*, and *Vermont* have all four been relegated to the second line.

Mr. PADGETT. I think you will notice on the same page of your Ships' Data a note in which they say that by virtue of an order made, I believe, in 1912——

Mr. GARDNER. I have the Secretary's letter here about it.

Mr. PADGETT. The Secretary made an order for classification that ships more than 10 years old should be put in the second line, and ships under 10 years old should be classed in the first line, and that publication is in accord with that order of the Secretary.

Mr. GARDNER. I have his letter.

Mr. PADGETT. I will say also, for the benefit of those who may not have investigated, that the book we referred to a moment ago as the Navy Yearbook is a publication gotten out by the clerk of the Committee on Naval Affairs of the Senate, and is not published by the Navy Department.

Mr. GARDNER. I am not blaming the department or even the committee, but I want to bring out the fact that that is a mistake in the committee's report.

Mr. PADGETT. I just wanted to call attention to the fact that it depends on which classification you adopt. Let me explain this. There is another regulation that has fixed the active fleet at 21 ships, and when they speak of the 21 in the first line they are taking the 21 that constitute the active fleet—the first line of resistance. In other words, there are 4 squadrons, with 4 ships in each squadron, and 1 extra one with each squadron, and a flagship, making 21 ships, 4 to a squadron, and allowing 1 extra one to be ready to go in its alternate time to the navy yards for docking and repairs, so as to have 4 in each squadron available.

Mr. GARDNER. The gentleman is merely confusing the question again. I want to get it clear that the Navy Department classification leaves only 10 ships in the first line.

Mr. PADGETT. According to that classification, under 10 years of age.

Mr. GARDNER. According to the classification of the Navy Department.

Mr. PADGETT. Under 10 years of age; that is correct.

Mr. GARDNER. Now I will read what the Secretary of the Navy said in a letter to me three days ago, if I may.

Mr. PADGETT. Certainly.

Mr. GARDNER. This is the Secretary's letter:

NAVY DEPARTMENT,
Washington, January 26, 1915.

Hon. A. P. GARDNER, M. C.,
House of Representatives.

MY DEAR MR. GARDNER: Receipt is acknowledged of your letter of January 25, 1915, pointing out certain discrepancies between Senate Document No. 637, Sixty-third Congress, third session (Navy Yearbook), and the Navy and Marine Corps List and Directory, January 1, 1915.

On October 22, 1912, the department issued the following general order: "The age of vessels in the Navy shall be computed from the date of the act of Congress authorizing their construction." On November 9, 1912, the department approved the classification submitted by the Bureau of Construction and Repair, in which battleships were transferred from the first to the second line when they were 10 years old.

The list of battleships contained in the Ships' Data book and Navy and Marine Corps List and Directory are therefore correct.

Senate Document No. 637 is a Senate publication over which this department has no cognizance. The list contained on page 842 has been carried along from year to year and evidently has not been compared recently with the Ship's Data Book. The *South Carolina* and *Michigan* will be transferred to the second line on March 3, 1915.

Sincerely,

JOSEPHUS DANIELS,
Secretary of the Navy.

This statement about the *South Carolina* and the *Michigan* means that on March 3, 1915, instead of having 10 ships in the first line of battleships there will be only 8.

Mr. PADGETT. That is correct as to the age of the ships. The gentleman must bear in mind also that there will be added the new ships as they are authorized to come in, and then he must make this distinction.

Mr. GARDNER. Yes; and it takes about four years from the date of authorization to build a ship.

Mr. PADGETT. No; about three years.

Mr. GARDNER. I think four years from the date of authorization.

Mr. PADGETT. They are building them now in about 30 to 32 months.

Mr. GARDNER. I think the gentleman is mistaken.

Mr. PADGETT. I want to call attention to the fact that the grouping of the 21 ships is the first line of resistance. They are the ones actually in commission and in service, and go into the first line of resistance. The other is a paper tabulation.

Mr. GARDNER. The *Texas* took three years and eight months from the date of authorization to the date of completion. That is the last ship completed. The *New York*, the next most recent dreadnaught, took from the time it was authorized to the date of its first commission three years and nine months to build. It is well to remember, however, that, owing to the Mexican situation, she was put into commission before she was complete. The gentleman is giving the figures of the date of the laying of the keel to the first commission, and is not counting the time from the date of authorization.

Mr. PADGETT. Then they are usually three or four months in preparing plans; but that varies, however.

Mr. OLDFIELD. Will the gentleman yield?

Mr. PADGETT. Certainly.

Mr. OLDFIELD. I notice in the report that the Navy Department asked for 8 submarines and you give them 17.

Mr. PADGETT. The Secretary of the Navy asked for 8 because he thought it was sufficient. The majority of the membership of the committee thought we ought to have more, and so voted, and 17 represent the action of the committee.

Mr. OLDFIELD. Nine more than the Secretary asked for. How does the $148,000,000 appropriated by this bill compare with the amount asked for by the Secretary of the Navy and the Naval Board?

Mr. PADGETT. You must separate the Secretary and the General Board.

Mr. KELLEY of Michigan. Will the gentleman from Tennessee permit me to call attention to the fact that the General Board recommended 17 submarines, and the committee followed the recommendation of the General Board instead of the recommendation of the Secretary?

Mr. PADGETT. I think the gentleman from Michigan is not accurate. The General Board recommended 16 coast submarines and 3 seagoing submarines. The building program of the Secretary of the Navy, I will say to the gentleman from Arkansas, as recommended, would have carried about $44,000,000 to construct it, and when the committee reported it it was $53,000,000.

Mr. OLDFIELD. Nine million dollars more.

Mr. PADGETT. Yes. The General Board recommended a program that would have carried $128,224,972.

Mr. OLDFIELD. More than twice as much.

Mr. PADGETT. Three times as much as the Secretary recommended and two and a half times as much as the committee allowed.

Mr. OLDFIELD. Who is at the head of the General Board?

Mr. PADGETT. Admiral Dewey. Now, Mr. Chairman, I desire to reserve the balance of my time and will yield the floor.

Mr. HENSLEY. Mr. Chairman, I want to ask the gentleman from Tennessee a question or two before he yields the floor.

Mr. PADGETT. I will yield?

Mr. HENSLEY. Last year's appropriation bill authorized the building of what is known as a seagoing submarine. This bill provides another seagoing submarine. These seagoing submarines cost something over a million dollars each, do they not?

Mr. PADGETT. The limit of cost is $1,400,000.

Mr. HENSLEY. Will the chairman give the committee some idea with reference to the practicability of these submarines—whether or not they have been worked out?

Mr. PADGETT. I stated in the early part of my statement that the experts in the department have worked out plans by which they think it will be a success. None has yet been built, and they do not know by actual demonstration; but they have great confidence and a firm belief in the seagoing type of submarines. However, it is a jump from 600 tons to one of 1,200 tons, or an increase of 100 per cent, and the question of its actual success is yet to be worked out; but we believe that it is going to be a success.

Mr. HENSLEY. Another question: Can the chairman tell when the submarine authorized by the last bill will be completed?

Mr. PADGETT. I think the contract calls for 30 months; but I will say to the gentleman that experience in the past has been such that, on account of the delicacy of the work of the submarine, its manifold number of pieces, it may not be completed

in that time. For instance, in the engine of a submarine there are something like a thousand parts; they are reducing it to something like six hundred and some odd different parts, but, as the gentleman can see, it is a very delicate piece of mechanism, and the contractors have not been able to keep up and complete it within the time limit.

Mr. HENSLEY. Is it not a fact that the experts in the department, not knowing whether this character of a submarine would be a success, did not make any request upon the committee for an authorization for another seagoing submarine?

Mr. PADGETT. No; the Secretary asked expressly for one. The General Board recommended three.

Mr. HENSLEY. Of the seagoing type?

Mr. PADGETT. Yes; estimated for it and asked for it.

Mr. SLAYDEN. Will the gentleman permit a question?

Mr. PADGETT. Yes.

Mr. SLAYDEN. I was much interested in the gentleman's statement about what he calls the seagoing submarine, and I received the impression that there is doubt in his mind, and perhaps reflected from the doubt in the minds of these experts, whether or not it is practical.

Mr. PADGETT. No, sir. I stated that the experts have worked out plans, and that they firmly believe that it will be a success.

Mr. SLAYDEN. Jumping from 600 tons to 1,200 tons.

Mr. PADGETT. Yes; but as none has been constructed here we will have to wait; but we wait with confidence, in the belief that it will be a success.

Mr. SLAYDEN. Is the gentleman quite certain that none have been constructed?

Mr. PADGETT. Not in this country.

Mr. SLAYDEN. Did the gentleman see an Associated Press dispatch which appeared in a Washington paper last Saturday to the effect that the Germans had just launched a submarine provisioned and equipped for, if it should become necessary, a three months' voyage?

Mr. PADGETT. I saw that.

Mr. SLAYDEN. That looks like it might be a seagoing submarine.

Mr. PADGETT. We have no definite information about it. They state that they have not been able to get definite information from abroad. We get these reports, but the department have worked out their plans and diagrams and specifications, and they believe that it will work to such an extent that they asked for one last year and they ask for another one this year, and the committee believed it by reporting for the one last year and reporting for the one this year.

Now, Mr. Chairman, I will reserve the remainder of my time and yield the floor to the gentleman from Pennsylvania.

Mr. BUTLER. Will the gentleman from Tennessee unite with me now in yielding to the gentleman from California the time we agreed to give him, I to give him one-half an hour and the gentleman one-half an hour?

Mr. PADGETT. Yes; I will yield 30 minutes.

Mr. BUTLER. Then I will yield to the gentleman.

The CHAIRMAN. The gentleman from California is recognized for one hour.

Mr. STEPHENS of California. Mr. Chairman and gentlemen, I am not for war; I am for peace, everlasting peace. I am for a larger Navy and a larger Army, because I believe that is one of the ways to keep this country at peace. [Applause.] I am not a jingoist in any sense of the word. I am as far from that as any man can possibly be, but I do believe that now is the time to take out more insurance against war.

Mr. McKELLAR. Will the gentleman yield?

Mr. STEPHENS of California. Yes.

Mr. McKELLAR. Did our European friends, who have been building large armies and large navies for the last several years, realize anything on their insurance? Does not the gentleman think the fact that they had large standing armies helped to bring about the war rather than insure them against war?

Mr. STEPHENS of California. No; I do not. I think that each of the nations now at war has postponed war, and is now benefited because of the army and navy each has.

Mr. McKELLAR. Does the gentleman think that any European nation now engaged in war is benefiting itself?

Mr. STEPHENS of California. No; I think war never benefits the people of any country engaged.

Mr. SLAYDEN. Will the gentleman yield?

Mr. STEPHENS of California. I will.

Mr. SLAYDEN. They paid the largest insurance premium of any people of whom we have any record in all history, and yet the conflagration came. Now, does the gentleman think it was a wise investment under the circumstances?

Mr. STEPHENS of California. I will answer the gentleman's question as I go along in my remarks.

Mr. McKELLAR. Before the gentleman proceeds will he answer this question?

Mr. STEPHENS of California. Yes.

Mr. McKELLAR. If a large standing army and a very large navy is an insurance against war, to what size does the gentleman think Germany ought to have built her army and navy, and to what size does the gentleman think Great Britain ought to have built her army and navy in order to have had effective insurance against this great war that is now being fought?

Mr. STEPHENS of California. I will say to the gentleman I am not and do not pretend to be a naval or an army expert, but a business man, with what I think is ordinary business sense, and it is because I believe it is a good business proposition, as well as one that will preserve the young men of this Nation, and perhaps save our women from the awful heartbreakings and sufferings and aftermath of war, that I advocate a larger Navy and a larger Army at this time.

Mr. HOWARD. Does not the gentleman think he will see a disarmament of all the nations before ever seeing an agreement among the militiarists and jingoists as to the size of army and navy which a nation ought to build?

Mr. STEPHENS of California. Well, I am not acquainted with very many jingoists, and I can not answer for them, but at this time I feel that we are not assured of anything at the close of this war unless it is that human nature will still be human nature.

I would insure this Nation against war, for I want no more war-bereaved mothers, widows, and children, and no more war-maimed and suffering men in these United States. I shall dwell on two points only at this time. Is the United States justified in making adequate naval defense, and is the Pacific coast fairly or even proportionately defended?

Mr. Speaker, we insure our personal property against burglary and our windowpanes against breakage; we build cyclone cellars to which we run when storms approach; we insure our homes and our business buildings against damage or destruction by fire; we go to great expense in all our cities and towns to provide fire engines and men to run them, so that we may be ready to fight fire when it comes. No city is so foolish as to wait until fire breaks out before contracting for fire-fighting apparatus. No insurance against loss by fire could be had for Chicago, San Francisco, or Baltimore after their destructive fires had commenced. Insurance must be taken out and fire-fighting apparatus be ready before the city begins to burn if it is to do any good; and trained fire fighters are more effective than the old-time volunteers.

We gather together a police force, large or small, according to the size of the community, and thereafter, night and day, it patrols the streets to prevent crime and arrest it. We do not wait until the riot call is sounded to organize and drill our bluecoats. Neither fire companies nor insurance prevent conflagrations, but they hold them within bounds and afford first aid to the injured. Policemen do not stop all crime, but they are a constant deterrent and a ready arm of the law in an emergency.

Mr. HENSLEY. Will the gentleman yield?

Mr. STEPHENS of California. Certainly.

Mr. HENSLEY. The statement the gentleman just made—that any community needs to organize a crew or fighting force to go out and cope with fire and that sort of thing—let me ask the gentleman whether or not now the great forces in Europe, by the tremendous effort they are putting forth, are trying to prevent the fire or are they not destroying property and life with no sort of regard to bringing about a cessation of hostilities?

Mr. STEPHENS of California. Of course the war in Europe can not now be prevented. One side or the other must be conquered, just as in a great conflagration we must put out the fire or be burned up. There never was a war without loss of life, and I think that previous preparation—preparation for defense—not only postpones and may prevent war but will well serve our Nation in time of war.

Every banker keeps cash in reserve and money on call that he may withstand future financial storms. Indeed, every man of sound mind and commendable habits is strengthening himself morally, physically, and financially against the possible troubles of to-morrow.

Every careful man of family insures his life and often strains to the utmost to meet insurance premiums in order to save his wife and children from a fight for existence after he is gone. Every mother with children is saving something for the rainy day that may come by and by.

If, as communities and individuals, we are so constantly and persistently, so commendably and praiseworthily, engaged in preparing against trouble, why should we not, as a Nation, insure ourselves against war by preparing our Navy to meet those who may attack us, and our Army and our fortifications to repel all who may invade? Is it wrong for husband and father to carry insurance? Indeed, is it not desirable and advisable to burden ourselves to-day that wives and children may not go hungry to-morrow?

God knows I never want another war, either at home or abroad. I pray for peace. "Peace on earth, good will toward men," means as much to me as to any other man who was taught at his mother's knee to pray for peace everlasting. If the rest of the world is armed, if every other nation in our class is possessed of a navy and an army that she thinks superior to ours, are we not more likely to be nationally imposed upon than if we are unquestionably the stronger?

It is my guess that Great Britain will never again attack us, nor will she ever seriously participate in any war made upon us. In the interest, therefore, of world-wide peace, in the interest of peace between this Nation and every other, the United States of America should be prepared to defend herself from an attack by any other nation and be fairly prepared to repel Great Britain. To be thus prepared we must have more battleships and battle cruisers, air craft and submarines, destroyers and auxiliaries—not in numberless array, but within reason.

Shall we as a nation spend millions of dollars as a warning to the world and a defense against all comers, or shall we wait until the attack is made and then sacrifice our bravest and best, our own and our mothers' sons, in awful war? Shall we delay and pay for our tardiness in the suffering and privation of our soldiers and sailors? Shall we wait until the storm breaks, and then have our women and children miserable and hungry because we would not see? Shall we spend money now or men and money hereafter? Shall we pay out millions of money to avoid war or shall we wait and spend the life blood of hundreds of thousands of our sons and billions of our money in war?

We must do one or the other. With all my strength I favor reasonable preparation now. We should husband the Nation's resources. We should not appropriate hundreds of millions additional until we know what defenses we ought to have. But we can double the number of submarines now built, building, and authorized, and help, not hinder, any proper program. We can add a few battle cruisers to our fleet and not go contrary to the lessons taught by the war in Europe.

The United States needs a council of defense made up of men who know and are not afraid to recommend that which would render this country reasonably safe from attack. And then, my fellow Congressmen, we should vote the money to carry out that program, regardless of whether or not it helps trade in our respective communities.

Again let me say I am not for war. I am unequivocally for peace. I would go the limit to avoid war. If my shoe should be stepped on, I would be sure my toe was hurt before I would enter the international prize ring. The United States ought not and must not again engage in civil or foreign war, and one of the best ways to insure against it is to reasonably prepare our Army, Navy, and fortifications for the defense of our shores.

Mr. HENSLEY. Will the gentleman yield right there?

Mr. STEPHENS of California. If the gentleman will not take too long. I do not want to take time from my colleagues.

Mr. HENSLEY. The gentleman from California says he is for peace, and I am confident from my relations with him that he sincerely takes that position and believes in what he is saying here now, but I desire to ask him this question, whether or not if this country had a navy even twice as large as the present Navy he does not believe that there would be the same insistence upon the part of those who are asking for further increases to-day?

Mr. STEPHENS of California. First, I want to thank the gentleman for his good opinion. I have an equal respect for him. And next, I want to say, in answer to his question, that I do not believe the demand will increase with the years. What the Navy wants, and above all what the people want, is adequate defense and nothing more.

We have two great ocean fronts and a fleet large enough to fairly protect but one. The Pacific coast has more miles of territory touching the 3-mile limit than has the Atlantic coast, but it has no dreadnaught to help protect it. There are 29 battleships on the Atlantic coast and only 1 on the Pacific. That one is the *Oregon*, almost 20 years old and ordinarily in reserve, but now in commission and on her way to meet the President at Colon.

I am not one of those who think war imminent or likely at any very early day, and yet I must ask you who read the news of the world to answer one question: If war should come to-morrow, in which direction would you look to see the flash of the guns? Do you not think the Pacific coast ought to be fairly well protected? Do you not think we ought to have a fleet there equal to the one on the Atlantic? Now, that the Panama Canal is open, do you not think the only fleet we have should be on the Pacific coast at least a part of the time?

Secretary of the Navy Daniels has said the fleet should not be divided. Well, then, why not keep it in the Pacific most of the time? It is no farther from the Pacific to the Atlantic than from the Atlantic to the Pacific coast. It will not take a battle fleet a day longer to go from San Francisco to New York than it will to sail from New York to San Francisco.

The following figures demonstrate clearly the difference in naval protection afforded the Atlantic and Pacific coasts:

Battleships.

[1] Four at Honolulu.

There are 29 battleships on the Atlantic and 1 on the Pacific coast. There are 34 torpedo boat destroyers on the Atlantic and 9 on the Pacific. There are 17 submarines on the Atlantic and 5 on the Pacific coast and 4 at Honolulu. There are 12 cruisers on the Atlantic and 16 on the Pacific, and not a gun of the 16 larger than 8-inch. Mr. Speaker and gentlemen, do you think that a fair division of naval protection, even in time of peace? If the fleet is to remain the larger part of the year on the Atlantic coast, do you not think 50 submarines should be stationed along our Pacific shores? [Applause.]

Mr. GOULDEN. I want to ask the gentleman how many harbors you have that could be attacked by a foreign fleet from any point on the Pacific coast?

Mr. STEPHENS of California. We have a dozen, in round numbers.

Mr. GOULDEN. I did not think you had more than four or five.

Mr. STEPHENS of California. We have four or five large harbors; but there are many smaller harbors, with cities of three to fifteen thousand near by.

Mr. GOULDEN. But not of sufficient depth of water to enable large battleships to enter or approach near enough to do any harm.

Mr. STEPHENS of California. I think they could easily reach the wharves in these smaller harbors. There is depth of water sufficient in many to admit any ordinary battleship. They now take in merchant ships that draw from 20 to 25 feet of water.

Mr. GOULDEN. If the gentleman will permit, I am in sympathy with him and think the Pacific coast ought to be protected; but if the gentleman will pardon an observation, some years ago when the difficulty with the school board was had in San Francisco I heard it said by the President of the United States that war was imminent, and that we were on the very verge of it with one of the oriental powers. Happily the difficulty was amicably adjusted and war averted.

Mr. STEPHENS of California. Mr. Chairman, I reserve the balance of my time.

Mr. BUTLER. Mr. Chairman, I yield 15 minutes to the gentleman from Illinois [Mr. BRITTEN].

The CHAIRMAN. The gentleman from Illinois is recognized for 15 minutes.

Mr. BRITTEN. Mr. Chairman, it is not my intention to talk for or against the naval appropriation bill as a whole, as it has been presented to the House, because I am thoroughly satisfied with it at present. I do desire, however, to call the attention of the House to a new paragraph on page 27 which has for its effect the elimination of the Board of Selection for Retirement, which I am told, though new legislation, will be provided for in a rule that will be presented to the House to-morrow, making this paragraph not subject to a point of order. The "plucking board"—as this board is commonly known—in the past has performed a valuable service toward the efficiency of the Navy. We all agree on that. We also must agree that the value of the "plucking board" to-day is nil. But it is in effect, and "pluckings" will continue until this House takes some action toward removing that board, which was created some 16 years ago.

Naval experts who have appeared before our committee time and again have insisted that the pluckings from year to year as they occur now do not tend to increase the efficiency of the Navy, but rather to decrease the efficiency, with the result that some 15 able-bodied, highly efficient officers, some of whom have survived 15 different sets of "pluckers," are put on the retired list every year when they are practically at the zenith of their ability; when they are enjoying the best part of their life and giving to the service the best that is in them. Then we pluck them—put them on the retired list; practically pension them—in order to make room for the promotion of an ensign or a lieutenant of junior grade.

Mr. McKELLAR. Will the gentleman yield?

Mr. BRITTEN. Yes.

Mr. McKELLAR. At what average time of life are these men plucked? Have you any figures on that?

Mr. BRITTEN. They are plucked at all ages.

Mr. McKELLAR. But what is about the average time?

Mr. BRITTEN. I do not quite understand the gentleman's question.

Mr. McKELLAR. I mean this, how many years have they to serve on an average when they are plucked?

Mr. BRITTEN. That depends on the rank of the officer plucked.

Mr. McKELLAR. I understand that entirely; but my idea was, have any statistics been prepared showing the average time when these gentlemen who have already been plucked have the right to serve?

Mr. BRITTEN. They may not have served a year and then be plucked, and on the other hand they may have served 15 or 20 years before being selected for retirement.

Mr. McKELLAR. I want to say to the gentleman that I am heartily in sympathy with his view about it.

Mr. COOPER. Will the gentleman yield?

Mr. BRITTEN. Yes.

Mr. COOPER. It is entirely left to the discretion of the board as to whom shall be plucked?

Mr. BRITTEN. That is left entirely to the discretion of the board. No public hearings are had; nothing is given to the public as to why an officer is plucked; there is nothing reviewable. The plucking board meets and acts, not upon the service record of the officer, not upon any merit that is shown to exist in the Navy Department applying to that particular officer, but upon the general impression that prevails in the Navy regarding the officer plucked.

Mr. McKELLAR. Does the board report its findings; and if so, to whom?

Mr. BRITTEN. To the Secretary of the Navy, who in turn reports to the President of the United States, and the officer is retired from the service.

Mr. McKELLAR. Is a record kept of the findings of the board, an examination on which it acts, and is that record sent to the Secretary and then to the President?

Mr. BRITTEN. There is no record kept, the names of the unfortunate officers merely being submitted for immediate retirement to the Secretary of the Navy.

Mr. CALLAWAY. How is this board appointed?

Mr. BRITTEN. By the Secretary of the Navy. It is composed of five rear admirals.

Mr. CALLAWAY. Are they on the retired list or on the active list?

Mr. BRITTEN. They are on the active list.

Mr. GREENE of Vermont. This plucking board starts with the idea that somebody must be plucked, whether they deserve to be plucked or not?

Mr. BRITTEN. Yes.

Mr. PADGETT. The law provides that they must pluck so many captains, commanders, and lieutenants. If there is no plucking, there can be no promotion.

Mr. BRITTEN. Did the chairman of the committee say that if there was no plucking there would be no promotion?

Mr. PADGETT. Practically none.

Mr. BRITTEN. I dislike to take exception to that statement. The law provides that as soon as a sufficient number of retirements in the natural way does not occur during a year to provide for the proper flow of promotions, then the plucking board must retire the required number, not to exceed 15.

Mr. McKENZIE. At what age are the officers of the Navy retired by law, 62 or 64?

Mr. BRITTEN. Sixty-four years.

Mr. McKELLAR. Will the gentleman yield?

Mr. BRITTEN. Yes.

Mr. McKELLAR. In the opinion of the gentleman, is it requisite in order to get an efficient Navy to arrange such a system as to get a proper flow of promotions or to get service?

Mr. BRITTEN. A proper flow of promotions and retirements will be established through a new personnel bill now in the hands of our committee.

Mr. GOULDEN. Will the gentleman yield? Does the gentlemen know that the Secretary of the Navy approves of the findings of this so-called plucking board?

Mr. BRITTEN. Always; he must.

Mr. BUTLER. The Secretary and the President both.

Mr. BRITTEN. According to law, he can not do otherwise. We must change the law.

Mr. BUTLER. Oh, that part of it; yes.

Mr. BRITTEN. It was a good law in its effect when passed, but it has now outlived its usefulness.

Mr. GREENE of Vermont. Mr. Chairman, will the gentleman permit this suggestion?

Mr. BRITTEN. Yes.

Mr. GREENE of Vermont. Is not the operation of the law to-day based upon just as substantial a philosophy as that delineated in the comic opera of "The Mikado," in the words of Koko:

> As some day it may happen that a victim must be found,
> I've got a little list; I've got a little list?

[Laughter.]

Mr. BRITTEN. Yes. "I'll prepare a little list" is more apropos.

Mr. STEPHENS of California. Mr. Chairman, will the gentleman yield?

Mr. BRITTEN. Yes.

Mr. STEPHENS of California. Is it not true that the plucking board is not accountable to anybody for its verdicts, and does not have to give an account to anybody for the reasons of them?

Mr. BRITTEN. Yes. It has been said by one of the members of the plucking board this year that it tended rather to decrease the efficiency of the Navy than to increase it; but he added, "The law provided that we must meet and select a number of officers for retirement, and we did it." Their efficiency or value to the service was not considered.

Mr. COOPER. Would it not be better if a discretion were lodged in the plucking board, so that they would not be required to pluck an arbitrary number, but if they saw officers who ought to be plucked, they could retire them?

Mr. BRITTEN. Yes. That is being considered in the preparation of a new personnel act now pending before our committee. The bill will provide for reasonable promotion, and such officers as may be selected for retirement will be placed in a reserve list and used in some other branch of the department—in the Life-Saving Service or in the Revenue-Cutter Service or in the departmental service—where their activities through life have disqualified them to still serve the Government in a most satisfactory manner.

Mr. GREEN of Iowa. Mr. Chairman, will the gentleman yield?

Mr. BRITTEN. Yes; I yield.

Mr. GREEN of Iowa. I understand the gentleman to say that the law was a good one at the time it was passed?

Mr. BRITTEN. Yes. That was 16 years ago.

Mr. GREEN of Iowa. Will the gentleman explain why it is not a good one at the present time?

Mr. BRITTEN. It is because in those days our Navy did not compare with our Navy of to-day. During the first few years after the passage of this law anybody could pick out 5 or 10 or 15 captains whose service did not do the Navy any good. But to-day they pluck men who a year ago may have included the chief of staff of the Atlantic Fleet. One officer plucked last year was the naval representative at the Army War College, whose duty in effect was to tell the Army officers what the Navy would do under certain conditions in time of war, to decide on strategical developments and tactical movements and all sorts of complicated questions which might arise during the war; and the officer who was designated by the Secretary of the Navy less than two years ago to act in that important position at the Army War College was last year plucked, notwithstanding the fact that Admiral Dewey had just sent a request to the department asking that that particular officer should be assigned to the Navy General Board for the year 1914, and he would have been in that service when retired had not the difficulty with Mexico intervened.

Mr. KELLEY of Michigan. Mr. Chairman, will the gentleman yield?

Mr. BRITTEN. Yes.

Mr. KELLEY of Michigan. Is it not also true that a former superintendent of the Naval Academy, a comparatively young man, was plucked last year?

Mr. BRITTEN. Yes; that is true; a man in the height of his ability, practically a young man in the service, was plucked, as was said, because of his social position, not because of his service record. I refer to Capt. Gibbons, one of the greatest captains in the American Navy up to the time he was plucked.

Mr. BUTLER. Mr. Chairman, will the gentleman yield?

Mr. BRITTEN. Yes.

Mr. BUTLER. Was it not plainly stated that he was plucked because he had not gone to sea enough?

Mr. BRITTEN. Yes; that was one of the attributed causes.

Mr. BUTLER. Capt. Gibbons was eliminated from the service because he had not spent his time at sea, but had been too long on the land. That was the reason assigned.

Mr. BRITTEN. That was the reason assigned for his plucking, and directly thereafter another officer who had been on the high seas a greater length of time than the admirals who plucked him was retired from the service because he had an untidy ship that was 16 or 18 years old, and his great sea service and material additions to the development of the Navy entirely ignored.

Mr. HENSLEY. Mr. Chairman, will my colleague yield?

Mr. BRITTEN. Certainly.

Mr. HENSLEY. I ask the gentleman if it is not true that notwithstanding the gentlemen who compose the plucking board decided that Capt. Gibbons had not had sufficient sea service, the fact that he did not have sufficient service was because he was detained as Superintendent of the Naval Academy over his own protest, when he was insisting all the time on more sea service, and those in authority would not give it to him?

Mr. BRITTEN. Yes. The records all indicate that fact.

Mr. HENSLEY. His record was marked "excellent" throughout?

Mr. BRITTEN. Yes.

Mr. GREEN of Iowa. Mr. Chairman, will the gentleman yield further?

Mr. BRITTEN. Yes.

Mr. GREEN of Iowa. Does not the gentleman think we ought to have some method of getting rid of the least efficient officers of our Navy?

Mr. BRITTEN. Yes; and we are going to accomplish that in a personnel act that is now pending before our committee.

Mr. GREEN of Iowa. Why not wait, then, for the introduction of that act instead of doing it now?

Mr. BRITTEN. Delay at this time will cause the assembling of another plucking board on June 1, and 15 officers who are to-day looked upon as valued protectors of our great country will be relegated to the scrap heap as the result of this unnecessary and now infamous law.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. BRITTEN. Mr. Chairman, I ask that the gentleman controlling the time on our side [Mr. BUTLER] give me some more time.

Mr. BUTLER. I greatly regret, Mr. Chairman, that I have no time at my disposal.

Mr. STEPHENS of California. I will be glad, Mr. Chairman, to yield to the gentleman five minutes of my time.

The CHAIRMAN. The gentleman from California [Mr. STEPHENS] yields to the gentleman from Illinois [Mr. BRITTEN] five minutes. The gentleman from Illinois is recognized for five minutes.

Mr. BUTLER. Then, Mr. Chairman, I will yield to the gentleman five minutes which would otherwise have gone to the gentleman from Michigan [Mr. KELLEY].

The CHAIRMAN. The gentleman from Illinois is recognized for 10 minutes.

Mr. BRITTEN. Mr. Chairman, I understand I got five minutes from my colleague [Mr. BUTLER], five minutes from the gentleman from California [Mr. STEPHENS], and five minutes from the gentleman from Michigan [Mr. KELLEY], making 15 minutes in all.

Mr. BUTLER. Yes; Mr. KELLEY gives the gentleman five minutes. I was offering the gentleman Mr. KELLEY's time. [Laughter.]

Mr. BRITTEN. Then I am recognized for but 10 minutes, Mr. Chairman?

The CHAIRMAN. Yes.

Mr. BRITTEN. When Admiral Knight appeared before our committee as a member of the plucking board for 1914, he said in substance that the officers were not plucked on account of their service records, which appeared in the files of the Navy Department, but rather were plucked on the general impression respecting them that prevailed throughout the Navy.

Now, if an officer is a good fellow and a sociable character naturally he will not be plucked, if Admiral Knight's statement is true, but if he is inclined to be a little gruff, if he insists on strict discipline on board ship, he is the man who will be plucked. And in this instance, the case of Capt. Hill, he was plucked last year. I maintain that without exception he was one of the greatest, if not the greatest, captain of the United States Navy up to the time he was plucked, and I am going to tell you gentlemen just a few of the material developments he has added to our great Navy, which is going ahead in leaps and bounds.

In 1912 Capt. Hill was the Chief of Staff under the Commander in Chief of the Atlantic Squadron, Admiral Osterhaus. The rank of Chief of Staff is looked upon generally as the greatest compliment that can be paid a naval officer, except to make him Commander in Chief of the Atlantic Fleet, which assignment, of course, comes through the Secretary of the Navy. The duties of the Chief of Staff are voluminous, and in substance comprise the entire management of the fleet, as well as being the principal adviser of the Commander in Chief, in all tactical and strategical movements, both in mimic and actual warfare. He does practically everything under the Commander in Chief, the latter being a sort of managerial officer. Capt. Hill was a naval adviser at the Army War College, as I explained a few moments ago, at the time he was retired. He was a member of the Navy General Board for 1907–8, and had been requested for 1914, by Admiral Dewey. Among all the captains in the Navy Admiral Dewey had requested Capt. Hill. He was a staff officer and a director of the Naval War College in 1910–1911, and the hearings before our committee developed the fact that while there he and two other officers changed the entire system of instruction, followed along the line of some of the German and English systems, and that system is to-day in effect at the Navy War College.

During the War with Spain he served on the battleship *Iowa* under Fighting Bob Evans, and Admiral Evans, in a special report to the department, highly commended this young officer for his coolness while in action at one of the rapid-fire guns.

In 1903—and here is where the shoe pinches—this young officer stepped on the toes of the Board of Construction, who had decided to eliminate from battleships the great torpedo of to-day. Hill made a single-handed fight, as admitted by Admiral Knight before our committee, and was entirely responsible in preventing the taking of torpedoes from the battleships, as had then been ordered by the Board of Construction; and, after a fight of six months and treading on the toes of his superiors all that time, the torpedo tubes and torpedoes were ordered replaced on battleships, and they are there to-day, and you and I know their great value.

Mr. SMITH of Texas. Will the gentleman yield?

Mr. BRITTEN. I have very little time left.

Mr. SMITH of Texas. I should just like to ask the age of Capt. Hill when he was retired?

Mr. BRITTEN. About 52, I believe.

Mr. BUTLER. He is older than that—56 or 58.

Mr. BRITTEN. I am informed that he is 56 or 58. My impression was that he was 52 or 54.

Mr. GREEN of Iowa. Does the gentleman know of an instance where a torpedo that struck anything has ever been fired by a battleship?

Mr. BRITTEN. Yes; many instances.

Mr. GREEN of Iowa. When and where?

Mr. BRITTEN. The war between Russia and Japan was decided by a torpedo attack.

Mr. GREEN of Iowa. Not fired by a battleship, but by a torpedo-boat destroyer.

Mr. BRITTEN. It was a torpedo, nevertheless, was it not?

Mr. GREEN of Iowa. Yes; but the torpedo tubes on battleships are simply useless.

Mr. BRITTEN. I must decline to yield further, and certainly do not regard the gentleman from Iowa as a torpedo expert.

The CHAIRMAN. The gentleman declines to yield further.

Mr. BRITTEN. Some years ago, when Capt. Hill was assigned to a battleship as assistant in command, he incorporated what is now known as the Ship's Organization Book, which is now a part of the equipment of every battleship. This ship's organization book will tell a new man on a ship just where to find any location and any article he desires on board that ship, the location of the lifeboats, the fire appliances, and other mechanisms that go toward the making of a battleship. This book is Capt. Hill's own idea.

Then, later on, Capt. Hill suggested to the Board of Construction and had revised practically the entire system of construction of battleship turrets and the raising of the armor belt on battleships, which at that time was too low and appeared to be erroneous. He was the originator in this country of the Council of National Defense. Now, I ask you, gentlemen, in God's name, whom is the plucking board going to pluck this year, who last year was superior to Capt. Hill and Capt. Gibbons? Still, the law provides that they must pluck five captains, and these five captains who are to be plucked this year were 12 short months ago superior to Capt. Hill and Capt. Gibbons, two of the greatest captains we had in the Navy. Unless a special rule is brought in here to-morrow to make this paragraph not subject to a point of order, some gentleman on the floor of the House, who probably is not in the room at the present time will make a point of order and it will be stricken from the bill, and the plucking board will meet again on June 1, and five captains who 12 months ago were apparently superior in efficiency and in every way, according to this last plucking board, to Capts. Hill and Gibbons, will be plucked in order to provide a sufficient flow of promotion for some ensign or some youth who now is a lieutenant, junior grade.

Mr. HENSLEY. Will the gentleman yield?

Mr. BRITTEN. I yield to the gentleman from Missouri.

Mr. HENSLEY. I should like to ask the gentleman from Illinois whether or not there is anything pointed out by Admiral Knight, appearing against Capt. Hill in his service record?

Mr. BRITTEN. Capt. Hills' record was perfect in every detail with the exception of an untidy ship, the *Marietta*, which was given him by his superior officers as a sort of unsatisfactory assignment because he had stepped on their toes. Instead of giving him the ship to which he was entitled at that time they put him on this old tub, the *Marietta*, 15 years old.

Mr. HENSLEY. Has the gentleman in mind any officer whose service was such that he anticipated the action of the plucking board and packed his things to get out of the Navy?

Mr. BRITTEN. It is said that one officer—and I thank the gentleman for the suggestion—thought that he would be retired by the plucking board, and he was so convinced of it that he had his trunk packed and ready to catch a certain steamer in the Orient as soon as he got the wireless telling him that he was plucked. He was dumbfounded to think that men like Hill and Gibbons should be plucked and he left in the service.

Mr. BUTLER. They had overlooked him.

Mr. BRITTEN. Yes; they had overlooked him. I will say that Capt. Hill had more sea service than the most of the admirals who plucked him.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BRITTEN. Will the gentleman yield me two minutes more?

Mr. HENSLEY. I will yield the gentleman two minutes.

Mr. McKELLAR. I want to ask the gentleman a question.

Mr. BRITTEN. What is it?

Mr. McKELLAR. We educate these boys at the Naval Academy at an average cost of $20,000, and then this board plucks them out. Is that correct?

Mr. BRITTEN. That is correct.

Mr. McKELLAR. Without regard to efficiency, but simply to afford easy promotion?

Mr. BRITTEN. That is correct. Now, gentlemen, at the proper time, on reaching page 34, it is my intention to offer an amendment applying to aviation, which you all realize is probably the most important branch of our naval service. Aviation and submarines are at least the most important new branch. The bill provides that the ranking officer in aviation can not be above the rank of lieutenant commander. Now, it develops that we have in the great aviation corps one lieutenant commander. Previous to the war England had 37 commanders and a great number of lieutenant commanders, and this number has been greatly augmented since the war. This one lieutenant commander, who is supposed to be attached to the Pensacola aviation base, will be promoted to the rank of commander in a few months, and then our great Aviation Corps, combining with it the great technicalities that go with that branch of the service, with its great dangers that go with the service, for which we are appropriating a hundred million dollars, will be under the direction and supervision of what is called, in the parlance of the street, a "kid," a young lieutenant. I think the bill is entirely in error, and my amendment will endeavor to cure it.

The officer who commands a dirigible or a squadron of aeroplanes will perform duties that in responsibility, cost of the material under his charge, and importance in naval operations are certainly commensurate with command rank.

It is most important from the standpoint of harmonious coordination of the air fleet and the main body to employ a reasonable number of officers in air duty that have the wide general service experience and mature judgment that can be gained only after sufficient experience in all the grades below commander.

The recommendation from the Navy Department, as prepared by Capt. Bristol, the director of aeronautics, included commanders. Unless commanders are included, it is not reasonable to expect them to volunteer for a duty which precludes them from taking out life insurance and which is most hazardous.

There are now 6 naval officers and 1 marine officer who hold the Navy Department's air pilot's certificate. They are 1 lieutenant commander, 2 lieutenants, 2 lieutenants (junior grade), 1 ensign, 1 first lieutenant, Marine Corps.

The first of these is due for promotion to commander about July 1 next, graduated from the Naval Academy 1896. The next senior graduated from the Naval Academy 1905, 9 years later, and will not be a commander in the ordinary course of events for about 10 years.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BRITTEN. I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN (Mr. CRISP). The gentleman from Illinois asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. HENSLEY. Mr. Chairman, I yield one hour to the gentleman from Mississippi [Mr. WITHERSPOON].

Mr. WITHERSPOON. Mr. Chairman, I had supposed until I listened to the speech of my friend from California [Mr. STEPHENS] that we had made at least one step in the progress toward truth in this naval business. I was astounded when I heard him say that he still believes in the old doctrine that preparedness for war preserves peace. That is not true in any department of life.

Men always do the things that they prepare themselves to do. If you want to practice law, you go to a law school and get a legal education. You get some law books and rent an office and make preparations; but, according to my friend from California, if you do not want to practice law the way to do it is to make all these preparations. If you want to be a doctor, you get a thorough knowledge of the science of medicine and make all your preparations to practice medicine, and then you will not do it.

In regard to war, if you do not want to indulge in all the barbarities and savagery of the war, the way to keep from doing it is to prepare yourself well to do it.

Mr. J. R. KNOWLAND. Will the gentleman yield?

Mr. WITHERSPOON. Yes; but I have not much time.

Mr. J. R. KNOWLAND. China was unprepared for war, and suffered severe devastation in consequence.

Mr. WITHERSPOON. Since China has had no preparation at all she has been at absolute peace, and the same is true of all other nations in the world that are not prepared.

Mr. J. R. KNOWLAND. Is it not true——

Mr. WITHERSPOON. The gentleman has asked me a question, and I am answering it. The gentleman should not ask a question of me unless he wants it answered.

Mr. FARR. Will the gentleman yield?

Mr. WITHERSPOON. No; I am answering the question of the gentleman from California. How can I yield when I am answering his question?

Every nation in the world except one or two that has prepared itself to go to war is now at war. They have done the very thing they prepared themselves to do.

Are you opposed to sneaking under the water to some innocent battleship while the sailors are all asleep, like those on the battleship *Maine*, and blow the bottom out of it and murder these innocent men? Are you opposed to doing that? Then, the way to keep from doing it is to prepare yourselves with mines and submarines. Are you opposed to going through the heavens in the midnight air with a lot of bombs around you and flying over some house where an innocent mother and little babe are asleep and dropping the bomb down on them and murdering them in their sleep? Are you opposed to that? Then, if you do not want to do it, the way to keep from doing it is to prepare yourselves with a thousand flying machines and bombs in them and then you will not do it. [Laughter.] That will keep you from doing it, according to the idiotic argument that preparedness for war preserves peace. The fact is that when men are in favor of a wrong there is absolutely no suggestion, no proposition, too idiotic for them to believe.

The question in this bill is whether or not we need to build any more ships in order to adequately prepare ourselves for defense; whether or not we are already prepared, without building any more ships, to defend ourselves against any attacks that may be made upon us. That is the question. No intelli-

gent conception of that question can be made without considering the relative power of our preparation with those of foreign Governments. Now, it is not necessary to compare our Navy with the navies of all foreign Governments, because when we compare them with the greatest and that comparison shows we need no more ships, it follows inevitably that we do not need them as to the others. Take, for instance, the German Navy. They have 10 more battleships than France; they have 21 more battleships than Japan; they have 22 more battleships than Italy; they have 26 more battleships, I believe, than Russia; and, consequently, if we do not need any more battleships to enable us to resist the naval power of Germany, we do not need any at all.

Now, I want to call the attention of the committee to some facts developed in the hearings before the committee in preparing this bill, which to my mind are absolutely overwhelming in the establishment of the proposition that we have all the warships that we need. In order to appreciate the force of these facts, I want to remind you of how the matter stood a year ago, and first I call attention to the number of ships. Germany a year ago had 39 battleships, and we had the same number. Now we have 40 battleships, and Germany, according to the Navy Yearbook just published, also has 40; but that Navy Yearbook, which always credits Germany with more than she has and puts us with less than we have, is not corroborated in that respect by the British Navy Annual, which all naval officers say is the highest authority on naval matters. That book, just published for the year 1914, gives a full list of German ships built, building, and authorized, and it puts down the number at 39. The last battleship on the list in the Navy Yearbook of 1914 is not found in the list as put down in the British Navy Annual. In regard to the number of ships we should have, the General Board has been recommending for years that we ought to have 48 battleships, or, in other words, 8 more than we have now. They say that they base that recommendation upon the building programs of other nations. Their argument is, we ought to have 48 battleships because Germany and other nations have a program of building so many. That basis of recommending has no foundation in fact. A year ago the last dreadnaught completed by Germany was the *Koenig Albert*, and you can take the Navy Yearbook for 1914, just published, which I have here before me, and look at the list and you will find that the last completed battleship of Germany is the same one, the *Koenig Albert*, and within the last year Germany has not added a single ship to her navy, and according to the British Annual she has not authorized any other battleships than those that were building a year ago. Not only that, but Germany has never expressed any intention or purpose of having anything like 48 battleships. The number of battleships in Germany is determined just like they are determined in this country—by law—and the laws of Germany tell us how many they propose to have.

In 1900 Germany passed her first law for the construction of battleships, and she at that time fixed the number of battleships that should constitute her navy at 38. Six years afterwards, in 1906, that law was amended, by which Germany determined that her fleet should be composed of 40 battleships, and that stood as the expressed intention of the German Government for six years longer, until 1912, when her law was amended the last time, and when she provided that 41 battleships should be the full number of her fleet. That is the German law, and the German Government has no more power to increase her battleships beyond that limit fixed by German law than the executive department of our Government has to increase them without the authority of Congress. So that, as Germany does not propose at any time to have but 41 battleships, and we have 40 already, I say that the recommendation for 48 battleships, based on what other nations propose to do, falls to the ground. Not only that, not only has there never been any German proposition to increase the number of battleships in a way as to justify the increases which we are proposing, but at this time Germany's kindly neighbors are very rapidly decreasing her fleet. She has lost in the last five months 45 of her war vessels. In that loss is 1 battle cruiser, 5 armored cruisers, about 23 scout cruisers or protected cruisers, as they are called, 9 destroyers, 3 submarines, and a number of auxiliary vessels. So if a justification for a large increase in our Navy that is proposed is to rest for a basis upon the proposition that Germany has increased her navy, then I say that the argument falls to the ground, in the face of the fact that within five months she has been decreased 45 vessels. I want to call attention also to the fact that a year ago I demonstrated to the House that according to every test known to naval experts our Navy was already far superior to the German Navy. One of the tests, and the one which Admiral Vreeland told us was the most accurate test, was a comparison of the muzzle energy of the guns in the armored vessels of the two Navies. I showed you by data taken from the authorities that at that time the muzzle energy of all the guns on our armored vessels was 444,110 foot-tons greater than the muzzle energy of all the guns in the armored vessels of the German Navy.

Now I want to call attention to a change that has occurred in the last year in that regard. Instead of our Navy having a superiority of 444,110 foot-tons in muzzle energy you will find this to be the fact, that within the last year we have added three great dreadnaughts to our Navy, each being armed with twelve 14-inch guns. The muzzle energy of these 36 guns is 2,374,732 foot-tons, and during the last year we have sold two of our battleships, the *Idaho* and the *Mississippi*, and the muzzle energy of the guns of those two ships was 351,590 foot-tons. Deducting that from the increase of the three last authorized ships, we have an increase in the muzzle energy of the guns on our armored vessels of 2,023,142 foot-tons.

Adding that to the 444,110 foot-tons that we were superior to Germany a year ago it makes our armored vessels now superior to those of the German Navy by 2,264,252 foot-tons. But that is not all. The muzzle energy of the battle cruiser and the four armored cruisers that Germany has lost in this war amounts to 1,037,170 foot-tons, while ours has increased nearly two and one-half million foot-tons. Germany's Navy has decreased over 1,000,000 foot-tons. So that now the muzzle energy of the guns on our armored vessels instead of exceeding that of the German Navy, as it did a year ago by 444,110 foot-tons, now exceeds them 3,504,422 foot-tons. There is the statement of the condition between the two navies, which, according to test, Navy experts tell us is the most accurate criterion to make a comparison and determine the superiority.

Another test of great value, though not as certain as this one, is the weight of the metal in a broadside from all the guns in the Navy. Now, I showed you a year ago that a broadside from all the guns on the armored vessels of the American Navy was 45,954 pounds greater than the weight of the metal in a broadside from guns on the armored vessels of the German Navy. I want to call your attention to the change that has occurred according to that test. The three dreadnaughts that we have added to our Navy within the last year, having thirty-six 14-inch guns, with shells actually weighing 1,400 pounds apiece, increases the broadside in our Navy 50,400 pounds, and deducting from that the weight of the metal in the broadside in the *Idaho* and *Mississippi*, which we have sold, leaves an increase in our Navy of 36,740 pounds. Adding that to the superiority that existed a year ago, we have this result, that the weight of the metal in a broadside from all the guns in the armored vessels of the American Navy now exceeds the weight of the metal in a broadside from the armored vessels of the German Navy instead of 45,954 pounds, as it did a year ago, 82,694 pounds. If figures, argument, and reason can satisfy any human mind, I submit that this ought to be satisfactory to you.

But there is one particular in which the evidence is now much stronger than it was a year ago. At that time we had to rely solely upon arguments and reason. We had very little support in the testimony of experts. It is true that we had the testimony of Admiral Vreeland, who, with a great deal of reluctance, contrary to his own wishes, finally was constrained to admit that the facts show that the American Navy is superior to the German Navy. And that is all we had at that time. Now, I want to call your attention to the fact that three members of the General Board and the commander in chief of the Atlantic Fleet have been before the Naval Affairs Committee in the hearing just closed, and every one of them testified that the American Navy is superior to that of Germany. In other words, I claim that the admissions of experts now unite with facts and arguments and reason to establish the proposition that we already have a Navy so big that it is not necessary to increase it in order to be able to resist the German Navy, and, of course, to resist those which are much smaller.

The General Board, in its report to the Secretary of the Navy, makes an assertion like this: It says the want of any definite naval policy has resulted in an inferiority of the American Navy, and that that inferiority, unless it is removed, will involve us in war. That is substantially the statement of the General Board. That is the statement, however, that was made in an office, was a statement made by men who could not be cross-examined, but when three of those men who made that report came before the committee and were confronted with the facts of the case, they united in testifying that our Navy is not only not inferior but is superior to every navy in the world except England's.

Admiral Badger, the ex-commander in chief of the Atlantic Fleet, now a member of the General Board, was the first men-

ber who testified on this subject. He was asked to take the last two of the American battleships and German battleships and compare them. He was asked this question:

It is a fact that the last two battleships in the German Navy are armed each with eight 15-inch guns and the last two in the American Navy are armed with twelve 14-inch guns; now state which are the superior ships.

He did not hesitate a minute to testify that the American ships are superior to the German ships. He was also asked to compare the next three ships of the American Navy, also armed with twelve 14-inch guns, with the corresponding three ships in the German Navy, armed with ten 12-inch guns, and, of course, he could not hesitate and did not hesitate to say that ours are superior. In that way he was taken from one end of the list to the other, and with ship after ship he was asked to compare it with those of the German Navy, and he testified that ship for ship we had the superior Navy. That is the testimony of Admiral Badger.

Then Admiral Fletcher came before us, and he was asked these same questions substantially, and he was then asked particularly about every nation in the world. He was asked the question if he thought our Navy was superior to the German Navy, and said that in tonnage and armament it had better ships and was superior. Then he was asked the question, "Do you think in a war between Germany and the United States we could successfully resist the German Navy?" He said, "Yes." "Do you think we could successfully resist the French Navy?" He said, "Yes." "Do you think we could successfully resist the Japanese Navy?" He replied, "Yes." "Do you think there is a navy on earth we could not successfully resist with the ships we already have?" And he said, "None but England." "But, Admiral," he was asked, "we have been told by one of the experts of the Navy that if we had war with England that, on account of her relations with her neighbors, she could not possibly send more than 50 per cent of her fleet against us. Now, if that be true, if she could not send half of them against us, do you think we would be able to resist her?" "Well," he said, "that would be a close question;" and he declined to answer it. That was the testimony of Admiral Fletcher, the commander in chief of the Atlantic Fleet. A year ago Secretary Daniels spent two days and a half before the Committee on Naval Affairs trying to uphold the contention that the German Navy was superior to ours, and every suggestion and argument that he could make was put in that hearing to show that our Navy was inferior to the German Navy. While he was testifying his aid for operations, Capt. Winterhalter, sat beside him and aided him and made suggestions to him about how to answer questions, and I thought that Capt. Winterhalter was clearly on the other side, and I think all the members of the Naval Affairs Committee thought the same thing. I believe still that he was on the other side a year ago. But in the present hearings just closed this great mistake was made. One of them, who wanted to prove, I think, that we ought to have about 40 more battleships, put Capt. Winterhalter on the stand by whom to prove it, and he told him about our immense coast line and how many ships it would take to defend that. He told about the $64,000,000,000 of property that he said was lying right on the water's edge close enough for hostile ships to destroy. "Now," he said, "Capt. Winterhalter, in view of these facts do you think it good policy to let the Navy sink to a third or fourth grade naval power?" Capt. Winterhalter, to the astonishment of the whole committee, made this reply. He said, "Well, I want just as many battleships as you will give me." He said, "I would like to have the biggest Navy in the world, but there is Judge Witherspoon, he has already proved that our Navy is superior to the German Navy, and I agree with him on it." [Applause.] That is what the third member of the General Board says. Nobody asked him whether I had proved anything or not. Nobody said anything to him about that. But evidently since we went into the facts and discussed them, the fact that our Navy is superior to the German Navy had been weighing on his mind and heart, so that he wanted to give expression to it, and he just did. [Applause.]

Mr. KELLEY of Michigan. Mr. Chairman, will the gentleman yield?

Mr. WITHERSPOON. Certainly.

Mr. KELLEY of Michigan. Does the gentleman also recall the statement of Admiral Fletcher when I asked him in the committee as to the relative strength of our Navy and the German Navy, and he also said that our Navy was the equal or the superior of the German Navy?

Mr. WITHERSPOON. Oh, I recall that Admiral Fletcher said at first that our Navy is as good as any in the world except England's, and then later on he qualified that a little and said that our Navy is as good, if not better. He amended his statement, just as we sometimes amend our statements in the House, by putting in the words "if not better." But when he got through testifying the facts he did not say that ours was as good; he did not say that ours was as good, if not better, but he admitted that we have a Navy that is superior to Germany's. [Applause.]

That is the way with every naval officer that has ever come before that committee when you confronted him with the facts. His very self-respect will force him to admit it.

But the remarkable thing that I have to submit to you is the statement of the Secretary of the Navy himself. A year ago the Secretary of the Navy sat in that committee for two days and a half defending the proposition that the German Navy is superior to ours. This year he came before the committee and he used this expression: "We have a powerful Navy." He said: "It is the most powerful Navy in the world except England's, and possibly Germany's." In the estimation of the Secretary of the Navy that German naval superiority which was clear and certain and fixed, that superiority of the German Navy over ours has now dwindled down to a bare possibility. [Applause.] The fact is the Secretary has always told us that he has to rely upon his experts for these matters in the Navy. That is what he has said a dozen times in the committee. Now, all his experts, including Capt. Winterhalter, have deserted him, and he is coming to the truth. [Applause.]

So much for that. There is one old fallacy that I want to call to your attention. For years and years and years in these debates we have seen Members who advocate the building of more battleships parading here a big map of pasteboard, with the figures of the American Navy on it—that is, the figures with reference to tonnage. The thing does not show that there is a single gun in any navy in the world. It leaves out everything that is important, and tries to show the superiority of other navies to ours by the matter of tonnage, as if battleships shoot tons instead of projectiles.

Now I want to call your attention to that. Of course you can make a paper map like that and prove that any navy is the smallest navy in the world or that any navy is the largest navy in the world, if you will just confine yourself to the tonnage and leave out enough ships to accomplish the result you aim at, and that is the way this is done.

I want to call your attention to that. Take, for instance, this statement of the German Navy. They say that the battleships of the dreadnaught type already built have a tonnage of 285,770 tons, and those building have a tonnage of 187,164 tons. Then they give the same for ours. They say that we have 8 dreadnaughts built, with a tonnage of 189,650, and 4 building, making 12 in all. The figures are given of 12 of our dreadnaughts. Now, the truth is that we have 17. They have just simply left out 5 of them, and in that way they make the tonnage of the German Navy superior to ours.

Mr. MANN. Mr. Chairman, if it would not interrupt the gentleman, will he yield to me?

Mr. WITHERSPOON. Certainly.

Mr. MANN. I may be misinformed, but so far as I remember we have never yet attempted in the provisions we have made to equal the English Navy.

Mr. WITHERSPOON. In tonnage or in vessels, do you mean?

Mr. MANN. In tonnage, or in any other way, so far as a comparison is concerned; but we have in a way attempted to keep up with the German fleet.

Mr. WITHERSPOON. Yes.

Mr. MANN. As I recall, there has been a dispute as to whether last year we were ahead or a little behind the German fleet. Is there any dispute now, in view of what has taken place during the war and the destruction of some of the German fleet? Is there any dispute now as to whether our Navy exceeds in strength the German Navy?

Mr. WITHERSPOON. I think there is. I think that some of these fellows would dispute it if every battleship in the German Navy were sunk in the ocean. Yes; they will dispute anything. [Laughter.]

Mr. MANN. I was not referring to those. I think possibly the gentleman exaggerates a little bit what he would state. I want to get at the facts.

Mr. WITHERSPOON. Yes.

Mr. MANN. I do not remember how many of the German vessels have been destroyed, but there have been some.

Mr. WITHERSPOON. Yes. They are in the hearings, and they numbered 44 in the hearings; and since the hearings were published the *Bleucher*, the largest armored cruiser Germany had, has been sunk to the bottom of the sea, making 45.

Mr. MANN. Does not that clearly leave at present the American fleet superior to the German fleet?

Mr. WITHERSPOON. Of course it does.

Mr. MANN. Suppose the war lasts a little while longer, with the natural results of the war; can anybody then dispute it?

Mr. WITHERSPOON. Well, I think they will. I think they will dispute it. [Laughter.] But I want to say this to the gentleman from Illinois on that proposition: When Admiral Badger, a member of the General Board, was before us, I said, "Admiral, you base your recommendation on 48 battleships, and you put that on the basis of what these other nations are doing." I said, "Now, if this war continues and Germany loses half of her battleships, will not the basis of your argument be gone?" And he said, "Yes." "Well," I said, "then would you say that we should stop?" And he said, "I should."

That is what Admiral Badger said. But, talking about this tonnage, there are the *Oregon*, the *Massachusetts*, the *Indiana*, three of our old battleships, left out of this table, and there are the three, the *California*, the *Mississippi*, and the *Idaho*, that we authorized a year ago. They are left out, and those make six of our battleships that are left out in making this table showing that the German tonnage is superior to ours.

Well, of course, you can do that. You can leave out enough battleships to show that the tonnage of our fleet is inferior to any fleet in the world, and it does not take any brains to do it, either. [Laughter.] All it requires is a little disregard for the truth. That is all that it requires. [Laughter.]

Not only that, but this table here includes in the tonnage of the German Navy all these vessels of Germany that are now lying at the bottom of the sea. Let me show you. This tonnage table has among the German battle cruisers two completed. One of them is the *Goben*. The *Goben* is the largest and last completed battle cruiser in the German Navy, and it was the one that was caught down there in the Mediterranean at the beginning of the war, and she nearly ran herself to death getting out of the way of the other ships to avoid a fight, and finally got into the Dardanelles with all her boilers burned out, half ruined, and was sold to Turkey. The tonnage of the *Goben* is still included in this table just issued in the Navy Yearbook. Take the *Idaho* and the *Mississippi*, that were sold to Greece long before Germany sold the *Goben* and the *Breslau*, and the tonnage of the *Mississippi* and the *Idaho* is excluded from our Navy, but they put into it the *Goben* and the *Breslau*, two cruisers that Germany had sold to Turkey. That is the kind of juggling with figures that these fellows resort to in order to fool you into voting for more battleships.

Then here are the armored cruisers. They have got down 9 of them. Well, 4 of those are lying at the bottom of the sea—4 of them are destroyed. Yet their tonnage is set out in this table against the tonnage of the American Navy.

Here are 41 cruisers. My recollection is that in the list of 45 ships lost by Germany 23 of them are those cruisers. The tonnage of 23 cruisers lying at the bottom of the sea is put down here in this table, in order to show that in tonnage the German Navy is superior to ours. Then here are all the German torpedo-boat destroyers—130 of them—of which 9 are destroyed; and 27 submarines, of which 3 are destroyed.

I want to show you how that will figure out. This table gives the total tonnage of the German Navy as 1,306,577 tons, and gives ours at 894,889 tons. Of the German cruisers that are destroyed there were about 12 of which I could not get the tonnage. Leaving them out of the deduction, the tonnage of the vessels that Germany has lost amounts to 112,540 tons, which would reduce the tonnage in the German Navy to 1,094,037 tons.

On the other hand, take the tonnage of the 3 dreadnaughts that we have ordered, that are not included here, and the 3 battleships that are left out, and they amount to 126,864 tons, which gives the total tonnage of our vessels as 1,021,753, instead of 894,000. That makes the German tonnage about 17,000 tons ahead of us still, but you must remember that in that total there are 12 cruisers that ought to be deducted, and if they were deducted it would show that the tonnage of our vessels is superior to those of the German Navy.

But I want to call your attention especially to one thing, and that is that the tonnage of the German Navy includes 20 battleships of the predreadnaught type. So far as our defense is concerned, they ought to be excluded. You will remember that last year I compared the *Oregon* with every one of those 20 battleships, and showed that in the armor plate, in the armament, in the muzzle energy of the guns, in the weight of the metal of a broadside of those vessels, the *Oregon* was superior to every one of them. Yet the *Oregon* is left out and they are all included. If it is fair to leave out the *Oregon*, *Indiana*, and *Massachusetts*, then in order to determine the greater tonnage you ought to leave out every vessel in the German Navy that is inferior to them. That would be fair.

But what I want to call your attention to especially about these ships is that they ought not to be considered by us at all, for the reason that it is an impossibility for them ever to cross the ocean. They can not carry coal enough to bring them across the ocean, not one of them. The maximum coal capacity of the first five of those German battleships is 1,050 tons. The maximum coal capacity of the next five is 1,400 tons. The maximum coal capacity of the next five is 1,600 tons, and of the other five is 1,800 tons of coal. You can not get those ships across the ocean with that much coal. They can not carry enough coal to bring them, the largest of them, closer than within 500 miles of our shores, and I do not believe the smallest of them could get halfway across the ocean. How can it be justified that we should build battleships to defend ourselves against such battleships as these, from which there is no possibility of any attack? The truth of the business is that the German Navy was never constructed with any idea of fighting the United States. If it had been the vessels would have been built differently. Take the ships of our Navy, the first five old ships that we have carry 1,475 tons, or 425 tons more than the corresponding ships of the Germans. The others carry 1,450, 3,000, 1,900, 2,300. That is the kind of ships we have, and if Germany had ever built her Navy with any idea of prosecuting a war against the United States she would have built different kinds of ships. She would at least have supplied her ships with enough coal to bring them across the ocean.

And there is another thing that bears out the very same idea. You will recall that I pointed out with great detail a year ago how much superior in size the guns on our ships are to those on the German ships. When we were building 13-inch guns they were building 9.4-inch guns. When we were building 12-inch guns they were building 11. When they built 12-inch guns we were building 14-inch guns. Their guns have always been very much smaller than ours. I asked a very brilliant naval officer to explain why that was, and his explanation was that the German Navy was constructed with a view to having war with its neighbors. He said in that country they nearly always have fogs on the sea and the weather is rarely clear, and necessarily a naval engagement over there would be at very close range, and at very close range those smaller guns are as good as the big ones, but nobody would build a ship to fight in such a country as this and equip that ship with those small guns.

So from this we learn two lessons. The first is that we are in no sort of danger from at least half of the German battleships, and the other is the blessed assurance that in the German mind there has never been any idea of a war with the United States. [Applause.]

Mr. GOULDEN. Will the gentleman yield for a question?

Mr. WITHERSPOON. Yes.

Mr. GOULDEN. The gentleman has said nothing whatever about the relative speed capacity of the German vessels and ours. Does the gentleman attach no importance to that?

Mr. WITHERSPOON. They are just about the same.

Mr. GOULDEN. I wanted to know that, because I imagined we had greater speed capacity in our vessels than they had in the German naval vessels.

Mr. WITHERSPOON. There is very little difference, and I do not think it makes a particle of difference, anyway. If you are going out to fight an enemy, it does not make much difference how soon you get there or how late you get there.

Mr. GOULDEN. Speed is useful to get away sometimes, when you find yourself being beaten.

Mr. WITHERSPOON. So far as getting away is concerned, we do not want to get away. When we get into a fight we are going to whip them before we go.

Mr. GREEN of Iowa. Will the gentleman yield?

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. BATHRICK. Mr. Chairman, I ask unanimous consent that the gentleman from Mississippi have 10 minutes more.

Mr. MANN. That is not within the power of the committee.

Mr. HENSLEY. Mr. Chairman, I yield 25 minutes additional time to the gentleman from Mississippi.

Mr. GREEN of Iowa. For information, I want to ask the gentleman a question. I understood the gentleman to say that a large number of the German battleships would not have sufficient steaming radius to come across the ocean.

Mr. WITHERSPOON. I so stated.

Mr. GREEN of Iowa. I did not understand how many in number the gentleman stated.

Mr. WITHERSPOON. Twenty. I heard a naval officer say that on one occasion he saw some German battleships in one of our ports, and when they got ready to go home they had to fill the bunkers full of coal and pile it up on the deck in order to have enough to get back.

Mr. ESCH. Will the gentleman yield?

Mr. WITHERSPOON. Yes.

Mr. ESCH. Germany has already installed some oil-burning machinery on her battleships the same as we have. Could she not install it on the 21 battleships?

Mr. WITHERSPOON. I will say that I do not know whether she could or not. It is very uncertain whether you can change the construction so as to make it suitable for oil. I do not know; I doubt it. According to all authorities she has not done it yet, and that ought to be enough for us.

Mr. POWERS. Will the gentleman yield?

Mr. WITHERSPOON. Certainly.

Mr. POWERS. The gentleman has based his argument on the proposition that our Navy is superior to that of Germany, and that therefore we are in no danger from Germany. It develops that England is a good deal more powerful on the sea, more powerful than we are, and I would like to have the gentleman deal with that.

Mr. WITHERSPOON. The reason I do not want to discuss that is because all the battleship crowd that has been before the committee admit that it is unnecessary to build more ships as far as England is concerned. That never has been a question before the committee, and the gentleman will have to excuse me from going into it because I have not now the time.

Mr. TOWNER. Will the gentleman yield for a question?

Mr. WITHERSPOON. Yes.

Mr. TOWNER. It has been stated, and the gentleman knows, that during the war Germany, as well as England, has been building new battleships to replace those that have been destroyed during the war. Can the gentleman give us information as to what extent they are building to repair their losses?

Mr. WITHERSPOON. I will give you this information, that your information is newspaper talk and does not amount to a bill of beans. [Laughter.] The newspapers are publishing this kind of information to influence Congress to squander the public funds, and that is what they are for. We have examined into that; we have asked the Navy Department about it, and they say they have no information at all.

Mr. TOWNER. That is what I was going to ask the gentleman.

Mr. WITHERSPOON. There is no such information, and it is nothing but idle newspaper talk. It is very much like the newspaper report a year ago that Japan had just decided to build 12 more dreadnaughts, and it turned out that she did not want to build but one, and a mob congregated, and they had to escort the members of Parliament home who voted for one in order to keep them out of the hands of the mob. That is the kind of stuff that some newspapers are trying to stuff the public with.

Mr. TOWNER. With the present resources of the German shipyards, would they be able to replace such as have been destroyed?

Mr. WITHERSPOON. I do not know, because I have never seen them, but I imagine that Germany and England and all those other countries have all they can do right now without attempting to build new ships that will not be completed until after the war is over. It takes three years to build a battleship.

Mr. SLAYDEN. Will the gentleman yield?

Mr. WITHERSPOON. Yes.

Mr. SLAYDEN. The gentleman speaks of the newspapers as a source of information, and that argument is as good on one side as it is on the other. Did not the gentleman see an Associated Press dispatch the other day that England would hasten to complete such dreadnaughts as she had under construction but would lay down no more?

Mr. WITHERSPOON. I did not see it. I think it is reasonable that she would hasten to complete those, but it would be folly to build new ships that they could not possibly complete until the war is over. That is the way it looks to me.

I want to suggest this to you: Suppose that Germany had the same number of battleships that we have—40; concede that. What is the relative strength of the American Navy and the German Navy, supposing that every ship in both navies is equal in power? That is a false supposition, because we have proved by every expert that, ship for ship, our ships are superior to the German; but I am supposing that they are just equal, ship for ship, the same number. Then could we defend ourselves against Germany?

A naval officer told me that the Naval War College had worked out the problem as to what disadvantage it is to any country to wage a war against another one 3,000 or 4,000 miles away. Everybody admits that it would be a great disadvantage, and they have worked it out as a naval problem. My information from him is that their decision was that, for instance, if Germany should come over here to attack us it would take 11 of her battleships to equal 10 of ours of the same power and character.

Now there is a reason for that. Where a nation sends its fleet 4,000 miles away to fight that fleet has got to be supplied; and, according to one of the experts before us, if we were carrying on war 4,000 miles distant it would take 200 ships to supply our Navy, and it would require the same to supply the German Navy if they were fighting us.

Then you would have to have a part of your fleet to protect those merchant ships bringing your supplies to you, and every one you take away to defend and protect your transports would weaken you just that much. And, so they say, putting it in figures, that 10 of our battleships of the same power would be equal to 11 of the German battleships. In other words, if we had 40, as we have, Germany would have to have 44 in order to be equal to our 40. That is what they worked out in the board of naval experts, according to my information. If that is true, then with 40 battleships in our Navy and the same number in the German Navy, according to the Navy Yearbook, would not we be able to resist her? Have not we got plenty already?

But what is the value of battleships anyway? What are they worth? Do they fight? Do battleships shoot guns? Do they shoot shells? Do they waste any powder? Why, we have had the greatest war of the world going on now for five months. Most of the battleships of the world are owned by the belligerents, and not one single battleship has fired a gun. What are they worth; what are they made for? Sir Percy Scott and other experts told you long before this war came that the day of the battleship was ended; that the invention of the submarine had destroyed its usefulness and it was no longer of any service. He said that before this war began. The war has continued now for five months and not a battleship has fired a gun. I ask you what are they worth?

Mr. J. R. KNOWLAND. Will the gentleman yield?

Mr. WITHERSPOON. Yes; I yield.

Mr. J. R. KNOWLAND. Is is not true that no battleship has fired a gun because the German battleships are all bottled up?

Mr. WITHERSPOON. That is the gentleman's reason.

Mr. J. R. KNOWLAND. What is the gentleman's reason?

Mr. WITHERSPOON. I will show you that is not the reason of the experts. I will show you that is not the reason given in the testimony. The gentleman says the reason the German battleships have not fired a gun is because they are all bottled up in the Baltic Sea. That is the contention of my friend. Where is the Russian fleet? It is also bottled up in the Baltic Sea. The two fleets are right there side by side. The German fleet is five times as powerful as the Russian fleet. Why does not the German fleet destroy the Russian fleet? Why does not it attack the Russian fleet? Why did not they fire a gun from the battleships at the Russian fleet? Do you know why it is? The experts before the Naval Committee tell us that the reason why the Germans have not attacked and destroyed the Russian fleet in the Baltic Sea is because they know that the mines and the submarines of Russia would destroy them before they got in reach of the battleships.

Mr. FORDNEY. Is that the case with England?

Mr. WITHERSPOON. I am going to get to England; I will get to all of them. Now, they say that the reason the German battleships did not fire their guns at the English ships is because England has got her bottled up. If that were a good reason, then Germany would have fired her guns at the Russians. The reason why England and France do not fire their guns at the German fleet is this: Those two nations together have two and a half times as many battleships as the Germans. They are two and a half times as strong as the German Navy. Why do not England and France send their battleships into the Baltic and destroy the German fleet, as they could do if they could ever get in there? Why do not they do it? I will tell you what the experts say. Admiral Badger and Admiral Fletcher, who we have asked to explain that, both agree that the reason why the French and English do not send their battle fleets into the Baltic in order to destroy the German fleet is because England and France know that the German mines and submarines would sink them all to the bottom of the sea before they could get to the German fleet. [Applause.] That is the testimony before our committee. That is what the nations of the earth believe to-day, and everybody believes it except those who want an excuse for building more battleships here—everybody. I will show that England and Germany both believe it. Just take that fight they had the other day. The Germans sent three of their battle cruisers and one of their armored cruisers out on the North Sea. Did they go alone? No. What did they have with them? Why, the German admiral took with him a whole lot of submarines.

Mr. FORDNEY. How did they get back?

Mr. WITHERSPOON. I will tell you——

Mr. FORDNEY. I am asking for information.

Mr. WITHERSPOON. I am going to tell the whole story. The German admiral carried his fleet of submarines out and strung them out in a line behind him, fixing a place behind which he could run. When he was attacked he made for those submarines and got behind them. Now, what did he have the submarines out there for? What did he want something to get behind for except that he knew the English Navy were afraid of submarines and would not follow him when he got behind them as breastworks? That shows the estimate of the German admiral of how submarines are dreaded by the English. The English admiral had the same estimate, because with a great deal more powerful navy, with five battle cruisers all armored with much larger guns than the Germans had, it was perfectly certain that he could have destroyed all of them, but when he got within shooting distance of these submarines he stopped and went back, and that shows what England thinks about submarines.

Mr. HENSLEY. And that was 70 miles from the coast.

Mr. WITHERSPOON. Seventy miles from Helgoland. [Laughter.] I do not know how far from the coast, but I think Helgoland is 30 or 40 miles the way I saw it. They would not approach within 70 miles of that fortified island of the Germans, because Admiral Beatty says himself that he was scared of submarines.

Mr. BRITTEN. Will my colleague yield?

Mr. WITHERSPOON. Yes.

Mr. BRITTEN. It is reported one of the German cruisers went down. Did it go down from the effect of a submarine or from the effect of the fire of an English gun?

Mr. WITHERSPOON. I do not know; but I know if the submarines got close enough they would have blown their bottoms out.

Mr. BRITTEN. The gentleman is so wise in all other directions I thought he might know about that.

Mr. WITHERSPOON. I do not know anything about that.

Mr. BRITTEN. Is it not a fact that the *Blucher* did go down from the effect of big-gun fire and not from a torpedo?

Mr. WITHERSPOON. I suspect it did, although I do not know. The truth about the submarine is that the submarine is described as a weapon of opportunity. That is the expression of the experts. It can not do anything unless you give it the opportunity; but if you do give it the opportunity, you are going to the bottom of the sea. Great ado is made by my friend from Illinois and all these other advocates of so many battleships, and a great point is made of the fact that so few vessels in this war have been destroyed by submarines. Well, that is true. Submarines do not go way out on the oceans. They are defensive weapons, and the very fact that they have destroyed but few vessels in this war shows what is the consensus of opinion in the minds of all the belligerents. They do not let their vessels get close to them. That is the reason they do not destroy any more. [Applause.]

Now, here is the argument I want to impress upon you. If the submarines and mines that have got the Russian fleet hemmed in are sufficient to deter the German fleet, four or five times as big, from attacking it; if the submarines and mines that lie between the German fleet and the English and French fleets, which are two and one-half times as great, are sufficient to deter the fleets of those nations from attacking the Germans; if the submarines were sufficient to stop the English the other day in their pursuit of the German cruisers when it was perfectly apparent they could have destroyed all of them if they had just pursued them; if they would give up that pursuit on account of their fear of submarines; if the submarines have had that effect in Europe, then I appeal to you as men who have some logic in your minds if it is not also a fact that with our 59 submarines to protect us, it would deter any of them coming 4,000 miles to attack us? [Applause.]

Mr. FORDNEY. Will the gentleman yield for a question?

Mr. WITHERSPOON. Yes.

Mr. FORDNEY. Do you recommend that our Navy have submarines and mines and no battleships or cruisers?

Mr. WITHERSPOON. No; I could not recommend that, because we have already 40 battleships.

Mr. FORDNEY. Do you mean to say that if we have no battleships or cruisers——

Mr. WITHERSPOON. There is no question of whether we need 40 battleships or not, because we already have them.

Mr. FORDNEY. Do you recommend that the Navy have the necessary submarines and mines and nothing else competent to protect our Navy?

Mr. WITHERSPOON. Oh, no. If we did not have any battleships at all, then your question would arise. But we have 40, and what is the use of discussing the question whether we will have any or not?

Mr. FORDNEY. The argument has been presented here recently that why we do not want a battleship or a cruiser is that in some eight or ten years it becomes obsolete, and therefore unless we continue replacing ships our Navy will be obsolete in a few years.

Mr. WITHERSPOON. There are some people who, wishing to squander the public funds, assert that ships become obsolete in a few years. But anybody knowing anything about battleships will not say that, because it is not true.

Mr. BRITTEN. Did not my colleague, for whom I have the very highest regard——

Mr. WITHERSPOON. I thank you.

Mr. BRITTEN (continuing). Vote against the increase in the number of submarines?

Mr. WITHERSPOON. Yes, sir; I voted against them.

Mr. BRITTEN. I wanted the House to know of the fact.

Mr. WITHERSPOON. I will tell you why I voted against them. There is just this difference between me and my friend from Illinois. I voted against them because the testimony showed that we did not need any more. He votes for the construction of battleships whether we need them or not. That is the difference. [Applause.]

The CHAIRMAN. The time of the gentleman has expired. [Applause.]

Mr. HENSLEY. I yield five minutes more to the gentleman from Mississippi. [Applause.]

Mr. GOULDEN. Will the gentleman yield?

Mr. WITHERSPOON. Excuse me. I was asked one question about submarines, and I want to answer it. I voted against increasing our submarines for several reasons. We have 59 already. There is great difficulty in constructing them. I think the amount of money that it will take to complete the submarines already authorized will be about $15,000,000; but there are a great many difficulties about it which I can not take time now to explain. It takes a long time, and they hardly ever get them right, and there is the greatest difficulty about ever getting them constructed. They are working to solve these difficulties, and I say, as reasonable men, we ought not to waste any more money on them until they have solved the difficulties and given us some assurance that the money will result in the construction of good ships. That is one reason. Another reason is that the experts tell us that the submarine is a weapon of opportunity, and that 50 will do just as much good as 500. That is the testimony before our committee. You can not find in the hearing a single man that advocates a great number of submarines. Admiral Fletcher says, "I do not advise it; I would have a small increase," but he said a small number is just as good as a big number. Admiral Badger says——

Mr. BRITTEN. Right at that point.

Mr. WITHERSPOON. When I get through with the point. I have started to tell what was said. Do not interrupt me until I get through. He says that 50 will do just as well as 500. He says also that it is a weapon of opportunity. All it depends on is whether they can get close enough to a battleship, and he says that if 50 can not do it 500 can not do it; their value is not increased in proportion to the number like other ships. Admiral Badger was also questioned about that. He said, "Well, we think we ought to have a hundred instead of 64." I asked him if there was any reason by which he could tell why we ought to have 64 or 100, and he said, "No; I just said a hundred, but there is no more reason for having 100 than having 64."

Now, there is another thing about that that I want to call your attention to, a reason why we do not want to have any more. If we should have a war with Germany or with England or with any of these other nations, they could not bring their submarines over here to fight us; and we have already 59. I submit that 59 are enough to fight a nation that could not have any on its side.

Mr. BRITTEN. Right there, on that point, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. WITHERSPOON. Yes; I yield.

Mr. BRITTEN. The gentleman refers to our having 59 submarines. Is it not a fact that we have only 6 modern submarines in commission to-day?

Mr. WITHERSPOON. Oh, no.

Mr. BRITTEN. Yes; it is a fact.

Mr. WITHERSPOON. You asked me a question.

Mr. BRITTEN. How many have we, then?

Mr. WITHERSPOON. Well, sit down, and I will tell you. [Laughter.] You asked a question, and you ought to allow me to answer it.

Mr. BRITTEN. If you answer the question I will sit down.

Mr. WITHERSPOON. Yes, sir. We have 59 submarines. That is the number we have, and the testimony shows that we have that many.

Now I will tell you about these submarines. The commander of the submarine flotilla tells all about them, and he said this, that they could go under their own power from 400 miles to 1,350 miles. That is to say, the smaller ones could go out 200 miles and come back; the others could go out 675 miles and come back again.

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. BATHRICK. Mr. Chairman, I have 20 minutes reserved for myself, and I yield 10 minutes of that time to the gentleman from Mississippi [Mr. WITHERSPOON].

The CHAIRMAN. The Chair can not recognize the gentleman from Ohio to control time under the agreement that was made. The Chair will recognize the gentleman from Tennessee [Mr. PADGETT] or the gentleman from Missouri [Mr. HENSLEY] or the gentleman from Pennsylvania [Mr. BUTLER].

Mr. BATHRICK. Then I yield 10 minutes of my time to the gentleman from Missouri, to give to the gentleman from Mississippi.

The CHAIRMAN. The gentleman from Ohio has no time to yield.

Mr. PADGETT. Mr. Chairman, I may state that I reserved 15 minutes for the gentleman from Ohio [Mr. BATHRICK], and if he desires I will yield 10 minutes of that time to the gentleman from Mississippi. [Applause.]

Mr. WITHERSPOON. I thank the gentlemen.

The CHAIRMAN. The gentleman from Mississippi is recognized for 10 minutes.

Mr. BARKLEY. Mr. Chairman, will the gentleman yield to me for a question?

Mr. WITHERSPOON. Yes.

Mr. BARKLEY. Has any method been discovered whereby the submarine may be destroyed?

Mr. WITHERSPOON. Well, there was a test made the other day down here of a shell invented by Mr. Isham. I was not present; I was not able to go. But I understand that that test showed that he had invented a shell that would not ricochet and would go under the water when it struck the water, and would explode after it had gone under the water for a certain length of time. Now, if such a shell as that could be fired out of a battleship or a cruiser and should strike near the submarine, it would probably destroy it. But the trouble about that is this: Submarines are things that you can not see. They are the assassins of the sea. They go under the water, and they go up under a battleship and blow the bottom out of it before the battleship knows that it is anywhere near about. Here is the fact about it: The submarine can go under the water with its periscope just out, so that it can see everything itself, and in very smooth water the men on the battleship, if they happen to be looking right toward where it sticks the periscope up, may see it at a distance of 2, 3, or 4 miles. But if the weather is anyways rough and the sea foam is there, they can not see it more than a mile or two, and the submarine therefore has the power to get up close enough to the battleship to destroy it before it can be seen, and therefore the invention of that shell, in my judgment, would have very little effect upon the submarine.

Mr. BARKLEY. How close does the submarine have to get to the battleship before it sends its projectile forth to destroy it?

Mr. WITHERSPOON. That depends on the submarine. The oldest submarine can only shoot its torpedoes a thousand yards, if I remember, but the latest and best improved submarines are supposed to have a range of 4 or 5 miles. It depends on the power of the submarine.

Mr. BRITTEN. How many of those have we in commission, please?

Mr. WITHERSPOON. I do not know how many.

Mr. BRITTEN. Is it not a fact that we have only six of those in commission? I have the Navy Register right here before me.

Mr. WITHERSPOON. Excuse me now. I am going to answer you. You can not ask me a question and when I start to answer it, interrupt me.

Mr. BRITTEN. Pardon me.

Mr. WITHERSPOON. I do pardon you. It does not make any difference whether a thing is in commission or out of commission. If we have the ship we can put it in commission very quickly.

Mr. BRITTEN. Is it just as effective out of commission as it would be in commission?

Mr. WITHERSPOON. It is not out of commission and consequently it does not need to be put into commission.

Mr. DONOVAN. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. DONOVAN. The gentleman from Illinois [Mr. BRITTEN] has no right to interrupt a gentleman on this floor and interject remarks without his consent. It is a gross breach of the rules. The gentleman should address the Chair if he wants to take the floor. [Applause.]

The CHAIRMAN. The committee will be in order.

Mr. KELLEY of Michigan. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Mississippi yield to the gentleman from Michigan?

Mr. WITHERSPOON. Yes; I yield.

Mr. KELLEY of Michigan. I would like to ask the gentleman just a word about the statement that the enemy could not bring his submarines to this country.

Mr. WITHERSPOON. Yes.

Mr. KELLEY of Michigan. As I remember, we have some 9 or 10 submarines in the Philippines, and my recollection is that those were carried there. What is the gentleman's recollection as to that? If they were carried there, why could not an enemy carry its submarines over here?

Mr. WITHERSPOON. Well, this is the fact about that: I do not think it makes any difference whether those submarines were carried to the Philippines by their own steam or whether they were carried on a battleship. They can go long distances, provided they can stop every 1,300 miles and get new supplies. That is the reason why they can not go any farther. Those submarines, I expect, went to Hawaii and stopped along the route wherever they could get supplies and supplied themselves. That is the way, as I understand that. But all the testimony before us is that neither Germany nor any other nation in the world could bring submarines over here to fight us except England, and she could only do it because she has a base of supplies at Halifax and at Bermuda. You remember that testimony. The others could not do it. That being true, I want to submit this argument: If we were to have a war with Germany, there would be on the German side her 40 battleships, her destroyers, and her cruisers, without any submarines. We would have on our side all of our battleships and cruisers and destroyers and monitors, plus our submarines. And the number of German ships that 59 submarines would destroy in that war would be no unimportant part. So, I think that ought to be considered in determining whether it is necessary to build any more ships in order to defend ourselves against foreign countries.

The whole question seems to me to reduce itself down to this, that we have now in our possession so many ships of all kinds that no nation on earth would dare to attack us, especially when we see that they have no disposition to do it, and it is not to their interest to do it.

A great deal is said against Germany because of her militarism. A great many people criticize that country on that ground. Have we more militarism in us than Germany has? Are we less peaceful than Germany is? If we are not, then we ought to be as good as Germany. Let us adopt the same policy that Germany adopts. Germany states her policy in her laws, and she says in that policy that it is not necessary to build a navy as big as that of any other nation in order to defend herself. She has never tried to build a navy as big as that of England, and she puts it on this ground: She says, "All we propose to do is to build a navy big enough so that any nation that might attack us would know that we would destroy so many of her ships that it would imperil her standing among the other nations as a naval power." That is the policy of Germany, expressed in her statutes. Why can we not be as good as she is? Why must we want the greatest Navy on earth? What is it? Is it barbarism? Is it the savage that is in us, or is it the profits that there are in building battleships? Tell me! [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. BUTLER. I yield 25 minutes to the gentleman from Michigan [Mr. KELLEY].

Mr. KELLEY of Michigan. Mr. Chairman, this debate on the naval bill has been going on now for about four hours, and while I believe in the doctrine of concentration I think, perhaps, there is such a thing as carrying it a little too far; and so, on the general theory that any change is a rest, during the short time that I shall occupy I am going to discuss a matter entirely foreign to the question of the Navy.

Mr. Chairman, in a little more than 30 days the work of the Sixty-third Congress will be a matter of history and one-half of the administration of Woodrow Wilson will be over. Within 18 months from this time, and before the end of the first regular session of the Sixty-fourth Congress, the battle lines of the

next presidential election will be drawn and the people of the country will be getting ready to choose again between the Republican Party and the Democratic Party.

The work of this Congress will necessarily play an important part in the next election. It has been in session almost continuously for two years and has acted upon scores of propositions. The great mass of this legislation, however, will have but little bearing upon the fortunes of either party, because party issues were not raised by its enactment. The fact is, that upon many propositions there is substantial agreement between Republicans and Democrats. Upon many other questions there is disagreement among Republicans and a corresponding disagreement among Democrats, while only upon a very few questions is there drawn a clear-cut line of demarcation between the two parties. But in order for parties to exist there must be at least one well-defined, fundamental, outstanding difference between them. But what fundamental difference is there between the Democratic Party and the Republican Party? I do not desire to discuss psychological differences or differences in habits of thought between Republicans and Democrats. I simply wish to call attention to such practical differences as have been shown by the attitude of the two parties upon public questions in this Congress.

Running down through the middle of the House of Representatives is an aisle separating the Democrats from the Republicans and Progressives. Over on one side of the House, sitting together, are the 127 Republicans and 18 Progressives so thoroughly in accord on most propositions that it has never occurred to anyone that these two parties should be assigned different sections of the House. Over on the other side of the House are the 290 Democrats. (Too many altogether.) Why are these men on one side of the aisle Republicans and these on the other side of the aisle Democrats? Is it a difference in character? No. Is it a difference in patriotism? No. Is it a difference in love or sympathy for mankind? No. Is it a difference in faith in Republican institutions? No. What, then, is the meaning of this middle aisle? What economic, social, or moral question is responsible for its existence?

Let us briefly examine the attitude of Members of this House toward important questions which have been considered here during the past two years with a view of discovering, if we can, at least one sure, unfailing, reliable test of party fealty.

A short time ago the question of woman suffrage was before the House. It aroused Nation-wide interest and was ably debated by Representatives of all parties. It very soon developed, however, that there was a diversity of opinion in both parties upon the subject of woman suffrage. The roll call showed 88 Republicans and 86 Democrats in favor of it, and 34 Republicans and 170 Democrats against it. The question of woman suffrage, therefore, is not a party issue, and is not responsible for the existence of this middle aisle. A person might sit on either side of the aisle and be on either side of the question.

On another occasion recently the question of national prohibition was before the House. The debate very soon disclosed the fact that party lines would not be observed in the consideration of this great moral and economic question. The roll call showed 81 Republicans and 116 Democrats in favor of it, and 46 Republicans and 143 Democrats against it. And so the question of prohibition of the liquor traffic does not explain the existence of this middle aisle.

One of the great questions considered by this Congress is the matter of immigration. During the past few years a million aliens a year have been coming to our shores. Many thoughtful persons of all parties have come to the belief that we should restrict immigration. The Sixty-second Congress passed a bill with this object in view without regard to party lines. That bill was vetoed by a Republican President. This Congress passed a similar bill with a similar object in view. Again party lines were disregarded, and this bill has been vetoed by a Democratic President. And so the question of immigration is explain the existence of this middle aisle.

The doctrine of State rights was at one time regarded as a peculiarly Democratic doctrine. To-day, however, it is just as common to hear this doctrine invoked by Republicans as by Democrats against encroachment by the Federal Government on the rights of the State. And so the doctrine of State rights is in no sense a test of party fealty and is not responsible for this middle aisle.

The principle of Government ownership has had the attention of this Congress. We passed a bill here providing for the Government ownership and operation of a railroad in Alaska. This project had the indorsement of two administrations—one Republican and one Democratic—and party lines were disregarded in the passage of the bill. The President of the United States is now urging Congress to put the Government into the business of transportation on the high seas, an experiment which would test to the uttermost the principle of Government ownership, even though other serious questions were not involved. When this proposition comes up it is certain that the Democratic Party at least will be divided upon it. And so the principle of Government ownership is not responsible for this middle aisle.

The most spectacular debate which has taken place in the House during the past two years was the debate on the question of free tolls for American ships passing through the Panama Canal. On this proposition the leaders of the Democratic Party were in open disagreement. The Speaker of the House and the leader of the majority held views opposite from those entertained by the President. The roll call showed 26 Republicans and 221 Democrats in favor of the repeal of free tolls, and 110 Republicans and 52 Democrats against it. If this question had been a test of party fealty, 26 Republicans would have had to cross over to the Democratic side and 52 Democrats, including the Speaker and the majority leader, would have had to come over on our side.

On the subject of national defense there is a diversity of opinion in each party. You will find Democrats and Republicans who believe we should have a larger Army and a more powerful Navy. You will find Democrats and Republicans who believe our Army and our Navy are entirely sufficient for our needs. You will find peace-at-any-price Democrats, and I dare say that you will also find peace-at-any-price Republicans. And so the question of national defense is not responsible for this middle aisle.

Mr. POWERS. I suggest to the gentleman that if he is not careful about what he says he is going to get all of us together directly.

Mr. KELLEY of Michigan. There will be enough there. [Laughter.] And so with a single exception I might review the attitude of Members of both parties toward the whole field of legislation, including legislation affecting the currency, conservation, and the trusts, without discovering any one safe or reliable test of party fealty.

What policy or principle of government, then, have we had under consideration here during the past two years big enough, vital enough, and fundamental enough to divide Congress and the country into two great political parties? I will tell you what it is. It is the old familiar doctrine of protection to American industry, a doctrine which in its 50 years of continuous application has lifted our country up out of the industrial lowlands to a commanding position among the nations of the earth.

Go over on the Democratic side and ask any Democrat, no matter what his views may be on other questions, "Are you in favor of the principle of protection?" and his answer will be "No." He will tell you that the Democratic Party is the traditional opponent of protection. He will tell you that Congress has no power to levy a tariff except for revenue. He will tell you that Congress has no power to levy a tariff to equalize wages and conditions here and abroad, or to encourage production or manufacture in the United States.

Go over on the Republican side and ask any Republican, no matter what his views may be on other subject, "Are you in favor of the principle of protection?" and his answer will be "Yes." He will tell you that he is for protection because it is a matter of civilization and standards of living. He will tell you that we ought to build up here under the American flag a civilization higher than that of any other country in the world, and then we should protect that civilization against all cheaper and inferior civilizations elsewhere throughout the world. [Applause on the Republican side.]

But how can it be said that protection is a matter of civilization? Because, in the last analysis, it is largely a question of wages and conditions of employment. Wages and civilization are bound up together. Tell me the wages and conditions of employment of labor and I can paint in the balance of the picture of a nation's life. If you strike at wages, you strike at the home, and the home is the headwaters of the world's civilization. A reduction in income is always a serious matter for labor. It means less nutritious food and poorer clothing for the family. It means fewer books and less schooling for the children. It means a sacrifice of leisure and recreation. It means more of the grind and drudgery of life. It means smaller savings laid aside for a rainy day against sickness and adversity, which sooner or later are apt to cross the pathway of every human life.

And so any policy which protects the wages and the employment of the people against cheap competition, tending to drag men down to a lower plane of living, becomes vital to our civ-

ilization and is of sufficient importance to the Nation's life to become the chief article of faith in the creed of any political party. [Applause on the Republican side.]

The present leaders of the Democratic Party recognize that protection is the one great policy which divides Republicans from Democrats. Coming into power two years ago, for the first time in 16 years, the tariff was the first thing to claim their attention. The first blow struck by this administration was against protection. The first message of President Wilson to Congress was a plea to uproot the doctrine of protection from our social, industrial, and economic life, and in a few weeks thereafter the views of the President were enacted into law.

Conditions in the country two years ago were most favorable for trying out the theories of the President. The business of the country was never more forehanded than then. Industry was standing firmly and confidently on its feet. Even the prospects of a Democratic administration had lost some of its terrors because the promise had been made that no legitimate industry would be injured. Factories were all running full time. Labor was well employed at wages higher than had ever been paid before in the history of the country. The farmer had a ready market for everything he had to sell at prices higher than he had ever received before in times of peace. The savings banks of the country were full of money laid aside by the people for a rainy day. Our merchants and manufacturers and farmers had gone out beyond the seas in quest of a market for their surplus until our export trade had reached the enormous sum of $2,500,000,000 per annum, or an increase of $1,000,000,000 per annum over our exports of only 10 years before. [Applause on the Republican side.] And then, like sensible folks, we did not buy back from the world as much as we sold the world. Our imports during the last year under protection amounted to only $1,800,000,000, leaving a balance of trade in our favor of approximately $700,000,000 per annum, or an average of nearly $60,000,000 per month. And our domestic commerce—the trade among ourselves, grown in volume beyond the power of the human mind to comprehend it—reached the staggering total of $35,000,000,000 per annum. That was the condition in which the Democratic Party found the country only two years ago.

How have we been getting along since that time? The new tariff law went into effect in October, 1913, and continued in uninterrupted operation until the beginning of the war in Europe, August 1, 1914. During those 10 months of its operation there was an increase in imports of more than $100,000,000 over the corresponding months of the previous year under protection. The American people had to send into foreign countries to pay for goods formerly made at home $100,000,000 more than during the corresponding 10 months of the year before. Not only did the American people lose this $100,000,000 on account of increased imports, but they suffered a further loss of approximately $160,000,000 during the same 10 months on account of a falling off in our exports. By buying more from the outside world and selling less we lost in trade the enormous sum of $260,000,000 during the first 10 months of the operation of the Underwood tariff law. This readily explains why business began to halt and stagger almost everywhere throughout the country even before the commercial uncertainties incident to the war in Europe were introduced into the situation.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. BUTLER. I yield to the gentleman two minutes more.

Mr. KELLEY of Michigan. Since August 1, 1914, the Underwood tariff law has in effect been suspended by stress of war as to certain lines of trade. During the last five months imports have fallen off approximately $125,000,000 as compared with the corresponding five months of last year. The heaviest falling off was for the month of December last, and amounted to approximately $70,000,000. During the same five months there was also a falling off of exports, as compared with a year ago, of approximately $243,000,000. Our exports, however, for the month of December last were practically normal in volume, being slightly in excess of the exports for December of last year and only about $5,000,000 less than for December, 1912.

This heavy falling off of imports in December, coupled with the return of a normal volume of exports, has undoubtedly benefited many lines of trade in this country during the last few weeks. In a sense war has operated as a tariff to shut out imports, while at the same time war's demands for food and supplies have stimulated our exports. War, however, is a poor substitute for the tariff. Trade contingent upon the duration of a war is most hazardous and uncertain. Business, to be successful, must plan for the future. The manufacturer must be able to make contracts with the jobber for future delivery. The wholesale house must be able to send out its traveling salesmen to make contracts for delivery many months later. Conditions in trade to-day are uncertain. Business men realize that the falling off of imports during the month of December to the extent of $70,000,000 was due to the exigencies of war, and that when the war is over the stream of imports is again likely to flow to our shores. Under such circumstances it is but natural that business should go forward, feeling its way with hesitation and doubt. Under such circumstances merchants will contract only for immediate or early delivery and the business world will pursue a hand-to-mouth policy. Business men can not take advantage of present trade opportunities at home or abroad or go forward with confidence planning for the future, because no one can say how long the war in Europe will continue or how soon American business must meet destructive competition again from abroad.

The CHAIRMAN. The time of the gentleman from Michigan has again expired.

Mr. BUTLER. I will yield to the gentleman from Michigan all the time he wishes, and take my chances on it, and the time may be charged up to me. [Applause on the Republican side.]

Mr. KELLEY of Michigan. If the industries of the United States were to-day protected by a tariff reasonable in its terms and certain in its operation, instead of being forced to rely upon the uncertain, temporary protection of a European war, how quickly would American business men seize upon present opportunities to retake our domestic markets and open up new lines of foreign trade. If business men could be assured at this time that they would not be subjected to ruinous competition from abroad when peace comes again, in my judgment, every wheel of industry in this country would begin to turn, and a new era of prosperity for the American people would be at hand.

I believe that the American people have fully determined to restore the policy of protection. In 1912, for the second time in more than half a century, the party of protection was retired from power. It was not because the American people preferred Democratic policies to Republican policies. It was not because there were more Democrats than Republicans in the country. The trouble in 1912 was that we Republicans tried to elect two Presidents at once. [Laughter.] Some of us voted for President Roosevelt and some of us voted for President Taft, and because we voted for both we elected neither. By dividing our forces in 1912 the policy of protection was temporarily supplanted by a Democratic tariff. Whenever our forces are united the policy of protection can be restored. The result of the last election, in which our party gained 60 seats in this House and nearly won a score of others, is a prophecy that the Republican Party, reunited and carrying the banner of protection as of old, will be speedily returned to power. Fifty years of achievement without a parallel in the history of mankind is our party's guaranty for the future. [Applause on the Republican side.]

In view of all that there is at stake for us and for our children, and for all mankind, to be charged as a party with the destinies of this mighty Republic is a sublime trust. Fully alive to the responsibilities which go with the leadership of a great people, let us upon return to power dedicate anew our party to all the high and holy purposes symbolized by the flag of the Republic itself. But what does our flag stand for? It stands for liberty under the law. There can be no such thing as liberty except through the orderly processes of the law. It stands for the rights of persons and the rights of property; it stands for popular rule, and in this it is our destiny to lead the way. It stands for universal education, because every wise person knows that free schools and free government go up and down in the scale together, and that you can not long continue to have one without the other. It stands for a Christian civilization, the best and the cleanest on the globe. It stands for the home and for all the virtues which thrive and cluster around the hearthstone. Standing for all these things, may the God of our fathers protect it and defend it, and may it ever continue to be the emblem of liberty and the banner of promise for all mankind. [Prolonged applause on the Republican side.]

Mr. BUTLER. Mr. Chairman, how much time did the gentleman from Michigan consume?

The CHAIRMAN. The gentleman used 31 minutes.

Mr. HENSLEY. I yield 30 minutes to the gentleman from Texas [Mr. SLAYDEN].

Mr. SLAYDEN. Mr. Chairman, the comprehensive, learned, and well-reasoned address of the gentleman from Mississippi [Mr. WITHERSPOON], who is a member of the Committee on Naval Affairs and evidently a student of the operations of the Navy, and of the construction of the appropriation bills pertaining to it, has left little to be said by one who in the main stands with him as regards this question. I do differ from him—and I do it with a great deal of reluctance, because I have

such a high respect for him as a man and for his learning as a legislator—I do differ from him, however, in some minor details which I will undertake to express to the House. Before he closed his address he was interrupted by some one, I think by the gentleman from California [Mr. J. R. KNOWLAND], with a discussion of the late naval fight in the North Sea.

This gentleman asked some questions about how the German battleships which had been defeated got back to port. Since that question was asked I have had put in my hand a brief editorial which appeared in a New York paper yesterday afternoon, which so clearly and fully answers the gentleman's question and sheds such a light on other phases of this bill that I am going to read it:

Score one more for the submarine. The most interesting passage in Admiral Beatty's report reads thus—

Bear in mind that this is a report of a British admiral who commanded the fleet—

"The presence of the enemy's submarine subsequently necessitated the action being broken off."

The victorious fleet, in a moment of triumph, abandoned the field of battle and discontinued the fight where there was every prospect that it might go on and clinch its victory by absolutely destroying the fleet of the enemy. But what happened?

Thus the English commander records something undreamed of hitherto—that the mere presence of underwater boats compelled the sudden ending of a victorious fleet action by the most powerful battle cruisers yet produced. At the very moment when the complete destruction of his quarry was in sight, Admiral Beatty had to haul off and start for home—not because of the appearance of a great fleet of costly battleships, but because the enemy's submarines were at hand. This is the more remarkable because the British ships had their own destroyers and torpedo boats with them, which are reported to have given perfect protection to the fleet operating off the Belgian coast. More than that, the *Tiger*, like the *Lion*, was going at a terrific speed, making 28 or 29 knots; yet, as in the case of the *Hermes*, which was sunk by a German submarine when running at full speed, ability to go fast was not, in Admiral Beatty's mind, sufficient defense, despite the fact that he had once successfully dodged submarines. All of this must send the submarine's stock 'way up above par, if it has become so formidable as to be a deciding factor in a fleet action, without having even scored a hit. Plainly the surviving German cruisers owe their safety to-day to their underwater comrades.

Mr. Chairman, my text for the speech which by the courtesy of the committee I am allowed to make will be chiefly on the unparalleled conservatism of the United States Navy. In these days of radicalism and what masquerades as reform, and which, when you strip the mask from it, is socialism pure and simple, we ought, I suppose, to welcome conservatism when we can find it in an important body of men like the naval bureaus. But, Mr. Chairman, there is such a thing as an excess of virtue in some cases. And it is to that particular phase of the United States Navy that I shall address myself.

Mr. Chairman, the citizen of the United States or the mere Member of either House of Congress who has the temerity to hold and express an opinion contrary to that of their masters, the bureaus, on the question of national defense invites and unfailingly receives contumely. Although he may believe himself to be a patriotic citizen, although he may be endeavoring to the best of his ability to serve his country and the constituency which sent him here, he becomes immediately the target for what are meant to be offensive epithets when he has the audacity to do his own thinking.

I know of no American in public or private life who wants to see his country inadequately defended. I know of none who is willing to take a chance of having his country invaded or overrun by any enemy, even the strongest and most aggressive. But is it not a pity, sir, that in the discussion of this question of the national defense epithets can not be dispensed with and real arguments, dictated by calm judgment and supported by sound reasons, substituted?

To call the man who does not believe that an excessive share of the people's contributions to the Government shall be wasted in the support of a needlessly large army and a huge navy a "little American" is not an argument. It is sound and fury from the foolish or insincere pleading by the representatives of those who grow rich in war traffic. I even refuse to feel insulted when such epithets are hurled at me, as they have been. I merely feel sorry for infatuated jingoes, drunk with the war spirit, who resort to such methods and who really seem to believe that they are reasoning.

In voicing my opposition to some features of the naval bill as reported by the committee I shall try in a courteous way and in perfect sincerity to give reasons for my position.

Let me state that position in a sentence. I believe that the committee has advised the appropriation of too much money for obsolete weapons and too little for the greatest ever devised by the wit of man. Recent and current events sustain that view. Battleships are helpless in the presence of submarines and in terror if their presence is suspected. They are secure only when locked up in well-protected harbors. That is not merely my opinion; it is the logic of events. The committee and the bureaus seem not to have been impressed by facts of recent occurrence. Why are these two bodies so conservative, so ultra-conservative, one may say?

Lately I have been looking into the history of the United States Navy. My investigation has been altogether too casual and superficial for the importance and interest of the subject. But, casual and superficial as it has been, I have learned, for instance, that the American Navy is probably the most conservative body on our continent. Men of my age are usually conservative, but the Navy excels in that particular virtue, as is clearly shown by some of its own historians. History overflows with evidence that the disinclination to employ newer and improved methods of defense has characterized it for a hundred years. It was daring and brilliant in its achievements during the War of 1812, but immediately thereafter it appears to have become the victim of paralysis, mental and physical, and has not yet entirely recovered.

What can be the reason for this peculiar conduct on the part of a body which contains so many men of daring and talent? The only reason I can think of is bureaucracy, always and everywhere dangerous alike to liberty and progress.

The classic example of a purely bureaucratic government is—or, at least, was until the recent revolution which established a Republic—China. For thousands of years the Government of China was in all of its departments and branches thoroughly bureaucratized. Its civilization was stereotyped, its institutions petrified, and every improvement proposed was stoutly resisted and usually defeated. All the activities of government flowed in bureaucratic channels hoary with age, and to propose an improvement was to incur the penalties of treason.

Prior to her great revolution the institutions of France had broken down. There was no outlet for the aspirations, the energy, and the activities of a highly intellectual people. To propose and advocate any improvement or any change, however slight, in the administration of affairs met as its reception the galley, the Bastile, or the block. In intellectual despair, in wide-wasting economic ruin, the French people rose in revolt against this desperate tyranny, and through seas of blood they struggled to emancipate themselves from the dead past, and in the new world of thought, of action, and government became a great, free, progressive nation and the instructor of the world. The bureaus and special privilege were drowned in an ocean of blood.

It was reasonable to suppose that the United States, a new Nation in a New World, untrammeled by foolish traditions, would in the conduct of its Government have lent an eager ear to the suggestion of needed improvements and would have reformed its processes of administration as exigencies and occasions demanded. Not so, however. They also fell under the spell and influence of the bureaus.

Even Congress, acting presumably on the advice of military bureaus, has not been altogether free from excessive conservatism, for until recently every able-bodied citizen of the United States between the ages of 18 and 45 was enrolled in the militia. After his enrollment, until 1903, it was, if I may go to the statutes for an illustration, expressly required by law that every militiaman should be constantly provided with a good musket or firelock of a bore sufficient for balls of the eighteenth part of a pound, two spare flints, a pouch, and a powder horn. See Federal Statutes, volume 4 page 891, section 1628. These muskets, powder horn, pouches, and so forth, were required by the act of Congress of May 8, 1792, and this act was unchanged until after the Spanish War, and not then until 1903.

However, the most bureaucratic department of our Government is the Navy. During both terms of President Washington's administration there was no Navy Department and no Secretary of the Navy; but during its whole existence since the Navy Department seems to have been controlled and dominated, effectively and absolutely, by bureau and naval officers. During the whole of its existence the bureaucrats in charge have steadily, and generally successfully, resisted all improvements until they were forced to adopt them by an aroused public opinion.

The first great revolution in water transportation was the discovery and invention of steam navigation, and how slow and how reluctant the Navy was to adopt this very evident improvement I will try to show you.

STEAM POWER RELUCTANTLY ACCEPTED.

In 1787 John Fitch launched the first steamboat in the United States and made regular trips on it from Philadelphia

to Trenton, N. J., Wilmington, Del., and other points in neighboring States. In the Library of Congress there are newspaper files that carry advertisements of his boat with a fixed steaming schedule.

Robert Fulton launched the *Clermont* on the Hudson River in 1807. His venture was brilliantly successful, and in our commercial navy steam rapidly superseded oar and sail. Steamboats made regular trips on many of our lakes and rivers immediately after Fulton's successful cruise with the *Clermont*. It was surely to have been expected that as steam was successfully used as a means of navigation in the commercial marine of the Nation our Navy experts would eagerly avail themselves of such an epoch-making invention for the Navy. Five years after Fulton had propelled vessels by steam and steamboats were in constant use on our lakes and rivers, the War of 1812 was declared. But during that entire war until late in 1813 no effort was made by the Navy to use steam as a means of navigation.

In that year Fulton designed the first vessel of war which was to be propelled by steam alone. He laid his plans before President Madison, who eagerly and enthusiastically indorsed them. Subsequently, in March, 1814, they were accepted by Congress. This steam war vessel was immediately built by the direction of Congress. The vessel was given the curious classic name, *Demos-Logos*. It was popularly known, however, by the name of the inventor as the *Fulton*. When the *Fulton* was completed in May, 1815, she was assigned to the command of Capt. David Porter, who had just returned from his unfortunate cruise with the *Essex*. The original plan of the *Fulton* was to rely upon steam alone for propulsion. Its commander, Capt. Porter, however, could not forget his previous training and experience on sailing vessels. True to the traditions of his profession, he had no confidence in steam as a motive power. As soon as he assumed charge he caused two large masts to be erected, and he had the sides of the vessel, ordinarily stop flush at the spar deck, carried up to form protecting bulwarks for the sailors who might be on deck attending to the sails and rigging that had been added by order of Capt. Porter.

On her trial trip the *Fulton* steamed out from New York Harbor 50 miles and back. No use whatever was made of either oar or sail on the trial trip.

Then and there it was demonstrated to everybody save the Navy experts that steam was a successful means of navigation of boats of any size then known and that it had every advantage over the oar and sail.

Before the *Fulton* was finished her inventor died, and peace was declared between Great Britain and the United States. The head of the Navy at that time, on the advice of his cabinet of bureau officers, did not attempt to utilize this great invention of Fulton's, but ordered her to be laid up as a receiving ship at the Brooklyn Navy Yard, where she remained as such from June, 1815, to March, 1829. She was afterwards blown up and destroyed in an explosion. Thus ended the first steam vessel in the American Navy.

The next steamer to appear in our Navy was the *Seagull*. This vessel was used as a dispatch boat in Porter's mosquito fleet. She was laid up in 1825 at Philadelphia, where she remained until 1840, when she was sold for $4,750.

Bennett says in his Steam Navy of the United States that after the *Seagull* was laid up there was no mention of steam in the literature of the Navy for 10 years.

From 1825 to 1835 no effort was made to use steam in propelling vessels in the United States Navy. During all these years there were about 700 steam vessels in use in the commercial navy of the United States, owned and conducted by citizens, on the rivers and lakes of the United States, and several coastwise steamers and steamship lines had been established and were running successfully and prosperously.

It is not desirable to pursue further this sickening history of hidebound inefficiency, blind conservatism, and disastrous incompetency at that period of our naval history. The bureaus were in absolute control. Mr. Bennett, in discussing the failure of the naval officers to avail themselves of Fulton's invention of steam navigation, after lamenting their refusal to utilize it, says that had it been employed it would have changed the naval architecture of the world, and would not only have changed the naval architecture, but would also have changed the methods of naval warfare. He further says:

> Steam, instead of being afterwards obliged to fight its way inch by inch and foot by foot, compelled to struggle against every obstacle and every objection which jealousy, conservatism, and ignorance could bar against its progress, slowly and painfully forcing an unwilling and qualified recognition from the very element that should have championed its cause, would have appeared in the arena fully armed and equipped from the brain of its master and would have been hailed not only as an auxiliary but as an all-important arm in naval warfare.

This blind obstinacy and conservatism of the naval officers generally has been graphically summed up and described by Prof. James Russell Soley in an article called "The Union and Confederate Navies, battles, and leaders of the Civil War," pages 611 to 631. He says:

> The consciousness of ignorance in some men begets modesty, but it seldom has this effect upon the older members of a military hierarchy. Obedience to the orders of a superior is, of course, the essence of military discipline, without which it could not exist, and rank is the primary source of authority. But a system which combines reliance upon rank as the sole source of authority and reliance upon age as the sole qualification for rank contains essential elements of weakness. Its tendency is to make the seniors grow less capable and more despotic, while the juniors gradually lose all sense of responsibility and all power of initiative, and when they at last reach a position of command their faculties have become paralyzed from long disuse. Especially is this the case in a long period of peace, such as followed the War of 1812, and lasted, with only a brief intermission, until 1861. During this time the Navy was always grasping at the shadow and losing the substance. * * * The fatal defects of the system were not noticed until 1861, when the crisis came and the service was unprepared to meet it; and to this cause was largely due the feebleness of naval operations during the first year of the war.

The next great revolution in naval warfare was the invention of ironclad warships of the *Monitor* and *Merrimac* types. Of course, this invention was frowned upon by the bureau chiefs of the Navy Department. It was a new invention, and the old and venerable cry of "experiment" was urged against their construction, and yet the present dreadnaught is but a modification of the *Monitor*. Long after France and England had constructed and had in commission warships incased in iron armor not a step had been taken by our Navy. As Prof. Soley states:

> The advantages of a light armor plating for vessels of war had been demonstrated by the experience of the French floating batteries *Devastation*, *Lave*, and *Tonnante* in the attack on Kinburn in 1855 during the Crimean War. These vessels were protected by 4½-inch plates, and the experiment had been deemed so conclusive that both France and England had already constructed new warships incased in armor. It was to be expected that a navy with a war on its hands would have directed its attention from the first moment when it was convinced of the probability of hostilities to securing some of these formidable vessels; and if a hesitation due to the want of statutory authority had led the department to defer building until after Congress met it would at least by that time have digested its plans so thoroughly that the work could begin at once. Nevertheless, for four months after Mr. Welles entered upon his office no steps were taken, even of the most elementary character, toward procuring ironclads.

When the *Merrimac* steamed out of Norfolk Harbor and destroyed the *Cumberland* and *Congress* and disabled the *Roanoke* wooden navies were made obsolete. Would it be believed that after this conclusive demonstration of the worthlessness of wooden vessels in naval warfare that they were built all during the Civil War under the advice of our naval experts, and that they continued to be built even after the Civil War was ended? Prof. Soley says, on page 615, as cited above:

> The vessels purchased by the department during the war amounted to 418, and included every variety of merchantman and river steamboat roughly adapted in the navy yard for war service. Three types of wooden vessels were built—14 screw sloops of the *Kearsarge*, *Shenandoah*, and *Ossipee* classes; 23 screw gunboats; and 47 side-wheel steamers, known as "double-enders," for service in narrow channels where they could move ahead or astern without turning.

It seems that the board which was appointed on the 6th of August, 1861, to pass upon the advisability of the United States constructing ironclads in effect damned the project. In their report they said:

> Opinions differ amongst naval and scientific men as to the policy of adopting the iron armature for ships of war. For coast and harbor defense they are undoubtedly formidable adjuncts to fortifications on land. As cruising vessels, however, we are skeptical as to their advantages and ultimate adoption. But whilst other nations are endeavoring to perfect them we must not remain idle. * * * We, however, do not hesitate to express the opinion, notwithstanding all we have heard or seen written on the subject, that no ship or floating battery, however heavily she may be plated, can cope successfully with a properly constructed fortification of masonry. The officers on this board were Commodores Smith and Paulding and Commander Davis.

It can almost be said that, without exception, every new and effective invention of a war vessel in the history of the Navy of the United States has been the result of an act of Congress demanding that the "experiment" be tried. Three iron-plated floating batteries had been used by the French in the Crimean War in 1855. A joint resolution of Congress, June 24, 1861, directed the Secretary of the Navy to appoint a board to examine the Stevens ironclad floating battery, ascertain the cost and time necessary for its completion and the expediency thereof. This board was composed of the elite of the old wooden navy. It examined the Stevens battery and did not make a report until the end of the year 1861. This report was, of course, adverse to the completion, and, so far as the Government was concerned, the project was dropped.

Ericsson was reluctantly granted a contract. This contract was very rigid in its terms. It provided that the *Monitor* should be built, and when completed should be tested under the direc-

tion of the Navy authorities, and that 25 per cent was to be withheld from each payment until after the completion and satisfactory trial of the vessel. A clause of the contract provided that in case the vessel did not develop the stipulated speed or failed in other stated requirements the contractors should refund to the United States the full amount of the money paid them. This contract contained another clause which illustrates very strikingly the ingrained habit of naval experts to cling to the dead past. The contract made with Ericsson required him to furnish on the ironclad, as a part of its construction, masts, spars, sails, and rigging of sufficient dimensions to drive the vessel at the rate of 6 knots per hour in a fair breeze or wind.

It may not be generally known that when Mr. Bushnell, a friend of Ericsson's, presented the model of the *Monitor*, which had been prepared by Ericsson, to the board composed of Commodores Smith and Paulding and Commander Davis, they grew merry over it and told him that they would vote for a trial of the design if he could get Commander Davis to vote for it. Commander Davis, when appealed to by Mr. Bushnell, told him to take the little thing home and worship it, as it would not be idolatry, because it was in the image of nothing in the heaven above or the earth beneath or in the waters under the earth. Long after the *Monitor* was under way Ericsson examined the contract and stated that if he had known of its terms he would never have completed it. Had he not done so, the *Merrimac* would have pursued its career unchecked, would have destroyed the blockade of the southern ports, and by the destruction of the wooden navy it is safe to say the Confederate States would have established their independence.

The *Monitor* was built very rapidly after the contract had been signed, but, says Prof. Soley:

> It must be remembered that the Navy Department had possessed from the beginning five frigates, sister ships of the *Merrimac*, any one of which could have been armored more efficiently than she was in half the time and with half the money, and without waiting for congressional action. Evidently the department little imagined while it was dallying for six months with the question of ironclads that the first 24 hours of the *Monitor's* career would be so big with fate.

While Ericsson was constructing the *Monitor* he was constantly annoyed by Commodore Joseph Smith, Chief of the Bureau of Yards and Docks, with angry criticisms of details. On September 25, 1861, he wrote Ericsson as follows:

> I am in great trouble from what I have recently learned, that the concussion in the turret will be so great that men can not remain in it and work the guns after a few fires with shot. I presume you understand the subject better than I do.

He certainly did.

Again, on October 11:

> I understand that computations have been made by expert naval architects of the displacement of your vessel, and the result arrived at is that she will not float with the load you propose to put upon her, and if she would she could not stand upright for want of stability, nor attain a speed of 4 knots.

All the world knows now that she did float.

He wrote on October 15:

> I have been urging the Ordnance Department to furnish the guns for your vessel, but the knowing ones say that the guns will never be used on her.
>
> In a heavy sea—

He wrote again, October 17—

> one side of the battery will rise out of the water or the sea recede from it, and the wooden vessel underneath will strike the water with such force when it comes down or rolls back as to knock the people on board off their feet.

Admiral Farragut, if I read history correctly, never commanded an ironclad vessel during the Civil War or after it. Like all the old officers of the Navy, he damned ironclads as well as torpedoes. When he captured New Orleans in 1862 he commanded a wooden vessel, which was nearly destroyed by a fire raft. At the battle in Mobile Bay in 1864 his flagship was also a wooden vessel.

Admiral Dupont, after the failure of the attack on Charleston, S. C., in 1863, in his report of his operation expressed a decided opinion that monitors and ironclads as vessels of war were failures. See Bennett, pages 403 to 404. In December, 1863, the admirals of our Navy were called upon officially by Secretary Wells to report their opinions as to the efficiency of ironclads.

In the light of subsequent developments, indeed, it was curious, in view of what had already happened, that high officers of the Navy could have been found to report against the efficiency of ironclad vessels. Let it be remembered that an historic engagement at Hampton Roads in March, 1862, had already been fought. The epochal contest between the *Merrimac* and *Monitor* had been in history nearly 21 months when an official opinion as to the value of ironclads was asked and given, and the report of Rear Admiral Goldsborough, made in 1864, was anything but favorable.

In Bennett's Steam Navy of the United States, from which I have derived much information and from which I have freely quoted, is also found the statement that the naval bureaus were not in sympathy with the efforts to get vessels of great speed. In view of the now generally recognized value of speed in vessels of war the statement of the author taxes one's credulity. But let me quote him again:

> The importance of speed as a factor in naval warfare, although demonstrated by many events of the Civil War, was disputed, or at least not admitted, as soon as that war was over, and the element that disparaged the *Wampanoag* type of war vessel by referring to them as "engine carriers" and "runaways" succeeded so well in checking naval development in this direction that it was more than 21 years after the triumph of the *Wampanoag* before her speed was again reached in our Navy, the first vessel to equal it being the steel cruiser *Charleston* on the occasion of her four hours' trial trip in smooth water in September, 1889. The British, more progressive and less hidebound in naval matters than ourselves, arrived at the speed of the *Wampanoag* in their navy in 1879 with the large dispatch vessels *Iris* and *Mercury*.

To show how reluctant the Navy was to surrender the wind as a motive power is shown in an order made as late as June 11, 1869, which directed that "hereafter all vessels of the Navy will be fitted with full sail power. The exceptions to this will be tugs and dispatch vessels not fitted with sails. Commanders of squadrons will direct that constant exercises shall take place with sails and spars." A long list of exercises with sails was prescribed.

However, Mr. Chairman, steam did win in the contest with sails and the picturesque old wooden ship, so hallowed by the memories of Van Tromp, Drake, Nelson, Paul Jones, Decatur, and Perry, surrendered to the ironclad. A thing of beauty and grace was displaced by an ugly mass of iron propelled by steam. About these modern creations McAndrews' Hymn is the only bit of literature I recall, and that, beautiful as it is, hardly fills the void in song and romance made by the disappearance of the full-rigged ship.

To the monitor and fast cruisers that were the early development of the ironclad vessels succeeded the battleship. The battleship was succeeded by the dreadnaught, which, in turn, was followed by the superdreadnaught. This change has tremendously increased the cost of the Navy. To construct a dreadnaught of the *Pennsylvania* type costs $15,000,000—more often it costs $16,000,000.

And here I will remark that the clause in every naval act passed in recent years which provides for the construction and fitting out of a superdreadnaught is, in my opinion, purposely misleading. This clause reads: "For hull and machinery, $6,000,000 or $7,000,000." Nothing is said in it about the cost of armor and armament, which usually amounts to much more than that of the "hull and machinery." To ascertain the cost of armor and armament of a superdreadnaught one must resort to lump-sum appropriations and dig it out after painful efforts. In popular opinion, it only costs six or seven million dollars to construct and fit out a superdreadnaught, when, in fact, it costs more than twice that sum.

In passing I will say, Mr. Chairman, that this is an evil in the methods of the Committee on Naval Affairs which should be corrected, even if an act of Congress is necessary to secure the reform. That committee should deal frankly with the House and the country.

Mr. PADGETT. Will the gentleman yield?

Mr. SLAYDEN. Yes.

Mr. PADGETT. Every appropriation bill contains the language that the cost, exclusive of armor and armament, is not to exceed, as in the last bill, $7,800,000 each, as it does expressly call attention to the cost of a vessel.

Mr. HOBSON. Will the gentleman yield?

Mr. SLAYDEN. No; I can not; for my time is short.

Mr. HOBSON. I simply wanted to call the gentleman's attention to one thing.

Mr. SLAYDEN. What is it.

Mr. HOBSON. It is simply in the next paragraph in each bill the gentleman will see that there is an appropriation for armor and armament, and of course that completes the appropriation for the vessel.

Mr. SLAYDEN. But nowhere does the bill say what a superdreadnaught shall cost. It says so much excluding armor and armament, but it does not state it so that the man in the street may know approximately the cost of a battleship.

THE COMING OF THE SUBMARINE.

Following the battleship and, in the opinion of many people, destined to drive it off the seas is the submarine.

It has not only brought terror to the commanders of great battleships but it has also disturbed swivel-chair sailors who sit in administration buildings and see danger ahead for their pet project of majestic and expensive dreadnaughts.

Maybe they do not feel as discouraged as Decatur did when he first appreciated the fact that steam had to be accepted by the Navy, but they are not happy at the outlook.

Capt. Mahan tells a story of Decatur, when he was present at an early experiment in steam navigation.

"Crude as the appliances still were, demonstration was conclusive; and Decatur, whatever his prejudices, was open to conviction. 'Yes,' he said, gloomily, to King, 'it is the end of our business; hereafter any man who can boil a teakettle will be as good as the best of us.'"

In anticipation of this legislation and to develop hostility to the purchase of a reasonable number of submarines, certain naval experts and their journalistic fuglemen have already said that it is to be feared that uninformed Members of Congress, victims of the spectacular work of the submarine, may seek to substitute them for dreadnaughts.

If they are wise that is exactly what Members of Congress will do, and I half suspect that the greatest naval power in the world, measured in terms of dreadnaughts, would agree with them. Everybody will admit, I suppose, that if England had had three submarines in the North Sea on a certain day instead of the three cruisers, *The Hague*, *Cressy*, and *Aboukir*, she would have more live sailors to-day and less humiliation.

The submarine has literally fought its way to recognition. It has won its rank as a fighting machine on its achievements.

The idea of a subsurface boat is not new.

Admiral Melville says that—

A submarine craft was experimented with at Toledo, Spain, nearly 400 years ago, and it is possible that submarine navigation was seriously attempted even earlier.

The French are said to have had one in the last decade of the eighteenth century. It first demonstrated its destructive force during the Civil War, and was the work of the Confederates. The Confederate States had no navy worth mentioning. Its naval officers, in the absence of other employment, designed submarine torpedo boats. In February, 1864, a Confederate "David" approached the sloop-of-war *Housatonic*, lying on the outer blockade of Charleston, and exploded a torpedo under her which sank her. In fact, it may be also said that the development of the torpedo as an engine of destruction in war was the work of the Confederates.

The modern submarine is the invention of J. P. Holland, a civilian and a resident of New Jersey. The present efficiency of submarine craft appears to be the direct result of that invention of Mr. Holland. When he presented it to the Government for inspection and adoption it was sneered at and ridiculed by officers in the Navy. There were a few eminent exceptions, however, for Admiral Hichborn and others immediately saw that a revolution had been made in naval warfare.

On the other hand, Admiral O'Neil and other naval officers are reported to have commented most unfavorably on the submarine as an engine of war. Its terrible effectiveness, so recently and conclusively demonstrated, is a complete answer to such critics.

But American officers have not been the only skeptics. The present high admiral of the German Navy, in March, 1901, pronounced against them, and Carl Busley, a German naval expert, once published a monograph on the subject, in which he poured out unstinted ridicule on the submarine. High Admiral von Tirpitz has changed his mind, and so no doubt has Mr. Busley.

In 1910 Blackwood's Edinburgh Magazine published a contribution from Col. A. Court Repington, a British staff officer, on "The submarine menace." It is usually very dangerous to essay the rôle of prophet, but Col. Repington did so nearly five years ago, and events have justified him. Let me quote him:

I think—

He says—

that the North Sea falls within the category of narrow waters which eventually must, by a process of evolution which is taking place under our eyes—that is to say, by the invention or development of the airship, the submarine, the torpedo, and the mine—become practically closed on the outbreak of war, and possibly throughout the war, to the operations of seagoing fleets and cruisers.

Col. Repington was right. The North Sea has been virtually closed to the operations of seagoing fleets. To save her's, Germany keeps them immured within her own harbors. To save her's, after a few disastrous ventures, England keeps them in her own waters.

But hear Col. Repington again:

I think that the great ships to which we devote so much money every year * * * will, within a limited period of time, become useless for most operations of which the North Sea or the channel will be the theater.

Col. Repington, in the same article, spoke of the possibility of a superdreadnaught which costs from two to two and a half millions sterling, or, say, $12,500,000, with its load of a thousand men, being sunk by an invisible submarine which costs only $300,000 to $400,000. That also has happened.

The author directed attention to the fact that improvements in the controlling mechanism of the torpedo has given it astonishing accuracy, and that it can compete with a gun at the medium fighting range and deliver a far more deadly blow.

But let me give you Col. Repington's own words on another point. I like to quote these military experts because the words of the "uninformed" Member of Congress may have no weight, even when supported by such tragedies as those of the North Sea and the English Channel.

He says:

Combined with the submarine the new torpedo becomes a weapon of deadly menace, while the submarine herself—worst of all for battleship and cruiser—has not yet found her naval destroyer, nor is open, except accidentally and by chance, to any known form of attack by ships in fair and normal fighting circumstances.

I express my own opinion, not Col. Repington's, when I say that sneaking up on the enemy while submerged and invisible is about as fair as any feature of war on land or sea.

Our colonel hardly knew, I fancy, how prophetically he spoke when he said:

I think that Germany realizes the value of the submarine and will soon astonish us by her productive capacity in this type.

Germany has shown marvelous productive capacity, and operative capacity as well.

Again, he says:

It is time for us to recognize that the North Sea in time of war will be, if it is not now, no place for a seagoing fleet. Swarms of submarines and destroyers * * * will infest this sea and the existence of every great ship which ventures into the area controlled by these pests, which are almost unassailable by naval means, will be most precarious.

Now, listen to what he says:

Our great and costly battleships and cruisers must be stowed away safely in some distant, safe, and secluded anchorage. Britannia may rule the waves, but who will rule above and below them?

Our author, who seems to be an unusually clear-headed man and also endowed, as events have proved, with a rare gift of prophecy, says that "battle fleets will have to keep out of harm's way and leave flotillas to carry on the war."

They have tried to keep out of harm's way, but have not been entirely able to do so. The fate of the English men-of-war in the North Sea and the Channel and of the Turkish men-of-war inside the Dardanelles, and protected by many mines, warns the commanders of vessels in a way they can not afford to ignore.

Col. Repington says frankly that nothing the English can do by naval means will prevent German submarines putting to sea when they please. Of course the submarines of other countries, if equally enterprising, can also go to sea when they please.

Mr. Chairman, the submarine has taken the place of the dreadnaught as a sea terror. When a flotilla of submarines is operating, the particular sea in which they operate has no place for great battleships. This, of course, is contested by the great firms which have huge and expensive plants for the building of dreadnaughts. Very naturally they fight the inevitable change, for it means the disappearance or lessening of dividends. But its realization and acceptance means success to the countries that employ the latest and most marvelous development in naval architecture. It has been said—and I think it has been shown that—

The submarine can observe, attack, and sink a dreadnaught while she can neither observe, attack, nor sink, except by accident, the submarine.

I have quoted this frank-speaking Englishman at length. Now, let me return to an American authority, Admiral Melville, who says:

If the boat—

He was speaking of the Holland submarine—

has military or strategic value, we should change our policy of construction. Nothing could justify the building of so many battleships if the submarine possesses even a portion of the advantages that their advocates claim.

Who will now deny that it has military and strategic value?

He further says:

In the indifference of naval officers to this question there is great danger. The boats are either valuable or they are worthless for military purposes. From the time that the Senate and House Naval Committees look with favor upon these boats there will be a decrease in the construction of battleships, and the action of Congress in striking out of the naval appropriation bill of 1901 all authorization for battleships and cruisers can certainly in part be traced to the belief that the submarine possesses many of the qualities claimed by its advocates.

If Admiral Melville had known of the present Naval Committees of the two Houses, he would not have been alarmed, because they are usually the last to get an impression aside from that which is sent to them from the department.

And it may be said in passing that Congress still seems inclined to do its own thinking—sometimes, at least.

Yet Admiral Melville did not send forth his note of warning in vain. From that time down to the present the submarine has been fought by the great majority of the officers of the Navy at every session of Congress. Twenty years ago the *Holland* was denounced as an experiment. Long after the submarine had been successfully demonstrated in our Navy, under the mandatory provisions of Congress and following the success of this American type in foreign navies, our own Navy Department in its annual recommendations gave this type of vessel only perfunctory recognition and grudging recommendation. We find, for instance, in the report of Secretary Moody in 1902 that he asked for two submarines; in his report in 1903 Paul Morton did not ask for any. Secretary Bonaparte, in the first year of his administration asked for two submarines; in the second year, none. Secretary Metcalf asked for four submarines during each year of his term. Secretary Meyer, 1909, did not recommend any; in his second year he recommended two; in his third year he did not ask for any. This will show the Navy Department's attitude toward this epoch-making invention. In other words, had the submarine depended upon departmental recognition we should probably have had at this time—instead of 51 built and building—about 10. To show that our naval officers instinctively fear and distrust the submarine and realize that it means the doom of the battleship, reference may be made to the fact that every time a battleship is torpedoed by a submarine during the present war our naval officers are quick in their endeavor to "save the face" of the dreadnaught, and they invariably put down the catastrophe to a floating mine. After the cable dispatches prove conclusively that the disaster was due to a torpedo fired by a submarine they grudgingly admit the fact, but apologize for the incident by calling it a lucky shot, and persist in their opinion that the submarine is still an "experiment."

In the Navy, now presided over by that rare old salt from Tar River, N. C., Josephus Daniels, the submarine is still denounced as an "experiment." Future historians of our Navy will discover that as late as the year 1914, and in the month of December, the Secretray of the Navy, supported by his aid for matériel, Capt. Winterhalter, and by two of his admirals, denounced submarines as an "experiment." If the horrible war which now devastates the earth has taught one naval lesson, it is that the battleship, the dreadnaught, and the superdreadnaught are the certain and legitimate prey of the submarine.

To decry the submarine as an experiment seems a bit absurd in the light of current events. Are we not justified in declaring that dreadnaughts and superdreadnaughts are experiments? Have they ever been tried out in any war? The British battleships *Bulwark*, the *Audacious*, the *Formidable*, and four large British cruisers—the *Aboukir*, *Cressy*, *Hogue*, and *Hawke*—as a result of submarine attacks now rest on the bottom of the ocean. Only a few days ago we read how a British submarine dived under the mines placed in the Dardanelles and sunk the Turkish battleship *Messudieh*. As a result so far of the experiment of dreadnaughts and superdreadnaughts all of them that have ever been encountered by submarines have been sunk. The events of the past few months demand that on humanitarian grounds, if on no other, the advisability of building great battleships each calling for not less than 1,000 officers and men to operate them should be seriously weighed. Due to the torpedoing by submarines the following is the partial death roll up to date of big ships alone:

	Officers and men.
British battleship *Bulwark*	700
British battleship *Formidable*	600
British cruisers *Aboukir, Cressy, Hogue,* and *Hawke*	1,653
Total	2,953

In December, 1913, Admiral Sir Percy Scott, one of the most famous naval experts of the world, and having specialized with great success in gunnery, wrote a remarkable letter to a friend, which for some reason never saw the light of day until June 14, 1914. In that letter, which I will not stop to read in full, but ask to have published as a part of these remarks, he stated that a battleship's occupation was gone, that the naval warfare of the future would be dominated by aeroplanes and by submarines. Every prediction he made in regard to the submarines has been more than fulfilled, and aeroplanes have proven to be of tremendous importance. Submarines have sunk every battleship that they have attacked. Admiral Scott said, among other things:

> If we ever go to war with a country that is within striking distance of submarines, I am of the opinion that that country will at once lock up its dreadnaughts in some safe harbor.

This is precisely what Great Britain has had to do and is now doing with her dreadnaughts in the present war. Sir Percy Scott predicted that in any future war there would be—

> no use for battleships, and very little chance of much employment of fast cruisers. The navy will be entirely changed; naval officers will no longer live on the sea, but either above it or under it, and the strain on their system and nerves will be so great that a very lengthy period of service will not be advisable. It will be a navy of youth, for we shall require nothing but boldness and daring.

This great English admiral says that—

> the function of a battleship is to attack an enemy's fleet; but there will be no fleet to attack, as it will not be safe for a fleet to put to sea.

This prediction of Sir Percy Scott has been conclusively demonstrated during the present war; and as he further says, referring to maneuvers which he had seen:

> This demonstration should have made us realize that, now that submarines have come in, battleships are of no use either for defensive or offensive purposes, and consequently building any more in 1914 will be a misuse of money subscribed by the citizens for the defense of the Empire.

He is a sailor who has spent his life on the sea and achieved great distinction in his profession, and is, of course, better qualified to speak than some uninformed Member of Congress who has the audacity to hold an opinion contrary to great naval experts like the gentlemen from Tennessee, North Carolina, and elsewhere. [Applause.]

Secretary Daniels differs from Sir Percy Scott. He says that—

> submarines are an experiment and that our main reliance in the future must be upon battleships and dreadnaughts.

But it should be remembered that Mr. Daniels's experience as a sailor was on Tar River in North Carolina, and his taste naturally inclines him to the larger ship.

Notwithstanding North Carolina differs from Great Britain, I humbly submit that Sir Percy Scott has earned his reputation as a prophet.

The General Board and the Navy League insist that four new battleships should be provided for. It is given out that the program of Secretary Daniels for two will be adopted. What will be thought 10 years hence of the American Congress if it yields to these insensate demands? Advanced Navy leaguists claim that an insufficient number of dreadnaughts is worse than none. I suggest, then, that we take them at their word and do the better thing. In spite of all its activities, with conclusive demonstration of the destructiveness and effectiveness of the submarine staring them in the face, the Navy League, so sensitive in regard to our defenseless condition, has never, so far as I know, once raised its voice in behalf of the construction of submarines. The advocates of battleships are some people. Members of Congress and others, who are victims of an obsession—the Navy League, which wants more money spent and more offices provided, and builders who want more orders with the resultant profits. In our naval policy heretofore, but at a safe distance, we have followed England. Let us follow her now. The British Admiralty, so it is reported, has issued orders that no new battleships are to be constructed. All the shipbuilding plants of England to-day are said to be at work on submarines, and the papers state that an effort was made to have a supplemental number built in this country. Charles M. Schwab, it is authoritatively stated, had a contract to build here 20 submarines for the use of England.

Immediately upon the publication of Sir Percy Scott's letter frugal Holland ceased to build battleships and dreadnaughts. The minister of the Navy of Japan is said to have issued orders that no more battleships shall be built, but that torpedo vessels, submarines, and destroyers are to be provided in lieu of the dreadnaughts, so far as new construction is concerned.

The lessons taught by the present European war appear to be that the torpedo carriers—to wit, the fast destroyers and the invisible submarine, together with the fast scout cruiser—will constitute the efficient naval vessels of the future. It has been stated that England is building a 5,000-ton cruiser of the *Sydney* type, the scout cruiser that sunk the German cruiser *Karlsruhe;* but we do not find our Navy Department making any estimates for valuable vessels of this type. The dreadnaught is sacred. Nothing must interfere with the department securing the maximum number of these expensive luxuries. Cruisers of the type of the *Sydney* and the submersible ships are so far the only vessels that have established great value in the hard tests of battle. Then why should we do that which Sir Percy Scott said nearly a year ago would be a criminal waste of the public funds? Why not, if we must appropriate such large sums as this bill calls for, spend it for vessels that are shown to be worth while instead of in huge and costly ships that have never been really tested in war?

"Oh, but," the supporters of the dreadnaughts will say, "the big battleship can whip anything afloat on the ocean." That

may be true of anything floating on the surface of the ocean; but the danger is from below, and from that direction a greater, and from a mysterious and an unmatched power.

Again, say the big-battleship protagonists, "the submarines are all right for defense, but they have no radius worth considering, and can not go out into the great oceans."

Capt. Otto Wedigen, commanding the *U–9*, went more than 200 miles from his base in or near the Kiel Canal to find and sink the three English cruisers in less than 60 minutes. From a position 12 feet under water and at a distance of, it is safe to say, approximately a mile he launched his first torpedo at the unfortunate English ship, the *Aboukir*. She sunk in a few minutes. The other two boats were quickly dispatched. I do not care to even repeat the story of this horror. I refer to it as proof of my contention that in modern naval warfare, as in the contest between the Philistine and Israelite champions, David is the better man.

Now, a word more as to the radius of these subsurface boats.

More than a year ago I read somewhere that they were being built with power to go nearly a thousand miles out to sea and back again. Very recently I have seen it stated that now the newest, largest, and most powerful submarines are being built with the idea of going 1,250 miles out to sea and back again.

Who is prepared to say what the radius will be in one or two or five years?

Who will be so bold as to fix a limit to the powers of the scientist and engineer?

Is it not easily conceivable that in a short time submarine boats of increased speed and power may cross the Atlantic? I read:

NEW GERMAN SUBMARINE AN INDEPENDENT CRUISER.

LONDON, *January 23.*

The Daily Mail's Copenhagen correspondent says he learns from Hamburg that one of the new German supermarines has just finished trial runs in the Bay of Helgoland and that she proved well suited for the purpose for which she was constructed.

This giant submarine, the correspondent adds, is of the type that carries supplies for three months, and is not under the necessity of putting into a port or having recourse to the parent ship.

About 12 or 14 years ago I saw my first submarine. I had the privilege of going under the water in it. After the first plunge I got over my timidity, and in subsequent submersions I studied, as well as a nontechnical man can, the boat and its possibilities. I was convinced that it is the most wonderful weapon ever invented, and that on the defensive it could withstand any force sent against it. I did not believe then that it could become the powerful offensive arm into which it has since developed and which in some ways I regret.

I would like to see the weapons of aggression lose their potency and those of a defensive nature increase theirs. It would make for peace. It would thwart the schemes of ambitious monarchs and leave the people freer to develop socially and economically. It is the ideal weapon for a Government like ours which harbors no schemes of conquest.

With an adequate supply of submarines, 30 or 40 of which can be built for the cost of one battleship, the United States could not be successfully attacked by any power or possible combination of powers, and millions a year could be saved to the taxpayers. [Applause.]

Mr. Chairman, I shall print with my speech a few selected clippings from newspapers representing the sentiment of this and other countries. The first of these that I shall print is the celebrated letter of Admiral Sir Percy Scott, in which we find these striking statements:

Now that submarines have come in battleships are of no use, either for defensive or offensive purposes, and consequently building any more in 1914 will be a misuse of money subscribed by the citizens for the defense of the Empire.

Under these circumstances I can see no use for battleships and very little chance of much employment for fast cruisers.

The submarine when in water must be kept away from, not looked for.

What we require is an enormous fleet of submarines, airships, and aeroplanes, and a few fast cruisers, provided we can find a place to keep them in safety during war time.

If we go to war with a country that is in striking distance of submarines, I am of opinion that that country will at once lock up their dreadnaughts in some safe harbor. We shall do the same.

[From the Army and Navy Register.]

THE SUBMARINE MENACE.

The London Times of June 12 published a letter from Sir Percy Scott concerning the "Uselessness of great battleships." The position taken by the distinguished writer is the subject of editorial comment elsewhere in this issue. The letter to the Times is as follows:

TO THE EDITOR OF THE TIMES.

SIR: Although I have retired from His Majesty's navy, many people have written and are still writing to me as to whether we should build small battleships or large. My opinion is that we should not be building either. My reasons for holding this opinion will be found in a letter I wrote some time ago, and a copy of which I inclose herewith.

I am, yours, truly,

PERCY SCOTT.

52 SOUTH AUDLEY STREET, *May 31.*

52 SOUTH AUDLEY STREET, GROSVENOR SQUARE W.,
December 15, 1913.

DEAR SIR: In reply to your letter I have seen the correspondence in the press suggesting building smaller battleships and also the arguments as to whether two or four battleships should be laid down in 1914.

If we have battleships, we must have thick armor on them to keep out the enemy's shot, and we must have speed to give a tactical advantage in bringing our fire on the enemy. These are axioms among naval officers. For battleships our nation and all other nations have very properly decided to have big ships, big guns, thick armor, and high speed.

The other question is, Are we in 1914 to build two or four battleships? The little navyites say two in order to save money; the big navyites say four to, as they think, save the country. If battleships are of use in saving the country, the little navyites are foolish and unpatriotic. If battleships are of no use, then the big navyites are wrong in putting the country to the expense of building four more; the real question to settle before even talking about building more battleships is, Are they of use or are they not? For some thousands of years armed vessels floating on the surface of the water have been used for attack and defense; these vessels to-day vary in size from a canoe containing one man armed with a spear to a 32,000-ton battleship armed with 15-inch guns, and these craft, whether large or small, all float on the water and are visible. In this island we depend upon our food supply coming from overseas; hence it has been necessary for us to have a large number of armed ships to protect our commerce and to safeguard our food supply. This protecting force or insurance of our country is called the Royal Navy and to-day consists of a large number of ships that swim on the water and can be seen and a few that swim under the water and can not be seen.

The introduction of the vessels that swim under water has, in my opinion, entirely done away with the utility of the ships that swim on the top of the water.

The functions of a vessel of war were:

Defensively:

1. To attack ships that come to bombard our ports.
2. To attack ships that come to blockade us.
3. To attack ships convoying a landing party.
4. To attack the enemy's fleet.
5. To attack ships interfering with our commerce.

Offensively:

1. To bombard an enemy's ports.
2. To blockade an enemy.
3. To convoy a landing party.
4. To attack the enemy's fleet.
5. To attack the enemy's commerce.

The submarine renders 1, 2, and 3 impossible, as no man-of-war will dare to come even within sight of a coast that is adequately protected by sumarines; therefore the functions of a battleship, as regards 1, 2, and 3, both defensively and offensively, have disappeared.

The fourth function of a battleship is to attack an enemy's fleet, but there will be no fleet to attack, as it will not be safe for a fleet to put to sea. This has been demonstrated in all recent maneuvers, both at home and abroad, where submarines have been employed, and the demonstration should have made us realize that, now that submarines have come in, battleships are of no use either for defensive or offensive purposes, and consequently building any more in 1914 will be a misuse of money subscribed by the citizens for the defense of the empire.

As regards the protection of our commerce on the high seas, we must examine who can interfere with it.

Turkey, Greece, Austria, and Italy must pass through the narrow Straits of Gibraltar to get at our commerce.

Cyprus, Malta, and Gibraltar, well equipped with aeroplanes to observe the enemy's movements, and submarines to attack him, would make egress from the Mediterranean very difficult.

Spain and Portugal have ports open to the Atlantic and could interfere with our commerce, but war with those countries seems very improbable, and they are not very far from Gibraltar.

France from Brest could harass our commerce, but if homeward-bound ships gave that port a wide berth and signaled by wireless if they were attacked, fast cruisers and submarines from Plymouth could be very soon on the spot.

Russia and Germany are very badly placed for interfering with our commerce; to get to the Atlantic they must either run the gantlet of the Channel or pass to the north of Scotland, and even if they get out they have nowhere to coal.

America could attack our commerce, but they would have a long way to come.

If by submarines we close egress from the North Sea and Mediterranean, it is difficult to see how our commerce can be much interfered with.

It has been suggested to me that submarines and aeroplanes could not stop egress from the Mediterranean; that a fleet would steam through at night. With aeroplanes that would report the approach of a fleet and 30 or 40 invisible submarines in the narrow Strait of Gibraltar, trying to pass through them at night would be a very risky operation.

Submarines and aeroplanes have entirely revolutionized naval warfare; no fleet can hide itself from the aeroplane, and the submarine can deliver a deadly attack even in broad daylight.

Under these circumstances I can see no use for battleships and very little chance of much employment for fast cruisers. The navy will be entirely changed; naval officers will no longer live on the sea, but either above it or under it, and the strain on their system and nerves will be so great that a very lengthy period of service will not be advisable; it will be a navy of youth, for we shall require nothing but boldness and daring.

In war time the scouting aeroplanes will always be high above on the lookout and the submarines in constant readiness, as are the engines at a fire station. If an enemy is sighted, the gong sounds, and the leash of a flotilla of submarines will be slipped. Whether it be night or day, fine or rough, they must go out to search for their quarry; if they find her she is doomed, and they give no quarter; they can not board her and take her as a prize, as in the olden days; they only wait till she sinks, and then return home without even knowing the number of human beings that they have sent to the bottom of the ocean.

Will any battleship expose herself to such a dead certainty of destruction? I say no.

Not only is the open sea unsafe; a battleship is not immune from attack even in a closed harbor, for the so-called protecting boom at the entrance can easily be blown up. With a flotilla of submarines commanded by dashing young officers, of whom we have plenty, I would undertake to get through any boom into any harbor and sink or materially damage all the ships in that harbor.

If a battleship is not safe either on the high seas or in harbor, what is the use of a battleship?

It has been argued to me that if a foreign power destroys our submarines we are at the mercy of his dreadnaughts. There can be no doubt about the accuracy of this statement, but submarines are difficult to destroy, because it is difficult to attack what you can not see. A power that sends out ships to look for and destroy submarines will be courting disaster; the submarine when in the water must be kept away from, not looked for.

Submarines will be hauled up on land, with arrangements for instantly launching them when required; they can only be attacked by airships dropping bombs on them.

What we require is an enormous fleet of submarines, airships, and aeroplanes, and a few fast cruisers, provided we can find a place to keep them in safety during war time.

It has been argued to me that our enemy will seize some island in the Atlantic, get some fast cruisers there, with plenty of coal, and from this island prey on our commerce. This is ridiculous; the moment we hear of it we send a flotilla of submarines towed by an Atlantic liner, she drops them just when in sight of the island, and she brings them back to England when they have sunk everything they found at the island.

If we go to war with a country that is within the striking distance of submarines, I am of opinion that that country will at once lock up their dreadnaughts in some safe harbor; we shall do the same; their aeroplanes and airships will fly over our country; they will know exactly where our ships are, and their submarines will come over and destroy anything and everything that they can get at.

We shall, of course, do the same; but an island with many harbors and much shipping is at a great disadvantage if the enemy has submarines.

I do not think that the importance of submarines has been fully recognized; neither do I think that it has been realized how completely their advent has revolutionized naval warfare. In my opinion, as the motor vehicle has driven the horse from the road so has the submarine driven the battleship from the seas.

I am, yours, truly, PERCY SCOTT.

A few weeks ago I read an Associated Press dispatch from London which said that the British Admiralty would hurry to completion such battleships as were in process of construction, but would lay down no more. This may be only a shrewd surmise. It can hardly be more, for the Admiralty certainly would not have its secrets cabled around the world, but it is so reasonable that I believe it.

Mr. Chairman, I protest against the expenditure of vast sums of the people's money for vessels of war that all men must now doubt the value of and great sailors say are obsolete. Let us make the country safe against attack by providing the best weapons, but let us avoid waste by refusing to buy any of even doubtful value. This of all times in our history is the one in which we can best afford to go slow in the matter of military equipment. [Applause.]

The great navies of the world are destroying each other. It is entirely within the range of possibility, Mr. Chairman, that before this House convenes again after it adjourns to-day the United States may be the greatest naval power in the world. If the commanders of these battleships have the courage and indiscretion to go out upon the high seas, it is entirely within the range of possibility that before the survivors would come limping back to their home port the Government of the United States will, I repeat, possess the greatest and most powerful Navy in the world. We can afford to wait. The interest of the people demands we should wait, Mr. Chairman, and I sincerely hope that this House will try to make a record for economy in its closing hours and that we will reduce the waste of public funds in the way that has been proposed by the committee. [Applause.]

[From the Cleveland Plain Dealer.]

THE "FORMIDABLE."

The sinking of British warships by mines and submarines is not merely a matter of luck. It has become apparent that the numerous British disasters are the result of a systematic campaign planned by the German naval authorities.

The losses are already so great that Great Britain can not ignore them as insignificant. Ship after ship has been destroyed by unseen agencies. Slowly, but with amazing system, the Germans are reducing the size of the navy which holds their own ships bottled in Prussian havens of refuge. And while the British are losing their ships the Germans are losing almost nothing. Disregarding the battle of the Falklands, which practically wiped out the German force beyond the North Sea, the naval performances of the war have been strongly to the advantage of the Germans.

Of course, the Germans have a better field for operations. The British ships are in the open and can be easily found by the prowling submarines and mine layers. British retaliation in kind is practically impossible, as the Germans do not come out into the open sea.

The war is certain to be long. If month after month the Germans continue to pick off the British ships the vast British superiority will eventually vanish. With anything like equality of forces the Germans will surely come out for battle. The virtual blockade of the German coast is very irksome, and as soon as a fight can be risked without utter foolhardiness the Germans will attempt to open their harbors.

[From the Washington Post, Thursday, October 29, 1914.]

JAPAN FOR DEFENSIVE—NAVAL BUDGET DOES NOT CONTEMPLATE EXPANSION—RUSSIA'S FAITH IN NIPPON—SO DECLARES MINISTER OF JUSTICE OZAKI IN OUTLINING PLAN TO CONSTRUCT ONLY SUBMARINES AND TORPEDO-BOAT DESTROYERS, "TO SET AT REST ANY SUSPICION SOME NAVAL POWER MAY HAVE."

NEW YORK, *October 28.*

The East and West News Bureau to-day issued the following statement received from Tokyo:

"Yukio Ozaki, minister of justice, who has heretofore consistently advocated the disadvantage of Japan's entering into the race of armament expansion with the great powers, has made a statement with regard to the navy and army budget to be presented before the coming Diet.

WOULD ALLAY SUSPICION.

"'In the next budget,' he says, 'no proposal for construction of any new battleship will be made. It will only provide for building of submarines and torpedo-boat destroyers, with the sole purpose of placing the defense of Japan's adjacent seas on a safer basis. This will set at rest any suspicion some naval power may have harbored toward Japan.'"

[From the Nashville (Tenn.) Banner, January 8, 1915.]

THE SUBMARINES.

In deep-sea warfare the battleships and armored cruisers will continue to play an important part, but it is already dangerous for such craft to approach anywhere near the shore of an enemy's country, and it will become more so with the improvement of submarines and experience in their use.

The present war has taught that fortifications avail nothing against big siege guns, and it has also impressed the lesson that the greatest dreadnaught is helpless against the insidious attack of the hidden submarine, of whose approach it has no warning until struck by its torpedoes.

These lessons are important ones for the United States, and should be applied to the question of adequate defense, now so much discussed. With big siege guns mounted on the forts that line our coasts, guns that will carry great shells many miles to sea, and a sufficient force of submarines, the landing of an invading army in this country would be such a hazardous task as no European nation will be willing to undertake.

It has been revealed beyond doubt that the British ship *Formidable* was sunk in the English Channel by a German submarine operating probably from one of the towns held by the Germans on the Belgian coast.

A British submarine went under the water out of reach of the forts on both shores of the Dardanelles, sunk a Turkish battleship, and returned by the same route unhurt. How could a transport ship with thousands of soldiers on board, however it might be convoyed, land on the coast of the United States if this country were well supplied with submarines?

It is the German submarines that now protect Bremen, Hamburg, and other German cities in reach of ships from attack. The British and French fleets combined greatly outnumber those of Germany, and under the old conditions they would long ago have assailed the sheltered position of the German fleet beyond Helgoland, about the Elbe's mouth, and in the entrance to the Kiel Canal. To do so with the submarines in use would be to court destruction.

If there had been no submarines and no mines, the first efforts of the British in the present war would have been the destruction of the German Navy. They would have followed it into secluded places, as Nelson did the French fleets at Trafalgar and in the Battle of the Nile.

The big ships will still be needed in the navies of the world for long-distance cruises and fighting in the open seas, but submarines will otherwise revolutionize naval warfare. They are all powerful for coast defense.

[From the Grand Rapids (Mich.) Press, January 2, 1915.]

VICTIMS OF THE SUBMARINE.

The dispatches rouse again the old query, "What's in a name?" Here is H. M. S. *Formidable* at the bottom of the channel, sunk with all on board by an invisible adversary. The *Formidable* lived up to its name only in looks and on paper; in the pinch it was far from formidable. Down went the battleship like an iron pail with a hole punched in the bottom.

The truly formidable craft in this war are the submarines, cheap and humble creations of marine architecture. They are not imposing in line of parade or decorated with fire-breathing names. They struggle through life as colorless units designated by number and letter. The navy departments require a card index to keep track of them. Then suddenly the *E–9* or the *B–11* humbly and dutifully chucks a Whitehead torpedo at a huge and haughty battleship, and Davy Jones gets a fresh companion.

This ought to demonstrate that battleships are costly investments. No doubt they are needed to deliver hard blows, but even at that the mortality among them is bound to be frightful. The larger they are the better targets they become for the stalking submarine. Too slow for scouting blockade work, battleships seem destined to go by the board. Unless the battleship demonstrates its usefulness very shortly it can hardly avoid the scrap heap.

The prospect is encouraging. Battleships are too expensive. The burden of building and maintaining them is too heavy for mankind to bear. Their development no doubt advanced the science of marine construction; but having learned how to build such huge warships, it is now high time to quit building them.

Possibly the world will now enter upon a new era of naval expansion, in which larger and larger submarines will be constructed. But as the submarine has limited the size of surface warships, so is it likely that some future development will operate to keep submarines within reasonable size.

[From the Philadelphia Saturday Evening Post.]

DOUBTFUL INVESTMENTS.

Battleships and forts are two of the costliest objects of military expenditure. This war has demonstrated that the latter, as a means of repelling land attacks, are a poor investment, and has indicated the probability that the day of the dreadnaught is closing.

The Germans have shown that under favorable conditions a submarine can strike and sink any vessel, and it is entirely probable that invention within the next five years will increase the submarine's power of attack much more than it will increase the dreadnaught's power of defense. With better lungs and eyes a submarine would stand an excellent chance of stopping any battleship now.

It is also possible that no battleship laid down now can keep afloat under the attack of aircraft 5 years hence. Within 5 months a big question mark has been written against military objects on which hundreds of millions of dollars have been spent during the last 20 years.

[From the London Morning Post.]

THE NAVAL POSITION—A NEW BATTLESHIP.

[From our naval correspondent.]

The naval and military policy of the United States is her own affair, and criticism of it might by our American friends be considered impertinent. There are, however, certain passages in President Wilson's message to the United States Congress—quoted in these columns yesterday—which, as they strangely resemble assertions with which we used to be familiar in this country, may be usefully considered by the British public. Of that part of the message dealing with the military aspect this is not the place to speak, except to remark that President Wilson affirms that a system of voluntary military training is "right American policy" and is "the only thing we can do or will do," and that if the President thinks that such a force can be raised "for mere health's sake" he is likely to be disappointed.

But, says the President, "a powerful Navy we have always regarded as our proper and natural means of defense." Very right. British politicians have for many years been saying the same thing, and saying it so often that they sometimes induced the public to believe that the mere affirmation of a principle was equivalent to possessing a powerful navy—so potent is the influence of iteration. But the President went on to ask a very pertinent question, which is being asked by a large number of people in this country to-day, "Who shall tell us now what sort of Navy to build?" The immediate answer is that there are many naval architects, both in America and this country, who are competent to supply the information required. The United States enjoys at present the inestimable privilege of being able to benefit by the experience of a naval war in which she is not herself engaged. The conclusion drawn by the President is that no type of vessel can survive the rapid evolution of new ships of war for 10 consecutive years, and he implies that it is therefore of no use to build any ships at all. The same argument has been frequently heard in the British House of Commons.

The United States shipbuilding program for the current year suggests that America is waiting on events, although with some apparent inconsistency, she is to build two battleships; for if there is one class of vessel more than another concerning which doubts are entertained, it is the existing type of battleship. It may, of course, be that the United States Navy Department will design a new type. That a new type must be evolved is certain. A battleship or a battle cruiser which can be sunk by mine and by submarine torpedo attack is deprived of one-half its value. The other half consists in its ability to meet the enemy's ships of the same class. When the submarine is sufficiently developed to enable it to operate upon equal terms with the battleship in respect of sea endurance and speed, the value of the present battleship will disappear altogether.

The CHAIRMAN. The gentleman from Texas asks to insert as part of his remarks some memoranda, and also to extend other parts of his remarks. Is there objection? [After a pause.] The Chair hears none.

The gentleman from Massachusetts [Mr. GARDNER] is recognized for one hour.

Mr. GARDNER. Mr. Chairman, I asked to be stopped when I get to the end of three-quarters of an hour, because I have agreed to yield 15 minutes to the gentleman from Kentucky [Mr. BARKLEY].

FLOATING HAS BEENS.

SLOWER THAN THE SLOWEST.

Mr. Chairman, the fastest battleship or armored cruiser which the United States has ever owned or owns to-day, built or building, is slower than the slowest of the nine big warships which fought last Sunday in the North Sea. The *Blücher*, which was sunk because she was 5 knots slower than her companions, was faster than any vessel in our Navy to-day, built or building, except the small fry like destroyers and scouts.

Three of the five British battle cruisers, the *Tiger*, the *Lion*, and the *Princess Royal*, carry more powerful guns than any which have ever been carried by an American ship, except the dreadnaught *Texas* and the dreadnaught *New York*. Great Britain has 26 battleships, built and building, which carry as powerful guns as the *Lion* and the *Princess Royal;* we have, built and building, just 6 ships which carry such powerful guns.

GIVE US FULL CREWS.

What we need most in the Navy to-day is men. We ought to have enough men to provide full crews for all our ships now in commission and in addition full crews for such of our ships "in reserve" as ought to be put in commission. There is not much sense in building ships and then putting them in cold storage for lack of crews to man them. Eighteen thousand men is what we need, say Admiral Badger and Assistant Secretary Roosevelt. In my worthless judgment 18,000 men added to the Navy to-day would help our defense more than 50,000 men added to the Army.

The Navy constitutes our first line of defense, and the harbor fortifications and the field Army constitute our second line of defense. If we are so anemic that we can not spare enough for both services, for heaven's sake let us spend the money on the Navy and let the Monroe doctrine go. But do not fool yourself into thinking that we can enforce the Monroe doctrine while we sit at home in our own easy chairs.

THE BUILDING PROGRAM.

I stand for the building program of the General Board of the Navy from turret to foundation stone. What has possessed the Naval Committee in times like these to cut that building program in two is one of those things nobody can find out.

Another thing nobody can find out is why Chairman PADGETT absolutely refused to summon before his committee as witnesses Admiral Knight, Admiral Winslow, Admiral Wainwright, and Admiral Brownson. Either Capt. Hobson or I asked for every one of those men.

What possesses you gentlemen to declare that two battleships this year is a long step toward building up the Navy? Do not you know that the General Board of the Navy has reported that two battleships must be begun in 1915 to take the places of the *Kearsarge* and *Kentucky*, which became antiquated this year? At the rate of speed you are running you will just manage to stay about in the same place. If you want to get ahead, you must run twice as fast as that. You must vote for four battleships this year, as the General Board of the Navy advises. By the way, I wish some one would tell me what, in heaven above or in the earth beneath, is the sense of creating a board of our very best Navy officers to give us advice if we are going to use their reports only as kindling for the furnace of our superheated and childishly self-complacent eloquence?

A NAVY CATECHISM.

I have taken the liberty of assuming that the Members of this Congress are as ignorant on the question of the Navy as I was after I had sat in this House for nearly 12 years. So I have prepared a series of questions and answers concerning certain matters which ought to be familiar to every legislator, but which were, as a matter of fact, entirely unfamiliar to me until four or five months ago:

Question. What is the General Board of the Navy?

Answer. It is an advisory board, composed of the very ablest officers of the Navy.

Question. What does the General Board advise?

Answer. Among other things, it advises us what ships to build to insure our safety, and it advises us how to man those ships.

Question. What do we do with the General Board's advice?

Answer. We chuck it in the wastebasket year after year.

Question. What does the General Board advise for a building program this year?

Answer. It advises 4 battleships, 16 destroyers, 3 fleet submarines, 16 coast submarines, 4 scout cruisers, 4 gunboats, 7 auxiliaries, and $5,000,000 for the air service.

Question. What are we going to do with the General Board's advice this year?

Answer. We are going to chuck it into the wastebasket, as usual. The committee has more than cut the program in two, except in the matter of submarines.

Question. Is the shipbuilding program which the General Board advises supposed to be sufficient to insure our safety against Great Britain?

Answer. By no means. It is supposed to be sufficient to insure our safety against any nation except Great Britain.

Question. Why is that?

Answer. I give it up.

Question. Are there any authentic figures published showing the standing of the United States Navy as compared with other navies?

Answer. The Bureau of Naval Intelligence in our Navy Department published on July 1, 1914, a table of the warship tonnage of the world's navies.

Question. What did that table show?

Answer. It showed the war tonnage of Great Britain to be 2,157,850 tons, of Germany to be 951,713 tons, of the United States to be 765,133 tons. If you count also the war vessels then building, France led the United States. In other words, in war vessels built and building we stood fourth.

Question. How many battleships of the first line have we?

Answer. We have 10 battleships of the first line, according to the official Navy Directory of January 1, 1915; but 2 of those battleships are slated for retirement to the second line on March 3, 1915.

Question. How many battleships does the Committee on Naval Affairs claim for the first line?

Answer. Twenty-one is the number given on page 39 of its report.

Question. How does this difference arise?

Answer. It is the same old story of counting your chickens before they are hatched. The committee's list includes four ships that are building and three more whose keels have never yet been laid. If we are lucky, they may be ready in 1918. Meanwhile others will be becoming obsolete. Furthermore, the committee has performed the feat of resurrecting the semi-obsolete *Kansas*, *Minnesota*, *Vermont*, and *New Hampshire* from the limbo of the second line and has restored them to the company of the dreadnaughts of the first line; which, by the way, is a sin, whoever did it.

Question. Is our Navy, man for man, as good as foreign navies?

Answer. No one knows. The Secretary of the Navy refuses to publish the figures for target practice.

Question. Is our Navy, ship for ship, as good as foreign navies?

Answer. No one knows. The Secretary of the Navy says so; but recently when an attempt was made to mobilize the 12 submarines which constitute the flotilla for the Atlantic coast it was found that only 1 of them could dive.

Question. Is our fleet prepared for war?

Answer. Against the Mexican fleet; yes. Against a formidable enemy; no. Secretary Daniels in his annual report has a subdivision, which he entitles "Proof of the preparedness of the fleet."

Question. Do other authorities agree with Secretary Daniels?

Answer. They do not. Assistant Secretary Roosevelt has testified that a dozen of our battleships and some 70 or 80 smaller craft are in "cold storage," and that they only can be got out in from 3 to 12 months' time.

Question. What do you mean by "cold storage"?

Answer. Either "in reserve" or "in ordinary" or "out of commission."

Question. What is the difference between a vessel "in reserve" and a vessel "in ordinary"?

Answer. "In ordinary" is scrap-heap common, and "in reserve" is scrap-heap preferred. In reserve a ship has from a quarter to one-half a crew aboard; in ordinary a ship has enough men on board to scare off the rats.

Question. Does anyone else disagree with Secretary Daniels?

Answer. Well, Admiral Fiske, the chief for operations of the fleet, testified that it would take five years to get the Navy in shape to meet a first-class power. Admiral Fletcher, commander of the North Atlantic Fleet, has just written a letter in which he says that there is "an alarming shortage" of 5,219 men and 339 officers aboard the 21 battleships in full commission under his command. Admiral Strauss says that every battleship in commission is "equipped with a short-range torpedo which may be considered obsolete for the battle fleet." Admiral Knight testifies that there is no unity of effort in the fleet. The General Board of the Navy testified last year that the absence of a definite naval policy has placed us in a position of inferiority which is getting more and more marked. Commander Stirling was rebuked by Secretary Daniels for calling attention to the shocking condition of the submarine fleet. Admiral Badger testified that we are 18,000 men short of what we ought to have to man our ships. Capt. Bristol testifies that we have only 12 Navy aeroplanes where we ought to have 200, and so it goes; and yet gentlemen talk of our "preparedness."

Well, what are we going to do about it? The immediate question before us is the building program for the next fiscal year. I favor the program recommended by the General Board of the Navy. The board's building program for the fiscal year, which begins on July 1, 1915, without a break from one end to the other is what I stand for.

Mr. CRISP. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Massachusetts yield to the gentleman from Georgia?

Mr. GARDNER. Yes; I yield to the gentleman.

Mr. CRISP. Will the gentleman kindly tell us what that program would cost?

Mr. GARDNER. I have no idea, and I do not care, so long as I believe it is a necessary expense.

WE NEED A COMMISSION OF INQUIRY.

I regard it as of very great importance to provide for a commission to examine into this whole question, to bring fresh minds to bear upon the problem—not men who are defending the work of their own departments, not legislators who are examining the results of their own committee decisions of the past. I hope to see a commission appointed, partly by the President, partly by the Speaker, and partly by the President of the Senate—a commission which will get together and consider the problem of our defense as a whole, not by piecemeal. At present we have eight different committees of the House and Senate which possess jurisdiction over the problem. Can anyone reasonably expect an intelligent solution under the circumstances? I want new blood; I want a commission which will send for the junior officers and get their real opinions. I want a commission which will send for enlisted men and say, "What is your view as to the length of time required to make an able seaman out of a green recruit? Do you believe that merchant-marine training is a step in the journey toward the making of a man-of-war's man?" I want to see Congress get out of this rut of sending, year after year, only for the bureau chiefs.

Mr. McKENZIE. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Massachusetts yield to the gentleman from Illinois?

Mr. GARDNER. Yes.

Mr. McKENZIE. Does the gentleman think that the recommendations of the commission he proposes would have any greater influence with Members of Congress than the board that we now have?

Mr. GARDNER. Yes; I do, because that commission would be watched by the American people from the start. The moment the American people know where to turn for accurate information our fight for an adequate Navy is won.

PEACE! PEACE!

Andrew Carnegie has given $10,000,000 as a fund with which to persuade the world that a flexible spine is a better defense than a mighty biceps, but he will never be able to persuade us Americans. Our people will never say "Amen" to such a doctrine as that. The doctrine is not new, by the way. Cobden, the great British apostle of free trade, preached on that text in England in the middle of the last century. I am going to read you from one of his letters written in 1842. Here is what he wrote:

It has struck me that it would be well to try to engraft our free-trade agitation upon the peace movement. They are one and the same cause.

Twenty-two years later Cobden and his school forced Lord Palmerston, the British premier, to abstain from helping out Denmark when Germany and Austria together combined to take away from her Schleswig-Holstein. Great Britain was prevented from interfering by the peace advocates, and what has happened? The Kiel Canal, which connects the North Sea with the Baltic, was cut across Schleswig-Holstein. That intersea canal could never have been so advantageously cut if Schleswig-Holstein had not been taken from Denmark, and the German fleet to-day would be still more seriously restricted in its operations. So you see that the mistakes of the British pacificists of the nineteenth century were but a prelude to the mistakes of the British pacificists of the twentieth century. Ever since the war, "which could not possibly occur," broke out Great Britain has been paying the bill for her lack of preparation against war.

How much time have I consumed, Mr. Chairman?

The CHAIRMAN. The gentleman has 15 minutes remaining.

INTERNATIONAL ARMIES.

Mr. GARDNER. I am going to say a word about international courts and international armies, because as fast as one dream is shattered the income of Mr. Carnegie's $10,000,000 is paying men to invent new dreams and believe them. When, last August, the dream that the bankers would not allow the European countries to have any war was shattered, and the dream that workingmen would not fight each other merely because they wore different uniforms was shattered also—the moment those dreams were dissipated a new vision was promptly dreamed. If I had $10,000,000 to spend in the business I could get people to dream dreams just as fast as Mr. Carnegie or anybody else can get them.

What is the new dream? An international court and an international army to enforce its decrees—no less.

Supposing that that international court were to decide that the Chinese and the Japanese ought to have equal rights with men of other nationalities to be admitted into this country—which, by the way, is by no means an unlikely decision for an international court to render—do you think that our workingmen would allow us to lie down and permit it? Supposing the international army and the international navy were obliged to attack us in order to force the admission of those Chinese and Japanese, would the American division of the international army fight with the rest of the international army or against it? And if it mutinied, what would be the future of that international army?

Supposing the international court decided that if we would not secure debts owed to foreign countries by Mexico and would not protect foreign investments or persons in Mexico the international army would have the right to do it in our stead—and that is also a very possible verdict—what would happen then? Would we stand by and see that international army invade Mexico? And if the international court decrees that it shall

do so, shall we have no need for an army and navy to resist the international army and the international navy?

My friends, the theory is growing up in the world that the various people of Europe have an inherent right to migrate to the United States or elsewhere if they so desire. You meet that theory in every sort of foreign publication. Our right to exclude immigration seeking to come to these shores has been challenged more than once. Do you suppose our people would bow to an international decision which denied our right to control immigration?

Supposing the doctrine of the single tax becomes an international doctrine, and that also is quite possible. Supposing the international court decides that no man, no nation, no body of men has the right to own the unearned increment of real estate, that no body of men has the right to an unqualified title to the land, for the land is not the product of man's work but the gift of God. Supposing the international court decides that way, are we to give the Ethiopian or the Hindu an equal share in the land for which our fathers toiled and fought? Supposing the international court should say, "You must not be selfish. You must admit immigrants from the overcrowded countries of Europe, and give them some of the wonderful prairie land in the Dakotas. The Lord never meant that land to be parceled out to pioneers in quarter sections. He meant it for the whole world." How about our quota of the international army, when the international court starts to enforce that decree?

Suppose that by some strange mischance two nations at the same time are dissatisfied with the international court. Suppose, for example, that a question arises which involves the right of passage through the Dardanelles or through the Suez Canal, where several nations' interests are vitally concerned. Suppose two powerful nations simultaneously refuse to submit to a decree by an international court on some question involving the commerce of the Mediterranean. The international army will have its hands full. It must ask for more troops, and the United States will be called on for additional men and more money. Do you believe that public opinion in this country would support any administration which involved the United States in a Mediterranean dispute in which we were not concerned? Ask yourselves whether you would vote the additional troops and the additional money for the international army.

WHY NATIONS FIGHT.

In arguing this question do not forget that besides the great question of trade there is another prolific cause of warfare between nations and between men, and that is insolence. A little international insolence will do more to bring on a war than any kind of a trade dispute which you can conceive of. I have not much question that in my own Commonwealth of Massachusetts during the epoch which preceded the Revolution the anger of the people of the town of Boston was aroused more by international insolence than by any question of taxation.

NAVAL DISARMAMENT.

After this war is over, assuming that the allies are successful, many people think that there will be a general disarmament, and that Great Britain will consent to forego her navy. Let us not forget that Great Britain is the only populous country which can not practically feed itself. Therefore it is essential to Great Britain's security that she take no risk of being shut off from her ocean trade. Will she be willing to trust the safety of her ocean trade to the good will of other nations? Such a notion seems to me to be fantastic; yet, of course, it is conceivable that Great Britain might consent to forego her navy if other nations did the same. That would be no true disarmament, however, for in case of war her ocean-going merchant marine is so enormous and so much more powerful than that of other nations that she could easily convert a part of her fleet into warships and still have plenty left for commerce.

GREAT BRITAIN'S TWO-POWER STANDARD.

Great Britain undertakes to have as big a navy as any two European nations put together. Are we forever to go ahead and ignore what that means? Why, recently I received a petition asking me to vote for a reduction in the estimates for our Navy. Why? Because, as my petitioner declared, everybody will be exhausted and unable to fight after this European war is over, except, perhaps, Great Britain, and she is friendly. Well, she is friendly to-day, but in international affairs it is just as it is in politics. Your friend of to-day is the man you may be fighting to-morrow. If we are going into a match against Great Britain in the business of whittling down navies, I should like to start to whittle on a good deal longer stick than we have at present. I do not relish whittling on a short stick while we let Great Britain whittle a little off her long stick.

As to successful nations being so exhausted that they can not fight, I do not believe it. We were never stronger in a military sense than we were in 1865 after four exhausting years of war. Moreover, the victor nations in this European war will, if they think best, provide themselves with funds by the exaction of war indemnities from the vanquished. I want this country to remain on friendly relations with the whole world; but I do not want this country to be at the mercy of any nation's friendliness. My sympathies are entirely with the allies; but, more than anything, I want this country to be in the position to feel toward Great Britain the way one strong man ought to feel toward another strong man. I do not relish the idea that our safety depends on the friendliness of our relations with Great Britain. I hate to feel that Great Britain could wipe our Navy off the seas, and yet I believe such is the case. I want a Navy so strong that our intercourse with that great power may be like the intercourse of two giants who respect each other's strong right arms. I do not any longer wish to see this country subscribe to the doctrine that we must look at Great Britain from the point of view of a man who says, "Well, I know if you choose to hit me over the head, there is nothing I can do about it."

ARE WE GOING TO WAR?

Now, do I expect war? Of course I do not expect war. No sensible man ever expects war, but sometimes war comes. If I go into a neighborhood where there is smallpox, I do not expect to catch smallpox, but I get vaccinated just the same. I hope I shall not run into anybody with my automobile this year, and I do not expect to do so, but I propose to carry some automobile insurance. I am mighty sorry, by the way, that I carried any insurance for the last few years, because I have not run into anybody, and I might as well have saved the money. You see, I am giving you the same line of reasoning as that of the gentleman who yesterday felicitated us on all the money we have saved by inadequate armament.

If we are going to have a Navy at all, let us have a real Navy, such as the General Board of the Navy recommends, and not make a halfway surrender to the torpor of anemia reenforced by the economies of the cheeseparers. If we propose to save our money and surrender to those dreams, let us openly admit it and stop humbugging the people by pretending that the Navy is ready for war.

INTERNATIONAL ARBITRATION.

It is all very well to say that we shall never have any trouble if we go ahead and mind our own business. We can not go ahead in this country minding our own business. We never have done so, and probably we never shall do so, because our business is interwoven with the business of other nations. So long as that is true we are bound to have international troubles from time to time. It is pretty nearly certain that we should not be willing to arbitrate those troubles if they were to become too acute. For instance, would this country have consented to arbitrate the question of the annexation of Texas, which brought on the Mexican War? If so, we should have lost our case in any international court.

Would the North have consented to arbitrate the question of slavery? The Missouri compromise and the compromise of 1850 were nothing else but arbitrations of that question, with the usual result of arbitrations, to wit, compromises.

Possibly we might have consented to arbitrate the questions in dispute with Great Britain in 1812; but what international court would have been satisfactory to both parties? All Europe was in arms for Napoleon or against him while our troubles with Great Britain were brewing. Would we have consented to arbitrate the question as to whether the Maine was blown up from the inside or the outside, or would we have consented to arbitrate the question of whether or not Spain must get out of Cuba?

Why, we would not have arbitrated any of those questions, except, possibly, our grievances during the five years preceding the War of 1812. If we had arbitrated the disputed issues of our various wars, we should in all probability have lost nearly every one of our contentions. That is to say, we should have lost them before judges whose verdicts reflected the educated world's opinion of their day. It seems strange to intimate that the educated world would have decided against the North in 1861, and yet that conclusion is almost irresistible to the student of history.

EXHIBIT A.

LETTERS FROM GENERAL BOARD OF NAVY, 1913, ON PROPOSED CONSTRUCTION AND NAVAL POLICY.

From: President General Board.
To: Secretary of the Navy.
Subject: Proposed construction, 1915.

The General Board, in compliance with the duties imposed upon it by article 167, paragraph 3, section 7, of the United States Naval Regula-

tions, 1913, submits to the department the following advice and recommendation upon matters coming within the purview of that paragraph:

Under corresponding paragraphs in preceding regulations the General Board has previously considered the needs of the fleet in relation to adequate requirements for the national defense, and presented in its memorandum G. B. No. 420–422, of September 25, 1912, and again in its letter G. B. No. 445, of March 28, 1913 (copies of which are attached), statements, giving reasons therefor, showing the minimum yearly construction for the years 1913–1917, inclusive, necessary to insure a fleet in 1920 of measurable equality with the fleets of the principal foreign powers.

The General Board as the responsible naval advisers of the Secretary under the regulations referred to above again expresses the conviction that the number and types of vessels recommended in these papers is a concrete expression of what must be considered at this time an adequate Navy for defensive purposes only.

The General Board, adhering to these convictions and recommendations previously made, proposes as the building program to be recommended by the department to Congress at the second session of the Sixty-third Congress: Four battleships, 16 destroyers and 1 destroyer tender, 8 submarines and 1 submarine tender, 2 oilers, 2 gunboats, 1 transport, 1 supply ship, and 1 hospital ship.

The above construction of vessels is submitted in their order of importance.

The General Board further invites particular attention to the fact that the four battleships recommended will not constitute a numerical increase in the battleship strength of the fleet, since these vessels would simply replace the *Indiana*, *Massachusetts*, and *Oregon*, authorized in 1890, and the *Iowa*, authorized in 1892, all of which vessels should be withdrawn, even from the reserve battle line, before the four battleships recommended can be completed.

The military necessity for the lesser units, auxiliaries and gunboats, is set forth fully in the attached memorandum; and to this may be added the statement that frequently in times past and at the present time it has been necessary to detail battleships for duty ordinarily performed by gunboats, at the expense of the military efficiency of the fleet.

While not coming directly under the duties imposed by paragraph 3, section 7, of the regulations, the General Board feels it its duty to also invite the attention of the department to the present, and increasing, inadequacy of docking facilities for the fleet. This inadequacy will increase and become more accentuated on the completion of the ships now building and projected. The board is of the opinion that in the event of war the country would be in a most serious situation, especially in the Pacific, from its lack of docking facilities, and urgently recommends that at least two docks of a capacity to take the largest ships projected be authorized at the coming session of Congress.

GEORGE DEWEY.

From: President General Board.
To: Secretary of the Navy.
Subject: Naval policy.

1. The General Board invites the attention of the department to the fact that in the creation and maintenance of the fleet as an arm of the national defense there is not now and has never been in any true sense a governmental or departmental naval policy. The fleet as it exists is the growth of an inadequately expressed public opinion; and that growth has followed the laws of expediency to meet temporary emergencies and has had little or no relation to the true meaning of naval power, or to the Nation's need therefor for the preservation of peace, and for the support and advancement of our national policies. The Navy, like our foreign policy and diplomacy, of which it is the arm and measure of strength, is broadly national, and has no relation to party or parties; and hence, should not be affected by changes of administration; but should develop and grow with the national growth on a fixed policy that should keep it equal to the demands that will be made upon it to support our just policies on challenge, and to preserve peace.

2. The General Board has from the time of its organization in March, 1900, studied the question of naval policy from the point of view of the Nation's need, free from other influences, and having in mind solely the preservation of peace and the maintenance of the Nation's prosperity as it develops along the lines destiny has marked out, and according to the policies that have become national. In 1903 the General Board formulated its opinion as to what the naval development of the Nation should be, and established a policy for itself which it has consistently followed since, making recommendations to the department in accordance therewith from year to year. This policy—as a policy—has remained a General Board policy only, without adoption by the Government or even by the Navy Department, and without being understood by the people or Congress.

In the opinion of the General Board, any rational and natural development of the Navy looking to the continuance of peace and the maintenance of our national policies demands the adoption of and the consistent adherence to a governmental naval policy founded on our national needs and aims. To give life to such a policy requires the support of the people and of Congress; and this support can only be obtained by giving the widest publicity to the policy itself and to the reasons and arguments in its support, and taking the people and the Congress into the full confidence of the Government, inviting intelligent criticism as well as support.

3. The General Board does not believe the Nation stands ready to abandon or modify any of its well-established national policies, and repeats its position that the naval policy of the country should be to possess a fleet powerful enough to prevent or answer any challenge to these policies. The absolute strength necessary to accomplish this is a question that depends upon the national policies of prospective challengers and the force they can bring against us, and, hence, is relative and varies with their naval policies and building program.

4. The General Board believes that only a lack of understanding of these views by the people at large prevents the adoption of a consistent naval policy; and recommends to the department a system of extended publicity in all matters relating to naval policy, acting through patriotic organizations, the press, or by whatever means a knowledge of the naval needs of the Nation may be brought home to the people of the country, with the meaning and reasons for them. The General Board believes that an understanding by the Nation of the Navy's rôle as a guarantor of peace and an upholder of those doctrines and policies which have become a part and parcel of our national existence will fix a naval policy that will meet those needs.

5. What that policy should be is stated broadly in paragraph 3—the building and maintenance of a fleet powerful enough to prevent or answer any challenge to our national policies. To arrive at any concrete formulation of a naval policy, for recommending to the department for presentation to Congress and the country, the General Board invites attention to the following fundamental facts:

(a) The "power" of the fleet consists of two elements, its personnel and its matériel.

(b) Of these two elements the personnel is of the greater importance.

(c) The measure of the matériel portion of a fleet's power is expressed in the number of its first-line battleships.

(d) The life and continued power to act of these first-line battleships are dependent on the assistance of a number of smaller fighting units of the fleet proper and of a number of auxiliaries in recognized proportion to the battleships.

6. From these fundamental facts two principles follow:

(1) That, in any consideration of naval policy to arrive at a fleet of a power suited to the Nation's needs, questions of personnel and matériel must go hand in hand, and the two must expand and grow together until the needed power is attained.

(2) That the basis of the matériel side of the fleet is the battleship of the first line, and that this basis, for life and action, requires to be supplemented by its military assistants—destroyers, scouts, submarines, aeroplanes—and by its auxiliaries—fuel ships, supply ships, repair ships, etc.—in proper proportionate numbers.

7. The General Board in its letter No. 420–422, of October 17, 1903, expressed an opinion of what the strength of the Navy should be in 1920, based on the second of the principles above stated, and placed the number of ships of the line which should form the basis of the fleet at 48. In paragraph 9 of the same letter it formulated the first principle in these words:

"These recommendations would be incomplete unless the General Board invited your attention to the futility of building vessels for the defense of the country without providing the personnel to man them. Whenever appropriations are made for new vessels the number of officers and enlisted men should be increased in due proportion."

From year to year, since the formulation of those opinions in 1903, the General Board has consistently recommended a building program based on the policy of a 48-battleship strength in 1920, with necessary lesser units and auxiliaries, and these recommendations have varied only in the lesser units of the fleet, as developments and improvements have varied the relative value of those lesser units and the auxiliaries.

8. These recommendations of the board have been made in the pursuance of a fixed and definite "policy" adopted by the board for its guidance after mature and deliberate consideration of all the elements involved and after a careful estimate and forecast of the future as to what would be the naval development of those foreign countries with which conflict might be probable, and what should be our own development to insure peace if possible, or superiority of force if war should be forced upon us. Expressed in concrete words, the "policy" of the board has been to provide the Nation with a fleet equal or superior to that of any probable enemy as a guarantor of peace, and its forecast was that a fleet of 48 battleships, with the attendant lesser units and auxiliaries, ready for action by 1920 would accomplish this result.

9. The forecast of the board with regard to naval development in other countries has proved remarkably accurate. The absence of any definite naval policy on our part, except in the General Board, and the failure of the people, the Congress, and the Executive Government to recognize the necessity for such a policy has already placed us in a position of inferiority which may lead to war, and this inferiority is progressive and will continue to increase until the necessity for a definite policy is recognized and that policy put into operation.

10. The General Board, while adhering to the policy it has consistently followed for the past 10 years, and believing that the naval needs of the Nation call for a fleet of 48 ships of the first line in 1920, with the attendant smaller units and auxiliaries in proper proportion, all with trained personnel, officers and enlisted men, active or reserve, recognizes conditions as they exist and as clearly set forth in its memorandum of September 25, 1912, and the futility of hoping or expecting that the ships and men its policy calls for will be provided by 1920. The board does believe, however, that this result may be eventually attained by the adoption by the Government of a definite naval policy and the putting of it before Congress and the people clearly and succinctly. By this method responsibility for any rupture of our peaceful relations with other nations due to our naval weakness, or any national disaster in war due to the same cause, will be definitely fixed. The General Board believes that the people, with full understanding of the meaning of and the reasons for naval power, will instruct the legislative branch of the Government, and that that branch, with the same understanding, will provide the means. By the adoption and advocacy of a clearly defined, definite policy the department, with whom the responsibility first rests, will have done its part and placed the responsibility with the people and the legislative branch of the Government. If the people, having been given the meaning of and the reasons for naval power, fail to instruct the Congress, the responsibility and the resulting material loss and national humiliation rests upon them; and if the Congress, having been instructed by the people, fails to provide the means, then the responsibility is theirs.

11. In this connection, and for the furtherance of the establishment and carrying out of a definite naval policy, the General Board invites especial attention to the proposed formation of a council of national defense. The formation of such a body would, in the opinion of the board, compel the adoption of a definite naval policy and assure the department of the aid of all other branches of the Government in carrying it out. Further, all other branches of the Government, more especially the legislative, would become instruments for disseminating knowledge of the naval needs of the Nation among the people in justifying the policy, thus giving the people that understanding which is needed for earnest support.

12. The General Board recognizes that full understanding and complete support from the people and from Congress can not be obtained immediately, nor in a few weeks or months, or possibly years. It believes, however, that it can eventually be obtained, and that the best and surest method of doing this is for the department—which has knowledge and understanding of the questions involved—to adopt and maintain consistently from year to year a fixed governmental policy, taking the Congress and the people fully into its confidence, and disseminating generally through the press, through patriotic societies and organizations, and through any other available agencies its reasons and arguments in support of its policy.

13. As a basis for this governmental policy the General Board recommends:

(a) That the fleet shall consist of 48 battleships of the line, with the appropriate number of lesser units and auxiliaries to complete and maintain a fighting whole.

(b) That the personnel of the Navy, officers and enlisted men, shall grow and keep pace with the matériel fleet; and there shall at all times

be on the lists, active and reserve, a sufficient number of officers and men to fully man the existing fleet for war.

(c) That the full strength of the fleet given in (a) shall be attained at the earliest date practicable—by 1920 if possible. That, pending the full cooperation of the people and the Congress in carrying out this program, and as long as the full yearly increase the program calls for can not be obtained, the new construction each year shall be recommended in the proportions based on battleships to keep the fleet a complete fighting whole.

14. As a basis for departmental recommendation to Congress to carry out subhead (c) of the preceding paragraph, the General Board submits, as the results of its studies pursued since 1900, the following proportions of the various units needed for a complete fighting fleet: To 8 battleships there should be 32 destroyers, 16 submarines, 1 ammunition ship, 2 destroyer tenders, 4 fuel ships, 1 hospital ship, 1 repair ship, 2 submarine tenders, 1 supply ship, 1 transport. To these, with the present state of development, should be added at least 16 aeroplanes. With these proportions, to carry out the policy in full, there would be required to be laid down each year until the full fleet of 48 battleships was completed, 4 battleships, 16 destroyers, 8 submarines, 8 aeroplanes, and 6 auxiliaries, the particular kind of auxiliaries to be laid down each year to be of the character to keep the auxiliary fleet in the proportions given above.

(NOTE.—Until a sufficient number of aeroplanes for the existing fleet are obtained, the board recommends that no limitation be placed on the number to be built each year, since the aid for material states that the funds are available.)

15. The General Board recommends that the department place this program before Congress yearly until 1920, in pursuance of its definite policy.

PERSONNEL.

16. The immediate preceding paragraphs have treated of a naval policy in relation to material only. In the opinion of the board a naval policy in relation to personnel is of even greater importance, as all history teaches us that the greatest element of success in all enterprises, and more especially in the enterprises of war, lies in the personnel conducting the enterprise and its morale.

17. The General Board has from its incipiency given careful consideration to this question and made recommendations to the department from time to time. These recommendations have varied in details at times to meet conditions existing at the time, but have all been founded on the same fundamental ideas, which are expressed in the citation made in paragraph 11 of this letter from General Board letter No. 420–422, of October 17, 1903. The same idea is expressed in paragraph 4 of General Board letter No. 58, of February 9, 1903, which reads:

"4. The General Board further strongly recommends, as an essential part of any intelligent continued naval policy, that whenever an appropriation is made for an increase in the material of the fleet, the corresponding indispensable increase in personnel of officers and men be simultaneously provided for."

18. In the opinion of the General Board the question of personnel is more urgent now than at any time in the history of the Navy; and the board believes that the adoption and continued advocacy from year to year of a regular policy by the department of expansion and regulation of the personnel coequal with the expansion of the fleet will result in eventual success.

19. The General Board recommends as a basis for such a policy:

(a) That the personnel of the Navy, officers and enlisted men, including the active list and an established and trained naval reserve, shall at all times be sufficient to fully man the entire fleet for war.

(b) That the officers and enlisted men of the Navy on the active list shall bear a definite fixed ratio to the total displacement of the fighting units of the fleet.

(c) That the officers of the active list of the Navy shall be distributed in the various grades in a ratio that will insure the best efficiency of the fleet, by having in all grades the proper proportion of numbers for the duties of the grade, and so regulated as to bring each officer to the grade with sufficient experience and at the age when best equipped to perform the duties of the grade.

20. The General Board in this letter has taken up the question of naval policy in relation to the fighting fleet and its creation only and has not considered lesser adjuncts, as gunboats, tugs, etc.; nor has it considered the question of policy from the point of view of naval bases, stations, docks, and maintenance. The General Board does not consider that such lesser adjuncts as gunboats, tugs, and naval police duties enter into the broad question of a national naval policy and, hence, need not be discussed in a letter on policy. The broad question of the maintenance and uses of the fleet, however, which includes bases, stations, and docks, is coextensive with the creation of the fleet, and a national naval policy in relation to them will be discussed in another letter.

GEORGE DEWEY.

EXHIBIT B.

REPORT OF THE GENERAL BOARD OF THE NAVY, 1914.

DEPARTMENT OF THE NAVY,
GENERAL BOARD,
Washington, November 17, 1914.

To: Secretary of the Navy.
Subject: Increase of the Navy; building program and personnel, 1916.
Reference: Department's indorsement 8557–146: 11, September 22, 1914.

Article 167, paragraph 3, United States Navy Regulations, 1913, reads as follows:

"It (the General Board) shall consider the number and types of ships proper to constitute the fleet, the number and rank of officers, and the number and rating of enlisted men required to man them, and shall advise the Secretary of the Navy respecting the estimates therefor (including such increase as may be requisite) to be submitted annually to Congress."

The General Board, in compliance with duties thus imposed upon it by this and similar paragraphs in preceding regulations, has from year to year recommended to the department a building program and personnel legislation that would, in its opinion, produce a fleet that would be adequate to the needs of the Nation.

2. In view of conditions now existing, the General Board has given particularly careful thought to its recommendations for the coming fiscal year. To make its position clear and place before the department the full meaning of its recommendations, the General Board considers it necessary to review at length all that has preceded these recommendations and led up to them.

CONSISTENT POLICY OF GENERAL BOARD SINCE 1903.

3. In its letter No. 420–2, of October 17, 1903, the general board, after mature consideration of our national policies and interests, and of those of the other leading naval nations of the world, expressed its opinion of what the ultimate strength of the United States Navy should be, and recommended a program for the completion of the Navy to the strength then believed adequate by 1919.

4. The basis of the fleet recommended was 48 battleships; and lesser units and auxiliaries were recommended in the proportions believed to be best to complete a fighting fleet, in the light of the best information obtainable at that time. The influence of the progress made by new inventions and the discovery of new ideas in the development of the lesser units have changed the proportions and character of some of these lesser units; and have, to that extent, modified the original recommendations of the General Board. But the fundamental fact that the power of a fleet is to be measured by the number and efficiency of its heavy fighting units, or battleships, has remained unchanged. The recommendations of the General Board heretofore submitted have consistently followed a policy looking to the creation of a fleet founded on a battleship strength of 48, in accordance with its recommendation made in 1903, of what it considered an adequate fleet to meet the naval needs of the Nation and be an adequate insurance against aggression.

5. The General Board believes that these recommendations made from year to year have been both misunderstood and misconstrued in some quarters. An impression prevails that the General Board has always recommended an annual continuing building program of four battleships, with accompanying lesser units and auxiliaries. A brief analysis of the recommendations made by the General Board, beginning with the original formulation of its policy in 1903, to the present time, will demonstrate the error of this impression, and show that the recommendations made were consistent and contemplated the creation of a battleship fleet of 48 vessels by 1919, but did not involve a constant and fixed program of building 4 battleships a year.

BATTLESHIPS.

6. In October, 1903, the Navy had 10 battleships completed and 14 more either under construction or authorized. The last of these 14 was to be completed by 1907. In view of this condition, and to complete a fleet of 48 battleships by 1919, the General Board, in paragraph 8 of its letter of October 17, 1903, recommended:

"8. To sum up, the General Board recommends that Congress be requested to authorize for the present a yearly building program, not limited by the amount appropriated last year, composed of the following ships: Two battleships, etc."

To this letter was appended a table, quoted below, showing what the condition of the Navy would be in battleships, year by year, to 1919, starting with the 10 completed and 14 already building or authorized, if the recommendation of the General Board for a two battleship per year program from 1904 were followed:

Year.	Battleships.		Year.	Battleships.	
	Completed.	Authorized.		Completed.	Authorized.
1903	10	14	1912	34	2
1904	12	2	1913	36	2
1905	17	2	1914	38	2
1906	19	2	1915	40	2
1907	24	2	1916	42	.....
1908	26	2	1917	44	.....
1909	28	2	1918	46	.....
1910	30	2	1919	48	.....
1911	32	2			

7. It will be seen from the foregoing table that the General Board's recommendation provided for a two-battleship program consistently pursued from 1904 to 1915 to provide a fleet of 48 battleships by 1919. In these recommendations replacements were not considered, nor had limits of age been placed on battleships. The fundamental idea, however, was a 2-battleship program to provide a fleet of 48 battleships by 1919. A larger program to hasten the completion of the fleet had been considered, but had been rejected because it was believed a fleet of 48 battleships by 1919 would answer all needs, in view of the known building programs of other countries.

8. In pursuance of this policy the General Board, as stated above, began its yearly recommendations by asking that two battleships be authorized in 1904. The following table shows the yearly programs recommended. The reasons for an increase over two battleships annually are given in succeeding paragraphs:

Year.	Battleships.		Year.	Battleships.	
	Recommended by General Board.	Authorized by Congress.		Recommended by General Board.	Authorized by Congress.
1904	2	1	1909	4	2
1905	3	2	1910	4	2
1906	3	1	1911	4	2
1907	2	1	1912	4	1
1908	4	2	1913	4	1

9. The recommendation for the laying down of two ships in 1904 failed of enactment, and only one was provided for, leaving the program for the creation of a 48-battleship fleet by 1919 one ship in arrears. To make this deficiency good, and maintain the general program, one additional ship, or three in all, were recommended for the 1905 program. Two were authorized, still leaving a deficiency of one for the two years 1904 and 1905. To provide for this, three were again recommended for the 1906 program. In 1906 and again in 1907

one ship only was authorized, leaving by 1908 the general program three ships in arrears. To begin making this deficiency good the General Board for the 1908 program recommended the authorization of four ships. From 1908 to 1911, inclusive, Congress followed the original program and provided for two battleships yearly. The accumulated shortage of three ships still remained, however, during these four years, and the General Board recommended year by year the laying down of four ships to begin making this good, since each succeeding year found the shortage still there.

10. In 1910 a new element entered, not considered in the original program. The fleet of 48 battleships contemplated in the program put forward in 1903, on a two-battleship per year building program, to be ready by 1919, contained all battleships then borne on the list, beginning with the *Indiana*. Experience had not yet in 1903 demonstrated the effective life of battleships, nor had any exhaustive study been made of it. Beginning with the program recommended for 1911 in General Board's letter No. 420–2, of May 24, 1910, this matter was seriously taken into consideration, since experience had shown that the three older battleships, the *Indiana, Massachusetts,* and *Oregon,* then 20 years old from date of authorization, were approaching the limit of their effective life. Further studies from our own experience and from that of other navies and from practice abroad convinced the General Board that the effective life of battleships is about 20 years from time of completion; and that hence, to maintain a fleet at a given strength, it is necessary to lay down a replacement ship 20 years from the time of the laying down of the original ship. Hence, replacement ships for the *Indiana, Oregon,* and *Massachusetts* should have been laid down in 1910, for the *Iowa* in 1912, and new replacement ships should be begun for the *Kentucky* and *Kearsarge* in 1915. These matters, together with the shortage of three battleships already existing in 1911, were taken into consideration by the General Board in making its recommendations for a four-battleship program in both 1912 and 1913. One battleship only was authorized in each of these two years, increasing the shortage in the original program to five, without considering replacement ships for the *Indiana, Oregon, Massachusetts,* and *Iowa,* already overdue for authorization.

11. The preceding analysis shows clearly the error in the prevailing impression that the General Board has heretofore advocated a navy based on a continuous building program of four battleships a year, and proves that up to the present it has advocated continuously and consistently a program to produce a fleet of 48 battleships by 1919. This would have called for, considering replacements, a general two-battleship program with a third added every three years. The number of battleships called for by this policy—48—and the date set for their completion—by 1919—were fixed by a calm and logical review of the policies and aims of the Nation and the known laws and prospective developments and aims of other countries, and the policy was to provide and maintain at all times a fleet equal to or superior to that of any nation likely to challenge our policies.

12. The 1903 program given in paragraph 6 of this letter, as modified by the replacement policy in 1910, called for at this date, November, 1914:

(a) Effective battleships completed and ready for service less than 20 years old from completion	38
(b) Battleships under construction	7
(c) Battleships authorized in 1914	2
Total	47

13. The actual situation of the fleet as relates to battleships at this date, November, 1914, is as follows:

(a) Effective battleships completed and ready for service less than 20 years old from completion (since the sale of the *Mississippi* and *Idaho*)	30
(b) Battleships under construction	4
(c) Battleships authorized in 1914	2
(d) To replace *Mississippi* and *Idaho*	1
Total	37

14. This shows that we are now deficient 10 battleships, built, building, and authorized, from that contemplated in the 1903 program.

15. The General Board has made the foregoing brief analysis to set forth clearly the reasons for and meaning of all the recommendations it has made for battleship construction up to this time; and to show the conception under which the General Board has acted in the performance of its duty, under the regulations, as the responsible advisers of the Secretary in all matters relating to the strength of the fleet and the number and character of the units composing it. In the matter of battleships, the final result of all recommendations, and of all action taken thereon up to this date, has been to produce a completed battle line of eight units less than the General Board believed to be safe, and with two units less under construction and authorized than was needed to continue the expansion of the fleet to the strength laid down in the policy.

16. The General Board believes the policy it has consistently advocated for the production of an adequate Navy is to the best interests of the country, and that any Navy less than adequate is an expense to the Nation without being a protection. It can not, therefore, too strongly urge the adoption by the Government of a policy looking to the making good of the deficiencies of the past and the building up of this arm of the national defense until it becomes equal to the task that war will put upon it. That point will not be reached until the Navy is strong enough to meet on equal terms the strongest probable adversary.

17. The wisdom of such a policy is well illustrated by recent events, and is reenforced by the teachings of all history. For a review of the history of all ages will show that no nation has ever created and maintained a great over-sea commerce without the support of sea power. It will further show that trade rivalry, which is the active expression of the most universal of all human traits—desire for gain—has been a most fruitful cause of war; and, when the clash has come, the commerce of the weaker sea power has been broken up and driven from the seas. That has been true for all time, and is true to-day; and has a particular bearing on the United States at the present time, when such strenuous efforts are being made to build up a national merchant marine and extend our foreign commerce.

18. In the matter of national defense, history teaches still another great lesson particularly applicable to ourselves. That is, that a nation, insular in character or separated by bodies of water from other nations, can and must rely on its Navy—when that Navy is adequate—for protection and freedom from invasion and may keep its own soil free from all wars other than civil. The United States is one among the few nations of the world that occupy this happy position, being insular in so far as any nation capable of making serious war upon us is concerned, since any opponent that need be considered must come to us from across the seas. Our main defense and protection from invasion must, therefore, always rest with the Navy, which must ever remain our first and best line of defense. This defense, unless adequate, is impotent; and, as before stated, adequacy is not reached until the Navy is strong enough to meet on equal terms the navy of the strongest probable adversary.

19. In the matter of battleships the General Board remains of the opinion that it has always held, that command of the sea can only be gained and held by vessels that can take and keep the sea in all times and in all weathers and overcome the strongest enemy vessels that may be brought against them. Other types are valuable and have their particular uses, all of which are indispensable, but limited in character. But, what has been true throughout all naval wars of the past, and what is equally true to-day, is that the backbone of any navy that can command the sea consists of the strongest seagoing, sea-keeping ships of its day, or, of its battleships. The General Board recommends, therefore, in the light of all the information it has up to this present date, that the development of the battleship fleet be continued as the primary aim in naval development, and that four of them be authorized in the 1916 program.

DESTROYERS.

20. For the general purposes of war on the sea the General Board has placed the destroyer as the type of warship next in importance to the battleship, and has based the programs it has recommended on that idea. After very mature consideration of all the elements involved and a study of the results obtained from fleet maneuvers, the General Board came to the conclusion that a well-balanced fighting fleet, for all the purposes of offense and defense, called for a relative proportion of four destroyers to one battleship. Hence for every battleship built four destroyers should be provided. The General Board still holds this opinion and, therefore, recommends that 16 destroyers be provided in the 1916 program.

FLEET SUBMARINES.

21. For several years past all leading navies have been striving to perfect a submarine of an enlarged type with habitability, radius, and speed sufficient to enable it to accompany the fleet and act with it tactically, both in offense and defense. Our designers and builders have been devoting their efforts to the same end and are now ready to guarantee such a type and one such vessel was provided for in the appropriation act of 1914. The great difficulty in the past in the production of this type has been the lack of a reliable internal-combustion engine of the requisite power to give the necessary speed. This difficulty has been overcome, and the General Board is assured that engines have been designed and fully tested that will meet the requirements, and the builders stand ready to guarantee the results. The value of such a type in war for distant work with the fleet can hardly be overestimated, and the General Board recommends that three be provided in the 1916 program. These, with the one already authorized, will form a fleet submarine division of four for work with the fleet, and be the beginning of a powerful arm of the fleet.

COAST SUBMARINES.

22. For the submarine for coast defense and for occasional acting with the fleet in home waters, the General Board sees no necessity for boats of as great speed and size as the later designs, made before the seagoing submarine was believed to be in sight. In fact, any increase of size is detrimental, in that it increases draft and debars them from shallow waters; and any increase of speed in this class of submarines is not needed, and is gained at the expense of other desirable qualities. Between the coast-defense submarine and the submarine of sufficient size, radius, habitability, and surface speed to accompany and act with the fleet tactically, the General Board sees no necessity in naval warfare for an intermediate type. It is therefore recommended that the submarines for the coast work be of the general characteristics already prescribed in General Board letter No. 420–15, of June 10, 1914, and that 16 of these be provided for in the 1916 program.

SCOUT CRUISERS.

23. In the struggle to build up the purely distinctive fighting ships of the Navy—battleships, destroyers, and submarines—the cruising and scouting element of the fleet has been neglected in recent years, and no cruisers or scouts have been provided for since 1904, when the *Montana, North Carolina, Birmingham, Chester,* and *Salem* were authorized. This leaves the fleet peculiarly lacking in this element so necessary for information in a naval campaign, and of such great value in clearing the sea of torpedo and mining craft, in opening and protecting routes of trade for our own commerce, and in closing and prohibiting such routes to the commerce of the enemy. The General Board believes that this branch of the fleet has been too long neglected, and recommends that the construction of this important and necessary type be resumed. For the 1916 program it is recommended that four scout cruisers be provided.

AIR CRAFT.

24. The General Board in its indorsement No. 449 of August 30, 1913, and accompanying memorandum brought to the attention of the department the dangerous situation of the country in the lack of air craft and air men in both the naval and military services. A résumé was given in that indorsement with the accompanying memorandum of conditions in the leading countries abroad at that date, showing the preparations being made for air warfare and the use of air craft by both armies and navies, and contrasting their activity with our own inactivity. Certain recommendations were made in the same indorsement looking to the beginning of the establishment of a proper air service for the Navy.

25. The total result of that effort was the appointment of a board on aeronautics October 9, 1913. That board made further recommendations, among them the establishment of an aeronautic school and station at Pensacola and the purchase of 50 aeroplanes, 1 fleet dirigible, and 2 small dirigibles for training. At the present time, more than a year later, the total number of air craft of any kind owned by the Navy consists of 12 aeroplanes, not more than 2 of which are of the same type, and all reported to have too little speed and carrying capacity for service work.

26. In view of the advance that has been made in aeronautics during the past year and the demonstration now being made of the vital importance of a proper air service to both land and sea warfare, our present situation can be described as nothing less than deplorable. As now developed, air craft are the eyes of both armies and navies, and it is difficult to place any limit to their offensive possibilities.

27. In our present condition of unpreparedness, in contact with any foe possessing a proper air service, our scouting would be blind. We

would be without the means of detecting the presence of submarines or mine fields or of attempting direct attack on the enemy from the air, while our own movements would be an open book to him. The General Board can not too strongly urge that the department's most serious thought be given to this matter, and that immediate steps be taken to remedy it, and recommends that Congress be asked for an appropriation of at least $5,000,000, to be made available immediately, for the purpose of establishing an efficient air service.

GUNBOATS.

28. The Navy is very deficient in gunboats. Though the Navy list gives 50 names under "gunboats," only a very limited number of these 50 are in a condition to be available for general service. Some, like the *Villalobos*, *Callao*, *Samar*, *Sandoval*, etc., are old boats of little value taken over from Spain, of from 400 to 250 tons and less. Of the others, with the exception of the light-draft river gunboats *Monocacy* and *Palos*, and the *Sacramento*, no gunboats have been authorized since 1902. Seven are at present assigned to Naval Militia duty, and three others have been recently withdrawn from that service because of the crying need for more gunboats for general duty. Those remaining on the list serviceable and fit for general duty are so limited in number that it has been necessary in recent years to detail battleships, large cruisers, and destroyers to do gunboat duty. This has been markedly demonstrated during the past year on the Mexican coast. It would seem superfluous to point out the harmful influence this has on the efficiency and training of the fleet for war, and the General Board advises strongly against such practice whenever it can be possibly avoided. It is therefore recommended that a beginning be made to replace the old and worn-out gunboats, that there may be sufficient of them to do the police and general diplomatic duties required of such vessels in time of peace without disrupting the battle fleet. To this end it is recommended that four be authorized in the 1916 program. With the exception of the *Sacramento*, authorized in 1911, no seagoing gunboat has been authorized since 1902.

AUXILIARIES.

FUEL SHIPS.

29. In the matter of auxiliaries needed for the fleet, the General Board is of the opinion that the most serious situation exists in the matter of fuel-oil supply, and that provision for oil-fuel ships should be given first consideration. This is serious from the point of view of economy in time of peace and would be disastrous in the event of hostilities arising. We have 41 oil-burning destroyers built or building, to be followed by others, 8 ships of the dreadnaught type using oil as an auxiliary fuel, and in 1915 the two first all-oil-fuel battleships will be added to the fleet, to be followed by others. To supply this oil-burning fleet with fuel the Navy possesses the *Arethusa*, an old tank ship of 3,629 tons capacity and not more than 10 knots speed, and seven fleet colliers fitted to carry some fuel oil in addition. The total oil capacity is 23,738 tons, 3,629 tons of which—that in the *Arethusa*—could not accompany the fleet; so that the present available oil supply that could accompany the fleet is 20,109 tons. Logistic studies show that to maintain our present oil-burning fleet in active service across the ocean requires the delivery of about 23,000 tons of fuel oil per month. To maintain this supply we have the seven colliers mentioned above capable of delivering an average of about 10,000 tons per month. This situation will be very much aggravated on the addition to the fleet of the two all-oil-burning battleships, *Oklahoma* and *Nevada*, and the other destroyers now under construction. Nor can commercial oil carriers be relied upon to remedy this deficiency, since ocean tankage, both at home and abroad, is not yet adequate to meet the demands of commerce and industry.

30. To partially meet this situation two oil-fuel ships of a combined cargo capacity of 15,108 tons were authorized in August, 1912. On November 1, 1914, one of these ships was only 82.4 per cent completed and the other only 57.2 per cent completed.

31. To remedy this serious defect in our preparedness for war the General Board recommended the construction of two oil-fuel ships in the 1915 program. These were not authorized, and the General Board therefore emphatically repeats this recommendation for the 1916 program, and further recommends that the construction of the two ships authorized in August, 1912, more than two years ago, be hastened with all possible speed.

DESTROYER TENDERS AND SUBMARINE TENDERS.

32. The auxiliaries of next importance to the fleet at the present time, after the oil-fuel ships, are destroyer tenders and submarine tenders. Of the three improvised vessels used as destroyer tenders the *Iris*, built in 1885, is past her period of usefulness and should be replaced. The General Board recommended one destroyer tender in the 1915 program. This was not authorized, and the recommendation is repeated for the 1916 program.

33. Of the six vessels used as submarine tenders, all are of the improvised variety, and none is well fitted for the service. Three of them are old monitors, two of them old gunboats, and one the old sailing ship *Screen*. To begin replacing these, one submarine tender was authorized in 1911, another in 1912, and one was recommended in 1913 for the 1915 program. This last was not authorized, and this recommendation is repeated for the 1916 program.

TRANSPORTS.

34. The General Board has from time to time, in numerous letters extending over a series of years, called the attention of the department to the inadequacy of preparation in the Navy for advanced base work and to the vital importance of this work to success in war. The prerequisite for any advanced base work is the necessary means for transportation of the personnel and material of the advanced base outfit; and for this reason the General Board has recommended the construction of the two transports needed for the purpose—ships of the size and speed necessary and especially designed for what they were intended to accomplish. Their primary use was to be for war, but secondarily they could be used in general transportation service at all times. Not one of the four improvised transports now in service in the Navy—the *Hancock*, *Rainbow*, *Prairie*, and *Buffalo*—is of the size or is fitted for the work required, nor of the character of construction needed for safety in ships carrying large bodies of men. All are old single-skin ships without proper water-tight subdivision. Of the two transports needed, one was authorized in 1913, and the other recommended in the 1915 program. This was not authorized, and the General Board repeats this recommendation for the 1916 program.

HOSPITAL SHIP.

35. The General Board in making the foregoing recommendations has given preference to what is needed for the fighting efficiency of the fleet over all other matters. Two other types of auxiliaries, however, are required for the successful administration of the fleet—hospital and supply ships.

36. The two hospital ships now borne on the Navy list—the *Solace* and the *Relief*—are both improvised and small, and neither adapted to the service. They have done good service in time of peace in connection with subdivisions of the fleet, but the *Relief* is now unseaworthy and the *Solace* would be of limited value in time of war. To remedy this defect, the General Board recommended the construction of one hospital ship in the 1915 program. This was not authorized, and the General Board repeats this recommendation for the 1916 program.

SUPPLY SHIPS.

37. Of the four ships borne on the Navy list as supply ships, all are improvised and were hurriedly bought and fitted in 1898 to meet the exigencies of the Spanish War. The *Supply* is already beyond her period of usefulness, and has been discarded as a supply ship. The *Culgoa* is approaching her limit of usefulness. The *Celtic* and *Glacier*, while old and inadequately fitted, are still good for some years service. One new ship was authorized in 1913. Another is needed, and to meet this situation the General Board recommended the construction of one supply ship in the 1915 program. This was not authorized, and the General Board repeats this recommendation for the 1916 program.

SUMMARY.

38. To summarize, the General Board recommends for the 1916 program—

4 battleships.
16 destroyers.
3 fleet submarines.
16 coast submarines.
4 scouts.
4 gunboats.
2 oil-fuel ships.
1 destroyer tender.
1 submarine tender.
1 Navy transport.
1 hospital ship.
1 supply ship.
Air service, $5,000,000.

PERSONNEL.

39. The General Board can not too strongly urge upon the department the necessity of using its best endeavors to carry out the repeated recommendations of the General Board, made from year to year, to provide the fleet with a personnel, active list, and trained reserve equal to the manning of the fleet of war.

40. In the opinion of the General Board this is a matter of even more serious import than that of construction, for it can not be too often repeated that ships without a trained personnel to man and fight them are useless for the purposes of war. The training needed for the purpose is long and arduous, and can not be done after the outbreak of war. This must have been provided for long previous to the beginning of hostilities; and any ship of the fleet found at the outbreak of war without provision having been made for its manning by officers and men trained for service can be counted as only a useless mass of steel whose existence leads only to a false sense of security.

41. The strength of fleets is measured too often in the public mind by the number and tonnage of its material units. The real strength of a fleet is a combination of its personnel—with their skill and training—and its material; and of these two elements the more important—the personnel—is too often forgotten and neglected in making provision for our fleet. The General Board can not impress this point too strongly on the department or recommend too earnestly that every effort be made to correct it, and that legislation be urged to provide for a personnel on the active list, supplemented by a trained reserve, sufficient to man every vessel of the fleet when the call comes.

42. No nation in time of peace keeps all the ships of its navy fully manned and in full commission. But all leading nations except ourselves provide an active list, officers and men, sufficient to keep the best of their fleet in full commission and all the serviceable ships of their fleet in a material condition for war; and in addition a trained reserve of officers and men sufficient to complete the complements and fully man every serviceable ship of their navies, and furnish a reserve for casualties. Thus, every nation with which conflict is possible is prepared to mobilize its entire navy, by order, with officers and men trained for the service. We alone of the naval powers provide no such reserves, and an active personnel too scant, and trust to the filling of the complements of our ships by untrained men recruited after war is imminent or declared. To quickly man all of the ships of the Navy serviceable for war (including ships which are now in reserve or ordinary) with trained crews is impossible owing to the absence of a trained reserve.

43. In view of all that has been herein set forth, the General Board recommends:

(a) That legislation be asked for providing an active personnel, officers and enlisted force, capable of keeping in full commission all battleships under 15 years of age from date of authorization, all destroyers and submarines under 12 years of age from authorization, half of the cruisers and all gunboats, and all the necessary auxiliaries that go with the active fleet; and of furnishing nucleus crews for all ships in the Navy that would be used in time of war, and the necessary men for the training and other shore stations.

(b) That the general policy be adopted of expanding the active personnel with the expansion of the fleet in the proportions indicated in (a).

(c) That immediate steps be taken to form a national naval reserve of trained officers and men, and that this work be pushed until this reserve, in connection with the Naval Militia, has reached the point where, combined with the active list, it will be possible to fully man the entire fleet with war complements and furnish 10 per cent additional for casualties.

(d) That the Naval Militia be expanded in number and that the department encourage the continuance and improvement of its training to the end that it may still more efficiently serve to reenforce the regular service at need.

GEORGE DEWEY.

EXHIBIT C.

ADMIRAL KNIGHT SURPRISES SECRETARY DANIELS.

UNITED STATES NAVAL WAR COLLEGE,
Newport, R. I., December 16, 1914.

To: The Secretary of the Navy.
Subject: Coordination in the fleet and the Navy Department.
Reference: (a) Department telegram of December 15, 1914.

1. Receipt is hereby acknowledged of the following telegram:

WASHINGTON, D. C., *December 15, 1914.*

Rear Admiral AUSTIN M. KNIGHT,
Naval War College, Newport, R. I.:

Desire statement by first mail from you for insertion in hearing as to whether or not there is lack of coordination in the administration of the fleet and what the War College says it should accomplish.

JOSEPHUS DANIELS.

2. It is not possible in the brief time before the departure of the mail to compress into a few words a satisfactory reply to these questions, nor would it be possible in any case to avoid some discussion of issues which may appear to lie outside the field—not very closely defined—of the department's inquiry.

3. It will be convenient to reply to the second of the questions before taking up the first.

4. The War College considers that every effort of the fleet and every effort of the department in connection with the fleet should have for its sole aim the war efficiency of the fleet. Every effort which does not directly contribute to this end is in itself a wasteful expenditure of energy, and, so far as it is a diversion from this end, is distinctly harmful.

5. So much for what the fleet should accomplish.

6. Coming now to the question of coordination. By coordination is understood that unity of purpose and of effort which shall insure the concentration upon battle efficiency of all parts of the fleet itself and of all agencies outside of the fleet which bear, or can be made to bear, upon battle efficiency. The coordination of preparation is not less important than that of administration.

7. Coordination of administration calls for unity of effort within the fleet, within the Navy Department, and between the fleet and the Navy Department.

8. Unity of effort within the fleet demands that all elements of the fleet should be under a single administrative head and that they should act together under the direction of this head with singleness of purpose for the development of the ideal, namely, battle efficiency. For this they must, as far as possible, remain in intimate association with each other, with constant drills carefully designed to lead by progressive stages toward war maneuvers on a large scale.

9. It is clear that for many years past no such condition as this has existed. It is idle to connect this lack of coordination with any one administration of the Navy Department. It has characterized our naval policy, or, rather, our complete lack of naval policy, since 1865. One of the harmful manifestations of this lack of coordination is the frequent diversion of battleships and torpedo craft to uses widely different from that for which they exist, with resulting interruption of preparation for battle, and the breaking down of the efficiency of both material and personnel.

10. In many cases it is apparent that this use of the fighting units of the fleet results from the lack of cruisers and gunboats and that it is an emergency measure which can not be avoided. That this is a lack of coordination is not changed by the fact, if it is a fact, that the necessity for this condition is inherent in the present constitution of the fleet and in the exigencies arising from national policies.

11. In one important respect there has been recently a notable gain in coordination. The Navy Department, the fleet, and the War College have been drawn into very much more intimate association than has ever before existed, the importance of this association having for the first time found recognition under the present administration of the Navy Department. There is every reason to believe that these relations will become constantly closer as time goes by with results which will be far-reaching in their effect upon the efficiency of our Naval Establishment as a whole.

12. It is clear that the necessities which have arisen for using battleships to do the work of cruisers and gunboats arises from the lack of coordination in the character of the fleet. A true coordination here would result in an all-around harmonious development providing for all demands upon the Navy in peace and war. In my opinion the responsibility for this lack of coordination rests with Congress and with Congress alone. It is often said that naval officers themselves do not know what they want and neither Congress or the country has any guide in this matter; that naval officers have never stated what they mean by an "adequate navy."

13. No doubt there have been wide differences of opinion upon this subject and many inconsistencies in the views of naval officers themselves. But for many years past the General Board has spoken in no uncertain terms, and its reports are available for anyone who seeks information as to expert naval opinion on the subject of an adequate Navy for peace and war.

14. In some cases the Navy Department has accepted the recommendations of the General Board and passed them on to Congress, where they have never, so far as I recall, been accepted in their entirety. But in nearly all cases the Navy Department has felt called upon, even when agreeing with the views of the General Board, to ask for very much smaller appropriations than the recommendations of the board required. This because it has been considered impossible to obtain appropriations for anything approximating the complete program.

15. Replying specifically, then, to the first of the department's questions, the War College believes that lack of coordination does exist in the fleet; between the Navy Department and the fleet, and between the Navy Department, the fleet, and Congress. The college does not regard this as a new situation, although it happens for the moment to be unusually acute, and this, unfortunately, at a time when perfect coordination is especially to be desired.

16. The remedy for this condition rests partly with the fleet, where it is believed that everything which can be done is already in preparation; partly with the department, where it is understood that plans have already been formulated for more extensive maneuvers than have ever before been attempted by our fleet; and partly—and chiefly—with Congress, which alone has power to correct the imperfections in the composition of the fleet which make coordination difficult, and where there is already pending a bill for a council of national defense, which more than all other agencies combined would make for a coordination of all the agencies of the Government, many of which lie far outside the fields of the Navy and the Navy Department.

AUSTIN M. KNIGHT.

A SERMON OF 1785.

"AS A LOVER OF PEACE, I WISH TO SEE MY COUNTRY PREPARED FOR WAR."

The following interesting historical citation is contributed by J. M. Wilson, of Lowell, Mass. The sermon quoted appears in Potter's Biography of Dr. Jeremy Belknap, Manchester Monthly, March, 1852.

The following is an extract from a sermon preached before the General Court of New Hampshire, June 2, 1785, by Rev. Jeremy Belknap, D. D., author of "The History of New Hampshire":

It is a melancholy consideration that one of the most effectual methods to preserve peace is to be prepared for war; but such is the present constitution of things in this unhappy world, and such it will be till the gospel of peace shall so far prevail and extend its influence as that the nations will either avoid all occasions of controversy or agree to refer their disputes to some arbitrating power, with a peaceful design to abide its determination. (The distant hint of such a proposal does honor to the benevolent heart that conceived it and will do more honor to the States or nations that will publicly recommend and adopt it.) But at present it seems as if things must go on in their old course. The lust of power has been a ruling passion since the days of Nimrod, and there is no effectual way to check it but by a forcible resistance. Convinced that a nation can not preserve itself but by rendering itself formidable, as a lover of peace, I wish to see my country prepared for war; to see every cannon which now lies carelessly about our streets and wharves and in our forts properly secured from decay; every musket and sword furbished and kept in the nicest order; our militia officered and instructed, arranged and accoutered, and ready for the field on the shortest notice; our arsenals and magazines well supplied; our fortifications repaired and strengthened and garrisoned. God only knows who our next enemies may be or how soon we may have occasion for our veteran officers and soldiers and our foreign friends and allies.

EXHIBIT E.

Memorandum for the press prepared by Assistant Secretary of the Navy Franklin D. Roosevelt, October 21, 1914:

In answer to certain statements which have appeared in regard to the personnel and the state of preparedness of the Navy at the present time and supplementing what has already been said by the Secretary of the Navy, I wish to call attention to certain facts which have, perhaps, been misunderstood by some. The Navy has always felt glad to have the actual facts relating to the condition and the needs of the service given the widest publicity.

In regard to the numbers of the officers and men of the Navy, there has never been an attempt to hide the fact that although the numbers are recruited up to the limit allowed by Congress we have only sufficient men to man, in an adequate manner, a portion of the vessels already built. At the present time 3 second-line battleships, 2 armored cruisers, 4 first-class cruisers, 1 second-class cruiser, 2 third-class cruisers, 21 destroyers, 3 monitors, 5 submarines, 1 gunboat, 3 fuel ships, and 2 vessels of special type are in commission in reserve; that is to say, they have on board only from 25 to 50 per cent of the crews necessary to man them in case of war.

There are also 6 second-line battleships; 1 armored cruiser; 1 cruiser, second class; and 14 torpedo boats which are in the condition technically called "in ordinary." These vessels are manned by from 10 to 20 per cent of their regular complements—just enough to prevent them from rusting to pieces. Further, there are 3 second-line battleships, 3 second-class cruisers, 1 third-class cruiser, 1 destroyer, 2 monitors, 4 torpedo boats, 6 gunboats, 1 transport, 1 hospital ship, 1 fuel ship, 1 repair ship, and 11 converted yachts which are at present out of commission altogether; these vessels are in nearly every case hopelessly out of date. They are to all intents and purposes unserviceable for war purposes. Several of these gunboats, torpedo boats, and converted yachts are, in the absence of suitable vessels, being used by the Naval Militias of the various States.

To provide a proper complement for all vessels of the Navy which could still be made useful for war purposes would require an addition to the present force allowed by Congress of about 18,000 men. Meanwhile the problem is becoming more difficult as time goes on because of the vessels under construction which must shortly be provided with crews. For instance, during the coming year two battleships, the *Oklahoma* and *Nevada*, will take their places with the fleet. Each of these vessels will require a complement of nearly a thousand men each. Theoretically and on paper the Navy possesses at the present time 10 battleships of the first line and 23 battleships of the second line. Actually, however, only the 10 battleships of the first line and 11 battleships of the second line can be placed in commission for service because of the shortage of men.

In regard to the material of the Navy—that is to say, ships and their equipment, including guns, engines, range finders, etc.—matters are on the whole in excellent shape. As units, the vessels in commission are well built, well designed, and well cared for, and compare in all types very favorably with the vessels of other powers. In fact, I believe that they are better. In a few particulars, such as the lack of sufficient torpedoes, there is room for great improvement. Also, in regard to the lack of certain auxiliaries and the insufficient number of scouts, much can be done to make the fleet better balanced. But the Navy has felt that while it greatly desires a well-rounded fleet in the material sense, it would be the greatest possible mistake to secure such a fleet at the expense of the main seagoing fighting craft; that is to say, our battleships and destroyers. This is because of the fact that makeshift auxiliaries can be improvised in an emergency, whereas battleships must be planned and commenced at least three years beforehand.

Mention has been made of the unreadiness of the fleet at the present time. It is true that during the past two years maneuvers and battle practice of the fleet as a whole have of necessity been greatly curtailed. International affairs have required the use of a certain number of our ships. In many of these cases the department has found it necessary, owing to the shortage of men, to use battleships for duty which could have been performed equally well by gunboats or small cruisers. This lack of fleet maneuvers is, however, a matter which can be remedied by

a few months' practice, and it is hoped that these maneuvers will take place in the near future.

The department has received numberless inquiries in regard to its attitude on the relative merits of battleships and submarines. There can be, of course, no fair or exact comparison between the two types of vessels, each of which has its own sphere of usefulness. In their present stage of development submarines and air craft can make a hostile attack only from a distance of approximately four or five hundred miles. In other words, from the purely technical point of view of national defense the use of a base within that distance of our own territory would be necessary for an attack by submarines and air craft upon our territory. The establishment and maintenance of such a base requires beyond all possibility of dispute the possession of the control of the sea or, in other words, a force of seagoing vessels superior to our own. Again, from the purely technical point of view of national defense submarines can probably be relied upon to ward off an attack by a hostile fleet upon the principal harbors of the continental coast line of the United States, provided the submarines are at the point of attack. The possession, however, of a seagoing fleet having rapidity of movement and the ability to keep the sea insures, without doubt, the transference of a hostile attack to some point at sea at a great distance from our home shores and an ability to maintain a free highway for American commerce under conditions where the submarine would be practically powerless. All of this refers, of course, to the existing stage of development of all types of vessels of war. It would be foolish to attempt to prophesy what the future will bring forth, but it is at the present time clear that submarines have an undoubted sphere of usefulness in harbor work and within short distances of the coast, and that battleships are still the controlling factor in any war in which the belligerents are separated by great distances of water.

EXHIBIT F.

WARS AND REVOLUTIONS FROM END OF NAPOLEONIC WARS DOWN TO END OF FRANCO-PRUSSIAN WAR.

1815. Congress of Vienna; end of Napoleonic Wars.
1821–1832. War of Greek Independence.
1830. Revolution in France; revolution in Belgium against Holland; constitutional revolutions in Brunswick, Hesse, Hanover, and Saxony; revolution in the Papal States; revolution in Poland.
1832. Belgian neutrality guaranteed by the powers.
1832–1836. Civil wars in Spain and Portugal.
1846–1848. Rebellions of constitutional revolutions in France, Prussia, Hanover, northern Italy, Naples, Galicia, Austria, Hungary, Bohemia, and Switzerland.
1849. Independence of Hungary proclaimed.
1849–50. War in Schleswig-Holstein.
1852. Napoleon III declared Emperor of the French.
1854–1856. The Crimean War.
1859–60. War of Italian Independence.
1861–1865. American Civil War.
1862. Creation of Roumania.
1862–63. Rebellion in Poland.
1864. War in Schleswig-Holstein.
1866. War between Austria and Prussia; Venice ceded to Italy.
1870–71. Franco-Prussian War; proclamation of the German Empire at Versailles.

Mr. STEPHENS of California. Mr. Chairman, I yield 10 minutes to the gentleman from Pennsylvania [Mr. HULINGS].

Mr. HULINGS. Mr. Chairman, I do not take a great deal of stock in these war scares; but, just as a prudent business man would pay the cost of insurance to prevent loss by fire, I think it would be the part of prudence for this Government to provide a Navy strong enough to make it very improbable that an invading force could land on our shores. Now, just what degree of preparation that would require I am unable to tell, and for that reason I favor the suggestion of the gentleman from Massachusetts [Mr. GARDNER], that this matter should be remitted to a commission of experts who, by careful investigation, would be able to tell us what should be done. The United States Navy should be strictly up to date, perfect as American skill can devise, thoroughly equipped in all the auxiliaries necessary to make it a first-class fighting machine, finely coordinated with the Army and coastal defense, so that England or any other country contemplating an assault upon our shores might well hesitate. But that we should enter the race to build a great Navy is absurd at a time when in all probability it is least likely to be needed.

After this expression of my sentiments on a big or little Navy, I wish to digress to say that I was elected to Congress as a Progressive, and that I have been rather on the side line down here and have been given a greater opportunity to watch the game than to take any active part in it, and so I crave the indulgence of the House for an opportunity to say a few things that I think ought to be said.

I am somewhat in the frame of mind of the tramp printer to whom the editor when he went on a journey committed charge of the office. He collected bills for all the subscriptions and all the advertisements, and then he wrote an editorial and said, "I have always wanted to run a newspaper; I never thought it would be in a guy town like this; but the boss is gone, and I will never have another opportunity to tell you long-faced, hypocritical sneaks and booze hoisters what I think of you." He wrote a most defamatory article calling by name the prominent men of the town. Of course, it kicked up a great row, and when a posse of wrathful citizens went around to hunt up the author they learned that just as the paper had gone to press he had boarded a through train for the West. Unlike the tramp, I have nothing derogatory to say of this Congress. On the contrary, I have the greatest respect and admiration for and shall always bear testimony to the ability, the great industry, and the high character of the average Member of Congress. The unfailing courtesy which the older Members of Congress give to new Members has put me under obligations that I shall never forget, and in singing my swan song before I board the train for the West, I only regret I shall have to part from gentlemen on both sides of this House whose friendship I shall always cherish among my dearest possessions.

Now, I have said that to square myself with you as most charming gentlemen with whom I do not agree politically, because I am going to tell you some things which, as Democrats, you will not like.

The Democratic Party came into power by the divine appointment(?) of 41 per cent of the voters. The other 59 per cent were not and never will be Democrats.

The Democrats were wildly enthusiastic about things they would do which they have not done and about things they would not do which they have done.

They were especially enthusiastic about the "pie counter," and created 5,500 new offices, at an annual expense of $6,975,000.

They promised economy, and gave the country the most expensive administration the country has ever known.

They have stricken down the civil-service law in three separate assaults, approved by the President, to provide places to "reward faithful Democrats."

For 30 years the transcontinental railroads prevented the building of the Panama Canal. We gave our coastwise shipping free tolls. I think this was a mistake, and that as a mere economic policy every ship should pay a fair share of the cost; but it was done with the approval of the President and all political parties. But when Great Britain, whose shipping will get 80 per cent of the use of the canal, claimed that we had no more right in the canal than any other nation, except the exclusive right to pay the bills, the administration made a pusillanimous surrender.

They promised to take from Wall Street the control of business credits and enacted a measure which in the last analysis gives the banking interests legalized control of every great operation which requires large sums of money. The currency law, of which they so loudly boast, provides, indeed, elasticity, which was so greatly needed, but in other respects it is a complete surrender to the money power, at least so long as the Reserve Board is constituted as it now is.

They promised to reduce the cost of living, and only increased the number of those who have nothing to buy with.

But the Democratic tariff bill was to prove the divine commission of the Democratic Party to bring prosperity, "New Freedom," "markets beyond the seas," and other "phantom and psychological" blessings to the American people, with the physical, actual result of men out of employment, factories closed, and soup houses in full blast.

The bombastic threat that if anybody dared to say Democratic times were not good times the public prosecutor would jump on him has failed to suppress widespread complaint.

Everybody but a Democrat knew what would happen. Foreign goods came in, displacing American goods, but the rates were so low that there is a deficit in the revenues.

The President assured Congress that the tariff was working "admirably until the war came along and stopped imports." Nobody laughed, but most people knew four months before there was any war that the Democratic leaders were behind the door gnawing their fingers, at their wits' end to devise some way to meet the deficit.

The imports have not fallen off considerably, but so much comes in free or at reduced rates that you had to levy a "war" tax.

You threw away $50,000,000 of revenue derived from sugar imports and gave it to the sugar refineries. You fixed it up so that any foreign country can buy sugar in New York at 1 cent per pound less than our own people are obliged to pay.

You are now figuring some way out of the slough into which your misguided policy has plunged the country.

You can not do it with your shipping bill. You can not do it by stopping necessary works and improvements.

You can do it by repealing the sugar schedule, by repealing the Underwood Tariff Act, and enacting a substantial protective tariff.

The American people believe in a protective tariff. At the last election they repudiated your Democratic tariff.

There are Democrats on this floor who have seen these mistakes, but the party lash with few exceptions has whipped them into line; and there has never been an administration more

fanatically partisan nor a more subservient Congress in the history of the country.

When the Republican leaders in 1912 refused to nominate the man whom an overwhelming majority of the party wanted they trampled upon the fundamental doctrine of Republicanism. It was the culmination of an era of oligarchic tendencies and subserviency to special interests. [Applause on the Democratic side.]

The election of 1912 was a revolt against "boss politics." [Applause on the Democratic side.]

The election of 1914 was a revolt against Democratic administration. [Applause on the Republican side.]

The average progressive in 1912 was in comparatively prosperous circumstances. He indulged in hopes, perhaps in "dreams," of reforms and betterments. He revolted against the alliances of political bosses and big business, against privilege; but, in 1914, the same man was hungry and out of a job, and, as the quickest way to get relief from the hard times brought about by the Democratic Party, he voted the Republican ticket as the quickest means of relief, but he did not abandon his progressivism.

What the Progressive will do in 1916 will decide that election.

The same old leaders are in the Republican saddle. PENROSE is there, Cannon is there, and SMOOT and GALLINGER and all the other repudiators of the party will in 1912. Have they learned anything?

If they resume their former arrogant disregard of public sentiment and again make the Republican organization the citadel of "privilege," they will ride to a fall; but if they will make the organization responsive to the public will; if they will make it an efficient agency to meet the public demands, there will be no good reason why the Progressive who cherishes the Republicanism of Abraham Lincoln should not find in a reformed and rehabilitated Republican Party the realization of his "dreams." [Applause.]

[During the delivery of the foregoing remarks Mr. STEPHENS of California yielded five minutes additional to the gentleman from Pennsylvania, Mr. HULINGS.]

Gentlemen, what will happen in 1916 depends entirely upon what the Republican Party does meanwhile. Here, of course, the Democrats are responsible, and it would be difficult to determine what the leaders of a minority party in Congress would do if they were returned to power; but the Republican Party is fully in control in many States, and it will be easily seen whether the leaders have learned anything or will be up to their old tricks. Up in Pennsylvania, for instance, Gov. Brumbaugh was elected as a Republican. If he will clean out the boodlers, the grafters, and the place warmers that have infested the State capitol for a generation; if he will give the people of Pennsylvania a clean administration—oh, not a perfect; but a good, substantial administration, free from the dictation of the "interests" or the control of the bosses—there is no reason why the Progressives in that State should not support him, and I believe they will. They ought to support him, for anybody who has inspected the organization of the State senate knows Gov. Brumbaugh has a rocky road before him if he means to make a fight for clean politics; and he ought to be supported by every man who is opposed to the corrupt methods that so long have disgraced the Republican machine. [Applause on the Republican side.]

Mr. PADGETT. Mr. Chairman, I yield 40 minutes to the gentleman from Alabama [Mr. HOBSON].

Mr. STEPHENS of California. Mr. Chairman, I yield five minutes to the gentleman from Alabama [Mr. HOBSON] also.

The CHAIRMAN. The gentleman from Alabama is recognized for 45 minutes.

Mr. HOBSON. Mr. Chairman, before I begin I desire to request to be notified when I have proceeded for 30 minutes and to request gentlemen to defer questions until after that time. I also ask unanimous consent, in case I shall not be able to complete my remarks, to extend them in the RECORD and print certain documentary material.

The CHAIRMAN. The gentleman from Alabama asks unanimous consent to print certain additional documentary material and extend his remarks. Is there objection? [After a pause.] The Chair hears none.

Mr. HOBSON. Mr. Chairman, we have come again to the consideration of the naval appropriation bill. Since the naval bill was considered last year events of great importance have occurred in the world. From a world at peace we have suddenly become a world at war, and the field of operations has extended over the ocean until to-day there are active war operations in Canada, to the north of us; in Europe, to the east of us; in Asia, to the west of us; and internal war in Mexico, to the south of us; and every day that our citizens awaken they see hostile men-of-war hovering over our ports in both oceans. This disturbed condition in the world's affairs certainly calls upon us to give the question of national defense at this time our most earnest and painstaking consideration.

Our national defense must be founded essentially upon our world policies, and especially upon that part of our world policies that conflict, or are supposed to conflict, with the world policies of other nations. Let us consider briefly the world policies of America. America, like all nations and like all other living things, owes its first duty to itself and to nature—the duty of self-preservation. In my judgment, it is not a necessary corollary of international relations that under the dictates of self-preservation the world policies of one nation must inherently conflict with those of other nations. I am fundamentally convinced that the test for fitness to survive is no longer might and brute force to conquer, destroy, and rule, but is essentially a capacity and willingness to cooperate with others and actually to contribute substantially to the welfare of others. In other words, to serve. This conception of the fitness to survive is not now accepted the world over. On the contrary, there are great nations whose peoples honestly believe that their duty of self-preservation involves harm and even destruction to other nations. We must, therefore, make provision to protect our vital interests against violence. By vital interest I mean, first, the lives, property, and commerce of our citizens, including the integrity of our territory. When we contemplate the great exposure of these, our vital interests, the thought is almost staggering. The vast stretch of the Atlantic coast and its bays, harbors, and tributaries, upon which are built our great centers of population; the Gulf, the Pacific, the Panama Canal; and then, beyond our shores, Alaska, Hawaii, Guam, the Philippine Islands, in the Pacific; Porto Rico, Cuba, Mexico, in the Atlantic. In a conservative calculation we will find that we have the homes of over 30,000,000 of our citizens, with a property aggregation of more than $37,000,000,000, located within gunshot of the water, so that a foreign foe attacking us would not have to proceed inland. He could permanently occupy the outlying territory with great armies without opposition if he had control of the sea. On our mainland he could make raids and levy ransom, striking us long before we could organize any material resistance, and he could then retire with his booty, having destroyed our military resources, military stores, arsenals, factories, shipyards—all without suffering any serious loss.

As to the question of the Philippine Islands I think this is the time for me to express certain convictions that have grown upon me in the last few years. I am convinced that whatever may be our political relations to the Philippine Islands, whether we grant them partial or complete independence—and I for one am in favor of the principle of granting them a larger measure of self-government than they are even capable of successfully conducting, so that in the exercise and even in the mistakes of self-government they can make progress in the capacity for self-government—I am clearly and strongly convinced, from my knowledge of the American people, that whatever our relations with the Philippine Islands this Nation will always protect those helpless Filipinos, as we have undertaken to protect the helpless Cubans, against any intervention or oppression by any military monarchy. I know there are many of my countrymen who disagree with me, many of my countrymen who openly express the idea of our evacuating those islands in order to escape the exposure to attack that their possession brings to us. My conviction is that the policy of the present administration is to get in a position free from responsibilities in the Philippine Islands, so that if during this war or after this world war a foreign power proceeded to occupy them America might remain aloof with some show of honor.

I have just had a conversation with the Secretary of State over the phone, and I wish to state carefully what he has said to me clearly, that there has been no understanding whatsoever with Japan in this matter; that this question has not been officially discussed—that phase of it—either in Washington or in Tokyo, and I am glad to make that statement in connection with my own. And I make my statements simply as a conviction. I hope my conviction is not correct, but the natural statement or disclaimer of the Secretary of State has not changed my conviction partially founded upon a news report last summer, shortly after the world war began, apparently emanating from the White House, but whether literally given out or not, I care but little. That report intimated that the administration desired the Philippine independence bill to be hastened, so that in case the belligerent conditions in the world required our retirement from those islands we would be in a position to retire quickly. Of course I would expect the Secretary of State to deny this;

and of course I do not impugn his good faith and conscientiousness in making his disclaimer. This question of the conflict of our vital interests on the Pacific with the vital interests of another nation has been brought up on a number of occasions on the floor of this House. At the risk of continued misunderstanding and widespread criticism I have each time undertaken to give a warning to my countrymen, and I now repeat the warning. A great military nation of Asia believes that its vital interests in the Pacific Ocean run counter to ours.

Now, I have made the statement that our relations with that nation have repeatedly been strained. I wish now to repeat that statement, and I desire also to state that the Secretary of State has just assured me that he does not agree with me on that proposition; that he has not considered our relations with this power as strained at any time since he has held office. But I repeat the statement I made in the Naval Committee.

Mr. FESS. Will the gentleman yield for a question?

Mr. HOBSON. Yes.

Mr. FESS. It was rumored here soon after the President spoke on the Mexican situation, in which he spoke of the Philippine situation, that what he had in mind was to have the other nations to assist in neutralizing the islands. Have you any information on that?

Mr. HOBSON. I have no positive information, Mr. Chairman; but I wish now to renew my statement, without any chance of contradiction, because it was drawn out of me by a taunt in the Naval Committee, and then and there I called on the Secretary of the Navy to deny it if it were not true. I said then, and I repeat it now, that our Government believed in May and June, and up into July of 1913, that war was imminent, and our gunners at Corregidor Island at the mouth of the Manila Bay slept on their guns for six weeks, and were on duty night and day; that the harbor was mined, and that every hour they expected the appearance of a hostile fleet. Furthermore, cipher instructions were sent to navy-yard commandants to be prepared to instantly put their station on a war basis. But that is neither here nor there. Denials or differences of opinion are of little consequence. The principles of national defense that I have laid down demand that we recognize this condition in the Pacific Ocean. In that ocean, as in the Atlantic, since we have no large standing army and are inadequately provided with coast defenses, the only basis for the security for our vital interests is control of the sea. This control of the sea by America would not be a menace to any nation in Asia or anywhere else, because there would be no great army upon it, the fleet not being able to march ashore.

Mr. Chairman, there are other considerations that are becoming more and more dear to the American people which are not wholly based on our material interests and self-preservation.

Our free institutions have always been very dear; especially the principle of the right of local self-government, the corner stone of liberty; the principle that there can be many local sovereignties exercising the functions of local sovereignty consistently with the wider sovereignty of the Nation. But that thought has never yet been accepted by the great nations of the world. In the matter of the exercise of the police power by the individual States there have been 13 cases where the life and property of aliens have been put in jeopardy and injured. In those cases the foreign Governments concerned demanded action on the part of our Federal Government looking to the punishment of the offenders; and at each time our Government replied, "We regret the occurrence, but we can not interfere."

This question has gone further than that of lynching and violence. It has touched the question of land tenure, the right of a sovereign State to control and regulate the question of land tenure. It has gone even further and touched the question of school regulation, the right of a sovereign State itself, without interference from the Federal Government, to determine its own school policy. These matters have not been conceded; they have been challenged, and are now openly challenged. Could America surrender to such a challenge? Not while our Nation lives.

Not only are our free institutions here at home dear to the American people, but we are becoming more and more committed to the principles of the rights of man everywhere—the principle of justice and right and equality of opportunity, irrespective of the force or the might or the power of the individual nation.

The Monroe doctrine was enunciated as a doctrine of self-preservation simply because in international law, so called, no other principle has ever been recognized. But the fact is imbedded down deep in the heart of the great American people that this Nation proposes to protect the weaker nations of this hemisphere against military aggression and colonization by monarchies across the sea. And yet imperial colonization goes on all over the world. It is the fixed, established policy of European monarchies.

When this Nation had her hands tied in the Civil War, Maximilian led the French and occupied Mexico. He proceeded against the strongest protests from our Government. The protest was ignored. When the war was over and America had command of the sea and not another French soldier could be sent across to Mexico, then we repeated our request and sent Gen. Sheridan to the frontier. Promptly the French retired, but when they retired they never conceded the right of America to undertake the protection of Mexico. Neither has Germany ever conceded that right. Neither has England ever conceded that right. In the midst of all the disturbance of Europe we may not see the question arise during the period of war, but if either side comes out overwhelmingly victorious the question of Mexico may become critical in our foreign relations.

Mr. FESS. Mr. Chairman, will the gentleman yield for a question?

Mr. HOBSON. When my 30 minutes are up, I will yield to questions. I can not well maintain the continuity of my argument if I am interrupted, but, of course, I will yield to the gentleman.

Mr. FESS. Suppose that for destruction of property, either English or German or French, in Mexico, there is an indemnity demanded and Mexico can not pay it and they demand a coaling station in lieu thereof. What will be our situation?

Mr. HOBSON. I believe it would be a plain question of whether we would abolish and abrogate the Monroe doctrine or fight.

Now, this Nation has a permanent policy of conscience and conviction; it has made up its mind to thus protect the weaker nations in this hemisphere; yet this policy has not been recognized by the great military nations of the earth. Therefore it is very clear, since our armies could not reach Central and South America, if we would maintain the Monroe doctrine in peace, we must have control of the sea.

I want to refer, incidentally, to other instances of the infringement of the Monroe doctrine besides that of Maximilian in Mexico. We recall that in the history of the dispute between Great Britain and Venezuela Great Britain was proposing to proceed, because of the weakness of Venezuela, without regard to an adjudication or settlement, and President Cleveland sent a message practically announcing that the clear right of Venezuela to recourse to arbitration should be respected. His message had a sympathetic response in the heart of all America, unprepared as we were. Every man here who remembers the time knows that, without respect to party, we would have all supported the President. [Applause.]

Now, not long after that Germany hoisted her flag over the customhouses in Venezuela. Our President promptly assembled our whole fleet at Guantanamo and sent Admiral Dewey to take charge of it, and then requested Germany to haul down her flag and retire. Germany promptly did haul down her flag and retire. But when Great Britain granted arbitration to Venezuela and when Germany retired from Venezuela neither nation acknowledged the right of America to assume to protect those people.

Now let us pass from the Atlantic over to the Pacific and consider the open-door policy. Why did this find such a prompt response in America's heart? Because beneath it lies the same principle that underlies the Monroe doctrine. It is true that America did not inaugurate the open-door policy in China, yet America was one of the first nations to champion its acceptance by the nations of the world. When Russia entered Manchuria and occupied Port Arthur America made a vigourous protest. She practically demanded that Russia evacuate China, but we had no fleet, and Russia declined. War came, as the result, between Russia and Japan. When Russia retired Japan took Russia's place.

Why did we find such a response in America's heart in behalf of the open-door policy in China? It was because China, though with vast resources, had no preparations for national defense, and the great military nations were carving her up like vultures. China was helpless before the militarism and greed of the world. Of course, America had rights under her treaties to equal opportunity, under the most-favored-nation clause, in seeking markets in China. But, as I said, Japan stayed when Russia retired. The violation of the open-door policy was the same by Japan that it had been by Russia.

The effect upon our commerce was quickly seen. America's cotton-goods trade alone in Manchuria fell off $20,000,000 the first year of Japanese occupation. We have not yet made a protest to Japan against this permanent occupation of Chinese territory as we made to Russia for a similar occupation. Now

we are confronted with a situation where the Japanese have supplanted the Germans at Kiaochow, with assurances to the world that it was temporary, but later tentative statements that it would be permanent.

Disquieting reports have come from Tokio recently, one of them saying that Japan regarded China as committing an unfriendly act when she simply put an end to the war zone about Kiaochow when war ceased.

Another disquieting report has come that Japan is now taking up negotiations with China with a view to regulating the development of that empire. We got a dispatch this morning from London that Japan's ally in her spoliation of China put an O. K. on Japanese procedure. Great Britain herself is in the same category. She seized Hongkong, and then extended it with the Kowloon extension, and fought two bloody wars with China to compel her to receive the opium produced by the British companies in India.

I have referred to Germany. She occupied Kiaochow, and when she retired recently under force she never said she respected the open-door policy. The day is fast at hand when this Nation, which has championed that policy as we championed the Monroe doctrine, on the principle that the weak are entitled to consideration and respect of their rights by the strong, and the principle that over that great ocean there shall be equality of opportunity and fair chance, and no favor when commercial and industrial nations trade with China; the day is fast approaching when, in my judgment, this Nation will be compelled to surrender every vestige of the maintenance of the open-door policy in the Chinese Empire or fight. It is possible I may be mistaken in my deductions, but I am not mistaken in my facts. If we would see to it that the principles of justice and right, the rights of the weak as against the strong shall be respected wherever America has influence over the Pacific, there is only one policy of defense in that ocean. We must control the sea.

Human evolution in the world must rely upon America, the great peace Nation, a Nation which has no enemy in all the world. Our inherent altruism stands out everywhere. America returned to Japan the indemnity collected from that country in the sixties, when Great Britain, France, the Netherlands, and ourselves bombarded the straits of Shimonoseki and collected an indemnity. The other nations divided the indemnity and took their share and used it up, as they always do, but the United States, by the unanimous vote of the American Congress, returned to Japan the last dollar of our share of that indemnity.

The CHAIRMAN. The gentleman has consumed half an hour.

Mr. HOBSON. When the huge indemnities were collected from China in connection with the Boxer disturbances, against the constant protest of America at their being collected, particularly against the exorbitant amounts, there are Members who remember with what alacrity in due time this House by unanimous vote returned the last dollar of our share to the Chinese Government. It was one of the happiest votes I ever cast.

Members will remember that after the Spanish War, when Spain lay prostrate, we did not want to harm Spain. We sent peace envoys to meet her peace envoys, and we ended a victorious war by paying a conquered foe $20,000,000 and voluntarily transporting the Spanish soldiers for her back to Spain. And when Cuba was in our hands the world could not believe their own eyes when they saw America did not only not keep Cuba as a source of revenue, not even ask her to pay back the cost of the war, but saw us go back and spend more money to set Cuba on her feet, and then patted her on the shoulder and gave her her independence and told her we would protect her until the end of time. This is the only Government in the world that practices such principles of altruism in its relations with other nations, and this fact increases the importance of our possessing the power to promote the cause of such principles in the world.

Now consider the question of the rights of neutrals. It is in the interests of civilization that these rights should not be subordinated further to the alleged rights of belligerents founded solely upon the rule of might. Similarly in the question of the rights of weak nations neutral in war time. The principle of altruism ought to be projected more and more into the so-called international law, into the precedents and practices of the great nations of the world. In this America is the natural champion.

I am not asking America to go far afield, a wild champion of the weak everywhere, undertaking to dictate to the world and assuming that she alone can determine the true ethics of international conduct; but where we have such a settled policy as the Monroe doctrine, and as the open-door policy, we ought not to do as we did toward Korea. We were really under treaty obligation to protect the sovereignty of Korea, yet we would not even allow her ambassador, who was sent to Washington, to appear in the White House to ask us to observe our treaty. Orders were issued to prevent him from coming to the White House. America should not have her hands tied and be impotent in matters of humanity any more than in matters of vital interest. More and more the world policy of America should be based on altruism, and the only way to have it is to give America power on the seas.

Mr. J. M. C. SMITH. Will the gentleman yield?

Mr. HOBSON. Yes.

Mr. J. M. C. SMITH. The gentleman has spoken of the Monroe doctrine, and knowing that the gentleman has paid as much attention to that as any person in the House, I would like to inquire whether we are not under obligations to keep the peace if other nations interfere in Mexican affairs?

Mr. HOBSON. I think I should refer my friend to the watchful-waiting policy.

Mr. J. M. C. SMITH. Whether or not there could be any liability attached to us for the loss of property and lives of other nations by our undertaking to enforce the Monroe doctrine.

Mr. HOBSON. I doubt whether there would be financial responsibility upon us, but I can see that if there should come the threat of foreign military aggression in Mexico our responsibility of protection would be clear.

Mr. J. M. C. SMITH. I take it that the gentleman is not in accord with the watchful-waiting policy.

Mr. HOBSON. On the contrary, I do not approve all the things we have done, but I wish to take occasion to compliment the President and the Secretary of State, and compliment this Congress and the people of the United States upon their patience and good will and long-suffering waiting. I do not wish to be put in the attitude of condemning the policy.

Having established these principles for our defense, I now desire to discuss the question of our defense policy. How can we expect to determine and maintain a sound defensive policy as long as there is no agency in the Government for that purpose? There is no agency in this Government with the responsibility of investigating and determining questions of a defense. Ours is the only Government in the world that has no such an agency.

A bill has been pending in this House for six years to establish such an agency—a bill to establish a council of national defense—upon which there would be a representative of the whole Nation, the President ex officio; then the Secretary of State, representing world policy; and the War Department and the Navy Department, represented by their heads and by their great experts, to give full knowledge on these matters, these all representing the executive branch of the Government. Then there would be the chairmen of the great committees of the House and Senate—Military and Naval, the purse strings, and Foreign Relations. Six years I have been earnestly endeavoring to have this bill favorably acted upon. All investigating measures have been taken—elaborate hearings before the Naval Committee.

Take, for instance, such testimony as that Gen. Wotherspoon, president of the War College and late Chief of the General Staff, gave. He said, in effect, that it would treble the efficiency of the Army and cut its cost in half.

Twice the bill has been reported by the naval committee. I will append the report from the committee. It has been approved by all the Secretaries of War, I think four of them, and by the Secretaries of the Navy down to the present Secretary. The measure is mentioned by name in the Democratic platform at Baltimore, giving the country to understand at that time that the Democratic Party if intrusted with power would be constructive in dealing with our national defense, by creating an agency to treat it rationally.

That bill to-day would be on the statute books but for the opposition of the President and the Secretary of State.

In order that my words may not be misquoted or misunderstood, I will read them.

THE PRESIDENT AND SECRETARY OF STATE THE GREATEST OBSTACLES OF NATIONAL DEFENSE.

The fact that the council of national defense bill is a plank in the Democratic platform seems to have no influence with the administration. This bill would long since have been a law but for the opposition of the President and the Secretary of State. This opposition to the most vital and fundamental measure, similar to measures that have been taken by all the other nations of the world, opposition that keeps America from making a start, constitutes the President and the Secretary of State the greatest obstacle of their country's defense.

It seems a singular irony that the movement for national prohibition likewise has found greatest opposition from the present administration. To thoughtful men these two questions are the

most vital and the most fundamental before the Nation, one affecting the integrity of the Nation within and the other the security of the Nation without. It seems passing strange that measured by these two great causes we find the highest official of the Nation is the greatest obstacle to progress.

This brings me to the question of a naval program. I wish in the remaining 10 minutes, Mr. Chairman, to come down to the specific question of a naval program. I submit to the thoughtful consideration of my colleagues that our first duty, though not exclusive duty, is to make efficient the Navy that we actually have. It would be a singular thing, but for the fact that our people are nonmilitary, that in all the legislation relating to the Navy Department and the organization of the seven bureaus of that department there is not one word about keeping the Navy always prepared and ready for war under plans definitely worked out in advance. There is actually no agency in our Navy Department to work out detailed plans prior to war, to coordinate all agencies of the Navy, and insure efficiency when the war actually comes.

This present bill carries in it a provision to create a chief of naval operations and assigns him 15 assistants; this body, then, for the first time will give us an agency to take charge of this great question.

Mr. OLDFIELD. Will the gentleman yield?

Mr. HOBSON. I will.

Mr. OLDFIELD. What is the object of that board of which Admiral Dewey is the head?

Mr. HOBSON. I am gratified the gentleman asked that question. That board is only established by regulations, not by statute; it is a general accommodation board and is used for a lot of miscellaneous duties in the Navy. There are three active members of it, and one of those has the question of general plans, but it has no provision for working out complete detail plans; most of the time that board is working on knotty problems for the Navy and the Government at large. By the way, at the present time two of those three members of the board are occupied by duty with the State Department working up precedents on international law involved in neutrality. In other navies they will have 20, 30, 40, or 50 officers and assistants trained to this work, giving themselves over to this work exclusively all the time. We need not imagine that one or even several officers' sporadic work on general plans could answer. That is one of the most important parts of the whole bill.

Next comes the question of the fleet itself. What shall we do to make efficient the fleet that we have? There is a vast extent of ocean, the Atlantic and Pacific, over which our fleet will have to operate. It will have to see farther than any other fleet.

Mr. PADGETT. Will the gentleman yield there for about a minute?

Mr. HOBSON. Yes.

Mr. PADGETT. I have a letter from Admiral Dewey, which I received yesterday, with reference to the duties of the General Board on preparing plans.

Mr. HOBSON. Will the gentleman incorporate them or allow me to incorporate them in my remarks as an extension?

Mr. PADGETT. It is for the benefit of the House, and I would like to have read the letter the Secretary of the Navy forwarded to me.

Mr. HOBSON. I will read them. [Reading:]

THE SECRETARY OF THE NAVY,
Washington, January 28, 1915.

Hon. L. P. PADGETT,
Chairman House Committee on Naval Affairs,
House of Representatives.

MY DEAR MR. CHAIRMAN: In my hearings before the Naval Committee I stated that the Navy Department, through the General Board, carried out the naval regulations providing for plans of campaign if our country should be engaged in war.

I am inclosing herein a copy of a letter from Admiral Dewey, president of the General Board, stating that the General Board has prepared such plans; that they are constantly revised and kept up to date, and are in such condition as to be immediately available for the use of the Navy Department.

Sincerely, yours, JOSEPHUS DANIELS.

THE SECRETARY OF THE NAVY,
Washington, January 28, 1915.

To: Secretary of the Navy.
Subject: Preparation of war plans by General Board.

In compliance with your verbal request of this date for information as to the work done by the General Board in the preparation of war plans, I submit the following:

Article 167 (2) of the Navy Regulations is as follows:

"It (the General Board) shall prepare and submit to the Secretary of the Navy plans of campaign, including cooperation with the Army and the employment of all the elements of naval defense, such as the Naval Militia, Coast Survey, Lighthouse Service, Revenue-Cutter Service, and merchant vessels, and shall constantly revise these plans in accordance with the latest information received."

2. The General Board has prepared plans, in cooperation with the Naval War College and the Office of Naval Intelligence, for war with various nations which may be considered as being our most probable adversaries. These plans are being constantly revised and kept up to date, and are in such condition as to be immediately available for the use of the Navy Department.

GEORGE DEWEY.

When I made my statement in the beginning I was then aware of this naval regulation and the work which the naval board has done in the way of general plans, but I do not wish now to discuss the adequacy or inadequacy of that kind of a plan.

Mr. PADGETT. With the gentleman's permission I will insert in the RECORD a letter from the Secretary setting out the regulations, etc., in regard to the board in the preparation of plans.

Mr. HOBSON. Yes; I will also put those in my remarks as an extension, together with the general functions of this chief of naval operations and his assistants when they finally put that in operation.

The letter is as follows:

NAVY DEPARTMENT,
Washington, January 28, 1915.

Hon. L. P. PADGETT,
Chairman House Naval Committee, Washington, D. C.

MY DEAR MR. CHAIRMAN: Referring to my testimony before your committee regarding the preparation of war plans and to your inquiry by telephone in regard to the same, I quote below for your information the Navy Regulations covering the subject in question:

"SECTION 7.

"ART. 166. (1) The General Board shall be composed of the Admiral of the Navy, the aid for operations, the aid for material, the director of naval intelligence, the president of the Naval War College, and such additional officers as the Secretary of the Navy may designate.

"(2) An officer above the grade of lieutenant shall be detailed as secretary to the General Board. He shall record its proceedings and have charge and custody of its files and correspondence.

"ART. 167. (1) The General Board shall devise measures and plans for the effective preparation and maintenance of the fleet for war and shall advise the Secretary of the Navy as to the disposition and distribution of the fleet and of the reenforcements of ships, officers, and men of the Navy and Marine Corps.

"(2) It shall prepare and submit to the Secretary of the Navy plans of campaign, including cooperation with the Army and the employment of all the elements of naval defense, such as the Naval Militia, Coast Survey, Lighthouse Service, Revenue-Cutter Service, and merchant vessels, and shall constantly revise these plans in accordance with the latest information received.

"(3) It shall consider the number and types of ships proper to constitute the fleet, the number and rank of officers, and the number and ratings of enlisted men required to man them, and shall advise the Secretary of the Navy respecting the estimates therefor (including such increase as may be requisite) to be submitted annually to Congress.

"(4) It shall advise the Secretary of the Navy concerning the location, capacity, and protection of fuel depots and supplies of fuel, and of navy yards and naval stations; also in regard to the establishment and maintenance of reserves of ordnance and ammunition and depots of supplies; and shall advise as to the delivery of provisions and stores of every kind required by the fleet.

"(5) It shall coordinate the work of the Naval War College and the Office of Naval Intelligence, and shall consider and report upon naval operations, maneuvers, tactics, organization, training, and such other subjects as the Secretary of the Navy may lay before it."

SECTION 8.

"ART. 126. (1) The aid for operations shall advise the Secretary as to strategic and tactical matters, in conjunction with the recommendations of the General Board, as covered by section 7 of this chapter, and shall also advise regarding all movements of naval vessels, and in general regarding the operations of the vessels of the Navy.

"(2) He shall advise the Secretary as to the submission of subjects to the General Board and Naval War College, and, in order that he may properly perform this duty, all papers which are required to be submitted to the General Board of War College shall be forwarded to the department (Division of Operations of the Fleet) for such reference.

"(13) He shall, in conjunction with the General Board, advise the Secretary as to coordinating the work of the Naval War College and the Office of Naval Intelligence. (Art. 167, par. 5.)"

SECTION 1.

"ART. 105. The Division of Operations of the Fleet shall include the Office of Naval Intelligence, the Office of Target Practice and Steaming Competitions, the Naval War College, and a Section of Movements of the Fleet."

Pursuant to the above regulations the General Board makes a study of the armaments and war resources of foreign nations as compared to our own and their probable strategic plans for defensive and offensive operations against us in case of war, and prepares war plans for our use in operations against them.

In the preparation of such plans it has advantage of the studies on strategy, tactics, and logistics made at the War College on various situations that might arise. The president of the War College is a member of the General Board, and attends its regular monthly sessions. The General Board transfers its place of work to the War College during about three months every year. The Office of Naval Intelligence, whose director is also a regular member of the General Board, is located in the same building with the General Board, and furnishes it with all information obtainable relating to armaments and war resources of foreign nations.

The General Board, through the aid for material, who is also a member, has the means of obtaining all information relating to the material condition of the Navy, including ships, navy yards, and naval stations, and ways and means of supplying the fleet in time of war and peace.

The aid for operations, who is also a member, is charged with assisting the board in the preparation of war plans and with advising the Secretary in regard to the same, and in coordinating the work of the various utilities of the Navy Department in carrying them out.

Under the system briefly outlined the General Board has prepared war plans for use in possible contingencies against various nations, and these are now on file for immediate use should the occasion arise.

Sincerely, yours,

JOSEPHUS DANIELS.

TENTATIVE DUTIES OF PROPOSED CHIEF OF NAVAL OPERATIONS AND HIS ASSISTANTS.

The work may be conveniently divided among nine committees, or "sections."

The historical section studies past campaigns, analyzes them, and deduces a comprehensive conception of war. From this conception it deduces broad and general "doctrines," as guides for our officer personnel in their conduct of war. By means of these "doctrines," the personnel works with a prearranged understanding, without the necessity for awaiting long and detailed orders.

The policy section makes studies of the inherent interests of all nations, and the policies which logically follow. They endeavor to forecast the possibilities of international conflict and to devise measures to carry out the policies determined by the Government. The various policies of their own Nation, as outlined by the State Department, are studied, and upon these are based the naval strategy of possible future war.

The strategic section studies the theaters of possible wars from every aspect, and the sources and means of supply to the military and naval forces. The strategic situation in each case is studied not only from our point of view but also from the enemy's point of view, and his probable course of action is deduced.

The tactical section studies tactics, particularly in relation to the strategy determined, and endeavors to insure that the tactics of the fleet are kept constantly up to date and conform to the character of the ships and weapons that will be used. They also study the enemy's forces, together with the probable tactics which he will employ.

The logistic section studies the logistic aspects of the strategic and tactical plans, and deduces the following:

(a) The requirements as to supplies at the beginning of war.
(b) The requirements for subsequent phases of the war.
(c) The sources of supply and supplies available.
(d) The organization of transportation.
(e) The organization of the auxiliaries forming the fleet train.
(f) A list of available merchant vessels, their characteristics, whereabouts, and places of assembly for alterations, and the time required to place each in readiness.
(g) Inspection of merchant vessels, and detail decision in each case as to the use to which the vessel shall be put, the alterations to be made, the yard to which assigned; and tentative arrangements with owners as to price and mode of transfer.
(h) Detailed plans for the assemblage of supplies.
(i) Orders necessary for the execution of the plans.

The organization section studies and devises plans of organization for war in order to secure the most efficient flow of authority; the best administrative and tactical grouping of the forces; the detail of personnel for command; and the orders necessary for the execution of the various plans.

The mobilization section prepares and keeps always up to date plans of mobilization for war for each of the various situations arising from conflict with possible enemies. These plans must show:

(a) The vessels to be mobilized.
(b) Detailed scheme of organization and utilization of Naval Reserves, Naval Militia, ex-Navy men, and others who would be needed on outbreak of war.
(c) The names of their chief officers.
(d) The dates when mobilization of the various types of ships must be completed.
(e) The places of assembly.
(f) The plan of recruiting organization.
(g) Orders necessary for execution of plans.

The training section studies methods for the training of the naval forces, and devises strategical problems and tactical exercises involving combined maneuvers of battleships, scouts, cruisers, destroyers, submarines, air craft, and mining vessels.

The executive section sees that the plans devised are executed.

The importance of the work may be judged from the fact that in Great Britain it is performed by a separate organization called the naval war staff, composed of about 39 line officers, a few staff officers, and about 31 civilian assistants; in Germany by the admiral staff, composed of 22 officers with 13 officer-assistants and a librarian; and in Japan by a general staff, which is immediately under the Emperor.

In the duties of each of the present bureaus of the Navy Department, as explicitly defined by law, not one word appears as to the necessity of being prepared for war, or for the steps to be taken in preparation therefor. The Navy has no such bureau.

Now, as to the fleet itself. We have a vast extent of ocean which we must cover in our fleet operations.

Mr. CURRY. Will the gentleman yield?

Mr. HOBSON. Yes.

Mr. CURRY. The naval board has no real power. It simply makes recommendations, which are usually ignored.

Mr. HOBSON. It has no statutory power. Its power would be merely advisory.

Mr. CURRY. And the advice is not accepted.

Mr. HOBSON. The gentleman is correct that it may not be accepted. Now, in these vast operations our fleet ought to be able to see farther than any fleet in the world. Our fleet to-day is blind. There is not in the North Atlantic Fleet nor in the naval service a single efficient scout vessel, a vessel that could scout and do its scouting out on the high seas and keep there. Every other navy in the world has them. These fleets have eyes. Most up-to-date fleets have, in addition to regular scouts, these great battle cruisers that can make their reconnoissance in force at a long distance. Our Navy has not one. That I regard as a prime necessity for making the battleships we now have effective. We should no longer turn down amendments offered here for years, and which will be offered again, to authorize two battle cruisers. My conception of the best vessel for this service is a vessel of about 40,000 tons displacement, having guns as big as any built, with at least 30 knots speed, and having armor such as would protect them at battle ranges against attack by an armor-piercing shell. In addition to that, we ought to have at least five regular scouts——

Mr. McLAUGHLIN. How much would the vessel cost?

Mr. HOBSON. The 40,000 tons.

Mr. McLAUGHLIN. Yes.

Mr. HOBSON. I imagine the one I recommend would cost about $22,000,000. It is the 30-knot speed that makes it so expensive; the machinery is exceedingly expensive. All the nations of the world have seen fit to go to extra expense in order to get these vessels. The prime requisites are speed and power of hitting, enabling the vessel to choose its own range as against most vessels, at least those that are met in scouting, and be able to take its distance and then by a superior attack at long range destroy the enemy without having the enemy become effective against the ship itself. That is what has been done in all the battles recently fought. The one off the Chilean coast, Members will remember, was fought at a long range, nearly 14,000 yards, although the biggest guns were only 9.2; but through superior speed the German fleet was able to totally destroy the English fleet, although one of the English ships had larger guns than the Germans. Through superior speed the Germans were able not only to choose their own range, but also to choose their location, so that when the sun set the English ships could not see the German ships, while the German ships were practically destroying the English.

Now, in the Falkland Islands the tables were exactly turned, but the results were the same. The two English battle cruisers that went there chose their range and distance and destroyed the Germans.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HOBSON. Mr. Chairman, I will extend my remarks in the RECORD in more consecutive form.

Mr. Chairman, we have again reached the time when the Sixty-third Congress is to consider and to provide for the maintenance and development of the Navy. This is a momentous year in the history of the world. Amidst the clash of arms in all parts of the world our people have a general feeling of alarm and some misgivings and forebodings. The war area has extended until we find it in Canada to our north, in Europe to our east, in Asia to our west, and the echo of internal war in Mexico to our south. Daily we see the warships of belligerent nations hovering off our shores. There has never been such a disturbed condition of the world, certainly not since the Napoleonic wars.

CONDITIONS ANALOGOUS TO THOSE BEFORE THE WAR OF 1812.

Both sides in the great European struggle are taking occasion to bitterly criticize America's conduct. We have suffered already a serious interruption of our commerce and an economic dislocation requiring emergency revenue legislation for the Government and entailing hundreds of millions of dollars' loss by our people. The situation is closely analogous to the situation at the close of the eighteenth and beginning of the nineteenth centuries, when Great Britain was the moving spirit in directing allied nations against Napoleon. Indeed the situation now is more ominous than the situation at that time.

WAR WITH FRANCE IN 1800.

Napoleon's resentment which led to the war with France in 1800 was not as intense as the growing resentment of the Germans to-day at the great source of supply of war materials her enemy allies are finding in America.

WAR OF 1812.

The arbitrary treatment of American ships and American commerce by Great Britain to-day are closely parallel to similar treatment in the years preceding the War of 1812. The attitude of Great Britain toward America in recent years should give serious concern to all thoughtful Americans.

PANAMA CANAL TOLLS.

It was exceedingly ungracious, to say the least, for Great Britain to press us as she did over the question of simply granting free tolls through the Panama Canal to our coastwise shipping.

SHIP PURCHASE.

Great Britain's attitude toward our purchase of ships from Germany is nothing short of menacing.

RIGHTS OF NEUTRALS.

Her continual and arbitrary abridgment of the rights of neutrals to the great disturbance of our foreign commerce, and her arbitrary extension of the list of contraband to suit her own convenience, regardless of the Declaration of London and

of other international conferences, is a serious menace to the development of our foreign commerce and infringes the just rights of all neutrals.

THE ANGLO-JAPANESE ALLIANCE.

The disturbance in China, growing out of the seizure of Kiaochow by Japan, with the occupation of islands near our possessions, are causing disturbances in the Pacific where conditions were already serious.

The most ominous and significant event of the year is the giving out to the world that the Anglo-Japanese treaty is an alliance offensive and defensive.

TIME TO TAKE ACCOUNT OF NATIONAL DEFENSE.

It is high time that all thoughtful Americans should pause and earnestly consider the condition of our national defense.

BEWARE OF PEACE DREAMERS.

Let us particularly beware of those who come and who have been coming crying, "Peace, peace," when there is no peace; those who fold their hands like followers of Confucius and would pray for peace, but do nothing to actually insure peace. Peace is nowhere maintained without definite and adequate provision for its maintenance. Definite organization has been evolved in every community where peace prevails, whose principal purpose is to insure peace and that administration of justice upon which alone abiding peace can rest. There is no such organization between the nations of the world. Each nation is sovereign, acknowledging no superior, subject to no restraining authority. The prosecution of the war in Europe is a constant reminder that nations are beyond the domain of law and are subject only to the impulses that sway human nature unrestrained. An idealistic enthusiasm that assumes that organization exists between nations capable of assuming the responsibility of administering justice deceives itself and endangers the real progress of peace and justice. It becomes a public menace when it advocates leaving a nation's life, independence, and vital interest to hang upon a myth. To advise our country and other peaceable nations to go disarmed simply because we would prefer an international organization for justice would be like advising the peaceable inhabitants on a wild frontier to disarm and allow the lawless to reign. Such action would prevent the development of a condition of law and order.

MUST RELY UPON OUR OWN RIGHT ARM.

America never has been an aggressive Nation. She is not now and never will be. But America lives amidst the powerful military nations of the earth. As pointed out, we can not look to an international organization for our protection. There is no international court; only the embryo, in the form of The Hague tribunal; no international parliament, only the embryo of The Hague conference, whose third convocation, due in 1915, is now being allowed to lapse. Where are the peace dreamers? Sitting idly by, without raising a finger to avert this tragedy to the little embryo. In vain have I sought to interest the Secretary of State. He also will not raise a finger, out of fear, evidently, of displeasing those belligerents who do not wish any measures to be taken to hasten the advent of peace. There is no international executive—not even an embryo.

THE QUESTION OF TREATIES.

Treaties lack the main basis of a contract—the power of enforcement; the question of arbitration. Arbitration up to the present time, as between great nations, specifically excludes from consideration questions of vital interest and questions of honor—the very questions over which nations wage war. Having no outside recourse, nations must provide their own means of defense. At this stage of the world's political and social evolution we must rely upon our own strong arm alone for our national defense.

THE RIGHTS OF PEACE VERSUS THE RIGHTS OF WAR.

A very illuminating example is now seen of the encroachments of nations at war upon the rights of nations at peace simply and solely because of their preponderance of power over the latter. America's woeful lack of preparation is the fundamental reason for the reversal of the ordinary progress of humanity, the contraction of the rights of peace before the encroachment of the so-called rights of war, based solely upon the preponderance of brute force. It is no exaggeration to say that the condition of preparation for national defense in America is now and will remain the largest determining factor in the preservation of our own peace and the establishment and extension of peace throughout the world.

AMERICA'S WORLD POLICIES.

A nation's position among the nations of the world and its own world policies are the foundation considerations for working out a policy of national defense.

SELF-PRESERVATION THE FIRST LAW OF NATURE.

For America and for all other nations, as for all living organisms, the first law is self-preservation.

DANGER OF ATTACK IN THE ATLANTIC.

We have 5,300 miles of Atlantic coast line, and bays and harbors and navigable rivers leading up to the same, upon which are located, within 15 miles of water, the homes of 15,000,000 American citizens and over seventeen billions of American property. On the Gulf coast we have the homes of nearly 2,000,000 citizens and over eight hundred millions of property; on the Great Lakes, the homes of about 8,000,000 citizens, with about seven and a half billions of property; in the great Mississippi Valley, 11,500,000 citizens and nearly nine billions of property. In addition to our mainland exposure, we must protect Cuba, Porto Rico, and the Panama Canal.

DANGER OF ATTACK IN THE PACIFIC.

In the Pacific Coast States the homes of nearly 2,000,000 citizens are exposed, with nearly three billions of property. In addition to the mainland, we have the great treasure house of Alaska, the great strategic harbor and islands of Hawaii, together with the Philippine Islands, and also the Panama Canal.

MUST ALWAYS PROTECT THE FILIPINOS.

Whatever may be our political relations with the Philippine Islands, America will always protect the Filipinos, as she protects the Cubans, against military aggression.

INADEQUACY AND IMPOSSIBILITY OF DEFENSE BY LAND FORCES.

As compared with the great nations, our regular standing Army may be considered a negligible quantity. Likewise our militia and reserve. The same may be said of coast fortifications, which are open to capture from the rear because of the lack of a mobile army for their defense. Therefore an enemy in control of the sea could occupy Cuba, Porto Rico, and Panama, in the Atlantic; Alaska, Hawaii, Guam, and the Philippine Islands, in the Pacific, all with little practicable resistance in case of attack in force. In addition to definite occupation of this outlying territory, an enemy could raid our mainland coasts in force, occupy and levy upon our great cities without any chance whatever of effective resistance until long after they could retire with their booty, after destroying our navy yards, shipbuilding yards, arsenals, shipping, and public works. It is vain to imagine that our cities would be spared after the experience of cities abroad. It is likewise vain to imagine that the meager land forces available could make any serious resistance.

AMERICA MUST CONTROL THE SEA.

In order to realize the first policy, namely, that of security of our vital interests against violence in accord with the dictates of self-preservation, there is no other recourse. America must control the sea in the Atlantic, and thereby keep the European armies in Europe, and must control the sea in the Pacific, to keep the Asiatic armies in Asia; and since these oceans are so far apart and since nations that are liable to attack us in Europe and Asia are liable to establish and have already established alliances, offensive and defensive, we must control the sea in both oceans at the same time.

PROTECTION OF OUR COMMERCE AND FOREIGN MARKETS.

America is rapidly becoming a great industrial nation, competing for the markets of the word. The jealousy of industrial nations in this competition is illustrated by the attitude of Great Britain toward Germany before the war. America need not hope to have a fair chance to gain supremacy in world commerce any more than Germany if she has no more formidable naval strength than Germany had. The alacrity with which our rights as a neutral are invaded and the quickness with which every means is sought to hamper the growth of our merchant marine at the present time clearly show that neither when Europe is at war or at peace will our commercial and industrial expansion over seas be permitted normal and legitimate course unless we have control of the sea. Thus control of the sea must be the foundation for the security of our property rights on land and on sea.

MENACE TO OUR INSTITUTIONS.

Our Government was established and will have to be maintained in the face of antagonistic institutions of the Old World. Believing, as we do, in the principle of the right of self-government and of equality of opportunity, no European or Asiatic monarchy has yet acknowledged the right of sovereign local self-government as vested in our individual States. There have been 13 cases in our country's history where the subjects of foreign powers have been maltreated in individual States; in 11 cases these foreign subjects suffered violence. The foreign Governments promptly made demands upon our central Government to interfere, and our central Government informed

them with regret that it could not interfere. In most cases an indemnity was afterwards made as a matter of humanity but not as a matter of law. In one recent case a foreign Government questioned the right of a State to regulate its own school system, and in another case now pending it challenges the right of a State to determine the question of tenure of lands and property rights. It is not necessary to cite the dangers involved in this case on account of the race question. Thus, for the security of our institutions as for the security of our homes, our property rights on land and on sea demand that America should control the sea.

THE CAUSE OF JUSTICE AND OF RIGHT.

In world relations under the dictates of self-preservation the game should be played according to the rules of justice and of right, not the rules of brute force and of might.

The ascendency of right is in line with the law of evolution. The progressive development of the higher and nobler faculties of men and of nations, indeed cooperation and service, should supplant the destroying principle in the relationship of nations as in men. America has already historically become the champion of the right of the weak against encroachments of the might of the strong.

THE MONROE DOCTRINE.

Though the Monroe doctrine may have been conceived with the idea of self-protection for the United States, and though from time to time its justification is based upon considerations of vital interest, nevertheless the spirit of the Monroe doctrine is our championship of the rights of the weak against the oppressions of the strong and our championship of the principle that among all strong and weak alike there shall be equality of opportunity, fair chance and no favor. This doctrine cuts off the Western Hemisphere from the extension of colonial policies of Europe and Asia. It is natural and inevitable that the security of this policy rests, and can permanently rest alone upon the control of the sea.

MAXIMILLIAN AND MEXICO.

When America was embroiled in a civil war the French invaded Mexico against the protest of the United States. When the war was over and America had control of the sea and her armies were ready to be turned into Mexico the French promptly retired.

GREAT BRITAIN AND VENEZUELA.

In the boundary dispute between Great Britain and Venezuela the former proceeded against the latter in defiance of the expressed wishes of America until President Cleveland sent his Venezuelan message, "Arbitrate with Venezuela or fight." The British chose the former.

GERMANY AND VENEZUELA.

Germany hoisted her flag over the customhouses of Venezuela against the expressed wishes of America. President Roosevelt assembled our whole fleet at Guantanamo, then requested Germany to haul down her flag. The request was complied with.

MEXICO AFTER THE EUROPEAN WAR.

When Europe is relieved of the absorbing activities of the great war what will likely be the attitude of the victorious nation toward Mexico, especially in the event that the allies are victorious and British financial interests are greatly disturbed and injured by Mexican disorder? No one can tell when or in what way the issue may arise, but certain it is that America will be called on to surrender the Monroe doctrine unless she is able to defend it, and since the countries involved, Mexico and Central and South America, are over the seas this defense will hinge absolutely upon our Navy, whether it is powerful enough to control the sea.

CANADA AND THE MONROE DOCTRINE.

A new complication of the Monroe doctrine has arisen in the participation by Canada in the European war. If Germany were victorious and gained control of the sea, she would probably send an expeditionary force against the British colonies. In the event of such a force conquering Canada, question would arise whether Germany following her natural inclination to remain should be allowed by the United States to establish a German colony on our borders. In case German and American policies should conflict, the question of peace and war—the question of the integrity of the Monroe doctrine—would hang upon the strength of our Navy. If we want peace with the Monroe doctrine, we must control the sea.

THE OPEN-DOOR POLICY IN CHINA.

America has been the champion of the open-door policy in China, beneath which lies essentially the same principle underlying the Monroe doctrine, namely, justice to the weak and equal opportunity to all; respect for the integrity of China and equal opportunity for all nations in their competition for the trade of China.

Russian encroachments through Manchuria continued until Port Arthur was occupied. America promptly protested and practically called on Russia to retire. We had no strong fleet and no military strength behind the fleet we had. Russia ignored our demand and remained, and from her remaining came the war between Russia and Japan. Great Britain has shown scarcely more consideration for the integrity of China than Russia. She seized Hongkong after imposing her opium from India upon the unwilling Chinese by war. She has since extended the territory first seized in the mainland in the Kaloon extension. She made a second war on China to further impose opium upon her people, and later seized Wei-hai-wei, though it appears that since the Japanese alliance she has dismantled this station. Germany has shown a similar attitude toward China, especially when she seized Kiaochow and fortified the harbor of Tsing Tau.

JAPAN AND THE OPEN-DOOR POLICY.

Japan has shown less regard than all the other nations for the integrity of China. She has annexed Korea, part of the Liao Tung Peninsula with Port Arthur; she has practically annexed southern Manchuria, and now has seized Kiaochow. She went to war against Russia ostensibly to get Russia out of Port Arthur and out of Chinese territory, but when Russia withdrew Japan remained and never made any pretense of returning the Chinese territory to China. The probabilities amount to almost a certainty that having gone to war with Germany ostensibly to remove Germany from its encroachment upon China Japan now in Germany's place will never dream of retiring herself.

JAPAN'S MENACE TO CHINA.

Count Okuma, prime minister of Japan, in an article in the Shin Nippon, used these words, referring to the struggle for existence:

> We must be careful to keep this point in mind and prepare ourselves with power to meet the struggle for existence. The people who can not meet the struggle will be crushed * * *.
> Thus, those who are superior will govern those who are inferior. I believe within two or three centuries the world will have a few great governing countries and others will be governed by them—will pay homage to the mighty * * *.
> Woe to the nations which are governed. We should from now on prepare ourselves to become a governing nation.

These statements are significant in light of the recent dispatches from Japan stating in effect that Japan had practically sent an ultimatum to China, because China had, naturally, ordered the discontinuation of the war zone around Kiao Chao, since war there had ceased, and a later dispatch stating that Japan had taken up negotiations with Pekin for the purpose of "determining the development policies of China."

JAPAN AND AMERICA.

In the same article referred to above Count Okuma stated:

> Although we hold Germany as our enemy, yet we do not forget the part played by Germany * * *. In future as in the past we will continue to pay our respect to German knowledge and scientific genius, but we must at all costs fight against the Kaiser's spirit of conquest until we shall have crushed it * * *. Our attitude toward the American people will be the same; we shall attack any mistaken ideas or policies without mercy. We do not, of course, hate the individuals. The time has now come when humanity should awaken. The present war has brought about the opportunity. We should free ourselves from the mistaken racial competition arising from prejudice.

ANTI-AMERICAN PROPAGANDA IN JAPAN.

The cosmopolitan press and the dispatches to the foreign press from Japan continue more or less the same kind of smooth generalities regarding the Japanese and American relations, but in the vernacular press all kinds of disquieting and misleading rumors are being energetically circulated, all tending to arouse enmity and hatred of Americans among the Japanese populace, ending in the conviction that war with the United States is inevitable. A similar propaganda against Russia preceded the Russo-Japanese War. Among the rumors and misrepresentations may be mentioned the following: That the United States had territorial ambitions in the Far East and proposed to seize a naval station on the continent of Asia; that the United States is seeking to undermine Japanese commerce and the like. It is authentically reported that when the Japanese troops were mobilized for the expedition against Kiao Chao the soldiers for a long time thought they were starting for war against America.

ANOTHER WARNING.

My warnings to my countrymen as to the dangers in the Pacific Ocean arising from our lack of defensive preparations have been little heeded, and in some quarters have even been ridiculed.

Officers high in the councils of our Government have joined in the scoffing when they themselves knew that code messages

had been sent to commandants of our navy yards to be prepared to put their stations on a war basis upon short notice and that our troops in the Philippines protecting the harbor of Manila had slept at their guns for weeks with the harbor mined, hourly expecting an attack by the Japanese fleet. I renew my warning. The only security for permanent peace in the Pacific Ocean is our unquestioned control of the sea in that ocean.

THE PACIFIC OCEAN CLEARED OF AMERICAN BATTLESHIPS.

When our battleship fleet started around the world I endeavored to have it stopped and remain in the Pacific Ocean. The impression I received led me to the firm conviction which I have not since changed, that our fleet was allowed to go to the Pacific Ocean by Japan only upon our assurance that it would be out of that ocean by a fixed date. I have felt for some time that our battleship fleet will never go to the Pacific Ocean under the present administration. My conviction is firm that, protestations to the contrary notwithstanding, peace with Japan has thus far been secured by the present administration and war was averted at the critical juncture to which I have referred by assurances that America would speedily retire from the Philippine Islands. I am further convinced that our first inquiry as to the intentions of Japan in seizing Kiao Chao and the islands in the Pacific Ocean will not be followed up, at least by this administration, and that Japan, as a price of peace, will be given a free hand in China with the prospect of the complete overthrow of the open-door policy, leaving China to its fate to become a "governed" nation, while the commerce of America, which in cotton goods alone fell off over twenty millions in Manchuria after Japanese occupation, will be at the mercy of a competitor, while the complete overthrow of the balance of power in the Pacific Ocean would lead to one inevitable result, war.

THE GRAVITY OF THE ANGLO-JAPANESE ALLIANCE.

In determining the movements of our battleship fleet we can not escape leaving one ocean undefended. We may rest assured that in our negotiations with England that country has in mind her alliance, offensive and defensive, with Japan, knowing that both the Japanese Navy and the Japanese Army would be available for cooperation should war result, while in our negotiations with Japan that country will bear in mind that the British fleet, or part of it, and possibly the forces of other allies will be available in the Atlantic to prevent our battle fleet from going to the Pacific, insuring Japanese control of the sea and the availability of her overpowering army already on a war footing.

This brief scan of America's policies, the Monroe doctrine, and the open-door policy, based upon the principle of right and justice like America's policies based upon the necessity of self-preservation, both meet in the same inevitable conclusion. We must control the sea in the Atlantic and in the Pacific, both at the same time.

COOPERATION AND SERVICE.

In the relations of nations to each other as in the relations of individuals with each other there should not only be justice and right but also cooperation and service, generosity, mercy, charity, good will, brotherhood.

MILITARISM VERSUS INDUSTRIALISM.

Two forms of civilization are passing through a test of survival—militarism, with its concurrent institutions, based on monarchy and a privileged hierarchy of royalty and nobility and bureaucracy, and the system of industrialism, based upon productiveness with institutions free from privilege. America is the Nation that embodies industrialism; Japan and Asia and the great military nations in Europe embody the system of militarism. In a fair competition in times of peace militarism must go down, but industrialism unprepared would as inevitably fall in war. In the interest of humanity, that lies upon the survival of industrialism, America should with her vast resources make adequate preparations, taking care always to safeguard her own people against the spirit of militarism.

AMERICA THE MERCIFUL AND THE GENEROUS.

When Great Britain, France, the Netherlands, and the United States jointly bombarded Shiminosiki and exacted $3,000,000 indemnity from the Japanese Government for having closed the straits at that point, the other nations took their equal shares and expended them. America's share was duly received, but ere long, by a unanimous vote of the American Congress, every dollar was returned to the Japanese Government.

In the Boxer disturbances, when the allied nations invading China levied huge indemnities against America's pleading and allotted America $12,000,000, by a unanimous vote of our Congress we returned the last dollar to the Chinese Government.

When our blood and treasure had been freely poured out in Cuba and the world expected us to remain and hold Cuba as a fruit of conquest and a source of revenue, America astonished the whole world by voluntarily giving Cuba her independence. What nation on earth would have been so patient, so long suffering in Mexico as have been the American people?

AMERICA THE PEACEMAKER.

America is the one great Nation that covets no territory of any other nation. America is the one great Nation that has no enemies. America is the one great Nation that would recoil at the very thought of becoming a "governing" nation. In America Jews and Gentiles have become reconciled, Protestants and Catholics. America is a blood kinsman of the Anglo-Saxons, of the Germans, of the Frenchmen, of the Austro-Hungarian, of the Italian, of the Russian, the common friend of Celt, Slav, Teuton, Latin. America opened up Japan with the blessing of an elder brother. America to-day is the one disinterested friend of China in all the world. Shall this great Nation of destiny be impotent when it raises its voice for the establishment of such policies as the Monroe doctrine, the open-door policy, such principles as justice and equal opportunity and rights of the weak? Shall America be impotent when she seeks to restrain the cruel march of war and permit the operation of great organic forces of commerce and industry, of education, the moral and religious forces of the world, to work out the overthrow of war and the ultimate establishment of the era of peace on earth, good will to men?

THE RIGHTS OF NEUTRALS VERSUS THE RIGHTS OF BELLIGERENTS.

The swift events are daily bringing into contrast the so-called rights of belligerents and their restraint upon the inherent rights of neutrals. America is the only great nation in the world logically constituted the champion of the latter. The so-called rights of belligerents are founded solely upon might. For instance, Great Britain maintains that she has a right to negotiate unlimited credits and purchase unlimited amounts of war material in America and denies the right of Germany to sell ships to America from which a credit might be derived that, when derived, could not be used to supply war materials. Our Secretary of State takes the position that we ought to be parties to the proposition of giving great military aid to Great Britain and her allies and withholding even commercial aid to Germany, because the British and allied fleets are stronger in might than the Germans and have control of the sea.

A statement was made some time back, emanating evidently from the White House, that our Government in bona fide transactions and our citizens in similar transactions could purchase vessels where they pleased, but now we hear no murmur of protest when Great Britain informs us that a ship purchased in good faith from Germany by an American citizen will not be allowed to carry on peaceful commerce over the high seas. Every arbitrary action of the British Government in extending the list of contraband and the exercise of search and seizure represents an encroachment for all future time, at least as far as precedents go upon the sphere of neutral rights, simply because the combination of the allies represents so much power upon the high seas the limited progress already made in the rights of peace must be turned back. America must fold her hands while her own opportunities for commercial expansion are limited and the evolution of the rights of neutrals, the rights of peace, is set back.

NO CHRONIC BELLIGERENT SHOULD HENCEFORWARD BE ALLOWED CONTROL OF THE SEA.

Great Britain has undertaken for a long time to maintain power upon the sea greater than that of any two nations—in fact, more than double that of any other nation—so that the high seas are practically under the control of a partisan. In the interest of humanity at large and the orderly evolution of peace and right, and especially the development of the rights of neutrals, minimizing and localizing of the disruption of war demand that the scepter of the sea shall pass from the hands of Great Britain and hereafter rest in the hands of the great peaceful kinsman of all nations, the United States.

AMERICA'S DEFENSE POLICIES.

Having reviewed America's world policies, we can now proceed to establish our defense policies.

The elements of national defense may be divided into two classes—national resources and national preparations.

The trend of the times is to increase the already preponderant advantages of preparations as compared to potential resources. When Prussia struck Austria in 1866, the war was over in a few months. When Germany struck France in 1870, the same result followed. When Japan struck Russia, the same. In the great world war now raging both factors may be brought into the field, because both sides had ample preparations to insure having a time element sufficient to develop and bring to bear their resources. America's preparations are so utterly inadequate that the prospects are the blow struck would seriously

endanger our chances of being able to bring our resources to bear at all. It is estimated that at least three years would be necessary to create a model army in America, prepared to cope with modern armies abroad, which are kept ready to move on a moment's notice, with transportation facilities sufficient to cross the ocean in a few weeks. Our mobile army being so small and so widely scattered and our militia being in the same condition, with the complete absence of any reserve, America must rely upon her naval forces to insure the time element in which to bring to bear our great resources. Fortunately from our geographical position over seas from the great military nations, naval forces sufficiently powerful can insure us a security greater even than that England has enjoyed for hundreds of years, enabling her to escape the necessity of conscription and permitting her to evolve liberal institutions.

NAVAL POWER VERSUS MILITARY POWER.

Military power involves large numbers of men organized into armies; naval power consists chiefly in property made up of ships. A dreadnaught to-day, with its crew of 1,000 men, is ordinarily estimated to be more than equivalent in power to an army corps of more than 40,000 men. Take Germany's case to-day: Twenty additional dreadnaughts would give her control of the seas, and at least cut off the 2,000,000 men England is preparing to place on the Continent drawn from the British Isles and the colonies of the British Empire. Germany would have access to the resources of the whole world, while England could be starved into submission in a few months. The additional 20 dreadnaughts would be worth to Germany more than a billion of dollars, more than millions of men. It would mean sure victory; in fact, it would have prevented the participation of Great Britain in the war. It would have determined the course of history. A few more battleships in our Navy before the war with Spain would have insured control of the sea without the necessity of the test of war, and would have saved the cost of the hundreds upon hundreds of millions of dollars entailed by the war itself. Defense by naval power, therefore, does not involve military activities of the people, and what few people there are involved are far away from the mass of the people themselves. Thus there is no tendency to militarism. On the contrary, when people can secure their defense by naval power, then industrial activities are uppermost, and their civilization follows the kines of industrialism instead of militarism. It is this great fact in history that has caused all the Republics of the world to be built upon naval power. This will account for the fact that it is such countries where defense comes through naval power that free institutions have developed most, as in the case of England. The evolution of the world has been away from militarism and toward an industrial civilization, so the history of the world has persistently hung upon the course of sea power, and the great crises, the great decisive battles, have really been naval and not military.

The perpetuation of Grecian civilization as against Persian was not settled at the Battle of Thermopylæ on the land, but at the Battle of Salamis on the water. Likewise, the advent of the Augustan era of Roman history was not settled at the Battle of Philippi, but at the Battle of Actium. Indeed, the survival of Rome as against Carthage was settled when the Roman galleys gained control of the Mediterranean. The English civilization of Elizabeth overcame the Spanish civilization of Philip II because of the destruction of the Spanish Armada. England came through the Napoleonic wars supreme as against Napoleon because Napoleon could not cross the English Channel. England at Waterloo fought for victory; England at Trafalgar fought for existence. Anglo-Saxons are associated with the most advanced civilizations in the world, with the most advanced institutions of human liberty, because the Anglo-Saxon has held naval supremacy for a thousand years and has not been subjected to military conscription. The future of the world, like the past, is going to be determined by the control of the sea. Industrial nations sufficiently farsighted to make naval preparations to insure their bringing to bear their great resources are the ones that are going to survive as against the nations that continually maintain great armies.

OUR POLICY FOR LAND FORCES.

The fact that defense through naval forces where available is more advantageous than defense through land forces does not nullify the importance of the latter nor the necessity of clearly establishing a policy for land forces.

AMERICA A NONMILITARY COUNTRY.

We are a nonmilitary country, and our very civilization demands for its perpetuation that we remain a nonmilitary country. Therefore we can not have and should not have large standing armies, maintained under conscription like the military nations of the world. Our relatively small standing army therefore must be maintained in the highest state of efficiency, and must be kept at such station as to permit of rapid concentration at our vital points of exposure.

PRESENT POLICY WASTEFUL AND INEFFICIENT.

The policy of maintaining small detachments in scores of points widely scattered is absolutely contrary to such a policy, since it prevents practice in large units and prevents efficiency and makes rapid concentration an impossibility, while the cost per soldier is increased beyond all reasonable limits. There should be two main points on the Atlantic, one on the Gulf, two on the Pacific. Most of the others should be abandoned.

Having such a small standing army increases the importance of maintaining a comparatively large militia and military reserve force.

MILITARY PAY BILL A NECESSITY.

Congress should speedily take measures to encourage the States and the citizenship to develop in numbers and efficiency the National Guard. This, of course, can not be done without the Federal Government's sharing a reasonable amount of the expense necessary. A comprehensive militia pay bill insuring not only expansion but increased regulation and efficiency of the militia is a military necessity.

A GREAT CITIZENRY RESERVE FORCE MUST BE DEVELOPED.

We should adopt national policies to encourage the average citizen to secure that minimum amount of military training necessary for a speedy development of the citizen into a good soldier after war comes. This will involve the Federal Government's cooperation in the educational policies of the Nation, and a comprehensive plan for financial aid should be established to apply to all high schools and colleges and even to the seventh and eighth grades in the graded schools. The cost in equipment would, of course, be large, since the Federal Government in all probability will find it necessary to provide the essentials, but the success of the Boy Scout movement shows that cooperation on the part of the people and the boys would greatly reduce the total cost from what would naturally be the estimate.

EX-SOLDIERS AND OFFICERS.

A definite military reserve should be maintained in such a way as to keep together the bulk of discharged soldiers, and colleges, high schools, together with the militia and reserve, should be conducted with a special view to preparing a large contingent of officers ready for taking charge of the great volunteer armies in time of war.

COORDINATION.

Our land forces and our policies controlling same should be determined in coordination with our naval forces and the policies controlling the same. The two are essentially supplemental. In proportion as the land forces are weak so the naval forces must be strong. In a few moments I will discuss the elements that should determine our naval policy. It is clear, however, that before any real permanent efficiency and economy can be realized in our national defense we must create an agency competent to investigate the whole question of national defense, whose duty it would be to work out and recommend to the Government a comprehensive policy.

THE COUNCIL OF NATIONAL DEFENSE BILL.

For six years such a measure has been before Congress in the form of a bill to establish a council of national defense. This bill has been twice favorably reported by the Naval Committee of the House. It has been incorporated in the Democratic platform of Baltimore. In the hearings before the Naval Committee Gen. Wotherspoon, president of the Army War College, made the significant statement that under the operation of such a council the efficiency of the Army could be trebled while its expense could be cut in half. Similar testimony was given by other officers in the Army and Navy, and favorable action has been urged by the late President of the United States and by the last four Secretaries of War and by the late Secretary of the Navy.

Such a council would only have advisory power, and could not possibly interfere with the jurisdiction of the legislative or executive branches or with their independent operation. Upon the council would be found with the President the Secretary of State, the highest authority on our world policies; the Secretary of War and the Secretary of the Navy, with their highest technical experts and advisers; along with the chairmen of the committees of the Senate and the House having cognizance of naval and military affairs, foreign relations, and the purse strings.

THE PRESIDENT AND SECRETARY OF STATE THE GREATEST OBSTACLES OF NATIONAL DEFENSE.

The fact that the council of national defense bill is a plank in the Democratic platform seems to have no influence with the administration. This bill would long since have been a law

but for the opposition of the President and the Secretary of State. This opposition to the most vital and fundamental measure, similar to measures that have been taken by all the other nations of the world, opposition that keeps America from making a start, constitutes the President and the Secretary of State the greatest obstacle of their country's defense.

It seems a singular irony that the movement for national prohibition likewise has found greatest opposition from the present administration. To thoughtful men these two questions are the most vital and the most fundamental before the Nation, one affecting the integrity of the Nation within and the other the security of the Nation without. It seems passing strange that, measured by these two great causes, we find the highest official of the Nation is the greatest obstacle to progress.

THE COUNTRY'S GREATEST LIABILITY.

It is far from me to question the patriotism and the conscientious devotion of this eminent citizen. This only deepens the tragedy of the situation and the deadening effect of his influence in these two fields of public endeavor. I do not disparage the usefulness of his services in other lines and the beneficent educational influence his life has had upon his country. These, again, only deepen the tragedy.

Every citizen is entitled to his own appraisal of the relative importance of public questions. I expect others to differ with me. To me, however, the first question in importance before this Nation or any other nation is to make and keep the nation sober. The question of next importance before our Nation is to provide an adequate defense, so that as a people we may live in peace and security and work out our institutions at home without molestation and with the minimum disturbance when war exists in other lands, and so that we may without fear be able to effectively champion the cause of the weak and the principles of right and justice in the Western Hemisphere, and even ultimately in the Eastern Hemisphere, thus insuring the survival of industrialism, bringing about the passing of militarism, causing war to steadily recede, so that at last peace can reign throughout the earth, free institutions can be developed in all lands, leading toward the ultimate goal of the brotherhood of man under the fatherhood of God.

Nothing is so much needed in this country as for the public to be appraised of the truth that really bears upon great public questions. If there were any chance of my being mistaken about the obstacles in the path of these two great lines of national progress, I would not raise my voice; but being in the heart of the public movements in both lines, I have felt only too heavily the power of the obstacles represented by the President. My conception of duty as a public official is to do the duty, whatever it may be, without flinching, though it be "to his own hurt." It is only when the truth is fully known to our people that the real obstacles in the path of progress can be appreciated, and a beginning made toward ultimate realization of a great objective. If national prohibition and national defense are the greatest questions in America, as I believe them to be, then the President of the United States instead of being our country's greatest asset is our country's greatest liability.

I am fully aware, Mr. Chairman, what these words of mine mean, and the effect they will have in the minds of millions, perhaps, especially the effect upon the feelings of partisans, particularly those who exalt party because party constitutes for them the ladder upon which to climb to offices of preferment and eminence. There are some who place self above party and party above country, even without being conscious of their own subconscious classification. My conception is exactly the reverse. I look upon all parties as human agencies organized fundamentally to promote the public welfare. If our country were at war in the presence of a deadly foe, whether within or without, the patriotic citizen would subordinate self, and if necessary subordinate party. Others may differ with me, but I do not believe that in our country's whole history, whether in peace or in war, we have ever been confronted with a more critical situation.

OUR NAVAL POLICY.

Mr. Chairman, I will not repeat to-day the substance of my speech of April 23 of last year, setting forth, as many previous speeches in this House have set forth, my ideas of a true naval policy for America. I wish to make a supplemental addition brought out by the great world war that has come since our last appropriation bill. My previous investigations led to the final conclusion that America should always maintain in the Atlantic Ocean a fleet the equal of the fleet of any military nation of Europe possessing a big standing army, and that we should maintain permanently in the Pacific a fleet as large as the fleet of any military nation of Asia possessing a large standing army. Formerly this standard demanded that our Navy in the Atlantic should be equal to the navy of Germany, and that our Navy in the Pacific should be equal to the navy of Japan. The war in Europe, as previously pointed out, has shown that Great Britain is not a nation whose relations with other nations permits her to be safely trusted to dominate the waters of the world. In the interest of our own peaceful commerce when warlike nations are at war, in the interest of the rights of peace of all nations as against the usurped rights of belligerents based on might, the interests of neutrals, the interests of peace throughout the world now demand that our two fleets in the Atlantic and the Pacific should always at least equal the British Navy, and during the continuation of the Anglo-Japanese alliance they should be together equal to the navy of Great Britain and the navy of Japan combined. This should be the foundation upon which to determine our naval program.

OUR NAVAL PROGRAM.

The true naval program for our country at this juncture should be to speedily take measures to render the Navy that we have efficient and to adequately increase its strength. The great lacking of the Navy as a whole to-day is that naval administration in our country has been developed almost wholly in times of peace. Not since we have had a Navy Department beyond an embryo stage has our country ever engaged a powerful naval foe. It is not surprising therefore that the organization of the Navy Department, based upon seven bureaus, has not included an agency for coordinating all the elements of the Navy and for preparing plans and directing their execution in time of war in order to insure naval victory. Every navy department and every military department of every other nation of the world has such an agency; ours alone is lacking.

CHIEF OF NAVAL OPERATIONS.

In my judgment, the most important part of the present bill is the paragraph establishing a chief of naval operations, with 15 assistants. The enactment of this legislation would represent the real beginning of ultimate efficiency for the Navy we have, whatever its size. It is needless to remark that the efficient navy is beyond all comparison to the economical navy. Whatever the size of an organization, nothing is so wasteful in its operation as inefficiency. In my extension of remarks I will print a speech recently delivered by Rear Admiral Austin M. Knight, United States Navy, before the Efficiency Club of New York City, and I will also print a brief outline of the natural subdivisions or sections in the organization of the office of a chief of naval operations.

OUR FLEET IS BLIND.

Although the field of operations of our fleet must cover inevitably not a narrow channel nor a comparatively small sea, but the great extent of an ocean, nevertheless to-day we have no scouting ship, either weak or strong, and consequently our fleet is blind. All other navies have eyes in the form of not only scout ships properly adequate to the task of scouting on the high seas, but great battle cruisers that can make swift "reconnoisance in force" over long distances. Irrespective of the qualities to be developed on the part of the fighting ships, the imperative need of the fleet we have to-day is two great battle cruisers of about 40,000 tons displacement making more than 30 knots, carrying the heaviest guns afloat, and sufficient armor to keep out armor-piercing projectiles at usual battle ranges, with a radius of action larger than that of any vessel afloat. In addition to these we should provide at least four scout ships proper, three for the Atlantic and one for the Pacific.

INCREASE IN ENLISTED MEN.

To make our Navy efficient for the vessels that we now have and would expect to commission instantly on the outbreak of war would require at least 20,000 additional enlisted men. The report from the commander in chief of the battleship fleet, on the findings of various boards, shows an "alarming" shortage of enlisted men. The admiral refers to the findings as follows:

These boards have now completed their work and the result has developed an alarming shortage of officers and men that are required to efficiently man our ships for battle. The reports of all these boards were made independently and are singularly unanimous in their conclusions, presenting a more serious shortage than could have been anticipated by either the Navy Department or the fleet until brought to light by this searching investigation.

The reports of these boards show that in the 21 battleships in commission and now composing the Atlantic Fleet there is a shortage of 5,219 men and 339 officers required to fill all stations necessary to efficiently fight the ships in battle.

The least we can do at this session of Congress is to provide for addtional men to make up this deficiency on the battleships alone now in commission. Taking into account the fact that we have a comparatively small ocean-going merchant marine, a small Naval Militia, and as yet no naval reserve at all, we should endeavor to have our complements on our ships in commission relatively larger than on the ships of other nations. I shall

offer an amendment at the proper place to begin by the authorization of an increase of 5,000 men in the enlisted force of the Navy. This would entail an additional provision of a little over two millions of dollars and would ultimately require about three millions a year.

THE BUILDING PROGRAM.

In order to approximate a Navy equal to the Japanese Navy and the German Navy combined, and equal to and ultimately superior to the British Navy, we should adopt a consistent program of six capital ships per year, and I trust that sooner or later we may reach this basis. Knowing, however, that this Congress will not provide such a program, at the proper time I shall move to increase the number of battleships from two to four, in addition to offering an amendment of a new paragraph to provide for two battle cruisers.

I will not discuss at length the characteristics of these capital ships, but the experiences in the present war confirm the contention I have consistently made for many years before the Naval Committee and before this House that our capital ships should have superior speed along with the most powerful guns.

AUXILIARIES.

It is a corollary or an axiom that with the capital ships we must provide auxiliaries in sufficient numbers to make the capital ships most effective and to balance the fleet.

THE QUESTION OF SUBMARINES.

The submarine has rapidly demonstrated its power in the course of operations in Europe, a demonstration that shows that the defense from torpedo attacks heretofore provided is not adequate. As yet the use of destroyers and picket boats seems to have been the only available defense. There are indications, however, that other means of defense may be developed. Nevertheless the great usefulness of the submarine is fully demonstrated, and its numbers should be rapidly increased.

CAPITAL SHIPS DETERMINE THE CONTROL OF THE SEA.

It should be borne in mind that however useful auxiliaries may be, it is the preponderance of capital ships of the latest type that gives a nation control of the sea—the all-determining factor in the course of the world. No matter how many submarines Germany possessed, no matter how many auxiliaries of other types she possessed, the heavy preponderance of the allies' capital ships insures them the control of the high seas and recourse to the resources of the world.

EXPERIMENTATION.

The question of types of ships and of the qualities of each type involves evolution and change, particularly during and immediately following war. Orderly and useful developments of complicated implements of war entail laborious, patient experimentation. The organization of the Navy Department contains no agency to conduct such experimentations, and only at intervals does a bureau appoint a board for such special purposes. The Committee on Naval Affairs of the House has had a subcommittee on ordnance experiments cooperating with the Navy Department for several years in the development of ordnance materials. The results of the investigations are naturally of a confidential nature, but their importance can not be overestimated. In the conduct of these investigations a member of the Senate Committee on Naval Affairs has been frequently present. I trust that this special subcommittee work may be continued after my leaving Congress and may become a joint subcommittee of the two naval committees, and may have cooperating with it a corresponding board of the Navy Department, which could be provided by slight extension of the present board appointed to conduct experimentation on torpedo shells. At the proper place I shall move an amendment for a reasonable increase in the appropriations for experimentation.

AIR CRAFT.

I can not close, Mr. Chairman, without urging—what I have urged for a number of years—the systematic development of experimentation and building of air craft of all types. The utter decadence of aviation in our Army and Navy is due to lack of sympathetic legislation of Congress. I remember with painful vividness the defeat several years ago of a measure brought to the floor of the House from the naval committee to simply cooperate with private individuals to establish in Washington a laboratory and plant for experimentation in aeronautics. I hope the day will some day come when America—the great peacemaker, the great Nation championing the cause of free institutions and of humanity, championing the cause of the weak; our great peace Nation of America—will not only be mistress of the seas but mistress of the air.

Under my leave to print I will here print the speech of Rear Admiral Austin M. Knight, United States Navy, delivered at the annual banquet of the Efficiency Club of New York City, January 25, 1915. The address is as follows:

ADDRESS BY REAR ADMIRAL AUSTIN M. KNIGHT, UNITED STATES NAVY, AT THE ANNUAL BANQUET OF THE EFFICIENCY CLUB OF NEW YORK CITY, JANUARY 25, 1915.

I appreciate very highly the privilege of addressing you this evening, not alone because of the compliment which the privilege involves, but because of the possibility of usefulness to the Navy and the country which seems to be connected with it. If I do not speak as full as you might wish me to, I shall at least speak frankly.

It is not my intention to go into questions of the efficiency of individual ships, the results of target practice, and kindred topics. I propose to deal with the efficiency of the Navy as a whole, considering it as a great and very complicated machine, upon which hundreds of millions of dollars have been expended, with one end in view, and only one—the development of a supremely efficient weapon for the defense of the country against any and every enemy which may come against us.

I was asked a few weeks ago what the War College considered that the fleet should do, and I replied:

"The War College considers that every effort of the fleet, and every effort of the department in connection with the fleet, should have for its sole aim the war efficiency of the fleet. Every effort which does not directly contribute to this end is in itself a wasteful expenditure of energy, and, so far as it is a diversion from this end, is distinctly harmful."

No doubt there are many differences of opinion among those assembled here to-night as to what constitutes an adequate Navy for the defense of the United States. There may even be some present who think that we should have no Navy at all. But on one point I am sure there will be no difference of opinion—that if we are to have a Navy it should be as efficient as it can possibly be made. And everybody who knows anything about the Navy knows that this is not its present condition. I am not one of those who hold that it is altogether inefficient. Unsatisfactory as conditions are, it would be very easy to exaggerate them. When things are wrong you can always find extremists to tell you that they are much worse than they actually are. Some people think that this is the only way to make an impression. Others are so constituted temperamentally that they can see nothing good in anything which falls short of perfection as they see it.

I am going to assume that all of you who are gathered here to-night occupy a reasonable middle ground so far as temperament is concerned, and that to make an impression upon you I need not do violence to my own temperament by painting the picture which I shall draw for you in maximum contrasts of light and shade.

There is much about the Navy which is splendidly efficient, but as a whole it is far less efficient than it can and ought to be. Our ships are fine. Our officers are capable, industrious, and ambitious. Our enlisted men are the equals of those in other navies. But efficient ships and officers and men do not alone make an efficient navy. They must be welded into an efficient whole by a unity of organization and administration and purpose which coordinates their capabilities and directs their efforts toward a common end, wisely selected, and very clearly seen. Here is the first point at which we are lacking. We are lacking also in that harmonious composition of the fleet which is needed to give to every element of it the support that it needs from other elements to make up a symmetrical and well-balanced whole. And we are lacking to a marked degree in absolutely essential facilities for the care and preservation of our ships, especially in the matter of dry docks.

Finally we are lacking in efficient organization of the personnel. Here, so far as officers are concerned, the conditions are altogether deplorable. In a service like the Navy, where spirit is everything, where enthusiasm must be the driving power back of every activity, I ask you to picture the effect of a condition where a young officer, graduating from the Naval Academy, full of spirit and enthusiasm, finds himself confronted with a prospect of promotion to the grade of lieutenant at the age of 52 years.

If you ask me who is responsible for these conditions, I can only reply that the responsibility comes home to nearly all of us. Some of it, I am sure, rests with me; much of it, I believe, with you. Certainly it can not be attributed in excessive measure to any one administration of the Navy Department, for it has existed for half a century at least. So let us not cloud the issue by assuming that it is a new condition and that all administrations up to some recent date have been models of wisdom and efficiency or that naval officers themselves have always been ready with good advice. Speaking as the representative of naval officers as a body, I frankly admit that we have not always seen clearly what was needed and have not always worked together even for ends which we did see clearly. As for the Secretaries of the Navy, it is not surprising that many of them have failed to realize that their first duty was to strive, in season and out of season, to promote the war efficiency of the Navy as a whole. Many of them have not remained in office long enough to learn this. Some, perhaps, have realized it more or less clearly, but have not found at hand an organization through which they could produce results. A few have made material contributions toward improved conditions. I shall have the pleasure a little later of calling attention to one important step in advance which was taken by the present Secretary at the very beginning of his term of office.

A large part of the responsibility, especially that connected with the small size and the unbalanced composition of the fleet and the lack of dry docks, rests with Congress, which has always approached naval legislation from the wrong side so far as efficiency is concerned—asking, not what do we need for efficiency, but what can we afford to spend for efficiency. Behind the responsibility of Congress lies the responsibility of the country—and you, gentlemen, represent the country—because it has not insisted upon having what was needed without reference to cost. It may be that this attitude of both Congress and the country is necessary and even inevitable. But I am one of those who believe that this great country of ours can afford to have anything in the way of national defense which it needs, and I assume that all present here to-night agree that we need a Navy, and if a Navy then an efficient one, and that whatever efficiency costs is the measure of what we can afford to spend.

One particularly unfortunate feature about the application of the policy of "economy first" in naval expenditures is that it has often been invoked to prevent a small appropriation which would have added many times its own cost to the value of those items for which money was cheerfully appropriated. I shall discuss this more at length hereafter.

* * * * * * *

But, after all, is it not rather futile to spend our time in trying to place responsibility for existing conditions? It seems to me that what

we ought to do is to recognize the conditions clearly—neither exaggerating nor minimizing them—and to dissociate them absolutely from personalities. We can then proceed, with a perfectly open mind, to consider how the conditions can be improved.

I ask you to accept this point of view and to banish from your mind all thought of politics and every trace of partisanship, and fix your attention upon the question before us as one of national, not of political, significance.

The conditions, then, to which I shall invite your attention are those connected with, first, the size and composition of the fleet; second, the organization of the personnel; third, the organization and administration of the Navy Department.

* * * * * * *

First, as to the size of the fleet. I shall not go into this very fully because my subject is not so much adequacy as efficiency. A small machine may be efficient within the limits fixed by its size. It is from the point of view of efficiency within the Navy as it exists that I wish chiefly to consider my subject this evening. It must be recognized, however, that the actual efficiency for war of a battleship fleet which is efficient within itself may be seriously compromised by the lack of those supporting units which are vitally essential to its operation. There is, moreover, a sense in which we may say that a machine is not efficient if it is too small for the task for which it is designed.

What constitutes an adequate navy for the United States? The answer will depend, of course, upon the purpose for which we assume that the Navy is to be used. We are all agreed, I presume, that it is not to be used for aggression. Is it, then, to be used solely for defense? If we answer "yes," we ought to do so with a full recognition of what we are to defend and also of the elementary maxim that the best defense is a vigorous offense. In other words, no matter how resolute we may be to use our Navy only for repelling aggression, it does not follow that we should plan for meeting the aggressor only at our gates. Even if we had no interests outside our borders and no responsibilities for the defense of our outlying possessions and dependencies, we should still, as reasonable beings not wholly ignorant of history, prepare to project our battle line toward the enemy's coasts and to assume a course which would throw upon him the burden of replying to our initiative. In this sense, then, we need a Navy for offense; that is to say, for offensive action with a defensive purpose. In shaping our plans along these lines we should not overlook the fact that the policy which dictates the measure of our defense must take full note of the larger national policy which it is to enforce in relation, for example, to the Monroe doctrine, the Panama Canal, the Philippines, and other matters which are at once of national and of international significance.

The statement is often made—I have heard it made on the floors of Congress—that naval officers themselves do not know what they need. There are, naturally, differences of opinion among naval officers as to what the strength of the Navy should be and as to the types of which it should be composed. But the country has in the General Board a body of mature and experienced officers, whose business it is to study this question and to speak authoritatively upon it. In the main the recommendations of this board from year to year have been consistent with each other and consistent with the best naval sentiment. It has stood since 1903 for a fleet of 48 battleships and necessary smaller units and auxiliaries. The character of the smaller units and auxiliaries recommended has varied from time to time, following the developments of naval art and science; but the basis of 48 battleships, to be kept up to date by eliminating ships more than 20 years of age and replacing them by new construction, has been steadily adhered to. Now, it may be that we need fewer than 48 battleships or that we need more. Whatever their number is to be, we should have a policy in the matter looking as far into the future as practicable, and one which, in providing for capital ships, provides also for the smaller units and auxiliaries to round out the fleet into a complete and well-balanced whole, with an appropriate number of cruisers, scouts, destroyers, submarines, colliers, tank ships, supply ships, repair ships, mine-laying ships, tenders, and gunboats.

The program advocated by the General Board would, if it had been followed, have given us 47 battleships, built and building, in 1914. This program has not been followed, and we have at present 37 battleships instead of 47. It seems to me that he would be a bold man who, recalling the history of the last days of August, 1914, when the world passed within a week from a condition of universal peace to one of almost universal war, should say that we do not need the full number of battleships proposed by the General Board—and more.

But battleships alone do not make up a fleet, much less a navy. A fleet without fuel ships is crippled and one without scouts is blind. It can neither secure information of the enemy's movements nor deny information of its own. To send a fleet thus blind and crippled into hostile waters would be to invite destruction. We have an altogether insufficient number of fuel ships and practically no scouts. Moreover, we are very weak in destroyers, of which a large number should accompany the fleet to back up the scouts, to act in part as scouts themselves, to stiffen up the screen about the battleships, and to be ready for a dash against the enemy when an opening is presented. The effect of the conditions actually existing is to almost completely nullify the power of our fighting ships. Picture to yourselves the plight of a battleship fleet operating in hostile waters against a fleet much smaller, but with all its elements complete. The smaller fleet, with scouts thrown out a hundred miles or more around its main body, every scout in touch with every other one and with the commander in chief, and with a horde of destroyers backing up the scouts and awaiting the word to attack, would gain and keep touch with the larger fleet, while itself evading discovery, and would send its destroyers in at night, unchecked and unnoted by any protecting screen, to drive home an attack which might decide the issue without the main fleets ever having seen each other. And if nothing of this sort occurred, consider the situation where the fleet, with its fuel supply exhausted, finds itself without a reserve supply on which to draw.

There is a widespread and very dangerous opinion that all the fuel ships and scouts we need can be improvised on short notice from merchant vessels. This is one of those miserable fallacies based upon experience in the Civil War and the Spanish War, in both of which we won because our opponents were even more grotesquely unprepared than we were. The Civil War was, I suppose, the most costly war ever fought and the most unpardonably wasteful in money and in human life. But its cost did not end with the end of the war. Apart from the tremendous pension list, which our pacifist friends insist upon charging up to what they are fond of calling "militarism," although it was really the direct result of the criminal folly of unpreparedness; apart from this is the indirect cost of the perpetuation of that folly. Since we were successful in that war—so the implied argument runs—our preparation for it must have been of the kind that makes for success, and we can look for success hereafter from the same policy. To these gentlemen I commend the perusal of a book called The Military Policy of the United States, by Gen. Emory H. Upton. If any of you here present to-night have failed to read this book, I urge you to read it at once. It exists in conveniently available form as Senate Document No. 494, Sixty-second Congress, second session. It would be interesting to know how many Senators have read it. It is the best antidote I know for the monstrous delusion which sees in every American citizen a soldier, trained, efficient, ready to take his place in the ranks at a moment's notice and sweep the loathed invader from our soil, and in every ship that floats a potential man-of-war complete in everything but guns.

By what seems almost a misfortune, in view of its effect upon the minds of many of our people, the delusion that we alone of all the nations of the earth can carry on a successful war without preparation was confirmed by our easy victory in the Spanish War—our opponent again being as unprepared as we were. I should be sorry to agree with those who hold that nothing short of an overwhelming defeat in some future war will ever open our eyes to the danger of existing conditions, and I wish to do my part toward opening the eyes of my countrymen before such disaster comes. We must recognize the fact that war is an art and a very highly specialized art. For every task which it involves there is a need of special tools, efficient in themselves and contributing to the efficiency of the whole organization. And these can not be improvised. Yachts, tugs, and ferry boats can perform certain duties in waters close to our own coasts when they are absolutely unopposed. And any steamer capable of carrying a thousand tons of coal can get the coal to a fleet which is lying quietly outside a quiet port with no threat of interruption to its lines of communication. But no language is strong enough to characterize the fatuity of relying upon such tools for carrying on a real naval war. It is true, no doubt, that there are many fuel-carrying ships that can be utilized by the Navy in time of war. But let us consider briefly the characteristics which they should have, and then inquire how many of them we would probably find available in our waters on the sudden outbreak of war. First of all, a goodly proportion of them must carry fuel oil instead of coal or in addition to coal. Second, they must be large. A great number of small craft, manned by untrained crews and commanded by untrained officers, might be a fatal handicap to a fleet operating at sea. Third, they must be fast, for the speed of the fleet will be the speed of the slowest craft accompanying it. Fourth, they must have facilities for handling and transferring their fuel at sea.

I do not know how many such ships there are under the United States flag at this moment. But somebody ought to know how many there are, and how and where they can be reached. This should all be provided for in advance. But when it is provided for, it is safe to say that the number will be far short of what a fleet would need. And it is clear that, at the best, such craft could not work at maximum efficiency with a fleet engaged in operations where perfect military coordination is of the first importance.

We need, then, in order to make our 37 or our 47 battleships efficient, more large, fast Navy fuel ships of the *Jupiter* type, many more destroyers, and a considerable number of scout cruisers, designed and built as such, with a speed of not less than 28 knots.

It goes without saying that in these days a scout should carry aeroplanes to be launched from her decks, and this means, of course, that we need a large number of these, and of the most efficient type obtainable. It has been suggested that we can rely upon aeroplanes alone for scouting, sending them out from battleships, and so dispense with cruisers altogether. This might work if no other function were involved than that of locating the enemy; but the screening duty of the outlying line of cruisers is even more important than the scouting duty. To discover an enemy force is helpful; to arrest its advance is far more so, especially when by arresting it we deny the enemy the information about our whereabouts and our movements which it will be his object to secure.

We are weak in submarines, and the submarine, as you are all aware, has within the last few months established its claim to very serious consideration as an element in naval warfare. It has not shown itself the master of the battleship, and I doubt if it will ever do so; but it has taken a more commanding place than most of us have heretofore assigned it. I should rejoice if we had to-day 100 submarines instead of less than half that number, built and building. Those that we have are only half efficient because they lack tenders of the proper type to accompany them and care for their needs and the needs of their personnel. Here, again, crops up the old idea that a vessel for a special purpose, demanding special characteristics, and vitally necessary to the efficiency of a vital part of our naval force, can be improvised out of any old craft which happens to be handy. And here, again, is illustrated the false economy which in providing a weapon efficient within itself denies it the support outside itself which alone can make it efficient in application.

Running parallel with the omissions in the fleet itself is a corresponding list of omissions in the provisions for its upkeep—in dry docks and other navy-yard facilities especially. A fleet without dry docks of suitable capacity and suitably located is only a little less helpless than one without fuel ships.

We have at Guantanamo a station which should be the principal base of our fleet for operations in the Caribbean, the area in which, if anywhere, our control of the Panama Canal will be challenged. But not only have we no dry dock or efficient repair shops there, we have none within a thousand miles of it. Here the expenditure of $2,000,000 might conceivably double the efficiency of the fleet in some critical emergency by making it possible for every ship to go out in perfect condition; and it requires no stretch of the imagination to picture the issue of a war as hinging upon this point alone. After a battle the importance of a dock close at hand for repairing damages is too apparent to require more than a passing mention. It might enable the fleet to take the sea again after a brief delay, with every advantage over an enemy fleet less favorably situated.

It is understood, of course, that every station which is designed to serve as a base of supply, of repair, or of refuge for the fleet should be adequately fortified. This is a phase of my subject upon which I should like to dwell at considerable length, but time and other considerations make it impracticable for me to do so.

If I have made myself clear up to the present point, you will understand by how narrow a margin we have missed efficiency in the composition of our fleet and the provision for its upkeep; and yet of what vast importance is the space that separates us from it. Two per cent, perhaps—5 per cent, certainly—added to our expenditures year after year would have added at least 50 per cent to the efficiency of the fleet as a whole.

* * * * * * *

I come now to the question of personnel. In an ideal system the development here as regards both officers and men would keep pace automatically with the development of the fleet through a law by which the authorization for a certain increase in the number of ships would carry with it the authorization for a corresponding increase in officers and men and for a reasonable flow of promotion. Failing this ideal, we should at least have a periodical readjustment such as to maintain a personnel ample in numbers, amply trained, and so organized as to insure a flow of promotion which will secure contentment, foster ambition, and bring officers to the command of ships and fleets while still in the perfection of their mental and physical powers. Unfortunately, the present conditions are as far from this ideal as could be imagined. To begin with, we have not the officers and men to man our ships efficiently. This is serious enough, but much more serious is the fact that the promotion of officers is so completely blocked that a young man graduating from the Naval Academy must look forward to spending all the best years of his life in the two lowest grades of the service; to performing, as a gray-headed man, the same duties that he has performed as a boy; and to receiving but a very small increase in salary. I need not point out to you the inevitable effect of this upon efficiency.

For this condition I could not place the responsibility if I would. Congress has long been calling upon the Navy Department for a satisfactory personnel bill. Several bills have been prepared and every one has had support. But none has had the cordial support of the Navy as a whole. A new one has been presented to Congress this month. I hope it is a good one, but I confess that I do not know.

In this matter, as in that of the fleet, the question of expense stands in the way of every easy solution that can be suggested. Here is the problem in a few words: We need in the three lower grades of the Navy—ensign, junior lieutenant, and lieutenant—a very large number of officers. We can find room in the highest grade, that of rear admiral, for very few. Let us say, simply as an illustration and without any attempt of arithmetical accuracy, that of 100 men who reach the lieutenant's list not more than 5 can ever become rear admirals. Our problem is to eliminate the other 95 between these two grades without injustice to individuals or unreasonable expense to the Government, always remembering that expense is of far less consequence than the efficiency of which it is the price. The interest of the Navy should, naturally, take precedence over the interest of individuals; yet if it appears that a given scheme in conducing to the efficiency which we all so much desire chances to conduce also to the advantage of individuals, it should not on that account be abandoned.

The enlisted personnel is inadequate for the manning of the fleet as it exists to-day, and falls far short of what would be absolutely necessary in time of war. And we have no reserve on which to call. The present shortage is variously estimated at from 5,000 to 18,000 men, the wide difference between these figures being accounted for by different views as to the manning of ships not actually present with the active fleet. The extreme view on one side is that battleships can be laid up at navy yards for long periods of time with 50 or 100 men on board and still be counted as serviceable. The extreme view on the other side is that when a ship is to be laid up approximately half of her crew should remain with her, and she should be kept ready to join the fleet not in a year or a month but in 48 hours. If ships in reserve are to be borne on the Navy list and to stand before the country as available for war, there is no doubt that the second of these views is the correct one. A battleship "in ordinary," as it is called, with less than a hundred men on board, might as well be eliminated from the list of ships available for any service within a reasonable length of time.

Added to the deterioration in the ships themselves after a certain period of the neglect that is inevitable where crews are greatly reduced, is the fact that among the plans for utilizing the ships in an emergency is one which contemplates manning them with untrained or half-trained reserves. Such reserves may doubtless be made very useful in time of war if they can be distributed throughout the fleet, to be assimilated by the regular crews of active ships. But the fate of the *Good Hope* and the *Monmouth* is an object lesson on the folly of manning ships exclusively or even chiefly with reservists.

Here, again, I want to call attention to the mistake of providing the largest and finest fighting ships in the world—for this is what our dreadnaughts are, and it is largely due to the insistence of Congress that they are so—and balking at the comparatively trifling cost of providing the officers and men to make them fully efficient.

Other factors, less concrete than those that I have named, have militated and are militating against ideal efficiency. You will all understand that a fleet can not be efficient unless it has abundant opportunity for drilling as a unit. No matter how admirable may be the training and the discipline of the individual ships they will not work together efficiently as a fleet without the teamwork which comes from constant drilling in company with each other under the direction of the commander in chief. And their exercises must be progressive, leading up to war maneuvers on a large scale. We have had too little of this training at all times, and especially within the past year, the necessity of keeping the battleships in Mexican waters having been a controlling factor in all phases of administration of the Navy. This has not made for efficiency, but both the present commander in chief of the fleet and his immediate predecessor testify that the effect upon efficiency has not been as great as might have been expected. Many of the battleships have missed opportunities for target practice; but here, too, the commander in chief reports that the effect has not been disastrous. That conditions remain so good in spite of such extremely unfavorable conditions is a gratifying evidence of the excellence of our ships and the fundamental soundness of our personnel. We must, nevertheless, recognize that the necessity for using battleships in this way is seriously detrimental to their efficiency, and this throws further emphasis upon the importance of an all-around development of our fleet with the demands of peace in mind as well as those of war. If cruisers and gunboats had been available for service in Mexican, Haitian, and Santo Dominican waters the battleships could have spent the past year together in a good climate, carrying on their maneuvers and target practice under favorable conditions.

* * * * * *

I come now to what is, perhaps, the most important part of my subject—the organization of the Navy Department, viewed from the standpoint of efficiency. There can be no question that the existing organization is inadequate and would break down under the strain of war. The administration starts from too many sources and flows through too many channels. It lacks the unity of purpose which would come from recognition of the fact that a navy has one excuse for existing, and only one—that it shall always be ready to strike on the minute and with every element of power concentrated behind its blow for the defense of the country.

Do not misunderstand me. I am not telling you that our organization is wholly bad. I am telling you that it is inadequate. In many cases it works rather surprisingly well. But if you analyze these cases you will find that in so far as the results are good, they are so in spite of the system and because of some personal factor which has compelled efficiency. Moreover, and this is the crux of the whole matter, the cases with which we can deal at the present time are illustrations of peace efficiency, whereas the efficiency upon which our attention should be fixed unwaveringly is war efficiency; not because we are going to have war, but because we may have it, and because the one supreme duty of the Navy is to be ready for it if it comes.

I suppose this relation of the Navy to war, whether possible war or actual war, has always been understood more or less clearly. But it is a singular fact that the organization of the Navy Department takes no account of it. War is the one thing for which no arrangement is made. There are seven bureaus in the department, each with clearly defined duties; but in all the elaborate legislation creating these bureaus and defining their duties there is not a word about the duty of keeping the Navy in readiness for war or preparing plans for war or conducting war after it begins. There would be a certain element of comedy in this if there were not so many elements of possible tragedy. There is a bureau in the department charged with the construction and repair of ships, one with the design of machinery, one with the preparation of ordnance, one with the direction of personnel, and so on; but nowhere is it said "this bureau shall be responsible for the readiness of the fleet for war, for the preparation of war plans, and for the conduct of war." This, then, is the last and great defect in the efficiency of the Navy. How shall it be remedied? The answer is, I think, by the creation in the Navy Department of a "Division of Strategy and Operations," preferably not coequal with the present bureaus, but superior to them and standing between them and the Secretary. This arrangement would be a recognition of the fact that all the activities of the present bureaus should lead up to the Secretary through a channel which coordinates them all and directs them toward war efficiency.

The title proposed for the new office, Division of Strategy and Operations, covers very completely the ground that I have in mind. As standing for strategy, this division would plan what to do, and as standing for operations it would direct the execution of its plans. It would correspond more or less closely with the General Staff of the Army and the First Sea Lord of the British Admiralty, whose duties are thus defined:

"1. Preparation for war: All large questions of naval policy and maritime warfare—to advise. 2. Fighting and seagoing efficiency of the fleet, its organization and mobilization, including complements of ships as affecting total numbers; system of gunnery and torpedo exercises of the fleet, and tactical employment of air craft, and all military questions connected with the foregoing; distribution and movements of all ships in commission and in reserve. 3. Superintendence of the war staff and the hydrographic department."

These duties are all performed subject to the general authority of the First Lord of the Admiralty, who corresponds to our Secretary of the Navy; and I wish to emphasize the fact that I am not advocating a reorganization which would in any way reduce the authority of the Secretary.

I have spoken of strategy as shaping plans which are later carried out by operations. This is a convenient distinction but not an exact one, for in a broad sense strategy both plans and executes. It may be defined as the art of so shaping plans and directing forces as to concentrate the maximum of pressure upon the enemy at the time and place best suited to accomplish the purpose at which we aim. This evidently presupposes a clear conception of what the purpose is at which we aim, and a careful preparation—in advance—of the forces and the plans required for attaining the purpose. The strategy of a far-sighted nation does not begin with the beginning of war. It has its origin far back in the history of international relations and runs parallel with national policies, taking account of the ends at which these national policies aim and accepting their ends as its own.

First of all, then, strategy is preparation. Secondarily, it is execution; always—if it deserves the name of strategy—through the medium of forces and of plans previously prepared.

I have explained that the defects in the organization of the Navy Department are a lack of coordination of authority, as a result of which the administration starts from too many sources and flows through too many channels, and a total lack of provision for planning and carrying forward the operations of war. It must not be supposed that these defects have escaped recognition or that no efforts have been made to correct them. The most successful of the efforts to secure coordination between the bureaus was the adoption during the last administration of a system of aids to the Secretary, who coordinated the work of the various bureaus, and who, when important questions were under consideration, formed a council upon which he could call for advice. The weak point about this system was, and is, that the aids have never been legalized by Congress, and therefore have no permanent status whatever. In spite of this, they are in a position to do much toward improving the administration of the department.

The General Board was called into existence in 1900 by an order of the Secretary of the Navy to provide a body for the consideration of war plans and allied subjects. It has performed and is performing work of the very highest importance, but it, like the Council of Aids, lacks legislative sanction, although Congress has for many years past shown great interest in its work and not a little deference to its views.

Another and a very important agency to which the Navy Department looks for a contribution to its work in strategy and other matters connected with preparation for war and the conduct of war is the Naval War College at Newport. The War College has been in existence since 1884 and has been an important factor in the education of officers from the very beginning. For some reason, however, it has failed until very recently to command the full recognition which it has deserved from the Navy Department or even from the officers of the Navy. The present Secretary of the Navy visited the college shortly after coming into office and, with an insight of which many naval officers have shown themselves incapable, recognized its possibilities for usefulness and pronounced himself its friend. Since that time he has done everything to forward its work which could be dictated by the most thorough comprehension of its mission and its needs, and as a result of this generous support, both moral and material, the college has taken its proper place as an institution for the training of officers for high command and for the development of the art of naval warfare. Thus the college is enabled to contribute something toward making good the lack of a strategic division in the Navy Department itself.

You will see, therefore, that, although no law takes cognizance of the necessity for keeping the Navy ready for war, there are many

agencies which cooperate toward that end—the Council of Aids, to which the Secretary would naturally turn in an emergency, the General Board, and the War College. These agencies are so closely in sympathy that they are able to cooperate harmoniously with each other and with the fleet, and this cooperation is having important and very valuable results. This does not change the fact that there should be—that indeed there must be—in the Navy Department itself and close to the Secretary a coordinating office to bring the efforts of these and other agencies to an administrative focus bearing directly upon the efficiency for war. Such a coordinating office I have already sketched as a division of strategy and operations immediately below the Secretary of the Navy in authority.

The creation of this office would provide a policy for the Navy, so far as the activities of the Navy itself are concerned, insuring unity of effort and shaping plans toward the end which we have recognized to-night as the proper end of all our efforts—preparedness for war.

But a policy within the Navy is not enough. I have said of strategy that it should take account of national policy as applied to international affairs. We need, then, a policy broader than our naval policy and including it. Thus must be a national policy, dealing with both Army and Navy, and bringing the broadest statesmanship as well as the highest technical knowledge to bear upon the whole question of national defense. Its enunciation must come from the highest authority in the land, executive and legislative.

This points to a council of national defense, for the creation of which a bill is already before Congress. In such a council, with the President of the United States at its head, we should have the last word in the coordination of national resources for national defense.

I will now print the report of the Naval Committee on the council of national defense bill.

[House of Representatives. Report No. 584. Sixty-second Congress, second session.]

COUNCIL OF NATIONAL DEFENSE.

Mr. HOBSON, from the Committee on Naval Affairs, submitted the following report:

The Committee on Naval Affairs, to whom was referred the bill (H. R. 1309) to establish a council of national defense, having had the same under consideration, report the same to the House with the following amendments, and recommend that the amendments be adopted and that the bill as amended do pass:

Page 1, lines 4 and 5, strike out the words "Secretary of War, who shall be president of the council," and insert in lieu thereof the following:

"President of the United States, who shall be ex officio president of the council; the Secretary of State, who shall preside in the absence of the President; the Secretary of War."

Page 2, lines 1 and 2, strike out the words "the aid for operations of the fleet of the Navy," and insert in lieu thereof the following:

"An officer of the Navy not below the rank of captain to be designated by the Secretary of the Navy."

Page 2, after line 3, add a new section, as follows:

"SEC. 2. The chairmen of the several committees of the Senate and House of Representatives herein named shall act as members of the council until their successors have been selected."

Page 2, section 2, strike out the section and add the following:

"SEC. 3. That said council shall report to the President for transmission to Congress a general policy of national defense and such recommendation of measures relating thereto as it shall deem necessary and expedient."

Page 2, section 3, at the end of line 11, insert the following:

"*Provided*, That in the time of war said council shall meet only upon the call of the President of the United States."

Page 2, line 10, strike out the words "Sec. 3" and insert in lieu thereof the words "Sec. 4."

Page 2, section 3, line 12, after the word "*Provided*," insert "*further*."

Page 2, section 3, line 13, strike out the words "except in time of war."

Page 2, section 3, line 14, strike out all after the word "that" and strike out all of lines 15, 16, and 17, and insert in lieu thereof:

"The council may summon for consultation at any of its meetings any citizen of the United States, and upon request by the council the Secretary of War and the Secretary of the Navy shall order any officer of the Army, Navy, or Marine Corps to appear before the council for consultation."

Page 2, line 18, strike out the words "Sec. 4" and insert in lieu thereof the words "Sec. 5."

Page 3, line 2, after the word "session," insert the following:

"And the necessary expenses of all persons summoned."

The bill as amended reads as follows:

"A bill to establish a council of national defense.

"*Be it enacted, etc.*, That there is hereby established a council of national defense, consisting of the President of the United States, who shall be ex officio president of the council; the Secretary of State, who shall preside in the absence of the President; the Secretary of War, the Secretary of the Navy, the chairman of the Committee on Appropriations of the Senate, the chairman of the Committee on Foreign Relations of the Senate, the chairman of the Committee on Military Affairs of the Senate, the chairman of the Committee on Naval Affairs of the Senate, the chairman of the Committee on Appropriations of the House of Representatives, the chairman of the Committee on Foreign Affairs of the House of Representatives, the chairman of the Committee on Military Affairs of the House of Representatives, the chairman of the Committee on Naval Affairs of the House of Representatives, the Chief of the General Staff of the Army, an officer of the Navy not below the rank of captain to be designated by the Secretary of the Navy, the president of the Army War College, and the president of the Navy War College.

"SEC. 2. The chairmen of the several committees of the Senate and the House of Representatives herein named shall act as members of the council until their successors have been selected.

"SEC. 3. That said council shall report to the President, for transmission to Congress a general policy of national defense and such recommendations or measures relating thereto as it shall deem necessary and expedient.

"SEC. 4. That said council shall meet at least once in each calendar year, on such date or dates as it shall fix: *Provided*, That in time of war said council shall meet only upon the call of the President of the United States: *Provided further*, That special meetings may be called by the president of the council: *And provided further*, That the council may summon for consultation at any of its meetings any citizen of the United States, and upon request by the council the Secretary of War and the Secretary of the Navy shall order any officer of the Army, Navy, or Marine Corps to appear before the council for consultation.

"SEC. 5. That for carrying out the purposes of this act there is hereby appropriated, out of any funds in the Treasury not otherwise appropriated, the sum of $20,000, to be available until expended, and to be expended upon vouchers signed by the president of the council: *Provided*, That all necessary expenses of the chairmen of committees of the Senate and of the House of Representatives, when called to attend meetings of said council when Congress is not in session, and the necessary expenses of all persons summoned shall be paid from this appropriation upon approval by the president of the council."

This bill is approved by the President of the United States, by the late Secretary of War, by the present Secretary of War, the Secretary of the Navy, and without exception officers of high rank, knowledge, and experience of both the Army and Navy. The council entails practically no cost. A similar council has been established in every other great nation in the world.

The President, in a message to this Congress, says:

COUNCIL OF NATIONAL DEFENSE.

"I urge again upon Congress the desirability of establishing the council of national defense. The bill to establish this council was before Congress last winter, and it is hoped that this legislation will pass during the present session. The purpose of the council is to determine the general policy of national defense and to recommend to Congress and to the President such measures relating to it as it shall deem necessary and expedient.

"No such machinery is now provided by which the readiness of the Army and Navy may be improved, and the programs of military and naval requirements shall be coordinated and properly scrutinized with a view to the necessities of the whole Nation rather than of separate departments."

The late Secretary of War, to whom was referred H. R. 29371, an almost identical bill, states as follows:

"WAR DEPARTMENT, *December 16, 1910.*

"Respectfully returned to Hon. George Edmund Foss, Committee on Naval Affairs, House of Representatives.

"I approve of the provisions of this bill and recommend its enactment into law.

"J. M. DICKINSON,
"Secretary of War."

The last Secretary of War further stated in a hearing before the committee in part as follows:

"I do desire, however, to avail myself of this opportunity to say that I have considered the question and am very heartily in favor of the bill. I think one of the main troubles that we have had is that we have not proceeded upon a comprehensive and uniform plan in the development of our schemes for military defense. What we have done in that line has been largely sporadic, brought forward from time to time upon individual suggestion and reflecting more or less the views of some particular Secretary of War, so far as the Army is concerned, or the Chief of Staff, and there has never been any system of uniform legislation well thought out, planned, thoroughly studied, and proceeded with.

"There are great advantages, I think, to be gotten from the establishment of a board of this character. It provides for men of technical information. Then, it has represented upon it both branches of the legislative assembly. If the board shall be created, I believe that they can adopt a plan which will be utilized, and that then all legislation will be correlated with that plan. It will proceed then in a systematic way and not run out at tangents as it does now. That is a general statement, Mr. Chairman, of my views of the advantages of a bill of this character.

"The legislation that would be the outcome of an investigation by such a board as this, and recommended by such a board, would command the executive support and the legislative support, and it would command the confidence of the country, and it would not be upset from time to time by legislation that would emanate merely from some individual standpoint. I think that it would result in great economy and great efficiency."

The present Secretary of War, in his annual report dated December 4, 1911, states as follows:

"The House Committee on Naval Affairs has submitted a favorable report upon a bill to establish a council of national defense. This bill is approved by the President of the United States and the Secretary of the Navy. Its duties are to make practicable the formulation and execution of a consistent and continuing policy of national defense, to help in coordinating the plans of the Army and Navy, and furnish a means of coordiating military and financial questions before submitting to the President and to Congress recommendations for measures of national defense. It is hoped that this bill will receive favorable consideration during the present session of Congress."

The Secretary of the Navy states as follows, referring to a similar bill:

DEPARTMENT OF THE NAVY,
Washington, December 27, 1910.

SIR: I have the honor to acknowledge receipt of your letter of the 15th instant transmitting a bill (H. R. 29371) to establish a council of national defense, and requesting the views and recommendations of this department thereon.

"The proposed bill is regarded as very desirable to the Navy in that it would make practicable the formulation and execution of a consistent and continuing policy of national defense; it would help to coordinate the plans of the Army and Navy and furnish a means of reconciling the military and financial interests before submitting to the President and the Congress recommendations for measures of national defense, and would furnish the President and the Congress a ready means of ascertaining at any time the condition of the Nation for defense.

"Favorable consideration of this bill is recommended.

"G. V. L. MEYER,
"Secretary of the Navy.

"CHAIRMAN COMMITTEE ON NAVAL AFFAIRS,
"House of Representatives, Washington, D. C."

Again, in a hearing before the committee on May 19, 1911, the Secretary of the Navy said in part:

"Mr. Chairman and gentlemen of the committee, in war nothing fails like failure. Now, in order to have success we must have efficiency. To have efficiency we must have a definite policy; and to bring about a definite policy we have to have cooperation and coordination of

Congress, the Army, and the Navy. To bring about this cooperation we have to have an intelligent understanding.

"Now, this national council of defense bill is made up of two Cabinet officers, four Senators, four Congressmen, two Army officers, and two naval officers. It would seem that this council would tend toward and result in an intelligent understanding and assist in cooperation of Congress to a definite policy. I can not help feeling, after due consideration, that this council would result in a definite policy and would encourage cooperation, and would increase efficiency as well as economy.

"The President as Commander in Chief of the Army and Navy should be a member ex officio of this board. I say this without consulting with the President. I do not know whether or not that has come to the attention of the committee."

Again, the Secretary of the Navy, in a hearing before the committee on March 1, 1912, said in part:

"We feel that this council of national defense will be an additional benefit to the Navy, to the country, and to the Nation. It will in a way be a vehicle between the department and Congress. There will be representatives in this council from the Congress and from the departments of the Army and Navy, and they will be in touch with exactly what the future requirements may be in the Army and the Navy, and it will enable them to be in council with the two departments.

"In that way it will keep the departments and Congress in touch with each other and encourage continuity of policy, which is of vital importance to the best results. I will not go into the details of the bill, because it is all in the hearing which took place May 19, 1911, when Secretary of War Dickinson, the Secretary of the Navy, Admiral Mahan, Gen. Wood, Admiral Wainwright, Gen. Wotherspoon, president of the Army War College, and a number of officers from both the Army and Navy were present. The departmental heads of the Army and Navy are in sympathy with it, and the President is also in sympathy with it.

"In other countries—in England, and particularly in Germany and Japan—they are working out in advance policies for the next few years. If Congress were more in touch with the aims and objects of those two departments and felt that they thoroughly understood them, they could in turn inform and keep informed, not only in an intelligent way but in a sympathetic way, the Representatives of Congress, and thus be of great benefit in furthering proper and necessary legislation. I hope the committee will give this matter further consideration."

Sections 1 and 2 of the bill establish a council of national defense, composed of six officials of the legislative branch of the Government, four officials of the executive branch, and four technical and expert officers of high rank, two in the Army and two in the Navy. The officials of the legislative branch are the four chairmen of the two service committees, Naval and Military, of the Senate and the House of Representatives, and the two chairmen of the Appropriation Committees of the same.

The officials of the executive branch of the Government are the President, the Secretary of State, and the two Cabinet officers at the head of the two services, naval and military. The four technical officers of the Army and Navy are those charged with duties pertaining to high matters of national defense.

Thus in its composition the council brings together the officials charged with responsibility and most competent to pass on questions of national defense and insures unity, continuity, and cooperation heretofore impossible and the lack of which has entailed added expense and lowered efficiency in all branches of national defense.

Section 3 makes it the duty of the council to report a general policy of national defense and to recommend measures for carrying out the same. Under present conditions there is no authoritative official or body of officials to perform this important function. The lack of a definite policy at the time of and during our past wars has always entailed enormous outlay of treasure, loss of life, and at times has cost us victory on the battle field.

The necessity of having a definite policy worked out in advance of war has become of greater and greater importance in the conduct of modern war. Indeed, it is not overdrawing the facts to say that victory in modern war has invariably gone to the side of the nation with its policy the best determined.

The experience of these modern wars has caused all important nations to develop a council of national defense with duties similar to those prescribed in this section. This is noticeable in the cases of the two last wars, the Russo-Japanese War and the Boer War. Both Russia and Great Britain found the lack of a definite, carefully prepared policy chiefly responsible for their reverses.

The composition and duties of the similar councils abroad are as follows:

For Great Britain, including India, the name of the council is "The committee on imperial defense."

GREAT BRITAIN, INCLUDING INDIA.

THE COMMITTEE ON IMPERIAL DEFENSE.

"The defense committee, assisted by a small secretariat, will deal with questions of national defense and will foresee imperial requirements.

"The prime minister, who is president of the committee, and the secretarial staff are the only permanent members of the defense committee. The other officials who attend the meetings do so by invitation, and invitations are sent out for each meeting.

"The members who ordinarily attend the meetings of the defense committee are: The prime minister, the secretary of state for foreign affairs, the secretary of state for war, the secretary of state for India, the chancellor of the exchequer, the first lord of the admiralty, the first sea lord of the admiralty, the director of naval intelligence, the chief of the general staff, the director of military operations, Lord Esher, and Gen. Sir John French. Other members of the cabinet and officials who possess special knowledge on subjects under consideration are asked to attend meetings of the committee from time to time.

"The secretariat, or, as it is sometimes called, the 'permanent nucleus,' was appointed with a view to insure continuity of work and that a record of work done might be kept for the information of succeeding committees.

"The following statements, made in the house by the present and late prime ministers on August 2, 1906, will show clearly the status and functions of the committee:

"Sir H. Campbell-Bannerman said:

"'The defense committee act as the expert advisers of the Government in regard to technical questions.

"'It was for the cabinet to determine their political policy, and then it was for the expert members of the defense committee to furnish them with the information as to how they were to carry out their policy. Questions of high policy were beyond the ken of the committee of imperial defense. It was no part of the duty of the committee to pronounce an opinion on the general policy of the Government, either naval or military.'

"Mr. Balfour said:

"'The committee was summoned by the prime minister to assist him in dealing with matters outside the purview of a single department, and it was the prime minister's business to choose which heads of departments he would summon, and what experts were to be brought in * * *. There was a natural elasticity in the committee of defense depending on the problems to be dealt with, and the prime minister of the day must decide for himself whose advice he would take.'" (Organization and Equipment, Lieut. Col. Brunker.)

FRANCE.

DECREE RELATIVE TO THE ESTABISHMENT OF A SUPREME BOARD OF NATIONAL DEFENSE.

PARIS, *April 3, 1906.*

"ARTICLE 1. A supreme board of national defense is instituted for the examination of all questions requiring the cooperation of two or more ministerial departments.

"ART. 5. The supreme board of national defense shall be composed of: The president of the board of ministers, presiding; the minister of foreign affairs; the minister of finance; the minister of war; the minister of marine; the minister for the colonies.

"ART. 6. The chief of staff of the army, the chief of staff of the navy, and the president of the consultative committee for colonial defense shall be present at meetings of the supreme board with deliberative voice."

GERMANY.

"In order that the whole undivided strength of the fleet may be successfully employed in the destruction of the enemy and in defending our coasts, it is necessary that the army and navy should have a common commander in chief, whom the German Empire possesses in His Majesty the Emperor. The navy, as well as the army, must receive its instructions from the great headquarters, and this will be taken into consideration in the composition of the latter.

* * * * * * *

"In view of the importance of the German fleet at the present day and of the still greater importance which it will have in the future, the chief of staff of the navy and the chief of the naval cabinet with their staffs will in future be attached to the headquarters staff in order to insure the cooperation of the navy with the army.

* * * * * * *

"To some extent the two services already work together in peace times. This is the case as regards the enlistment of sailors by the military administrative circles, the joint action of the admiralty, the war office, and the general staff of the army on mobilization, the defense of our coasts, and so forth; but these joint duties are of little assistance in making the services better acquainted with one another, since they affect but a small number of officers of each branch.

"Something has been effected in this direction by the practice, recently introduced, of appointing naval officers to the army staff, and vice versa; of detailing joint committees of naval and military officers; and of selecting officers to attend the maneuvers of the sister service; but much more than this is required to instill into all ranks of the army and of the navy the necessity for combined action and mutual support in war." (The Duties of the General Staff, 1905, Gen. Bronsart von Schellendorff.)

The great successes of Germany in the wars of 1866 and 1870 were chiefly due to the policy and preparations resulting from the cooperation of the civil and the military embodied in Bismarck, the statesman, and Von Moltke, the soldier.

RUSSIA.

BOARD OF NATIONAL DEFENSE.

(This and a great general staff were created by the Emperor of Russia as a result of the experience of the Russo-Japanese War.)

"The board of national defense is charged with the study of questions which relate to the security of the Empire. It acts under the direct orders of the Emperor, and is made up of a president and six permanent members—all named by the Emperor—but has also a certain number of other members, some on account of the offices which they hold, as the ministers of war and of the navy, the chief of the general staff, the chief of the great general staff of the navy, and the inspectors of the army, and others because of their personal knowledge or because of the needs of the service as, for example, ministers, commanders of army corps, etc.

"The board of national defense has the following duties:

"(*a*) Study of general measures so that a fixed plan may be determined upon by the ministers of war and of the navy in order to assure the development of the military power of the Empire in conformity to the political ends which it is desired to accomplish.

"(*b*) To watch that these measures are carried out as soon as they have the approval of the Emperor.

"(*c*) Study of propositions emanating from the military ministers and conforming them in order that all resources may be employed in time of war and unification and direction of all preliminary measures.

"(*d*) Study of modifications which it is desirable to make in the plans of the two military ministers.

"(*e*) Study and solution of the questions of the fitness of the different branches of the administration and the differences which exist in them from the standpoint of national defense.

"The board of national defense has no executive power, but is limited to recommendations to the Emperor. The execution of measures which receive the approval of the Emperor is in charge of the minister of war. The president has direct communication with the Emperor, and speaks as his mouthpiece when he presides in the board. Said president forms a part by virtue of his office of the imperial council and of the council of ministers. He has the right to ask from the various ministers anything which can contribute to the work of the board, and receives from the minister of war, of the navy, and of foreign affairs information relating to the national defense. All the deliberations and actions of the board are considered as state secrets." (Revista Cientifico-Militar y Biblioteca Militar, 25 Septiembre, 1905.)

AUSTRIA-HUNGARY.

"In Austria-Hungary there is no minister of the navy. The minister of war of the monarchy has in his charge questions relating to the navy. On this account the bureaus of the navy constitute a section attached to the ministry of war." (L'Etat Militaire des Principales Puissances Etrangeres en 1902, Lauth.)

ITALY.

"By a decree of the 16th of July, 1897, the supreme mixed commission for the defense of the Empire was organized. This is charged with the duty of giving advice on all important questions concerning the defense of Italy. The Duke of Genoa is president; the members are: The admiral president of the superior council of the navy, the generals designated to command the various armies in case of war, the admirals designated to command the fleets, and the chief of the general staff of the army and of the navy. The generals, the commanders of army corps, the inspectors general and admirals, when it appears that their presence will be useful, may be invited to attend the meetings of the commission for consultation only." (L'Etat Militaire des Principales Puissances Etrangeres en 1902, Lauth.)

SPAIN.

"Spain has a consultative board for war which is concerned with the large questions in reference to preparation for war, etc. The organization and the composition of this board are regulated by decisions made in the council of ministers." (L'Etat Militaire des Principales Puissances Etrangeres en 1902, Lauth.)

JAPAN.

THE SUPREME MILITARY COUNCIL.

This was created in 1898 as the highest advisory body on naval and military matters to the Emperor. It was made up of six members, three army and three navy officers of the highest rank.

THE SUPREME COUNCIL OF WAR.

"This is a special office created on the eve of the outbreak of the late war, and may be regarded as the Emperor's advisors and staff officers on all important matter pertaining to war. The members of the supreme military council, ministers of war and of the navy, chiefs of the general staff, and of the naval staff board are entitled to membership by virtue of their official positions." (Japan Year Book, 1907.)

In the hearings before the committee the last chairman of the Committee on Military Affairs, Mr. Hull, made a statement in part as follows:

"A board of the kind provided for would be of great benefit to the country at large and would enable the Government to pursue a settled policy, and when that policy should be changed it would only be after very mature deliberation.

"I heard the question of my colleague from Iowa [Mr. Dawson], and I can not see any objection to creating a board of this character whose action is simply advisory. It can not have any effect until Congress acts, the same as it did with the Endicott board, the same as it does with plans for improvements at different institutions like the Military Academy and the Naval Academy. Congress must first adopt its recommendations.

"One great advantage of having a board of this character is, to my mind, to have some definite policy decided on. I do not know whether the Navy Department changes its mind very often or not, but the War Department changes its mind very often, and we are pushed into a line of legislation under one Chief of Staff, and when the head of the bureau changes or a new Chief of Staff comes in he urges sometimes a different line from that urged by his predecessor.

"Our whole system would be steadied if there was a board composed of these experts of the Army and Navy and the Members of Congress who have charge of these matters. In my judgment, the whole line of legislation would be steadied and benefited by the creation of this board. We can not conceive that there is any constitutional objection to creating it, and, as it is not a board that has absolute power to go ahead and do things, I can not conceive of any objections to both the experts and Members of Congress being joined together to get information. Personally, I think it is a splendid bill, and I should like to see it adopted. It will not cost us much; it will be of benefit to the Government; and we do need something in the way of a permanent policy of defense, and then let Congress carry it out; or, if the time comes to change it, we do need more than one man's technical ideas, no matter who he may be, before we can change it. You will never succeed in getting a continuous line of work unless you have some permanent authority, that Congress will have confidence in after it has been tested, or abolish it if you do not have confidence in it.

"I do believe in the bill, and I believe it is one of the best things you can do to get a board that can have some permanency and adopt some permanent policy and quit this makeshift we have been suffering from.

"I do want to see this act put in some shape where the vast sums we expend will be beneficial for the country as a whole, not only for this year, but growing up each year, with better results each year for our defenses, and getting results for the money we appropriate for the national defense. We are not doing it now. There has been a wonderful advance in the Army for the last four or five years. We are getting a better system all the time, and yet it has not that steadiness of purpose it ought to have and will have, in my judgment, if we adopt this bill."

Maj. Gen. Leonard Wood, United States Army, Chief of the General Staff, made a statement in part as follows:

"I believe thoroughly in the bill. I consider it to be the most important measure for military efficiency that has come up for consideration since I have had anything whatever to do with my present duties in Washington, and probably one of the most important that has ever come up. My reasons for making this statement so strong are as follows: If we succeed in having this bill enacted into law, it means that we shall have a committee consisting of the elements directly interested in the preparation and maintenance of national defense. It will insure the military proposition, and by 'military' I mean the propositions advanced by the naval and military authorities, being considered by a committee in which both Houses of Congress and the President's Cabinet are strongly represented, and it means that matters which are approved by this committee will be presented to Congress under an indorsement guaranteeing to that body that four of its own Members and two officers of the Cabinet, all civilians, have very carefully considered the measure and believe in it and recommend its enactment.

"It is well known to all of us that officers of the Army and Navy are generally looked upon as being a little overenthusiastic in military matters, and I believe that the effect of a joint committee of this sort taking up and considering questions of policy will, if it approves them, bring these matters before Congress in a much stronger way than we could possibly do it ourselves. It means, moreover, that we shall be able to establish and maintain a general military policy. The committee will change its membership gradually. We shall be able to adopt a general policy and carry it out from one administration to another without the radical changes which occur at the present time.

"A committee of this sort will insure a continuity of policy and a harmonizing, I think, of the military policy of the Government; it will provide a body in which the civilian element outnumbers the military, and whatever it approves is bound, I think, to appeal very strongly to Congress. I think it will be safe, sane, and strong for the betterment of the national defense."

Admiral Richard Wainwright, United States Navy, late aid for operations of the fleet, made a statement in part as follows:

"I am entirely in favor of the objects of the bill. I believe they will promote both efficiency and economy. With the same amount of money we should get more efficient military and naval forces, or for the same efficiency we should do it for less money. I think the object is to better bring before the Members of both Houses the requirements of the country, and then they would determine how much their resources were to be turned into preparation. I think, after the first formulation of the policy there would not be a necessity of many meetings. Of course from time to time the circumstances of the country would change its foreign relations, etc., that might require changes in the broad policy. And of course each year the question of how much should be recommended to do in that year—that is, broadly, between all the services taken together—would have to be largely determined by the Members who are representing the Senate and House.

"I can not see why there should be any emergency meetings of this council. Of course it would be better if the council could meet a little prior to the session of Congress, as Mr. PADGETT suggested, because they are very busy when Congress meets, and it would take a little time to carry it out. The English imperial council of defense was organized in 1895.

"Mr. HOBSON. Right there, will you explain why they came to organize that council in England?

"Admiral WAINWRIGHT. The 1895 one?

"Mr. HOBSON. Yes; and the subsequent one.

"Admiral WAINWRIGHT. The object of the subsequent one was more apparent. In 1895 there were no technical men in the council, and they felt they were not spending their money to the best advantage. They saw certain deficiencies in both army and navy.

"Mr. BATES. May I ask how that council was constituted—from what personnel?

"Admiral WAINWRIGHT. In 1895 the president of the council, the prime minister, the secretary of state for war, and the first lord of the admiralty.

"Mr. BATES. Were there members of Parliament in that council?

"Admiral WAINWRIGHT. The first lord of admiralty is a member of Parliament; the prime minister is a member of Parliament; the secretary of state for war is a member of Parliament. The president of the council is probably almost always a member of the House of Lords. So they are all legislative men.

"Mr. ROBERTS. You are speaking of the first council, of 1895?

"Admiral WAINWRIGHT. Yes. In 1903, after the Boer War, when they saw how deficient the army was, they increased the council by putting in the commander in chief of the army, the first naval lord (the first sea lord) of the admiralty, and the two intelligence officers, the officer in charge of military intelligence and the officer in charge of naval intelligence. They really represent what our presidents of the War College do, except that our president of the War College now has not the Office of Naval Intelligence under him. It would be better if he had.

"Mr. HOBSON. I want to ask Admiral Wainwright, in connection with his account of the second and current council in England, whether the Boer War threw any light on the necessity for the council?

"Admiral WAINWRIGHT. The Boer War was the reason they strengthened their council with technical members. Formerly they would call in technical people to explain to them the necessities, and after their great troubles in the Boer War they found that their army was not properly organized, and they also thought they could do better with transportation, etc., which was the navy part. They thought by placing regular technical members on the board they could talk more freely with the legislative members than if they were called in for a mere hearing. I do not think that in any of these boards it can ever become a question of voting. I think if the legislative members, for instance, did not agree to a policy the recommendation would not be made, because it would be ineffective. It would be like our meetings of the joint board.

"Mr. HOBSON. Admiral, as to the necessities or needs of that general policy now, do you think that it would facilitate settlement of the broad question of naval bases?

"Admiral WAINWRIGHT. As to the question of naval bases, naval stations, and fortifications, I think both the Army and Navy—a great many of us think there should be a uniform policy as to what should be fortified; that the country should not put money where it is not needed, in fortifications or in permanent naval stations, and that some places may not be neglected; but a uniform policy which would state what we are looking forward to I think would be of great value.

"Mr. HOBSON. In connection with that arises the question of joint operations of Army and Navy in time of war and preparation in time of peace for such matters as transportation.

"Admiral WAINWRIGHT. The question of preparation and how they should cooperate, not how they should operate after the war came; that should become technical."

Rear Admiral Raymond P. Rodgers, president of the Naval War College, United States Navy, made a statement in part as follows:

"I think the principle embodied in this bill is most desirable and necessary for us in determining any policy of preparation for war. It not only brings together the two executive military departments, the Army and Navy Departments, but it brings into this council several of the principal Representatives of both Houses of Congress to shape these policies. Councils similar to the one proposed are found in all the parliamentary countries of the world, and the advantage of them has been found to be very great. We have not had very much policy heretofore, for anything we got in the way of increase was of value; but now that we have developed so widely as we have it seems most important that there should be a policy for future development and expenditure in preparedness for war, and it seems that a council of this character is the best adapted for the purpose."

Brig. Gen. William W. Wotherspoon, United States Army, president of the Army War College, made a statement in part as follows:

"I consider this the most important bill in regard to the military efficiency of the country that has ever come under my observation. I say that from the standpoint purely of the Army. The great trouble we find at the War College is in ascertaining what the policy of Congress, the legislative body, is in regard to military affairs. We can only deduce that from its legislative acts. If we can crystallize that into a few brief sentences, it would be this, that Congress expects, on the breaking out of war, that the gathering together of untrained, unskilled,

and uneducated men will constitute an efficient Army for the country. That has always been the course pursued, and until we get some council like this probably it will be continued to be pursued. The result of that apparent policy has been most disastrous in the past, both financially and from the point of conservation of our human resources. In the War of 1812 Great Britain had never at any time on this continent a greater force than 16,500 soldiers. We mustered into the service 527,000 men, more than half a million. In 1878 we had a pension roll of 78,000 pensioners from the War of 1812, costing over half a million more than the entire Regular Army cost in 1811. That is simply an illustration.

"The most important feature, however, of this bill, so far as the Army is concerned, is this: The Army, drifting along from its old days in Indian campaigning, settled down here, there, and everywhere in the West and we have posts in the most out-of-the-way corners you can conceive of, the farthest possible from sources of supply and sources of recruits, so that the administration of the Army is enormously expensive. I conceive that such a board would take this up."

At another hearing Gen. Wotherspoon said:

"I consider this as decidedly the most important measure that has ever come under my observation since I have been in the Army, in forty-odd years. I should say that I have been working continuously for the last six years in order to get some such body as is proposed in this bill to pass authoritatively upon a national policy with regard to national defense. I have been compelled, as president of the War College, in preparing plans to pass from a state of peace to a state of war to search the records to see if there existed such a thing as a military policy in the United States. I found no evidence whatever of it. There is nothing that anyone can point to and say, 'This is the policy the Nation will pursue in the event of war or in the preparation for war.' In those studies I have seen that the expenditures for the Army are enormous, without results adequate to the cost. We have our Army scattered all over the country in the most expensive situations that there are, far from the sources of recruitment, far from the sources of supplies, far from railroad communication, where the cost of assembly at any definite point where their services would be required would be a great deal more than if we could have a scientific assembly. We have none of the higher organizations, such as brigades and divisions, which all other nations consider as absolutely essential for military efficiency. I have been in the service for 40 years, and I have never seen 5,000 men assembled. I have only once had control as a general officer of about 4,000 men, and then only for a few weeks in a militia camp.

"I have never seen a staff for one of these higher organizations trained. I consider that this bill will coordinate the efforts of the Army and the Navy and the legislative branch into some unified policy which will make for decided economy and still more decidedly for efficiency. I have stated to this committee before and to the Military Committee that I am perfectly convinced that an army three times as efficient and probably twice as strong as we have now can be maintained for the money we are at present spending for the Army. I should regret very much to see this bill fail, because it will throw us back to where we have always been, so that when a war comes on the first step is to evolve a policy from uncoordinated elements; the next step is to organize the higher fighting units; the third step, and that we always fail in, is the equipment of those units. I do not know that the committee knows that when the War of 1861–1865 came on it was the Secretary of the Treasury that drafted the bill for the United States Army or the Federal Army. The Secretary of War was too busy at that time to establish either a policy or to prepare for an organization. Consequently it was left to Mr. Chase."

Admiral A. T. Mahan, United States Navy (retired), made a statement in part as follows:

"The general purpose of the bill seems to me excellent. It would compel the deliberation in common of a number of men whose specialties are closely allied actually, but are not brought into formal cooperation, as the bill provides they shall hereafter be. For the information of each member of the council, and of the whole as a body, and for the subsequent formulation of measures, this method is superior to the appearance of experts before a committee, though it doubtless will not supersede that. Experts before a committee are like witnesses in a box, and confine themselves very closely to the matter in hand, whereas in discussion between equals many collateral facts and considerations transpire because of the freedom of range. Time is not thereby lost, at least to any greater extent than the half-informed questionings of those who are eliciting statements from a witness. I believe that Congress, the ultimate arbiter in matters of military provision, would be enabled to judge much better through the institution of this proposed council.

"As to questions of detail, I have very little to suggest. The proposed composition of the council, by ex officio members, seems to me very judicious.

"It has been justly remarked (Corbett's Seven Years War) that the strength of Great Britain's action in that war was that the three allied functions—diplomacy, army, and navy—were in one hand. In my judgment, they should all be represented in the proposed council."

Commander Frank Kinsey Hill, United States Navy, of the Naval War College, made a statement in part as follows:

* * * "A war will be properly carried on when the statesmen who control the steps preceding and subsequent to war work with and sustain the two military branches in harmonious plans during war, which plans are drawn to further the policies which caused the war; and, further, that it is necessary for the military commanders to study and broadly comprehend the policies of governments, so that their plans will fit the ends to be attained. * * * Now, unless the statesmen will tell us what the policies are we can not make proper strategic plans. I would like to illustrate this in one case with regard to Russia and Japan. The Russian statesmen did not coordinate with the army or navy. They did not know that a war was coming on between those two countries, as a matter of fact. The result was that they did not have the Russian forces in place to fight at the beginning of the war. The result was that Russia was defeated up to the time of the treaty. It is now considered by many that if war had been continued for a few months longer Russia would have prevailed. But lack of harmony between the Russian statesmen and the Russian army and navy commanders caused the defeat of that country. Another case, if you wish, is the Boer War, when exactly the same thing happened. * * * Having established a policy, then it is next the business of the military officers to state the necessities for their branches to carry out the policy.

"There is one other question which was asked several times by the chairman, and that is the question of economy, and the answers were wholly based on the economy due to coordination and a directive force. I consider that two economies will result, and the one named is the minor one. The largest economy which will ever come from this bill will result from our being so prepared for war that the enemy will decide not to have war with us. We would save a couple of billion dollars and several hundred thousand lives over and above the few millions which we could save by this fixing up of the stations, as mentioned by Gen. Wotherspoon. * * *

"We thus see that a definite responsibility can and ought to be fixed: first, for the decision as to what the policies of the Government will be; second, for the recommendation concerning the forces necessary to carry out the policies; third, for the appropriations necessary to provide these forces; and, fourth, for the right use of these forces by the military and naval commanders after they have been provided. The people of the United States, who delegate power to carry on the Government, should be thoroughly informed as to the various responsibilities, so that the credit for success or odium for failure should rest where it belongs. * * *

"War, being the result of policies enforced, should be based on strategic plans to gain certain definite ends. For instance, if the United States had a policy of extension of territory by absorption of Canada, the war would be directed so as to gain military control of that territory, and if the war ended successfully for the United States, the treaty would probably cede to them such territory as was held under military control at the end of the war.

"It is thus seen that the strategic objective of a war must rightly comprehend a knowledge of the policies which preceded war and contemplate the treaty which is to conclude the war.

CONCLUSIONS.

"War is not independent of political considerations, but must be outlined and carried on with due regard to these considerations. That to properly outline the war the three branches of the Government (State, War, and Navy Departments) should act in conjunction, and that peace preparation in anticipation of war should be the joint action of Congress, the War and the Navy Departments.

"Finally, both the peace preparations and war will best be carried out by a national board for war comprised of units representing both branches of Congress and the Departments of State, War, and Navy."

The three greatest authorities on the art of war are Jomini, Clonseuritz, and Von der Goltz.

Von der Goltz says:

"Upon policy the whole condition, the feeling, the constitution, and the moral and physical affairs of a State depend; and upon these depends, again, the waging of war.

"Policy, again, regulates the relations not merely of those States immediately concerned, but also those of such as are indirectly interested in the final issue. Their favor or disfavor may be of very great significance, impeding the course of events or promoting them. Politics, again, as a rule determine the moment for the outbreak of hostilities, upon the happy choice of which much depends. They, in short, create the general situation, in which the State enters into the struggle, and this will be of material influence upon the decisions and attitude of the commander in chief, and even upon the general esprit of the army. * * *

"War serves politics both before and after. War waged only for annihilation and destruction is in these days inconceivable. An end and aim that is of permanent value to the State, be it only a question of ascendancy, must be existent; and this can only arise from political considerations.

"The object of a war is of such importance and will be of such lasting effect upon the exertions which nations make to attain it that we ought, almost on this account alone, to place policy first among conditions of success. Now, as we have here pointed out, many motives are also attendant, and thus we may without hesitation lay down a maxim that without a good policy a successful war is not probable." * * *

Clouseuritz says:

"Thus, therefore, the political object, as the original motive of the war, will be the standard for determining both the aim of the military force and also the amount of effort to be made. * * *

"We see, therefore, in the first place, that under all circumstances war is to be regarded not as an independent thing, but as a political instrument; and it is only by taking this point of view that we can avoid finding ourselves in opposition to all military history. This is the only means of unlocking the great book and making it intelligible. Secondly, this view shows us how wars must differ in character according to the nature of the motives and circumstances from which they proceed.

"Now, the first, the grandest, and most decisive act of judgment which the statesman and general exercise is rightly to understand in this respect the war in which he engages, not to take it for something or to wish to make of it something which by the nature of its relations it is impossible for it to be. This is, therefore, the first, the most comprehensive, of all strategical questions."

Jomini says:

"The art of war consists of six distinct parts:

"(1) Statesmanship in its relation to war.

"(2) Strategy, or the art of properly directing masses upon the theater of war, either for defense or for invasion.

"(3) Grand tactics.

"(4) Logistics, or the art of moving armies.

"(5) Engineering the attack and defense of fortifications.

"(6) Minor tactics.

* * * * * * *

STATESMANSHIP IN ITS RELATION TO WAR.

"Under this head are included those considerations from which a statesman concludes whether a war is proper, opportune, or indispensable, and determines the various operations necessary to attain the object of the war.

"War is always to be conducted according to the great principles of the art; but great discretion must be exercised in the nature of the operations to be undertaken, which should depend upon the circumstances of the case.

"To these different combinations, which belong more or less to statesmanship, may be added others which relate solely to the management of armies. The name 'military policy' is given to them, for they belong exclusively neither to diplomacy nor to strategy, but are still of the highest importance in the plans both of a statesman and a general."

Col. Henderson, of the British Army, in his book, The Science of War, says:

"While a statesman may be competent to appreciate the general principles of the projects of operations laid before him, he should never attempt to frame a project for himself. * * *

"But political and financial considerations may not present themselves in quite the same light to the soldier as to the statesman, and the latter is bound to make certain that they have received due attention. If, however, modifications are necessary, they should be made before the plan of campaign is finally approved, and in any case the purely military considerations should be most carefully weighed. It should be remembered that an unfavorable political situation is best redeemed by a decisive victory, while a reverse will do more to shake confidence in the Government than even the temporary surrender of some portion of the national domains. 'Be sure before striking' and 'reculer pour mieux sauter' are both admirable maxims; but their practical application requires a thorough appreciation of the true principles of war and a very large degree of moral courage, both in the soldier who suggests and in the statesman who approves. If, however, the soldier and the statesman are supported by an enlightened public, sufficiently acquainted with war to realize that patience is to be preferred to precipitation, that retreat, though inglorious, is not necessarily humiliating, their task is very considerably lightened."

The question of the constitutionality of this measure was referred to the Attorney General, who gave an opinion as follows:

"I see no constitutional objection to the proposed measure. It merely empowers a number of officials—some in the executive and some in the legislative department—to meet and recommend to the President 'such measures relating to the national defense as it shall deem necessary and expedient.' I suppose that the President might without any act of Congress call together the same officials and discuss with them any measure of government in which he is interested. As a matter of fact, that is what he does with respect to important legislation of any kind. Take the various conferences that the President had with the members of the executive and the legislative branches of the Government regarding the railroad legislation two years ago and with respect to the tariff.

"I know of nothing in the Constitution to interfere with such legislation as is proposed by this bill."

A precedent for associating together members of the different branches of the Government is found in the act establishing the Smithsonian Institution and the Board of Regents of that institution.

Under the act of March 12, 1894, the President, Vice President, and Chief Justice of the United States are associated together in the charter body, and under section 5580, Revised Statutes, the Vice President, members of the Cabinet, the Chief Justice, and six Members of Congress—three from the Senate and three from the House—are associated together on the Board of Regents.

Every bill signed by the President is the joint work of the two branches of the Government. The complete separation of authority lodged in the two branches of the Government will be no more affected by joint action in the council than it is by joint action upon bills. The advantages of having the wisdom of both branches invoked in determining policies of national defense are even greater than in determining the usual laws.

Indeed, it is inherently impossible to attain a high degree of effectiveness in policies of national defense without bringing together the two branches of the Government.

The chief original purpose of the separation of the two branches of the Government was to avoid combining the powers of the two in the same man or group of men. Such a combination does not in the remotest degree result from the council.

No member of the executive branch is given any legislative power, nor is any member of the legislative branch given any executive power. In fact, the authority of the council is only advisory, and before any of its reports can be effective the recommendations made must be acted on by Congress and by the Executive.

The very fact that our two branches of Government, legislative and executive, are so entirely distinct, so much so that a member of the Cabinet may not even address the Houses of Congress and a Member of Congress may not hold an executive office, makes it far more imperative in America than in any other great country to establish a council of national defense in which the divergent branches may meet. Unity, continuity, and harmony are otherwise impossible, and without these there can be neither effectiveness nor economy.

The investigations of military authorities, notably the late Gen. Upton, show conclusively that the lack of a well-developed policy and the lack of harmony in our past wars are chiefly responsible for the larger part of our sacrifices of blood and treasure and for most of our reverses, if not for the wars themselves, while the hearings before this committee on this bill show clearly the same lack to be at the bottom of the high cost and lack of efficiency in our Military Establishment in time of peace.

George Washington, in a letter to the President of Congress, dated August 20, 1780, sets forth the serious and all but fatal consequences of a lack of a real definite policy of defense during the Revolutionary War. He says:

"Had we formed a permanent army in the beginning which, by the continuance of the same men in service, had been capable of discipline, we never should have had to retreat with a handful of men across the Delaware in 1776, trembling for the fate of America, which nothing but the infatuation of the enemy could have saved; we should not have remained all the succeeding winter at their mercy, with sometimes scarcely a sufficient body of men to mount the ordinary guards, liable at every moment to be dissipated, if they had only thought proper to march against us; we should not have been under the necessity of fighting Brandywine, with an unequal number of raw troops, and afterwards seeing Philadelphia fall a prey to a victorious army; we should not have been at Valley Forge with less than half the force of the enemy, destitute of everything, in a situation neither to resist nor to retire; we should not have seen New York left with a handful of men, yet an overmatch for the main army of these States, while the principal part of their force was detached for the reduction of two of them; we should not have found ourselves this spring so weak as to be insulted by 5,000 men, unable to protect our baggage and magazines, their security depending on a good countenance and a want of enterprise in the enemy; we should not have been the greatest part of the war inferior to the enemy, indebted for our safety to their inactivity, enduring frequently the mortification of seeing inviting opportunities to ruin them pass unimproved for want of a force which the country was completely able to afford, and of seeing the country ravaged, our towns burnt, the inhabitants plundered, abused, murdered, with impunity from the same cause.

"Nor have the ill effects been confined to the military line. A great part of the embarrassments in the civil departments flow from the same source. The derangement of our finances is essentially to be ascribed to it. The expenses of the war and the paper emissions have been greatly multiplied by it. We have had a great part of the time two sets of men to feed and pay—the discharged men going home and the levies coming in. This was more remarkably the case in 1775 and 1776. The difficulty and cost of engaging men have increased at every successive attempt, till among the present lines we find there are some who have received $150 in specie for five months' service, while our officers are reduced to the disagreeable necessity of performing the duties of drill sergeants to them, with this mortifying reflection annexed to the business, that by the time they have taught these men the rudiments of a soldier's duty their services will have expired and the work recommenced with a new set.

"The consumption of provisions, arms, accouterments, and stores of every kind has been doubled in spite of every precaution I could use, not only from the cause just mentioned, but from the carelessness and licentiousness incident to militia and irregular troops. Our discipline also has been much hurt, if not ruined, by such constant changes. The frequent calls upon the militia have interrupted the cultivation of the land, and of course have lessened the quantity of its produce, occasioned a scarcity, and enhanced the prices. In an army so unstable as ours order and economy have been impracticable. No person who has been a close observer of the progress of our affairs can doubt that our currency has depreciated without comparison more rapidly from the system of short enlistments than it would have done otherwise.

"There is every reason to believe that the war has been protracted on this account. Our opposition being less, the successes of the enemy have been greater. The fluctuation of the army kept alive their hopes, and at every period of the dissolution of a considerable part of it they have flattered themselves with some decisive advantages. Had we kept a permanent army on foot the enemy could have had nothing to hope for, and would in all probability have listened to terms long since."

In a subsequent letter to the President of the Congress, dated September 15, 1780, he says:

"I am happy to find that the last disaster in Carolina has not been so great as its first features indicated. This event, however, adds itself to many others to exemplify the necessity of an army and the fatal consequences of depending on militia. Regular troops alone are equal to the exigencies of modern war, as well for defense as offense, and whenever a substitute is attempted it must prove illusory and ruinous. No militia will ever acquire the habits necessary to resist a regular force. Even those nearest to the seat of war are only valuable as light troops to be scattered in the woods and harass rather than do serious injury to the enemy. The firmness requisite for the real business of fighting is only to be attained by a constant course of discipline and service. I have never yet been witness to a single instance that can justify a different opinion, and it is most earnestly to be wished that the liberties of America may no longer be trusted, in any material degree, to so precarious a dependence. I can not but remark that it gives me pain to find the measures pursuing at the southward still turn upon accumulating large bodies of militia, instead of once for all making a decided effort to have a permanent force. In my ideas of the true system of war at the southward, the object ought to be to have a good army rather than a large one."

The late Gen. Upton, perhaps the greatest military authority in America, in his book on "The Military Policy of the United States," in summing up the conclusions as to the War of 1812, says:

"The lessons of the war are so obvious that they need not be stated. Nearly all the blunders committed were repetitions in an aggravated form of the same blunders in the Revolution, and like them had their origin either in the mistakes or omissions of military legislation.

"In the war under the Confederation Congress in its own name could not raise a dollar nor arm and equip a single soldier. Under the Constitution it had the sovereign authority to call forth the entire financial and military resources of the people.

"In one war, with a debt of $200,000,000, the Nation became bankrupt at the end of five years; in the other, a debt of nearly equal magnitude was contracted in two and one-half years.

"In the first war, notwithstanding the steady decline of our military strength, two British armies of more than 6,000 men each were made captive; in the other, less than 5,000 men for the period of two years brought war and devastation into our territory and successfully withstood the misapplied power of 7,000,000 people."

These ideas were concurred in by Gen. James A. Garfield and by Gen. William T. Sherman, who penciled the following notes on Gen. Upton's original manuscript:

"I renew the suggestion that a further statement of the composition of the British forces against us ought to be made.

"J. A. G."

"A compliance with Gen. Garfield's suggestion will strengthen your argument. Many strong men will contest your conclusions by charging the lamentable failure of the War of 1812 to other causes than false legislation; to want of skill by generals and officers, such as the want of concert of action and dispersion of our strength, the want of men of action as leaders, rather than want of wisdom in council. I doubt if you will convince the powers that be, but the facts stated, the references from authority, and the military conclusions are most valuable, and should be printed and made accessible. The time may not be now, but will come, when these will be appreciated, and may bear fruit even in our day.

"W. T. SHERMAN."

Gen. Upton in the same work points out the similar consequences in the Florida War, 1836–1843, in which over 40,000 troops were engaged. The 4,000 Regulars engaged alone lost 1,500 men. He says:

"For want of a well-defined peace organization, a nation of 17,000,000 of people contended for some years with 1,200 warriors and finally closed the struggle without accomplishing the forcible emigration of the Indians, which was the original and sole cause of the war."

Gen. Upton is authority for the statement that the Mexican War, though successful, was longer than should have been required and exposed both the army of Gen. Taylor and the army of Gen. Scott to unnecessary peril. The events attending the annexation of Texas caused a degree of preparation for this war excelling anything in our previous annals. We were fortunate in the ability and experience of our officers, and their determining influence was felt as much in the preparations as in the battles. A crude approximation to a definite policy in this war, as compared with previous wars, was rewarded by an unbroken series of victories.

It remained for the Civil War to bring out the staggering price in blood and treasure a nation may pay for having no definite policy of defense.

Capt. J. M. Palmer, of the General Staff, investigating the causes that led up to this war, drew the conclusion that the utter lack of a military policy and of preparation on the part of the Union is the real responsible cause of the war. He says in Scribner's Magazine, February, 1912:

"A study of the period immediately preceding the Civil War reveals that secession was a formal and carefully preconceived act. * * * The southern people took the step that meant war simply because they thought that they could win. It must be remembered that Jefferson Davis was not only a trained soldier but an ex-Secretary of War of the United States. As a trained soldier he knew what military institutions should be, and as a Secretary of War of the United States he had learned what military institutions should not be. He knew that the United States was unprepared for war, he knew that it had no intelligent military policy, and he knew that know-nothingism in military affairs was cultivated as a positive civic virtue among northern politicians. He knew that the North had greater resources of wealth and population, but he knew that the war must be a war of subjugation, and as a trained military expert he knew that a war of subjugation can not be successfully waged by raw levies. He realized that the southern armies must also be largely untrained at first, but he was acquainted with the scientific fact that troops can be trained to defend long before they can be trained to conquer. He knew also that the military situation would impose a policy of invasion upon the North and that invasion would largely neutralize the advantage of superior numbers.

"Mr. Davis and his associates also knew the military history of the United States to be a history of legislative incapacity. They knew that Washington considered the British Army to be a much less formidable obstacle to success than the stupid military policy of the Continental Congress. * * * They knew that in the War of 1812, a war conducted on Jeffersonian principles, 16,000 British soldiers had been able to prevent 500,000 Americans from conquering Canada. They knew that during the Mexican War Gen. Taylor was left with only 5,000 men to bear the brunt of Buena Vista, and that when Gen. Scott was within three days' march of the City of Mexico, with victory behind him and final victory within his grasp, he was deprived of half of his little army on account of an oft-repeated legislative blunder. They knew that in all of our wars the American soldier has been called upon to win in spite of an unintelligent military statesmanship, and they did not believe that with such military institutions as these the North could successfully undertake the conquest of 5,000,000 Americans.

"Such was the logical estimate of the military situation. The appeal to arms was made by the southern leaders because in all human probability their cause would succeed. And they were almost right. But they failed to estimate the marvelous endurance of the northern people, who, spite of defeat, spite of unprecedented wastes of their blood and treasure, and spite of an unenlightened military policy, clung to the fearful burden of the war and bore it to the bitter end.

"The Civil War was a long and protracted struggle because it takes two years to convert armed mobs into armies, and until that conversion is complete there can be no decisive scientific military action. It was indeed fortunate for the United States that in this war its antagonist also began operations with an armed mob instead of an army.

"Our analysis of the facts of the Civil War has thus far led us to two important conclusions: First, that efforts to prevent it judicially were vain; and, second, that the undoubted proximate cause of the war was the military unpreparedness of the United States. * * * At the close of 1860 the Regular Army of the United States comprised 16,367 officers and enlisted men. This force consisted of 198 companies, and of these 183 companies were stationed on the Mexican and Indian frontier or were en route to distant posts west of the Mississippi. The 15 remaining companies were employed in guarding the Canadian frontier and the Atlantic coast from Maine to the Gulf of Mexico.

"On October 29, 1860, in view of the 'imminent danger of a disruption of the Union by the secession of one or more of the States,' Gen. Scott recommended that Forts Moultrie and Monroe and other southern forts be reenforced in order to prevent their capture by a coup de main or surprise. In a postscript added to his letter to the Secretary of War he stated that the forces of the United States available for the purpose were only five companies, stationed as follows: One company at Boston, one company at the Narrows (New York Harbor), one company at Pittsburgh, one company at Augusta, Ga., and one company at Baton Rouge. These five scattered companies, comprising about 400 men, constituted the total military force of the United States available for any sudden emergency. * * *

"The propriety of reenforcing the southern forts was carefully considered by Mr. Buchanan and his Cabinet, but the project was overruled, and thereupon the Secretary of War, Gen. Cass, resigned.

"But in its decision the administration of Mr. Buchanan should not be criticized without weighing the means at his disposal. The demands of the military situation were very clear. Prompt and decisive military action must have terminated the crisis, but prompt and decisive military action is not to be expected of a nation that has no military power. A vigorous national policy could hardly be supported by five scattered companies numbering 400 men. The tone of the southern leaders at this time was one of contempt for the weakness of the Federal Government. Their contempt was justified by the facts, and out of their contempt grew war. * * * The total cost of the Civil War to date has been over $9,000,000,000. It might have been prevented by an appropriation of $5,000,000 per annum from 1850 to 1860. But though it has already cost $9,000,000,000, it is still costing over $160,000,000 per annum for pensions on account of preventable military service, death, and suffering. In view of its consequences was the military retrenchment of the "fifties" a true economy? For every dollar spared from the proper military budget of 1860 we have so far paid $1,800, and we are still paying $32 a year almost half a century after the war. And this is the traditional military policy of the United States. * * *

"Although our analysis of the causes of the Civil War has necessarily been brief, it throws a suggestive light on several phases of the profound problem of war and peace. We find that the controversies that led to the Civil War were first brought before a competent tribunal, but that judicial action even under the most favorable circumstances was unable to prevent the appeal to arms. We find, however, upon further examination that the war in all human probability was a preventable struggle and that the proper preventive measure was simply Washington's classical remedy, preparedness for war.

"We also find a remarkable illustration of the vast difference that exists between military retrenchment and military economy. Economy always demands efficiency, no matter how much efficiency may cost, and retrenchment at the expense of efficiency is never economy. Because our fathers ignored this truth, we are still paying thirtyfold for an unintelligent retrenchment of 60 years ago."

There can be no doubt that the lack of a definite policy, the lack of harmony and organization, at the outbreak of the War with Spain are the chief causes of the heavy toll of life and health paid to disease, fourteen times that paid to bullets, though the bulk of our forces never left our own shores.

In fact, this lack of a defense policy is no doubt the real cause of the war itself. Any rational policy would have dictated our holding control of the sea as the Cuban question grew more acute. Ten million dollars put into ships in the early nineties would have insured this control and would have guaranteed the settlement of the Cuban controversy by diplomacy. With control of the sea there would have been no war. As soon as we gained control of the sea the war ended. A few millions of dollars put out in pursuance of a policy would have saved hundreds of millions poured out in war.

America has 30,000,000 of her citizens and $37,000,000,000 of her property exposed to naval attack. We have an expanding foreign commerce coming more and more in competition with the commerce of the great military powers of Europe and Asia. We propose to maintain the Monroe doctrine and insist on the "open-door policy," and are pledged to maintain the neutrality of the Panama Canal. Our possessions, whether to our liking or not, are spread all over the Pacific Ocean, placing us in the vortex of the world's politics. There is no choice. We must make adequate provision for self-defense.

This can not be done with efficiency and economy without a proper agency. This bill establishes such an agency without creating any new offices, and practically without entailing any additional expense. The committee unanimously recommends its passage at an early date.

The great weakness of our Nation from the standpoint of national defense has been the want of a definite policy and the want of cooperation between the various agencies involved. This bill makes up for this weakness and will promote economy and efficiency in peace and increases the chances of victory in war.

I will also print a letter from Admiral Fletcher bearing on the question of shortage of officers and men in the Atlantic Fleet.

AMENDMENT OF TESTIMONY BY REAR ADMIRAL FLETCHER, UNITED STATES NAVY.

UNITED STATES ATLANTIC FLEET,
U. S. S. "WYOMING," FLAGSHIP,
Navy Yard, New York, January 14, 1915.

MY DEAR MR. PADGETT: I desire to correct my testimony as given on page 547 of the hearings before your committee. The testimony is in answer to the question as to "how many short we would be if we attempted to put all our fighting ships in commission with trained service." My reply was to the effect that I could not give exact figures, but my impression was that it would take 4,000 or 5,000 additional men to fully man the ships which I think ought to be manned upon the opening of hostilities, and 5,000 in addition to the above to man other ships that should immediately be called out of reserve.

I am now able to give more exact information. Boards, consisting of the captain and other ranking officers of experience, by order of the Navy Department, have been appointed upon every battleship of the Atlantic Fleet, with instructions to carefully consider the complements of both officers and men required on the various types of vessels and scrutinize the number allowed in each rank and rating, with a view to reducing the same to the lowest practicable number consistent with efficiency for a peace complement and the lowest number that would be desirable for a war complement.

These boards have now completed their work, and the result has developed an alarming shortage of officers and men that are required to efficiently man our ships for battle. The reports of all these boards were made independently and are singularly unanimous in their conclusions, presenting a more serious shortage than could have been anticipated by either the Navy Department or the fleet until brought to light by this searching investigation.

The reports of these boards show that in the 21 battleships in commission, and now composing the Atlantic Fleet, there is a shortage of 5,219 men and 339 officers required to fill all stations necessary to efficiently fight the ships in battle.

The above figures refer to the commissioned battle fleet alone, and this shortage does not include "4,000 or 5,000 additional to fully man the ships which I think ought to be fully manned upon the opening of hostilities," as stated in my testimony.

My complete report has been sent to the Secretary of the Navy, but I desire the above facts to be placed in your possession in order that the testimony I gave before your committee may not be misleading.

Very respectfully,

F. F. FLETCHER,
Rear Admiral, United States Navy.

HON. L. P. PADGETT,
Chairman Naval Committee,
House of Representatives, Washington, D. C.

Mr. HENSLEY. Mr. Chairman, I yield 15 minutes to the gentleman from Wisconsin [Mr. REILLY].

[Mr. REILLY of Wisconsin addressed the committee. See Appendix.]

Mr. GRAHAM of Illinois. Mr. Chairman, this does not seem to be an opportune time to invest heavily in fighting ships. The experience of the present European war will doubtless shed much light on naval attack and defense. Up to this time what was clear before has been made clearer still, namely, that in naval engagements, as in prize-ring engagements, speed and "the punch" wins. Neither one enough. It takes both combined. It would seem to be almost criminally unwise to build fighting ships which were known to be slower than those of a possible enemy.

The ship which has speed enough to decline the combat, unless the conditions are favorable to it, has a great advantage, but if to greater speed it adds guns which are effective at longer range than its opponent's, it is complete master of the situation. Hence, every ship we build should have the greatest practicable amount of speed, should be faster than any now in service, if that is practicable, and should carry guns of the greatest range

Our Government recognized the force of this position when it sold the *Idaho* and the *Mississippi* because they were practically out of date on account of their lack of speed and lack of effective armament.

But it may be claimed that as we do not intend making war on any nation and need ships only for defense, we do not need such high speed in our ships; their principal function being to defend our coasts.

There are at least two answers to this. In the first place, one of the best methods of defense often is a vigorous attack. Hannibal taught the world that lesson, and Scipio learned it so well from him that he gave a demonstration of it. It is still true. For that reason alone we need speedy ships, if we need any.

The second answer is that we have so large a number of slow fighting ships now that we should equip them for coast-defense purposes, or such other work as slow ships can do, and put all the money we are now going to appropriate for naval purposes into fast ships only. Other nations now have great fighting monsters capable of a speed of 28 to 34 knots. Our new ones should have as great or greater speed than that.

I have heard the argument made repeatedly that speed is not important for defense; that big guns and heavy armor are what is needed. The bulldog, they say, does not need to be as fast as the greyhound; he does not have to seek safety by flight.

The illustration does not illustrate. There are many things the bulldog could do if he were capable of greater speed which he can not do now. Who would think of putting the most faithful of bulldogs to guard his flock of sheep or to run down a wolf? The greyhound or the wolf could kill every sheep in the field with the bulldog in full pursuit trying to prevent it. The bulldog's range of usefulness is quite limited because he has been developed into mere jaws, just biting capacity. But he must catch before he can bite. If his legs fail to serve his jaws they will soon grow weak from hunger.

I do not know whether it is practicable to develop a breed of dogs having the fleetness of the greyhound and the jaws and courage of the bulldog, but I do know it is practicable to develop a class of ships having both these qualities, having the speed of the fastest cruiser and gun power of the heaviest superdreadnaught. She may not carry as many heavy guns as the latter but she can carry enough to conquer with when she cares to fight, and she has speed enough to decline to fight when prudence dictates such a course.

Not long ago we sold two ships to Greece—the *Idaho* and the *Mississippi*. We sold them because they were practically superannuated; that is, newer and better methods of construction as to speed and armament had rendered them ineffective. As against faster ships armed with guns of longer range they would be mere targets.

But we still have 28 ships of practically the same character both as to armament and speed. What are we to do with them? If slow ships can do coast-defense duty, surely we have enough of them now. With 28 such slow ships on hand and no fast ones, it would be more than mere folly—it would be criminal folly—to build more of the slow ones and no fast ones.

It may be of interest to have more specific information as to these ships, and for that purpose I give a list of them, with their principal armament. Their approximate speed ranges from 14 to 19 knots an hour:

Name of ship.	Large guns.	Small guns.
Alabama	4 13-inch	14 6-inch.
Connecticut	4 12-inch	8 8-inch and 12 7-inch.
Delaware	10 12-inch	14 5-inch.
Florida	10 12-inch	16 5-inch.
Georgia	4 12-inch	8 8-inch and 12 6-inch.
Illinois	4 13-inch	14 6 inch.
Iowa	4 12-inch	8 8-inch.
Kansas	4 12-inch	8 8-inch and 12 7-inch.
Kearsarge	4 13-inch	4 8-inch and 18 5-inch.
Kentucky	4 13-inch	4 8-inch and 18 5-inch.
Louisiana	4 12-inch	8 8-inch and 12 7-inch.
Maine	do	16 6-inch.
Michigan	8 12-inch	
Minnesota	4 13-inch	8 8-inch and 12 7-inch.
Missouri	4 12-inch	16 6-inch.
Nebraska	do	8 8-inch and 12 6-inch.
New Hampshire	do	8 8-inch and 12 7-inch.
New Jersey	do	8 8-inch and 12 6-inch.
North Dakota	10 12-inch	14 5-inch.
Ohio	4 12-inch	16 6-inch.
South Carolina	8 12-inch	
Utah	10 12-inch	16 5-inch.
Vermont	4 12-inch	8 8-inch and 12 7-inch.
Virginia	do	8 8-inch and 12 6-inch.
Wyoming	12 12-inch	4 5-inch.

The other three, the *Oregon*, *Indiana*, and *Massachusetts*, are on the retired list.

When we take into consideration that every one of these ships carries only armor-piercing shells, it is perfectly apparent that they would be entirely harmless to an enemy of greater speed, with guns of equal or greater caliber firing high explosive shells.

The range of vision from ship to ship at sea is about 12 miles; that is, a man on a ship, at an elevation of about 25 feet, can see the top works of another ship, in clear weather, about 12 miles away. Many modern guns carry farther than that, and a shell loaded with guncotton, gelatin, or some other high explosive striking a ship at that, or even at a greater distance, would in all human probability sink it. The *Empress of India*, a British ship, was used as a target for such shells and sunk at a distance of about 9 miles. At that distance our A. P., or armor-piercing, shell would be as harmless as a popgun.

But we are on the eve of better things in that regard. Even reactionary ordnance bureaus can not much longer delay a change. We must soon adopt high-explosive shells and high-power guns, and if these 28 slow-going ships were armed with such guns and such shells they would be quite effective for coast defense and for many other purposes. It is not any defect in the structure of the ships, beyond their lack of speed, that makes them antiquated; it is only the armament, and particularly the use of a shell which is destructive only when it penetrates the enemy's armor and explodes after penetration. As that is possible only at comparatively short ranges, say, 4 or 5 miles, it can be readily seen how helpless such a ship is against an enemy with high-explosive shells, which are as effective at 10 miles as at 1 mile, if hits are made at the greater distance.

This whole matter and other matters of great interest are set out so clearly in an article printed in the New York American, of November 1, 1914, that I quote it.

After referring to the speech of Congressman GARDNER of Massachusetts, the article continues:

Mr. GARDNER's speech has served to call attention to another notable address recently made to the Senate Naval Affairs Committee by Mr. Willard S. Isham, a military engineer and expert, and the inventor of a torpedo shell. Mr. Isham makes five very specific charges of inefficiency against the United States Navy. These charges were made on September 30, publicly, and in the presence of high officials of the Navy, and they have not been challenged, explained, nor denied.

The graveness of Mr. Isham's charges can scarcely be overestimated. If they are unjustified they ought to be proved untrue by the Navy experts; if they are true our Navy administration needs immediate investigation and reorganization.

Here is an official copy of Mr. Isham's address to the Naval Affairs Committee of the Senate:

"Gentlemen: The main purpose of this brief presentation is to direct attention to some of the many defects in the matériel of our Navy which, neutralizing many good points, destroy the efficiency of our Navy as a means of national defense. A further purpose is to disclose some of the contributing causes that have resulted in present conditions in the expectation that when these are fully considered a searching investigation of our national defenses will result

"Since the time when our Government was established it has been recognized that an efficient Navy operating on the high sea was the most practical means for the protection of our long coast lines against hostile invasion. A Navy to accomplish this purpose must be able to intercept and overcome any convoyed force before a port suitable for a base could be secured and made defensible, and since it is obviously impossible to determine in advance the objective point of attack of an enemy it is necessary that our Navy, to be efficient, must possess eyes, as it is recognized that a blind fighter could never accomplish much in a combat with an active enemy.

"Hence an important adjunct to a fleet consists in scout ships for scouring the seas and ascertaining the strength, location, direction, and speed of an enemy's expeditionary force, so that he may be met by a suitable force at such a point and at such a time that a tactical advantage may be secured and a favorable result obtained. We possess no ships capable of cruising as scouts at a distance from our battle fleet which could not be quickly destroyed by the faster and more powerfully armed battleships and battle cruisers of other navies. Hence at the door of those responsible for the condition of our Navy is laid charge number 1.

"1. Our Navy is inefficient because of its inability to scout out an enemy on the high seas.

"Our battle fleets are made up of battleships in which speed has been sacrificed for armor plate and from a strategical or tactical standpoint are no better than floating fortresses, as they can never force a battle upon an unwilling enemy or interfere with any of his movements. Moreover, no part of a battle fleet can be safely detached as a flying base for cruisers, destroyers, or other fast ships acting as scouts, since they might be cut off and destroyed by a concentrated force of ships having superior speed and armament. Hence it is that our battle fleets must operate as an entity and must possess the force necessary to meet at any time or place the maximum force which an enemy can concentrate against them. This condition also results from the second defect in our Navy.

"2. We possess no ships capable of operating at such a distance from our battle fleets as to screen its formation and strength from the scout ships of an enemy.

"Because of this defect our fleets are compelled to be always ready and are as a consequence never ready to meet an enemy to the best advantage. This defect makes the defense of our fleets impossible at night, since it permits a hostile torpedo flotilla to hover about them at sundown like a pack of coyotes around a campfire ready to rush in when the conditions are favorable. Against this attack our battleships are powerless, as shown by Lord Charles Beresford in The Betrayal, page 62:

"'No guns, heavy or light, will protect a battle fleet from torpedo attack at night. The only effective method of protection is to employ a large number of small cruisers to clear a wide area about the battle fleet at sundown. These cruisers do not exist in the requisite number. * * * The small cruiser force must be disposed so that they form a protecting screen distant 120 or 140 miles on all sides from the battle squadron. By no other means is it possible to move a battle squadron at night without risking its destruction by the attack of torpedo craft.'

"Rear Admiral Twining, late Chief of the Bureau of Ordnance, stated in the House hearings, March 12, 1912, page 907:

"'The torpedo boat continues to be held in great favor as a weapon of underwater attack, and it must be admitted that no navy has at present an adequate system of defense against such attack if efficiently delivered. Torpedoes have been designed which can cut, penetrate, or displace the nets. The searchlight is ineffective, since a torpedo may be successfully launched at a range beyond its reach. Gunfire is ineffective against an invisible target, and the torpedo boat can launch its weapon while still invisible to the gun.'

"The great naval expert, Percy Scott, who formerly championed the construction of battleships, now declares them to be worthless and defenseless against underwater attack. The European war thus far has shown that no commander dares to expose a battleship to underwater attack. Hence the charge is laid and should be investigated:

"3. Our battleships are defenseless in a fog or at night.

"Moreover, the results thus far obtained as to the naval operations in the European war seem to indicate that heavy ships are defenseless by day against underwater attack. Notwithstanding this accumulation of evidence, our technical boards still propose to construct slow battleships, and one week from to-day bids will be opened for three such ships that will cost $45,000,000 and that an investigation will show to be as worthless and as antiquated as the flintlock musket.

"These defects in our battleships result from the sacrifice of active aggression for passive resistance, a vital sacrifice in speed for an unnecessary increase in armor plate. Because of this our ships are compelled to fight fleets, which make them an easy prey for the torpedo and which fired at the line of battleships will in one case out of four hit and sink a ship. The Napoleonic maxim that "The thicker the grass, the faster it is mown," applies with especial force to naval warfare. This is one of the fruits of armor-plate domination in the construction of our Navy. Had our battleships been constructed with such speed that they could cruise as fighting units they would have nothing to fear on the high seas from torpedo attack. Let us examine the advantages which this excess armor plate has given our ships.

"Since the remotest ages the art of war and the implements of warfare have developed according to certain immutable principles. For example, the boy David slew the giant Goliath because he could select a range for his attack where his sling was destructive, but which range the slow-moving Goliath could not lessen so as to make his ponderous sword and spear effective. This principle has been expounded for centuries and employed to secure victories in all ages, and it was recently reaffirmed as the basis of an argument for the sale of the *Idaho* and *Mississippi* that they were outranged by the larger guns of foreign fast ships. Hence charge 4 is laid and should be investigated:

"4. Thirty-two of our older battleships, carrying guns of equal or lesser power than those in the *Idaho*, are inefficient for the purposes for which they were designed because they are outranged by foreign ships having guns of superior range and possessing superior speed.

"A corrollary of this principle is that the effect of a missile weapon is not dependent upon its ultimate range, but upon its destructive range. The guns of the *Idaho* and *Mississippi* and our other 32 ships having the same armament fire shell weighing 870 pounds about 22,000 yards, yet these shell can not destroy a battleship at even one-half this range, which general fact is stated not only in the last British Naval Annual and in other technical journals, but also has been proven by tests carried out by a special committee of Congress and reported to Congress by the chairman, Capt. Hobson, on April 30 of the present year. Admiral Twining, in testimony referred to, stated that hits could be made at a range of 16,000 yards. The British navy last December sunk the battleship *Empress of India* at over 16,000 yards, and the account of the test in the Naval Institute Proceedings for April of the present year states that "holes were blown in her like lock gates," showing the employment of torpedo shell, since A. P. shell never make a hole larger than their diameter. Since then torpedo shell are used abroad that are effective at 16,000 yards or up to the limit of range fixed by visual conditions, as stated by Admiral Twining.

"The question naturally arises why these 32 battleships of our Navy are not supplied with such shell so as to prevent them from being outranged, as it is stated they would be in combat with foreign ships. Several types of torpedo shell were brought out in this country nearly 20 years ago. The War Department perfected one. I presented one, but neither type has been adopted. The cry of danger was raised against one of these types. That charge would have been accepted as honest had either of the other types of torpedo shell been adopted and against which no such charge could be brought. Either of these shell could destroy any battleship without even exploding in contact with it, as was established by experiments carried out by Gen. Abbott nearly 20 years ago. It was also proven by tests made with the Army shell against a caisson representing a battleship and furnished by the Navy Department, an account of which test is contained in Ordnance and Gunnery, by Lissak, page 583, which shows that this shell would destroy a battleship at even a distance of 15 feet from it. Hence charge 5 is laid and should be investigated:

"5. Ordnance officers of this country for the past 15 or 20 years have been in possession of safe torpedo shell that could destroy any ship at any range within the limit fixed by visual and other conditions, but, notwithstanding this, such shell have not been adopted for the service and our ships have not been constructed either to employ them or meet the change that would result if other navies adopted them.

"Tests of these shell have shown that by means of them not only can ships be sunk at extreme range, but also irrespective of their armor protection, as their most favorable point of attack is below the water line. Has this recognized destructive effect of torpedo shell which discounts the use of armor plate been the cause of the vigorous opposition to their adoption? Has their use been opposed because their adoption would at once extend the destructive range of all the primary guns on all our battleships and thereby prevent such ships from ever becoming obsolete? Has their use been opposed because their adoption would destroy the basis of the permanent naval building program so dear to many? Those back of this opposition should be permitted to give the reasons therefor, and these reasons should be weighed and tested by a searching investigation.

"The immediate cause for this request for a hearing in the hope of securing an investigation has been the arrogant act of the Naval Chief of Ordnance, who has refused to carry out tests with either of two types of torpedo shell in which I am interested, and as requested by the House Subcommittee on Ordnance Tests, but who has at the same time carried out a test with one of these shell in utter disregard of the wishes of either the House committee or myself, which for high-handed disregard for the interests of the Navy and of this country stands without parallel in the history of his department; and I am informed, having thereby secured the material for an unfavorable report, the caisson employed in the test was blown up and destroyed, thereby preventing further tests to disprove the inaccuracy of the reports and conclusions obtained and uttered by the department.

"It is recognized that a saw may be proven to be worthless if tested as a means to drive nails. Likewise a hammer may be proven worthless as a means for cutting off timber; but a test to prove their efficiency should be made under such conditions as they are designed to be used, and I am informed by many Members of Congress who received invitations to be present at a test requested by the House Committee on Ordnance Tests that they expected such test to take place. I am also informed that if the subterfuge of blowing up the caisson has been resorted to in order to prevent the result of an honest test from stopping contracts for battleships or shell, the blame will be placed where it belongs.

"The issue is not the Isham shell, or anybody's shell in particular. The question is whether the ordnance officers shall prevent the use of any torpedo shell because they lessen the demand for armor plate and for new ships. This issue, it is submitted, should be decided by an investigation and by honest tests, and it is believed that it will be so decided.

"Believing that the few serious charges herein made can be established by the honest officers, composing 95 per cent of those in the service, and that a searching investigation will result in great good to our Navy, I respectfully request that such an investigation be made."

It was my privilege to go down the bay this week to witness some experiments with a shell containing a high explosive, the invention of the Mr. Isham referred to above. To my mind the experiments demonstrated the excellence of the invention, and point unmistakably to a change—almost a revolution—in naval warfare.

Up to this time it has been found impossible to devise a form of shell which would not skip along the surface of the water, or ricochet, as it is technically called.

This fact made it impossible to hit a ship below the water line with a shell, and hence it was unnecessary to put armor plate below that line. Hence the submerged portion of the ship is especially weak against attack, and a hard blow delivered under the water is usually fatal. This, together with the secrecy with which its blow can be delivered, constitute the main reasons for the submarine and the torpedo. From shells which refuse to go into the water before exploding the submarine is, of course, practically immune. But if a shell could be found to enter the water and explode under the water, the submarine would be another Othello—its occupation would be gone. That is just what Mr. Isham has accomplished. By a device which is unerring in accuracy and so simple that one wonders why it was not discovered before, every shell not fired at too short a range enters the water on contact, and equipped with a time fuse, travels under the water a distance of from 100 to 200 feet before exploding.

No ship and no submarine within a distance of 15 or 20 feet from this shell at the moment of explosion could survive. The effect is manifest. The attack is carried direct to the weakest point of the ship and irreparable damage is done. In this way every shell becomes a mine, and it is difficult to conceive of a defense against it. Such a shell takes the place of the torpedo and, in addition, possesses tremendous advantages over it. In the first place its cost is but a small fraction of the cost of the torpedo. In the next place it is far more practicable. It will travel through the air in 15 seconds a distance which it would take the torpedo at least 5 minutes to travel through the water. In 5 minutes the ship may change its course so as to miss the torpedo, but if the high explosive shell is properly aimed, the ship can not in 15 seconds gain anything by change of position, and, in addition, during the 5 minutes the torpedo is making its journey at least 15 shells could be fired from a single gun. And in the third place, the shell has for its target the whole ship, both above and below the water line, whereas the torpedo has only the part below the water line.

I do not believe we are in danger of being involved in war very soon. I have the most abundant confidence in the ability of the President and Secretary of State Bryan to avoid such a calamity. It would be almost unpardonable that not even one of the great nations remained at peace. But if we appropriate money to build additional ships for our defense they should possess every quality of excellence—of superiority that skill and intelligence can supply.

Mr. PADGETT. I yield 15 minutes to the gentleman from Rhode Island [Mr. GERRY], a member of the Committee on Naval Affairs.

Mr. GERRY. Mr. Chairman, the present war has proven beyond question the value of the control of the sea, and has made our people realize more than ever the importance of an adequate

Navy to the United States. Oceans are the great highways over which the preponderance of commerce must travel. The nation that controls them has the world to draw upon, and its influence must be felt at all shores. In time of war the protection of one's commerce is an elementary and fundamental necessity for continuing commercial prosperity. A country that is able to carry on its foreign trade while its enemies' ships are driven to port has a great economic advantage. Sound finances are as fundamentally important to a government as they are to a business man, and the successful combatant in a great war is generally, in the long run, the one that has the deepest purse. Napoleon recognized this fact when he inaugurated his continental system and attempted to conquer England by closing the markets of Europe to her commerce, but his policy failed because he did not have command of the sea.

Apart from mere commercial considerations, there is also the advantage to military strategy that naval supremacy gives. If the enemy's navy is blockaded, advantageous points of attack can be chosen, colonies at the other end of the world can send aid to the mother country, and a concentration of troops is easily accomplished.

These are a few of the fundamental advantages that go with the command of the sea, and which experience is teaching to-day as it has in the past. In fact, I think it would be hard now to find any thinking person who would question the importance of naval supremacy. It therefore only remains to consider what is the best way to obtain it. All facts point to one sound principle, namely, to have the largest and most efficient fleet of capital ships. There are many different fighting vessels that can aid a navy, but there are none that can take the place of the first line of battleships. The mere fact that there is such a fleet capable of attacking the enemy's armada, if it comes out, is enough to keep it in port and give the command of the sea to the greater navy. England has proven this in the present war. Her superiority of superdreadnaughts has prevented the German Navy from attempting a battle, because they realize that the odds are greatly against them—too heavy to be recommended by sound policy.

Submarines have done effective work, and they are valuable adjuncts to a fleet; but, as Commander Stirling said before the committee this year, "It is a weapon of the battleship, just the same as the battleship's 12-inch turret."

In other words, the dreadnaught has not been superseded, but an additional destructive force has been added to the fleet, useful as harbor defense and helpful in conjunction with battleships. To rely solely upon a submarine attack to destroy a first line of battleships is to put much to chance, for the submarines must succeed in evading the aeroplane lookouts that in clear weather can see them although their periscopes are submerged some distance. They must be able to dive under the screen of cruisers and scouts that are extended far out to protect the dreadnaughts. Once or twice they must come to the surface if they are to determine the speed of their opponent and other questions of range, without which there can be little accuracy in discharging the torpedo. They must overcome all these difficulties and get in striking distance, although under the most favorable circumstances with new batteries they can only make 10 knots an hour submerged, and that for but one hour before their speed is cut in two by the using up of the electricity. While they are making 10 knots the dreadnaughts can make 20; therefore any change away from them in the direction of the fleet places the submarine at an irreparable disadvantage.

The reason why the submarine has proven so effective in the present European war is because of the close proximity of the belligerent nations, the waters that the skirmishes are taking place in are limited in area, home bases are never far off, and the scouts which the English have thrown out to protect their dreadnaughts and coast have given the submarine a great field for effective work, being near the enemy's bases. The only vessels that are known authentically to have been sunk by submarines were the units of this screen and not the protected vessels themselves. In other words, the outpost vessels were lost. Naturally, these scouting vessels are bound to suffer from the submarine's hands, and that is why the latter is being more and more recognized as a valuable new auxiliary; but how little naval commanders will consider them when they desire to make a raid is shown by the action of the Germans when they attacked the coast of England with their battle cruisers. The bombardment was effected and the retreat made without submarines being able to do any damage to the enemy, and this on a short coast line which was supposed to be protected by scouts that could give the alarm and create a rendezvous of forces when necessary. A similar raid was evidently attempted a few days ago, but this time they met the enemy's fleet of battle cruisers. The odds were at once recognized as too great and a retreat was made, with a loss to the attacking party. It is worth noting here that it was not until capital ships were met that the expedition had to be abandoned. Submarines alone would have been discounted as a negligible danger. I do not believe that there is a naval authority who would suggest for one instant that if England only had a fleet of submarines, she would have been able to have blockaded the North Sea.

The soundness of the United States maintaining a consistent policy of sustaining an adequate Navy can not be denied with any force of argument. Such a defense means that our shores can be kept from the ravages of war, our colonies protected, and the Panama Canal retained. As an adjunct to the Monroe doctrine it is absolutely essential, for, unless we can enforce our wishes, little respect will be paid to them. Might is still essential in international controversies. This defense of our country is maintained by a Navy at low cost, if we consider how vast would have to be our expenditure should we try to adequately fortify our great seacoast and support these fortifications with a standing army. An immense Army is not desired by the American people, and history shows that it is an unwise policy for Republics to pursue if they are to maintain the character of their Government, but by relying upon naval defense all these dangers are eliminated. Even with the Navy on a war basis, the number of men are few, in comparison with the millions in our country, and the danger of these few creating any spirit of militarism throughout the Nation, as a standing army might do, is not possible.

A glance at the table of the building program of the great nations of the world shows that their program calls for more ships than ours; and even should there be an important naval battle in the near future, history teaches and the present experiences show that the victor is not likely to lose many ships although the defeated is annihilated. In the battle off the Chilean coast the German fleet destroyed two of the English boats and escaped themselves unharmed. When, however, they were met by a superior force, all their ships but one were lost and their conquerors were practically unscathed. It would therefore seem an unwise policy for us to rely on the possibility of future loss among other powers instead of trying to continue our own strength among the sea powers of the world.

This bill reported by the Navy Committee is the best bill that has been presented to the House in years, and a vote for it is supporting policies that must appeal to us as patriotic Americans.

Mr. Chairman, I yield back the remainder of my time.

The CHAIRMAN. The gentleman yields back five minutes.

Mr. BUTLER. I yield 20 minutes to the gentleman from Iowa [Mr. GOOD].

Mr. GOOD. Mr. Chairman, while we are considering a bill providing funds for our occupation of the seas by our Navy I desire for a few minutes to discuss a serious problem growing out of the soil.

I wish to submit a few observations with regard to the price paid for live stock in the principal live stock markets in the country. Apparently but few people realize the great loss that is being sustained every day by our farmers and stockmen. I undertake to say that if the same demoralization of earnings and actual losses sustained by our farmers and feeders during the last few months were visited upon the railroads of the country they would be given instant relief.

Unquestionably the live-stock industry has received a staggering blow. The men who to-day are engaged in furnishing the meat supply of the country are doing it at a loss that will total many millions of dollars.

I have before me a Chicago paper of yesterday, January 28, from which I quote the following:

Live-stock quotations.

CATTLE.		
Beef steers, good to choice	$8.00 @	$8.75
Beef steers, fair to good	7.00 @	8.00
Beef steers, common to fair	5.25 @	7.00
Yearlings	7.00 @	9.50
Beef cows	4.50 @	6.75
Fat heifers, fair to selected	5.00 @	8.00
Bulls	5.00 @	6.75
HOGS.		
Bulk of sales	6.40 @	6.55
Common to good, mixed	6.25 @	6.45
Fair to choice, medium weight	6.45 @	6.55
Lightweights	6.50 @	6.60
Fair to selected butcher's	6.50 @	6.60
Select, 260 to 300 pounds, packer's	6.45 @	6.50
Boars, according to weight	5.00 @	4.00
Pigs	5.75 @	6.35
Stags	6.00 @	6.25

AVERAGE PRICES OF CATTLE AND HOGS.

From these quotations it will be seen that the average price paid for fat cattle at the Chicago market on yesterday was

$6.90 per hundred and that the average price paid for hogs was $6.06 per hundred pounds.

PRICES DEPEND ON COST AND DEMAND.

Mr. Chairman, as a general rule there is a corresponding relation between the price of fat cattle and hogs and the price of corn, the principal food on which hogs and cattle are matured. To-day there is no relation whatever between the price of fat cattle and hogs and the price of corn. Fat cattle and hogs are selling to-day in the principal stockyards of the country for considerably less than the actual cost of the corn to produce them.

Obviously there should also be a corresponding relation between the price paid for cattle and hogs and the prevailing price of fresh beef and pork. When the domestic and foreign price of fresh meats advance, should not the price of fat cattle and hogs also advance? Since the outbreak of the European war all foodstuffs have rapidly advanced, both here and abroad, but, strange to say, the price at which the American farmer has been obliged to sell his hogs has declined from $8.90 per hundred on July 18, 1914, to $6.06 on January 28. The average price of cattle has declined from $9.10 on July 18 last to $6.90 on January 28.

FARMERS UNABLE TO FORCE COMPETITION.

No one at all familiar with the live-stock industry will underrate the effect which this unreasonable depression in the price of fat cattle and hogs is having on the American farmer and cattle raisers. When a feeder picks up a daily paper and reads that the price of wheat to the wheat grower has doubled in the last six months, and sees that the price of his commodity has declined by leaps and bounds while everything that goes to mature his product has greatly increased in price, he naturally begins to question the forces that makes this unnatural, unjust, and unreasonable condition possible. He realizes his helpless condition; but, try as he may, he can not improve it. He sees heavy losses staring him in the face every day, but he is unable to reduce them. Great transportation companies similarly situated would have redress by interesting the President of the United States, as they have already done, and have him appoint men on the Interstate Commerce Commission who favor the granting of increased freight rates. By newspaper advertisements to create a public sentiment, and by political pressure from the White House, the railroads will get the increase which they are seeking, but where is the Government executive official who is demanding that the farmer receive even a "square deal"?

1912 AND 1915 COMPARED.

I suppose some one will claim that inasmuch as hogs sold on January 28 for almost as much as the average price of hogs in January, 1912, that the farmers should not complain. In comparing prices we must not lose sight of the comparative cost of production. While it is true the average price of hogs on January 28 last was almost as high as the average price of hogs in January, 1912, we must also remember that it costs a great deal more to produce fat hogs to-day than it did in January, 1912. In January, 1912, corn on the Chicago market sold for 47 cents per bushel, while to-day it sells for better than 70 cents per bushel. A farmer could make money feeding cattle and hogs at the prevailing prices in 1912, whereas he can not help losing money feeding stock at the prevailing prices of to-day.

COST TO PRODUCE CATTLE AND HOGS.

The Department of Agriculture has determined the amount of corn necessary to produce 100 pounds of gain on a hog or a steer. It claims that 1 bushel of corn will make 10 pounds of gain on a hog, and that it requires 922 pounds, or 13.17 bushels of corn, to produce 100 pounds of gain on a steer. Mumford and Hall, of the Illinois Experiment Station, after a most extensive investigation, concluded that 1 bushel of corn will produce:

	Pounds of gain in winter-fed lot.	Pounds of gain in summer on pasture.
With calves	8.9	10.0
With yearlings	6.5	7.6
With 2-year-olds	5.4	6.8

That 1 bushel of corn will produce 10.5 pounds of gain on hogs.

COSTS OF PRODUCTION GREATLY INCREASED.

Applying the first rule, because it is more general, let us see whether or not the farmers have a just cause of complaint with regard to the present price paid for fat cattle and hogs at the stockyards of the country. The facts are that the price paid to-day for fat cattle and fat hogs does not begin to pay the corn cost alone of their production.

I have prepared a table showing the profit or loss in producing fat cattle and fat hogs at the prevailing prices of beef cattle and hogs, and also the price of corn on the Chicago market for 1912, 1913, 1914, and for January 28, 1915. The table is as follows:

Table showing profit or loss in producing 100 pounds of gain on cattle and hogs from standpoint of corn costs only, as of Jan. 28, 1915, and for 1912, 1913, and 1914.

Year.	Average price of cattle per 100 pounds.	Average price of hogs per 100 pounds.	December and January price of corn per per bushel.	Corn cost.		Profit or loss.	
				To produce 100 pounds gain on cattle.	To produce 100 pounds gain on hogs.	To produce 100 pounds gain on cattle.	To produce 100 pounds gain on hogs.
1912	$7.75	$7.55	$0.47	$6.17	$4.70	$1.38	$2.85
1913	8.25	8.35	.46	6.21	4.60	2.14	3.65
1914	8.65	8.30	.60	7.90	6.00	.75	2.30
1915 (Jan. 28)	6.90	6.06	.70	9.45	7.00	2.55	[1].94

[1] Loss.

NOTE.—Prices for 1912, 1913, and 1914 are from Yearbook of Figures, published by the Daily Farmers and Drovers' Journal, January, 1915; prices for January 28, 1915, taken from Chicago papers—all prices at Chicago. Labor costs and losses through disease not included.

PROFITS IN 1912; LOSSES NOW.

It will be observed that the corn cost to produce 100 pounds of beef in 1912 was $6.17; that the average price for cattle that year was $7.75, leaving a profit on the corn cost to the farmer of $1.38 for every hundred pounds of gain produced. There was a profit on the corn cost to produce 100 pounds of pork that year of $2.85. In 1913 the profit in producing 100 pounds of pork, so far as the corn is concerned, was $3.65, and $2.30 in 1914, while on January 28, 1915, there was a loss of 94 cents for every hundred pounds of pork produced. In other words, the farmer who fed hogs on 70-cent corn until they weighed 300 pounds and sold them yesterday on the Chicago market for $6.06 per hundred lost over $2.80 on every hog he matured, to say nothing of his loss for labor in raising the hog or his loss through cholera and other risks which he had assumed.

So, too, the farmer who fed cattle in 1912 made a profit of $1.38 per hundred pounds, exclusive of the cost of labor and the risks assumed. In 1913 he made a profit of $2.14 per hundred pounds; in 1914 he made a profit of 75 cents per hundred pounds; and at the prevailing prices of both fat cattle and corn on January 28, 1915, he sustained a loss of $2.55 per hundred pounds.

In other words, the farmer who sold 1,200-pound steers yesterday at the average price suffered a loss on the cost of the corn alone to produce them of $30.60 for each steer sold, while at the average price paid in 1913 he had a profit of $25.60 on each 1,200-pound steer produced. His profits were not large in 1913. But who will question the seriousness of his losses in 1915?

PRODUCER SELLS FOR LESS WHILE CONSUMER PAYS MORE.

The wholesale price of fresh beef in London advanced 2 cents per pound from July 13 to December 21, 1914, while the average price of fat cattle on the Chicago market declined from $9.10 per hundred pounds for the week ending July 18, 1914, to $6.90 per hundred pounds on January 28, 1915. No one can dispute these prices. The English price will be found in Mark Lane Express Agricultural Journal and Live Stock Record, while the prices of live stock will be found in the Chicago papers. Who can explain how such things are possible, except through the violation of law? Who can justify such practices, which, if continued, will destroy the live-stock industry in this country? But where is the executive officer of the Government who is attempting to enforce the law and put a stop to this practice?

The Chicago wholesale price of pork for the week ending July 18, according to the National Provisioner, was 13 cents per pound. The average price of hogs at the Chicago market for that week was $8.90 per hundred pounds. The Chicago wholesale price of pork for the week ending December 19, 1914, was 13 to 14 cents per pound, while the average price paid for hogs in the Chicago market was $7.10 per hundred.

The American consumer paid more for his pork in December than he paid in July, but the American farmer sold the hogs out of which that pork was made for 20 per cent less in December than the price he received in July. The wholesale price of pork in London increased 25 per cent from July 18 to December 13, 1914, while the average price at which the American farmer was compelled to sell his hogs declined during the same time $1.80 per hundred pounds, or 20 per cent. This condition is unbearable, almost unthinkable, and yet it has been going on month after month, and not a single executive officer of the Government has interceded in behalf of the American farmer to put a stop to a pernicious practice if not an unlawful conspiracy.

The executive officers of the Government, whose sworn duties are to enforce the law, may give as an excuse for their failure to prosecute these violators of the Sherman antitrust law that the farmers have received an increase in the price of their wheat and their oats and their corn and that they should not therefore complain. It is true that the price of wheat has advanced from 78 cents a bushel to $1.50 per bushel during the past six months. Oats have advanced, and likewise corn has gone up in price; but these advances aid only the farmers who have these cereals for sale. They do not help the farmer who uses his corn and his oats for the purpose of maturing his stock and who looks to the sale of his fat stock for his annual income.

SUPPLY NOT EQUAL TO DEMAND, BUT PRICES DECLINE.

Let us remember that it can not be successfully urged as an excuse of these falling prices that there has been an overproduction or that the supply exceeds that of previous years. Just the reverse is the case. The demand for fresh meats has increased, and there has been a great falling off in the number of cattle and hogs sold on the stock markets in 1914, as compared with previous years, yet prices decline. Take the Chicago market, for example, and we find the live-stock movement for several years to be as follows:

	1914	1913	1912	1911
Cattle	2,237,881	2,513,074	2,652,342	2,931,831
Hogs	6,618,166	7,570,938	7,180,961	7,103,360

The combined total of receipts of all kinds of live stock at the 14 live-stock markets of the country show a great falling off in receipts in 1914, as compared with previous years. These combined receipts are as follows:

1914	53,700,238
1913	57,339,840
1912	57,268,861
1911	57,023,951

With this great shortage in the live stock in the country, why should our farmers be compelled to sell at the present bankrupt prices? With the demand for fresh meat increasing, with rising prices therefor to the consumer, and with the supply falling off why should there be such a great reduction, a reduction of over 20 per cent in price of fat cattle and hogs to the American farmer?

HOW PRESENT PRICES AFFECT IOWA FARMERS.

Take the State of Iowa, for example, for it is a typical stock-raising State: The farmers of that State naturally desire some of the benefits flowing from the great advance that has been made in the price in all food products by reason of the war in Europe. But the fact is that the farmers of Iowa, under present conditions, obtain but little of the great increase in the price of foodstuffs.

The entire State of Iowa produces only about 15,000,000 bushels of wheat and consumes about 13,000,000 bushels. Take from our production of wheat the amount that we consume and what we use for seed, but very little remains for sale.

The farmers of Iowa for several years have been advised by such eminent men as the Hon. James Wilson, the real father and builder of the now great United States Department of Agriculture, to conserve their lands by raising live stock and feeding their cereals on their farms. They have followed this advice, and in recent years have taken to raising cattle and hogs as their principal source of profit.

While we raise wheat, we raise only a little more than our people consume. We raise more oats by far than any State in the Union, but a large portion of our oat production is fed to our live stock. We excel all of the other States in the Union in the production of corn, producing in 1914, 389,424,000 bushels, yet of that great crop we will feed more than 85 per cent to our live stock. In the production of hay Iowa excels all the other States in the Union, save only the great Empire State of New York, but this crop, too, is largely fed to our horses and cattle. Iowa produces more horses than any State in the Union. It produces more cattle than any State except Texas, and it produces more hogs by 2,500,000 head than any other State.

It can be said as a general rule that the great production of cereals in Iowa is to a large extent fed to the live stock raised or matured within the State. It is therefore to the sale of live stock, and especially to the sale of fat cattle and hogs, that our farmers must look for their annual return, and when they see the price of pork advancing in London at the rate of 25 per cent in six months, and at the same time see the price of their hogs decline on our markets 20 per cent, they realize that some strong forces, stronger than the law of competition, is at work undermining their profits and destroying their industry.

When our farmers see the foreign and domestic price of beef advance, and at the same time are forced to sell their fat cattle on the live-stock markets, their only market, at a greatly reduced price, they are forced to the conclusion that powerful interests have combined against them to unreasonably depress the price of their principal product and to ruin their prosperity. Will this Congress refuse to grant the farmers relief?

There was a time not many years ago when our farmers having cereals for sale were obliged to sell their grain to the Elevator Trust at the price fixed by that combination. The farmers solved that question by going into the elevator business. The result has been that to-day the farmer who has grain to sell receives the advantage of the natural rise in price.

The slaughter of live stock and the operation of stockyards presents a far more difficult question. The magnitude of the investment alone in such enterprise has prevented our farmers engaging in this industry. But who can say that the losses which they will sustain this year by reason of this unjustifiable depression in the price of live stock will not force them to find some more profitable way of marketing this great crop?

LOSSES TO IOWA FARMERS.

Take the losses which the farmers of Iowa will sustain this year on their hogs alone. They raised last year 6,976,000 head. If three-fourths of them were matured to a weight of 250 pounds each and marketed this year at the average price paid on the Chicago market on yesterday, the loss to the Iowa farmers alone on the corn which was consumed in maturing these hogs would total over $11,000,000. Fortunately for the farmers of Iowa they have not all sold their hogs at the prevailing price of yesterday, but they have all sold their hogs at a much lower price than they should have received for them. Instead of sustaining a loss, if they had received the same percentage of profit which they realized in 1913, of $3.65 per hundred pounds, on the corn cost to produce their hogs, they would have realized on the same sales a profit of more than $19,000,000. Considering the profit which should have gone to the farmers and stock raisers of Iowa by reason of the advanced prices in beef and pork, which the farmers did not receive, I believe that loss of the Iowa farmers on cattle and hogs this year will total over $25,000,000.

I do not know who is responsible for this unreasonable decline in the stock market. I do not know who is controlling it. I only know that the farmers are receiving far less for their fat cattle and hogs than they should receive. The law of competition, uncontrolled, would have forced the price of cattle and hogs even higher than the prevailing prices at the time of the outbreak of the European war.

ANDERSON RESOLUTION.

I believe that the resolution offered by the gentleman from Minnesota [Mr. ANDERSON] should be adopted by the House, and that the Department of Justice should, in justice to the farmers, make a thorough examination into the causes of this decline in the price of cattle and hogs. If there has been a manipulation of these markets and a violation of the antitrust laws, those guilty of such violations should be punished. If there has been no violation of such laws, and if the prices paid at the various stockyards of the country for live stock have been the natural prices established by the law of competition, then the men engaged in the packing industry and in the ownership of stockyards should not be compelled to rest under the indictment fixed in the minds of thousands of farmers throughout the land that they are responsible for this manipulation of prices and the loss of untold millions to the stock-raising industry. If there has been no violation of the law, a thorough investigation of this subject should disclose what additional legislation is necessary to insure a full return to competitive conditions. [Applause.]

Average weekly prices of cattle and hogs at Chicago from June 27, 1914, until Jan. 21, 1915.

	Beef cattle.	Hogs.
Week ending—		
June 27, 1914	$8.70	$8.30
July 18, 1914	9.10	8.90
Aug. 1, 1914	8.80	8.80
Aug. 15, 1914	9.20	9.40
Sept. 5, 1914	9.25	9.20
Sept. 19, 1914	9.30	8.80
Oct. 3, 1914	9.20	8.35
Oct. 17, 1914	9.00	8.65
Oct. 31, 1914	9.25	7.40
Nov. 7, 1914	9.10	7.50
Nov. 21, 1914	8.80	7.45
Dec. 5, 1914	8.30	7.00
Dec. 19, 1914	7.95	7.15
Jan. 2, 1915	8.50	7.20
Jan. 16, 1915	8.20	6.80
On Jan. 28, 1915	6.90	6.00

Average weekly prices per pound of wholesale fresh meats at Chicago from July 4, 1914, until Jan. 16, 1915.

Week ending—	Carcass beef—prime native steers	Fresh pork—dressed hogs.
July 4	$0.13½–$0.14	$0.13
July 18	.13½– .14	.13

Mr. PADGETT. I yield 15 minutes to the gentleman from Louisiana [Mr. ESTOPINAL].

Mr. ESTOPINAL. Mr. Chairman, I believe in a strong Navy, because the Navy is our main dependence for national defense. It is the line of the first resistance to enable us to prepare our military defense, should invasion be attempted. I am against territorial expansion, but realize that we have assumed responsibilities which must be reckoned with; and, besides, we have, not counting these outlying possessions, a large coast line of rich interests and development which must be considered. While recognizing these responsibilities and willing to prepare ourselves so that we may not be derelict in meeting them, we may take comfort from the fact that the deadlocked condition, so to term it, of the novel overhead, underground, and underwater warfare of the present war seem to point to conditions which will make warfare impossible; but I am not willing to pin my faith on that appearance to the extent of ceasing adequate preparations for a real, competent defense; for, however much the opponents of a large Navy may talk of financial burdens, bankruptcy, and so forth, we know that two, or three, or even four hundred million dollars a year spent on our Navy would be a cheap insurance on the lives of a hundred million people and property wealth of one hundred and fifty billion dollars, not reckoning our pride as a people.

To have faith in peace and brotherly love among the peoples is a fine ideal, and we should cultivate that faith. It may serve to prevent warfare, but I am not of those who believe so.

So, in my opinion, we must not be so beguiled by this idealism as to fail to make preparation to meet any eventualities. History has always repeated itself, and until the nature of man is changed and his economic ideals and environment are different we may see the philosophers and advocates of peace thrown into confusion again and again by warfare, and in which we ourselves may be involved.

As I have already inferred, we have at stake, in the lives of our people, in the wealth of our cities, and in the pride of our national spirit, too much compared to the insignificant expenditure that is necessary to keep up our building program.

There are some who contend that fast cruisers must replace battleships; but, Mr. Chairman, for national defense it is imperative that we have powerful mobile fortresses capable of keeping the seas and clearing them of hostile vessels of all kinds. In this work these fighting machines must go hundreds, and even thousands, of miles from their base, and, after traversing such a distance, must be ready for conflict with similar fighting machines of an enemy bent upon breaking down the defense of our seacoast. Our naval experts and those of foreign nations are agreed that the modern dreadnaught is the only answer to this requirement, since this type of ship combines (1) the ability to inflict the greatest injury on the enemy, (2) the maximum protection to itself, and (3) the maximum speed practicable for any fortress which must carry all the weight of the guns, ammunition, armor, fuel, provisions, and so forth, that are imperative for the very object of the ship's existence. It is a truism to state that a ship of 30,000 tons displacement can not be loaded with more than 30,000 tons of weight without going deeper into the water and sacrificing essential fighting qualities. If, therefore, we wish to increase the speed of a ship of a given size, we must add more weight for machinery; which means that we must take away weight for guns or armor, or both. While we would like to give our dreadnaughts as much speed as we can, if we put too large a proportion of the weight in machinery to increase speed the ship could not carry enough guns and armor to enable her to stand up against an enemy's corresponding ship which carries a greater preponderance of weight in artillery and protection, and our ship could only run away from the fleet that would constitute the backbone of the enemy's sea power. We must therefore be amply provided with real first-class fighting machines, and these must be extremely powerful in their offensive and defensive qualities, with as much speed as is compatible with these primary qualities. It would be a great mistake to infer from results of the present naval hostilities that the modern battleship or dreadnaught has not amply justified its existence; as a matter of fact, it appears to be doing exactly the work it was designed to do. To state that opposing vessels of this class have not come into conflict in large numbers, the one with the other, is merely to state that the weaker fleet has stayed at home, while the stronger fleet has had the freedom and control of the seas.

While dreadnaughts "form the backbone" of any efficient fighting fleet, it is absolutely essential that the vessels of this class be provided with the necessary auxiliaries, including submarines, destroyers, fuel ship, etc., in order that they may find and engage the enemy and defend our country by bringing a sea campaign to a successful termination. It is noted that the bill as reported in the House provides an addition of 17 submarines. Vessels of this class have amply proven their value in the present naval war, particularly in defending the home coast. The 17 vessels of this class covered by this bill will add greatly to the national defense.

Of course we need vastly more of these types of vessels, but we are, even with this increase, conservative.

The strategy board recommends a material addition to our fleet of air craft and states that they "are the eyes of both the armies and navies, and it is difficult to place any limit to their offensive possibilities," and further states that in this respect "our present situation can be described as nothing less than deplorable." The bill as reported calls for $1,000,000 for air craft. This million dollars is ample to encourage the spirit of enterprise in building these craft. Only a few days ago there was sent to me a copy of the Yale paper, which mentioned the organization of a company to build dirigibles of the Parseval and Zodiac type, with the following comment:

> Up to a year ago very little had been done regarding the building of dirigibles in this country, but since the formation of the Connecticut Aircraft Co., with ample funds, they have conducted a private research and to-day possess constructive genius, experienced builders, and reliable drivers. They have evolved a design that has been tested with favorable results in the wind tunnel at Boston.

Mr. Chairman, I am in favor of building up a merchant marine and would go to almost any lengths to attain this object. The need of this, both as regards auxiliary vessels to be used in time of warfare and for the development of a seafaring addition to our population, is so apparent and so fully recognized that it is needless to discuss it.

When the last naval appropriation bill was being considered by this body I claimed that our country could well afford to spend ample sums to build and maintain a large navy. I am stronger in this conviction than ever. The condition of Germany to-day, with her fleet bottled up in the Baltic and her commerce destroyed, and the attitude of Great Britain toward the neutral powers, emphasizes the need of a strong navy. It is a great mistake to say that the people of this country are opposed to an effective navy. I believe this question, as well as that of the merchant marine, will be made an issue in the next presidential campaign, and that the majority of the people will strongly pronounce in favor of these measures.

The bill now under consideration is not too large, and it should receive the hearty approval of every Member of the House.

Mr. Chairman, in closing my remarks on the naval bill of last session, I used the following language:

> There has probably not been a year in the last decade—no; not in the last two decades—when there were not more than three times as many idle men tramping the streets of our cities and along the railroads of this country marauding and destroying than were enlisted in the Army and Navy. Before we decry the Army and Navy for taking men out of the productive channels of life, and thus causing the high cost of living, we should try to solve the problem of voluntary and involuntary idleness of these three times as many that stagnate in cities and tramp the

country and the several times as many more that are idle at home during certain seasons of the year.

To measure up to a full and symmetrical development of national defense, as well as international influence that may serve us to make a national defense unnecessary, I wish again to emphasize the economic problems which in themselves form the basic features of a stronger national life, and a stronger national cohesive support, in case that, unfortunately, warfare should become our portion. Successful issue of any country engaged in warfare is dependent upon the fiber of its citizenship. This is fundamental and underlies all other preparation. [Applause.]

Mr. PADGETT. On behalf of the gentleman from California [Mr. STEPHENS] I yield five minutes to his colleague, the gentleman from California [Mr. KETTNER].

Mr. KETTNER. Mr. Chairman, in this morning's mail I received a pamphlet from California dealing with a subject that has engrossed my attention for some time past. It deals with the report of four very prominent citizens of my State, all Free Masons, and active in that fraternal order. The report is made to Judge Paul J. McCormick, of Los Angeles, a Roman Catholic citizen of that city, who had submitted to the Masonic committee, with full authority of the supreme officer of the Knights of Columbus in the United States, a complete copy of all the work, ceremonies, and pledges used by the order of the Knights of Columbus for their full examination and inspection. That Masonic committee, consisting of Motley Hewes Flint, thirty-third degree Mason and past grand master of Masons of California, formerly postmaster of the city of Los Angeles, and president of one of the largest banks in that city; Dana Reid Weller, thirty-second degree Mason and past grand master of California, and a distinguished member of the California bar; William Rhodes Hervey, thirty-third degree Mason and past master and master of Scottish Rite Lodge, and formerly a superior court judge of Los Angeles County; and Samuel E. Burke, thirty-second degree Mason and past master and inspector of Masonic district, one of the most prominent dentists of Los Angeles.

These four men, than whom none stand higher for probity and honor in the State of California, and who are known throughout the State for their adherence to the highest standards of personal integrity, have just made a report on the ceremonies and ritual of the Knights of Columbus. They find unanimously that "the ceremonial of the order teaches a high and noble patriotism, instills a love of country, inculcates a reverence for law and order, urges the conscientious and unselfish performance of civic duty, and holds up the Constitution of our country as the richest and most precious possession of a knight of the order." They state further that they "can find nothing in the entire ceremonials of the order that to our minds could be objected to by any person."

As a thirty-third degree Mason and a working member of the Masonic order, I esteem it a privilege to present this report of these distinguished and fair-minded men on a subject which has been grossly misrepresented, and has caused religious bitterness and strife. I believe in justice and fair play. In the Sixty-second Congress the Committee on Elections No. 1, in a certain contested election case, incorporated in their report (H. Rept. No. 1523) an alleged oath or obligation of the Knights of Columbus, the publication of the said alleged oath being in connection with a contest for membership in this body. This alleged oath, which can be found in the bound CONGRESSIONAL RECORD of the Sixty-second Congress, third session, page 3216, was used to the detriment of the Knights of Columbus, whose critics pointed to the publication in the CONGRESSIONAL RECORD of the alleged oath as sort of proof of its genuineness. The alleged oath having found publication in the CONGRESSIONAL RECORD, I think it but fair that this report dealing with the oath of the Knights of Columbus by this distinguished Masonic committee should likewise be given the same prominence.

LOS ANGELES INVESTIGATION.

The following letter needs no explanation:

Hon. PAUL J. MCCORMICK,
Court House, Los Angeles.

MY DEAR JUDGE: I take pleasure in handing you herewith the findings of the committee of Free Masons to whom you exhibited the ceremonials and pledges of the Order of Knights of Columbus.

I am very glad that I have been able, in a measure, to secure this refutation of a slanderous lie which has been widely circulated and which has been disseminated in many cases by well meaning, credulous, and deluded persons.

I shall see to it that this report has wide circulation among Masons, and you may use it in any way you deem best to bring about an understanding of the truth among men who, above all controversies and contentions, desire to know and to follow that which is right and true.

Yours, cordially,

W. R. HERVEY.

OCTOBER 9, 1914.

We hereby certify that by authority of the highest officer of the Knights of Columbus in the State of California, who acted under instructions from the supreme officer of the order in the United States, we were furnished a complete copy of all the work, ceremonies, and pledges used by the order, and that we carefully read, discussed, and examined the same. We found that while the order is in a sense a secret association, it is not an oath-bound organization, and that its ceremonies are comprised in four degrees, which are intended to teach and inculcate principles that lie at the foundation of every great religion and every free State. Our examination of these ceremonials and obligations was made primarily for the purpose of ascertaining whether or not a certain alleged oath of the Knights of Columbus, which has been printed and widely circulated, was in fact used by the order, and whether if it was not used, any oath, obligation, or pledge was used which was or would be offensive to Protestants or Masons, or those who are engaged in circulating a document of peculiar viciousness and wickedness. We find that neither the alleged oath nor any oath or pledge bearing the remotest resemblance thereto in matter, manner, spirit, or purpose is used or forms a part of the ceremonies of any degree of the Knights of Columbus. The alleged oath is scurrilous, wicked, and libelous, and must be the invention of an impious and venomous mind. We find that the order of Knights of Columbus, as shown by its rituals, is dedicated to the Catholic religion, charity, and patriotism. There is no propaganda proposed or taught against Protestants or Masons or persons not of Catholic faith. Indeed, Protestants and Masons are not referred to directly or indirectly in the ceremonials and pledges. The ceremonial of the order teaches a high and noble patriotism, instills a love of country, inculcates a reverence for law and order, urges the conscientious and unselfish performance of civic duty, and holds up the Constitution of our country as the richest and most precious possession of a knight of the order. We can find nothing in the entire ceremonials of the order that to our minds could be objected to by any person.

MOTLEY HEWES FLINT,
Thirty-third Degree Past Grand Master of Masons of California.
DANA REID WELLER,
Thirty-second Degree Past Grand Master of Masons of California.
WM. RHODES HERVEY,
Thirty-third Degree Past Master and Master of Scottish Rite Lodge.
SAMUEL E. BURKE,
Thirty-second Degree Past Master and Inspector of Masonic District.

Mr. HENSLEY. Mr. Chairman, I yield 20 minutes to the gentleman from Indiana [Mr. CLINE].

THE REMEDY FOR UNPREPAREDNESS, IF ANY EXISTS IN THE ARMY AND NAVY, AND THE MENACE OF A MILITARISM.

Mr. CLINE. Mr. Chairman, for five years I have patiently listened to discussions of naval appropriation bills to discover our true policy of construction and the reason for it. No man during that time has attempted to lay down a well-defined policy; no man has attempted to discuss the subject as related to a democratic form of government, and particularly in connection with our historic policies and physical environment. We have argued much upon our needs under the ambiguous phrase, "An adequate Navy." The man who would spend $700,000,000 a year and the one who would spend $7,000,000 a year can find shelter and political security for his theory, whatever that may be, under that declaration. Our discussions have always proceeded on relative assumptions; namely, that we should build battleships because other governments built them. We have always talked about, not what our needs are to-day, but what they might be to-morrow. The advocates of large naval construction and of large standing armies have always proceeded upon comparison. No advocate has based our policy upon what we ought to do because of our coast line and our exposed and unfortified cities.

No man has until the immediate present proposed that we should have as large a Navy as Great Britain. We have usually contented ourselves with the statement that we ought to have a Navy as large as Germany has, though no one has given a reason why we should have one just as powerful and be contented with it. The naval policy of every nation must be anchored in reasons essentially individual and always looking to the promotion and accomplishment of the nation's ultimate purposes. The nation's ideal is always the controlling force. Who has not asked himself why Great Britain has constructed a great navy; why Germany in the last quarter of a century has copied English activities not only in manufacture and commerce, but in naval construction? To illustrate what I previously stated, that the policy of every nation must be individual in her construction, there was no other recourse for England than to build and maintain a great sea-going power. Her territory covers one-fifth of the habitable globe; her victory at Trafalgar a century ago gave her the control of the sea. She did not scatter her surplus population into her islands and continental possessions, but kept it at home to build a complete mastery of the world's trade. And let it be remembered that that mastery has always been maintained, either by the sharpest possible competition or by cutting off the commercial lines of her rivals. Australia and India and South Africa and Canada, where she holds large possessions, have always contributed to the maintenance of her prestige. She scattered her warships to the strategic points in the Mediterranean, Indian Ocean, and the Yellow Sea; to the Straits of Magellan and the Cape of Good Hope, and to the most advantageous coaling stations in all the world. A new period came in vessel construction—

steel ships operated by steam. England rapidly laid the keels for great warships, to protect her colonies and keep her immense business. Continental Europe had no modern ships, no war vessels, but England looked upon the swift mobilization of petty States in the continental center of Europe under the German flag with a suspicious eye. England blocked up the channel and crowded the North and Baltic Seas with her vessels, so that she could be in complete command, knowing that every dollar of export coming from central continental Europe would have to pass that way and under her observation.

The rapidly increasing German population, immense commerce, and national spirit sought new territory into which to spill her surplus population. Her trade sought sale in the English colonies. She became a rival of England for South American business. The restless and aggressive spirit of Germany sought a wider field of activity—cemented her national unity—and she now believes that her future depends upon becoming the dominating force in all Europe. There was only one barrier for her to break down, and that was the English Navy. Germany knows she has no way to the world's market except over water that her bitter antagonists control; that the Mediterranean and the North Sea are in England's control; that her racial enemy in the east, Russia, controls the railroads leading to China and Japan. With that situation confronting her, with a virile race of 60,000,000 looking to the strongest centralized Government on the earth for employment and destiny, she saw that her future as a people lay in the complete absorption of Continental Europe and in wresting the control of the seas from the British Empire. Her idea now is that she shall be the Roman Empire of the twentieth century in Europe. She began a naval program of construction with that idea in view. To return to my original proposition, the far-reaching ideal of a nation is always its controlling motive—the unifying power of her people in her military and naval program. That idea arises out of the nation's geographical location, its form of government, and its economic necessity. If it is the ambition of Germany to become pan-German in western Europe, there is no moral force to which to appeal. The arbitrament of this proposition must be determined by the force of arms. If England shall retain her grip on her colonies, her prestige on the sea, her commerce, she must remain master of the seas and be able to maintain all her strategic positions. The concurrence of conditions both in Germany and in England—and I am speaking of naval power—gave rise to both of their successes in naval construction. The result is not artificial. It is necessarily evolved out of the acts that complete the realization of the national idea. Germany has cast into the world's crucible of powers her industrial, commercial, and race problems for settlement. England, prompted by the history of her heroism, her chivalry, and her traditions for 20 centuries, has hurled her race against a most aggressive and determined people to protect her political integrity, her territorial limitations, and her supremacy over the waters of the globe. But none of these economic positions, none of these environments, none of these necessities need shape our opinions or our activities in naval or military armament. We have no island continents to protect, no pathways over the seas to guard, no enemy sworn to absorb and destroy us. We have no need of some place to dump our surplus population, to build up and protect new markets. No power is attempting to prohibit us from entering the world's trade, or intercepting our commercial highways, or standing over us to intimidate us with great war vessels as we pass to and fro in the pathways of a water. The relationship of our mixed population is not in harmony with any propaganda to acquire additional territory, especially by conquest.

These European conditions are due in part to the forms of government with which their respective territories are invested. American democracy is not in harmony with great military power. The militarism that has invested these monarchies is in deathless antagonism with a representative government like ours. We have never had great military or naval establishments. Recently ill-considerate enthusiasts have attempted to create a sentiment for a great standing army and a great navy. I am opposed to both. I believe in efficient naval and military power. Many problems enter into the solution of what constitutes such efficiency. We have no demand or necessity for an offensive naval and military establishment. Military power thrives in a centralized monarchy, whose efficiency to command when national sentiment and submissive obedience makes the prompt realization of every resource and activity sure. Decentralization of power is destructive of military force. I want to inquire into the probability of this country aping the great military forces of Europe by raising our standing army to the strength of half a million enlisted men, with a great trained reserve force. I want to inquire whether we need a navy exceeding that of any world power, clamored for only by a yellow press and the limelight exhibitors? There are many reasons why we do not need a large standing army and a greater navy than we now have. Our entire policy from the foundation of the Government has been to maintain friendly relations without alliances with all Governments. We have a Nation of mixed nationalities, whose tender and affectionate sympathies reach back to the fatherland, wherever that may be; hence the necessity for absolute neutrality. Because of the very fact that we may keep intact a complete national sentiment that shall dominate and control all ancestral relationship we must avoid all foreign complications. The steady march of democratic impulse is manifesting itself in Europe and in the Far East. The Hindu and the Egyptian, the Persian, and the inhabitant of the Balkan States all dream of new governments, of a nation administered by themselves on their own territory, independent of and tributary to none. These demonstrations will give birth to a new democracy that shall supersede autocratic and monarchical rule. I do not stop here. The interdependence of nations in commerce and trade, that has become profitable in the proportion that they participate in it, is always contingent upon the continuance of peace. Our own suffering, commercially speaking, since this world conflagration of war was inaugurated is to us conclusive proof upon that subject. There is a world-wide drift of all these forces that tends to eliminate war, and consequently the suppression of those agencies that develop war. These tendencies form a solid basis for great organized movements in favor of international arbitration. I have for years listened to the arguments that preparation for war was the surest guaranty of peace. How quickly that fallacy has been exploded. Why should we follow the trend of Germany, England, and France, that has brought them financial and industrial ruin? I call your attention to economic reasons that are world-wide in their application why disarmament should begin and militarism should cease.

We ourselves have paid out of the Public Treasury to develop and maintain the Army and Navy from 1901 to 1914 the incredible sum of three billion five hundred and thirty-eight million, an amount staggering the imagination. I do not know, Mr. Chairman, how better to understand such expressions of amounts unless we make comparisons of them with matters we are familiar with. I know, though, that three billion five hundred and thirty-eight million is nearly 3 per cent of all the taxable wealth the country has accumulated since the landing of the Pilgrim Fathers nearly three centuries ago. In 13 years we have paid out an amount to support the Army and Navy alone equal to three-fourths of all the taxable wealth of the two greatest States in the upper Mississippi Valley, Indiana and Illinois. The homes of 8,000,000 people, with their towns, villages, and cities, one of them the second on the Western Hemisphere; their railroads, telegraphs, and telephones; their banks, stocks and bonds, credits and cash; their thousands of square miles of the richest farming lands in the world; their improvements, flocks, and herds, are only 25 per cent more than the vast sum we have contributed to the Army and Navy. The taxable value of the 11 Southern States, known as the seceding States, with 22,000,000 people developing that great region of natural resources—collect all their taxable resources, consisting of railroads, cities and towns, farming lands and improvements, their mines, great smelting furnaces and steel mills, millions of cotton spindles, their cotton that clothes the world, their bank stock, loans, credits, and money, and it all amounts to but a trifle more than twice our contribution in the last 13 years to the Army and Navy. But there are other great overshadowing reasons why governments should cease to build great armaments and organize great military systems that invite war. The credit system of international exchange, merging into vast transactions where time and distance have been eliminated, has revolutionized and greatly multiplied the business of the world. Great aggregations of capital in the hands of powerful corporations for the purpose of financing single enterprises in modern industry have become a stupendous power in the material development of nations. This is world business. It can not be fostered, encouraged, and developed when nations are at war. Capital will hide away; industrial paralysis will seize business everywhere the sword is in action. These reasons could be indefinitely multiplied. I am opposed to an increased Navy. I want to balance it up and maintain it at its present state of efficiency. That is my attitude. We are the second naval power in the world. Since this world-wide war began England has lost 200,000 tons and Germany 190,000 tons displacement. The statement of Rear Admiral Badger, in a hearing before the Naval Affairs Committee, during the construction of the present bill, on cross-

examination by Judge WITHERSPOON, declared the American Navy to be better, ship for ship, in construction, in activity, and in effectiveness, than that of the German Navy. That authority convinces me; if it did not, the comparison made by Judge WITHERSPOON of our Navy with that of the German Navy in the preceding session of this Congress that demonstrated that fact has not been answered and will not be answered. Only one gentleman has attempted it, and his efforts, although his life has been spent almost continuously in the service of the Navy, reminded one of the adage that a certain class of people "rush in" where the angels exercise more caution.

I said in the outset that no man has laid down a basis for our naval construction. No one has undertaken it but the gentleman from Massachusetts [Mr. GARDNER], who runs into Congress with a resolution and into the press and the limelight with the declaration that the Nation was in a state of unpreparedness. Unpreparedness for what? For an attack by one of the great powers of the world now engaged in the bloodiest war of all the ages? There is not a student of history but knows that the present war in Europe will so exhaust the combatants that another international war involving these same powers is an absolute impossibility for a half century to come. England, France, Germany, Austria-Hungary are crushed to earth with the burden of expenditures, their standing army slaughtered, industry closed, credit gone, equipment destroyed, their cities and farming land laid waste, and their industrial activities paralyzed. Neither of them has had a war of any consequence in 45 years; they give us no fear of another early contest. That condition is not sufficient to quiet the alarmist, the militarist that seeks to plant that vicious doctrine in the democracy of this Republic. No rational basis has been laid down for naval construction. Shall we build a Navy for coast defenses compared with what other nations have builded for their coast defenses? If so, then you would build more battleships, more cruisers, more torpedo boats, more submarines, more transports than the entire Continental Europe, for we have more coast line than all of them. Shall our naval construction be built equal to the fighting force of the greatest naval power? That would not answer. Suppose England should attack us. This European conflagration has welded the triple entente into a league of offensive and defensive operation that no one supposes will soon be dissolved, and instead of having England to fight, we should have with her Russia and France. So that, following the logic of a gentleman from Massachusetts, we should have a Navy equal or superior to all of them; that is the absurdity of the logical deduction that the argument of a gentleman from Massachusetts leads us to. Of what efficiency has the German Navy been to its country in this contest? England has not only Germany's battleships, but her merchant vessels, interned in the bays and harbors of the great seas, while England remains so far as commerce is concerned, an outlaw upon the world's waters, with no power on the globe to successfully dispute her control. In this whirlwind of destruction now enveloping European nations the militarist of our country has seized the psychological moment to raise the alarm of unpreparedness and fire the country to demand a standing army of 500,000 men and the Navy equal to that of the English. May I digress sufficiently to say no effort has been overlooked to intimidate and alarm the public mind and business of the country by the war enthusiast who thinks more of seizing the present opportunity for self-aggrandizement than to patriotically promote the public welfare? It was handy to have an impromptu uprising in the Philippines pulled off to illustrate the necessity of more soldiers in the Regular Army and a greater Navy. A gentleman who for a long time ably administered the second office in the civil government of the islands was called 7,000 miles to testify before the Senate Committee on Military Affairs on the subject of conditions in the Philippines; an influential part of the metropolitan press turned its editorial battery upon the opponents of militarism in the attempt to popularize sentiment for a large navy and military establishment. Such ponderous military personages as Assistant Secretary Breckinridge and the "brass-button" and "gold-fringed" brigade who feed and live and retire on the toil of other men, rush to banquets and public functions to tell the dear people of the awful unpreparedness of this country for war.

The *Dacia* incident—sailing with a noncontraband cargo of cotton for Rotterdam—and Great Britain's answer to our protest for interfering with our neutral commerce has been worked as a scarecrow for all its worth, and last, but most ineffective, a "back fire," systematically scheduled, on Members of Congress, to have our constituents' chambers of commerce bombard us with resolutions already drawn, letters already directed, and telegrams already paid for, the most contemptible and despicable engagement a Member of this House can resort to, has been started. These parties not only demand a standing Army of half a million men, but a military trained reserve supported largely by the Federal Government. Every man in favor of a large standing Army knows that it can not be maintained in this country except under a statute requiring compulsory service. Every country in the world maintaining an immense military establishment does so by force of law enforcing conscriptive service. Every country in Europe except Great Britain maintains this service. I note with what alacrity the militarist rises to deny that there is any idea of conscriptive or compulsory service to be enforced in the United States in the building up and maintaining great fighting forces. I quote from the CONGRESSIONAL RECORD of the present session, page 1609, the words of the distinguished member of another legislative body, who, speaking of a reserve force auxiliary to the standing Army, used these words:

> These reserves should be created. No one would think of suggesting either conscription or compulsory service for this purpose, but the end can be attained without either.

Well, let us see whether "no one" is suggesting compulsory service to create a great reserve force for military services in the United States. I note in the Army and Navy Journal, the ready conduit through which the prominent figures of the Army and Navy and the devotees of that proposition reach the public and attempt to develop and control the sentiment of the American people, that in a recent editorial from which I quote, written October 3, 1914, discussing and commending German militarism, it uses these words:

> There is left, then, only the last supposition, namely, that "German militarism" is condemnable because of its extreme readiness. As Gen. McCoskry Butt wrote from Europe the other day, Germany was ready; the other countries were not. But this is a feature of her military system for which Germany should be praised, not blamed; for what is any army worth if it is not ready when the call comes? The more nearly ready it is the more nearly it approaches those standards of value and efficiency for which all great commanders have striven through all the ages. Instead, therefore, of "German militarism" being something that should be "wiped out," it is something that should be imitated closely by other nations, not excepting our own United States.

I note also in the Associated Press report that Col. O. S. Heistand, adjutant general of the central department of the Army, in an address at Chicago on the evening of December 24, 1914, used these words:

> For the purposes of the Army of defense I would have every male citizen of the United States in the early part of his life give a sufficient time to the United States to qualify himself in the essentials of a soldier. * * * I would have him submit his will to that of his commander.

The Army and Navy Journal, whose policy is shaped by the personnel of the Army and Navy, commending "German militarism" as a proper thing for the United States to adopt, and Col. Heistand, commanding the central division of the Army of the United States, advocating a doctrine of conscription, and then to be told that "No one would think of suggesting either conscriptive or compulsory service" is a surprising statement to come from one of the greatest of present-day American statesmen. I am opposed to a large standing Army, because one can not be maintained in this democracy without dangerous complementary burden of militarism. I challenge the preposterous proposition preached by the Army and Navy Journal, known to be at least the semiofficial publication of the commanding forces of both of these features of our national life. The Army and Navy Journal expresses the sentiment of those officers in both branches of the service who direct their activities to mold public sentiment in affairs. Since this journal gratuitously advised the people of the United States that it was our business to follow the example of European countries and practice compulsory service not a single officer connected with either branch of that service except Secretary Garrison has seen fit to publicly repudiate its attitude and its statements. No man objects to a proper standing Army; no man objects to preparedness for national defense. We object to the militarism advocated by the Army and Navy Journal and by Col. Heistand. The militarism preached and indorsed by the Journal and its followers takes the best years out of the life of every young American, withdraws him from the farm and from productive pursuits, and puts him on the back of another man to keep and feed. The tact and skill with which the idea of compulsory service is kept in the background at the present time surprises no one; every advocate of a standing Army of a half million men knows better than to advocate compulsory service before we get a law authorizing such enlistment. But the hour that such an Army is authorized by law all sorts of arguments will be resorted to to make compulsory service obligatory. There is not a militarist now but knows that a standing Army of half a million men and a naval reserve like that of Germany can not be recruited in this Republic without compulsory service. I am opposed to the standing Army and a complementary Navy of

the dimensions suggested, because it burdens not one nation alone but every nation with neutral commercial interests with great armaments that can be sustained only by crushing taxation. I am opposed to it because it begets a military oligarchy and silently issues a command that comes from an irresponsible power that the productive forces of the Government shall be diverted to the uses of destruction. These great standing armies and great navies, this militarism, must be paid for and its subjects fed by the men who work, by the citizen, the tradesman, the clerk behind the counter, and the husbandmen in the field, whose hands have fed the maw of competitive armament for a generation in the name of "armed peace."

The pretense that its purposes are to establish a guardianship of peace and progress on this continent is the most contemptible hypocrisy. A half million men, an immense standing army, an unmatched navy is sponsor for the philosophy that war and the destruction of property, paralysis of industry, and death of a multitude of men is the most exalted and glorious engagement of men and nations, and that peace is a cowardly surrender. The militarist, and he is universally and always in favor of a great standing army and a complementary or great navy, believes that the crowning glory in this generation is the supremacy of brute force. I quote from a great newspaper:

> A vast standing army overshadows pacific traditions and humanizing policies with a dazzling ideal of conquest. It holds that the strong alone have a right to exist, and that the weak must be thrust aside in the interest of evolution toward a more vigorous type of men and nation. Such abstract virtues as sympathy, generosity, and justice it derides as systems of weakness.

A mighty standing army and great navy and its accompanying militarism gives the soldier preeminence over every other type of men. It sneers at peace and lauds military power. The temper with which the brass-button brigade entertain the right of Congress that represents a hundred millions of American people to express its opinion upon the Army and Navy is admirably illustrated in the sneering and contemptuous remarks of Rear Admiral W. F. Fullam, of the Naval Academy, at a meeting of the Efficiency Club in New York on the evening of January 25, 1915, when he insolently used these words:

> In this country the only people who feel they ought to discuss the Navy are those who are not in the Navy; if you want to be a naval expert don't go into the Navy. Become a Congressman, or a lawyer, or a newspaper man; it seems that the citizens are made up of natural-born admirals and generals.

No great standing army ever existed except by compulsory service that did not create a self-sufficient aristocracy, of which Rear Admiral Fullam is a happy illustration; they constitute themselves a super caste, whose leaders sooner or later become the controlling forces in the Government. Its supporters of this propaganda exhaust the tactics of the soft-cushion boards of strategy to keep prominently before the masses the supremacy of their mission, and if criticized for their conduct whimper like a whipped cur that an ungrateful people are persecuting the apostles of peace. A vast standing army with its immense armament invest the people with a constant air of uncertainty and insecurity, and if the people complain they are rebuked by the snobbish aristocracy that we do not appreciate the respect they show us in not using the power they possess.

Great military power, so large that it can control conditions, puts international law and solemn treaties and conventions into the scrap heap. Militarism, when it is not at war, gives us apprehension all the time that we soon shall be, and when in war it becomes a livid horror and defends itself with the plea of complete justification in race and territorial aggrandizement; it respects no neutral territory, and its wicked and destructive hand lays a ruinous tribute upon conquered cities. It seizes innocent citizens and hangs the postponement of the execution up as a hostage for the surrender of their fellow citizens who revolt against the destruction of their homes and the ruin of their families. Militarism flings its bombs out of the clouds upon mothers and sleeping children and the helpless and unfortunate. Its justification is in the complete annihilation of home, of government, and all that is sacred. That is militarism; the handmaiden of a great standing army and an immense navy. Our protection lies in our system of Government, in the dissemination of power, in our democracy. I hate militarism because its influences are always political; because it seeks always to belittle and secretly subvert the civil authority; because it seeks to minimize a real patriotism and build upon it its insolent prestige. These are the logical results of great military systems. They can not exist in a true democracy because they draw their sustenance from a dominating and controlling caste. Between militarism and a self-governing, self-reliant, self-respected democracy there is an irresistible antipathy, and yet the Army and Navy Journal says that German militarism "is something that should be imitated closely by other nations, not excepting our own United States." That is the publication that assumes to speak for the American people.

Mr. Chairman, what is the present situation? We are told by the advocate of a large military and naval establishment that we ought to have a trained reserve force, ready at any time that we might be attacked. We have now a large reserve of enlisted men amounting to 120,000 in the National Guard. We will next year, and each year thereafter, under the 4-year terms of enlistment, discharge from the Regular Army at least 15,000 men. We will likewise discharge from the National Guard at least 20,000 more. There will graduate from military schools and colleges and schools that teach military tactics at least 25,000 more, making a well-trained force of 60,000 men that we turn back into civil life every year, fully equipped in all the lines of military tactics to mobilize a great reserve civil enlistment. A little calculation will show that in 5 years we could have a well-seasoned, well-trained reserve force of 300,000 men. We have still another greater reserve force; we have 16,000,000 of patriotic American citizens who are ready at all times when the occasion demands to volunteer their services to defend the flag and American institutions. That great moral force in American democracy is more effective than the standing armies of Europe. What we ought to do is to supply the Naval arm of the service with sufficient officers and enlisted men to properly man the vessels we now have, and build those accompanying auxiliaries—submarines, torpedo boats—that shall properly equip them and maintain the Navy in statu quo by new construction when it is necessary to supply worn-out equipment. We should do another thing; every vessel, whether great or small, should be built in the United States navy yards; our armor plate, powder, small arms, field guns, munitions of war, clothing, boots and shoes, and all equipment necessary to supply the Army and Navy, should be made by the Government itself and thereby eliminate a long line of grafters who stand for a large standing army and a big navy, because they think there is something in it for them. Let it be remembered, however, that any settlement growing out of the present war that does not look toward a gradual disarmament and an international arbitration of all differences is not a peaceful settlement. That if unnecessary armament shall continue to be made under strong competition war will simply be postponed. Such a settlement would be only a truce. On no other terms than those looking to a final arbitrament of international difficulties through arbitration can a peaceful civilization again reestablish itself. [Applause.]

Mr. PADGETT. Mr. Chairman, I yield 30 minutes to the gentleman from Illinois [Mr. WILLIAMS].

Mr. WILLIAMS. Mr. Chairman, I will define my position with reference to our naval program at the outset of my remarks, that what I say may be the better understood. I am for a conservative naval program. Heretofore the question has been presented from two viewpoints, represented by those who are opposed to any increase of the Navy and those who have stood for a conservative constructive program. This year the issue presents three angles, and in addition to the arguments heretofore advanced we find a third element entering into consideration represented by gentlemen on the floor who favor a distinctively large navy and who are much concerned lest we are inadequately prepared for immediate war. The arguments of those who are opposed to any navy are familiar to us and have been replied to so often that I will not take time to discuss the issues raised by these gentlemen. I do not mean thereby to underestimate or disparage the very able arguments made by distinguished gentlemen who have from year to year ridiculed the importance of a good and adequate navy. I have time only to present the case from the standpoint of one who favors an adequate navy as against the arguments advanced by those gentlemen who urge the necessity of a navy equal to or superior to any afloat.

I must confess that the hallucinations which seem to disturb the gentleman from Massachusetts [Mr. GARDNER] have not occasioned any nightmares for me, and that I do not feel any urgent, immediate necessity for great military preparation. I am sure that no Member of this House would go further to protect and defend the honor and the integrity of the flag if assailed or threatened than would I, but I can not agree with the gentlemen that the country is assailed or that the integrity of the flag is threatened. I know that complications arise from day to day, growing out of the unfortunate conditions which exist abroad, and that these complications will require diplomacy and statesmanship to solve, but I do not apprehend that questions of such great moment will arise as to precipitate war or to even threaten the peace of our country or disturb the quietude of our people. I have implicit faith and absolute confidence in the President and know his intention to avoid war

and to maintain peace. In this I am hopeful that he will succeed. If there was ever a time in the history of the world when a peace-loving people, bent on the pursuit of material gain, should stop and consider the prodigious cost and the enormous and fearful consequences of war, it is now, when conflagration rages around the globe and when we of all the great nations of the earth are at peace.

The only argument that can be advanced by the most zealous advocate of a great army and navy is the possibility of war arising out of world-wide conditions as we face them to-day. There are but few nations which maintain a great naval establishment, and but two at most which have a navy superior to our own, and these nations—all of them—are engaged in a death struggle to maintain national existence. These powers consist of Great Britain, Germany, Russia, France, Austria, Turkey, and Japan, with other and lesser powers involved. The struggle is stupendous, and the resources of each and every one of these powers are taxed to the utmost. Which one of these countries, think you, could or would be willing under any ordinary cause of war to engage the United States on sea or on land? There is not the remotest possibility of war with Russia. There is no occasion for strained relations and no disposition on the part of either country to encourage or provoke hostilities. And Russia's hands are full. Her task is herculean, and Russia has all that she can accomplish if she maintains her territory intact. France is friendly, but if she were disposed otherwise she could not spare a man nor a ship in a conflict with the United States. Germany is encompassed in a struggle for her very existence, beset upon every hand, approached from every quarter, and defending almost single handed and alone against four of the greatest powers of earth. Do you anticipate trouble with Germany now or in the near future? Even though she emerges from this struggle without territorial impairment, without the exaction of enormous indemnity, her trade will be paralyzed, her population decimated, her people impoverished. Do gentlemen who start in their sleep and imagine they descry upon the horizon myriad ships and phantom fleets approaching our shores fear England? Why should England and the United States go to war? What has either country to gain? What devilish spirit or malevolent influence could impel war between the two great English-speaking peoples, whose traditions and customs and laws are one, whose hopes and aspirations are in common, and whose combined power and influence must dominate the world for centuries to come? These two nations have been foremost in advocating peace and promoting arbitration by means of which disputes between nations may be peaceably adjusted. But if England were disposed to be unfriendly, if our commercial and political relations were strained, how could England contend upon land or sea with the United States now, at this time, when she stands in armed conflict, face to face, locked in mortal combat with the greatest people, the best armed, the best trained, the best equipped armies which ever went to battle in all the history of Europe?

If England, together with her allies, succeeds in driving Germany within her own borders and dictating terms of peace she will have accomplished more than her most sanguine friends can hope for or expect within many months to come. This war is a drain upon her mighty resources, on men and means, and common sense teaches me and convinces the mind of the reasoning and thinking everywhere that England can not if she would deliberately provoke or cause war with this mighty Nation. It is true that England controls the seas in this war; but why? Because her enemy is at bay and her whole resources and extensive navy are concentrated in a limited area. Let her divide her fleet and engage in naval war across the seas with so dominant a power as the United States, and it would be but a day until Germany's fleet would emerge en masse from its shelter, challenge Britain's supremacy in the North Sea, and imperil her commerce in the four quarters of the globe. Are the English so foolhardy, are her statesmen so puerile as to invite a condition that would hamper, menace, and, perhaps, destroy the one thing upon which she must rely if she hopes to win in this war?

Does anyone fear Turkey? She has no navy and is not a menace to us at home nor abroad. And what of Japan? Japan is a thrifty, progressive, and ambitious nation. She acquitted herself well in a 200 days' war with Russia, at her own doors, within a short radius of her own base. But suppose she had been called upon to attack Russia thousands of miles away from home. Would anyone entertain the belief that she would either have undertaken the task or would have stood any chance of victory? We have no cause of quarrel and are not seeking war with Japan. Will she attack us? Just now, with limited resources and an exhausted treasury as a result of the war with Russia, she has plenty to do in safeguarding and protecting the interests of England and her own in the Far East. She could not bring to her assistance the active aid of any other nation. She could not involve us in war with Europe, because the countries of Europe would not involve. She would have to fight her battle alone. It is the most ridiculous and nonsensical notion advanced by some that Japan could land an army on the Pacific coast and invade the domain of the United States. It would require a thousand transports each conveying a thousand men, with provisions, munitions of war, and equipment, convoyed by a hundred battleships to effect a landing and to secure a foothold on our shores. These could not come en masse, nor in a day, but would have to come detached, in installments, under convoy, and would be dispatched in succession as they arrived, if not waylaid at sea by our Navy and sent to the bottom. Japan knows this as well as we know it. Let no man nurse a thought nor harbor a dream that this will ever happen. War with Japan is only a remote possibility, now or hereafter, and if it ever comes it will be when we are involved in war with some nation which is foot-loose and free-handed to engage with us in the Atlantic. That time is not near. It will be many years before any other respectable military power will sufficiently recuperate to go to war with the United States. Hence I see no spectacle, feel no alarm, and fear no war in the immediate future from any source nor with any country.

Then why a great navy? We have a magnificent navy now. I favor such a constructive program as will maintain our relative place among the navies of the world. If Europe were at peace to-day and their navies not impaired in battle I would favor a continuation of the program which Congress has authorized in recent years, and I see no reason why that program should be altered or changed by reason of anything now occurring across the Atlantic. To my mind the lessons and the consequences of this war would argue for a reduction rather than an increase in naval construction. This because of the reasons which I have already stated, that Europe can not disengage herself at home and engage in war with us now nor in the immediate future and because of the impairment of their navies which must inevitably occur as a result of naval engagements from day to day, and for the further reason I hope and confidently expect world-wide disarmament as the one beneficent result of this awful conflict. I am not for the whole of this bill. I am not for any increase greater than that recommended by the department. I opposed in committee the increase of submarines and will vote here to limit the number to that recommended by the Secretary. I voted in committee against the hospital ship and the transport provided for in the bill and will vote to eliminate them here. I stand substantially for the rest of this bill, including two battleships. There is but one thing which I would add to this bill, and that would be a battle cruiser. I believe that the efficiency of our Navy would be materially enhanced by battle cruisers of maximum speed, and I hope that some day, if naval construction throughout the world continues, we will authorize the construction of cruisers and strengthen this arm of our Navy. I favor battleships because we can maintain the present efficiency of our Navy only by a systematic, uniform building program and offset deterioration by new construction. I have no patience with men who decry the battleship and disparage its usefulness. It is no argument to my mind to say that they have not actively participated in the present war. These constitute the main reliance which must determine the eventual outcome of the struggle. Lesser craft, including destroyers and submarines and scouting ships, may maneuver and harass the enemy in the front and in the rear, but in this war, as in every naval war, the time will come when the monsters of the sea, the dreadnaughts, will, like two great armies after preliminary maneuvers, strategy, and skirmish, come together and decide the conflict. In that awful clash, when the fatal test comes, when the fleets of contending nations grapple in a final struggle for supremacy, the side that can bring into action the best-equipped and the greatest number of modern battleships will win the victory and determine the fate of nations and the future of the world. [Applause.]

Mr. STEPHENS of California. Mr. Chairman, I yield 10 minutes to the gentleman from Kansas [Mr. TAGGART].

Mr. TAGGART. Mr. Chairman, I have no written remarks on this bill. It is my purpose only to make some comment on what seems to me an unnecessary degree of interest at this time in national defense. I shall discuss for a few minutes the European war as it seems to me it should affect our policy of national armament.

This war has demonstrated that a battleship is not an instrument of national defense and that it is not a weapon of offense in conducting a war under present conditions. The two greatest navies on earth are employed in this war as far as

possible. The greatest navy in the world has not knocked one brick off another on the soil of Germany after the war has been in progress nearly six months. The great dreadnaughts of the British Navy have not appeared anywhere near the coast of the enemy. For the first time in the history of Great Britain the British Navy has England between the navy and the enemy instead of having the navy between England and the enemy. It has been demonstrated that a battleship is the most helpless thing in the world when attacked from under water; on account of its ponderous weight it immediately sinks, and so far it has been more dangerous to the crew than it has been to the enemy. [Laughter and applause.]

This war has farther demonstrated that a navy can serve only one great purpose, and that is to protect the commerce of a nation that may be at war. The logical conclusion from this war is that the nation that can not be starved into submission does not need a single battleship in order to maintain a complete national defense. If the navy of England was at the bottom of the sea to-morrow, it would not be six months until that Empire would have to sue for peace, for the people would be face to face with famine. Britain must maintain her supremacy on the sea in time of war or starve, and so far she has been able to maintain that supremacy on account of her superior navy. The German Empire, fighting for its life, finds it unnecessary to expose its navy. It has food for its army and can maintain the struggle, while the British Empire must maintain its supremacy on the sea because it has not the food for its people or army without the ports of England remain open to the commerce of the world.

I would like to ask gentlemen who seem to be nervous at this time about our national defense which of the cripples are they afraid of. Every great nation but this one, as the gentleman preceding me stated, is at war. Great wars are always followed by periods of profound peace. The Napoleonic wars ended 100 years ago this year, in 1815. Then for a period of 29 years there was no war of any consequence in Europe until 1854, when the Crimean War occurred, and that was not a war of great consequence. The Crimean War and the disastrous invasion of Russia by Napoleon absolutely proved that a great continental nation can not be successfully invaded. Russia never was successfully invaded, and in this great war there is absolutely no attempt, and will be no attempt, to invade Russia. After the Crimean War there was a short war between France and Italy, and then in 1866 there was a six weeks' war between Germany and Austria, and four years later came the Franco-Prussian War.

Then for 43 years the two nations that represent one side of this struggle, Austria and Germany, were the only two great nations in Europe that did not fire hostile shots. Every other great nation that is at war at this time had war in that period with some other country, but those two maintained absolute peace for a period of 43 years. Now, who will say that after this European struggle is over that there will not be a long period of peace? If we are ever to have such a thing as international disarmament, it is going to come after this war is over. If it is possible to teach humanity that it is wiser and better to maintain peace, I believe this sacrifice will bring that lesson home to the nations of the world. It is again demonstrated that the little streak of silver sea that has protected Britain through all the centuries is just as effective now, if not more effective, than it was ever before.

If less than 100 miles at the widest and 23 miles at the narrowest place will protect England against the power of Germany what will you say to the 3,000 miles that separates us from Europe? Why, is it not plain that it would be impossible to conduct a successful war against the United States even if all the powers of Europe with all the navies of Europe were combined for the purpose? But we went into the expansion business some 20 years ago. We went out looking for nations to conquer. We took possession of the Philippine Islands. We have spent more than a billion of dollars holding those islands.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HENSLEY. I yield five minutes additional time to the gentleman.

Mr. TAGGART. In case of war between us and an Asiatic nation we would be obliged to hold those islands or surrender them. Then perhaps the question of the supremacy on sea will come to us, and then, as stated by the gentleman from Illinois, the superiority of the battleships in mid-ocean may be tested. If those islands are protected by submarines their cities can not be attacked by any navy. If it is necessary in the protection of those and other islands to maintain our supremacy in the Pacific Ocean it is the only condition under which we can say that we would ever employ a battleship. But who would reason if he had charge over the Japanese Government that it would result in any profit to Japan to have a war with the United States?

Now, in these war colleges where young officers are studying they give to one group of young men the problem of invading the United States from Asia, and they give to another group of officers the problem of defending the United States, and the conclusion is always reached that the final result of such an attempt would prove that it would be impossible for an Asiatic nation to effect a permanent lodgment or to maintain an army on the soil of continental United States. If a foreign army invaded Alaska, it would be almost impossible to maintain it there. The only danger we could encounter would be the loss of the Hawaiian Islands and the Philippine Islands, and we are trying to get rid of all responsibility in the Philippine Islands. If we do, we will have no place subject to attack in the Pacific Ocean except the Hawaiian Islands. It seems to me that if we should have a war with any nation and the enemy took possession of the Hawaiian Islands we could do as Germany is doing now with the little possession it held in China—just overlook the matter until the final settlement of the war. We would not need to speed our strength in defense of those little islands, but in the final adjustment of any war we might have they would be restored to us if we were successful.

Of all the times that we could ever feel safe it is now. Whenever great nations are preparing navies and armies, and those navies and armies have not been employed and militarism is at its highest pitch and military enthusiasm and navy enthusiasm pervades the great nations of the world, then is the time that peaceful and peace-loving nations are in danger. But now, when these fighting nations are exhausting each other's strength, until they are leaving each other prostrate and helpless, this is a time when we can afford to look forward to a period of profound and uninterrupted peace. [Applause.] I have here a list which I presume is correct, and it has been referred to in other speeches here, of 13 British vessels aggregating a tonnage of 133,000 tons, carrying crews in the aggregate of more than 8,000 men, all of which have been sunk to the bottom of the sea without a single shot having been fired at any of them, without the intervention of a single battleship—all of them sunk by submarine boats.

Vessels.	Class.	Tonnage.	Crew.	Date.
Amphion	Third-class cruiser	3,440	320	Aug. 6
Pathfinder	Patrol scout	2,940	268	Sept. 17
Hogue	Armored cruiser	12,000	755	Sept. 22
Cressy	do	12,000	755	Do.
Aboukir	do	12,000	755	Do.
Hawke	Protected cruiser	7,350	544	Oct. 15
Audacious	Battleship	23,000	900	Oct. 27
Hermes	Protected cruiser	5,600	456	Oct. 31
Good Hope	Armored cruiser	14,100	900	Nov. 1
Monmouth	do	9,800	754	Do.
Niger	Gunboat	810	85	Nov. 11
Bulwark	Battleship	15,000	781	Nov. 26
Formidable	do	15,000	750	Jan. 1
		133,040	8,023	

The CHAIRMAN. The time of the gentleman has again expired.

Mr. HENSLEY. Does the gentleman desire more time?

Mr. TAGGART. I should like about three minutes.

Mr. HENSLEY. I will yield to the gentleman five minutes more.

Mr. TAGGART. The tonnage of these ships is greater than the whole tonnage of the navy of Great Britain 110 years ago, when it was under the command of Nelson. Of what use is a battleship near a coast? If it is near the coast of its own nation, it is not as effective as a submarine boat.

If it dares approach the coast of the enemy, it is in immediate danger of being sent to the bottom of the sea. By the inexorable logic of war its place is in mid-ocean. Its function is to protect the commerce of a nation. Its purpose now is to allow a nation to be fed while it conducts a war; and, as far as our Nation is concerned, we could not be starved in any war. We have talked about the high cost of living; we have argued it from every angle; but I can not imagine anything that would so effectively lower the cost of living as to have all the navies of the world combined together to shut up the ports of the United States and forbid anything to leave this country. It would solve the problem. And I do not know of anything that ought to suit one of our great parties, which is so ably represented here this evening, as to have all the ports of the Nation shut up, so that we could not import anything. In their opinion, American business would flourish then as it never did before. That would be protection without revenue. I am afraid that

if such a thing ever happened that great political party, with its usual luck, would be restored to power.

We do not need to defend the highway of the ocean if any nation attacks us. Great Britain is not going to attack us. The centerpiece of the British Empire lying next to us has an unprotected frontier of 4,000 miles. Any trouble between us and Great Britain would mean the dismembership of the Empire. We have nothing that the Germans want except our trade and our good will. They do not want our territory. They want a market for their manufactures. We want their patronage; and I say here and now, while I digress from the subject, that of all the short-sighted policies that was ever pursued by the American press and some American people, the most unfortunate thing for us is for them to continue to heap insult on the most thrifty——

The CHAIRMAN. The time of the gentleman has expired.

Mr. HENSLEY. Mr. Chairman, I yield five minutes of additional time to the gentleman.

Mr. TAGGART (continuing). On the most skillful, the most industrious, and the ablest people in the world—the people of Germany. [Applause.] We will have to look to them as customers when this war is over. Now, imagine a business man in the case where two of his customers were fighting, and he would go and hand a weapon to one of them. After the fight was over he would have one customer, the one he helped, and he would lose the customer that he had helped to injure. That great nation, that wants nothing but peaceful commerce with all the world, which maintains its army for its own defense and is now demonstrating to the world the supreme necessity of that army, does not want our territory, and has not, and never had, any purpose to attack the United States. The Germans have no cause of quarrel with us. We have nothing belonging to them, unless it is that we have with us their best blood, their most enterprising children, inheriting all of the great qualities of their ancestors, as true to our flag as their cousins are to the Fatherland.

I will oppose any more than one battleship in this bill. I will vote for all the submarine craft that is provided for in the bill. I will vote for everything in this bill that looks like national defense and against everything that looks like national offense. We should not prepare to carry war to any nation, but we should prepare to defend our coast against all the nations.

Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD, and I yield back the balance of my time.

The CHAIRMAN. The gentleman yields back two minutes. The gentleman also asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

Mr. BROWNING. Mr. Chairman, I yield 20 minutes to the gentleman from California [Mr. J. R. KNOWLAND]. [Applause.]

Mr. J. R. KNOWLAND. Mr. Chairman and Members, I favor the pending bill. While it does not carry such character of increases as I personally favor, nevertheless I believe it is a decided improvement over any naval appropriation bill reported to this House since the Democratic Party came into control of this branch of the Government.

I listened to-day with a great deal of interest to the chief small-Navy advocate, the gentleman from Mississippi [Mr. WITHERSPOON]. I knew that he was opposed to battleships, but during the discussion I became somewhat hopeful that he was at least in favor of submarines, because he spoke very highly of this character of defense, but in answer to a question I ascertained, much to my amazement, that he had not voted in committee for even the submarine increase, and as an excuse declared that he believed we had a sufficient number of submarines at the present time. I recall, however, in looking over the testimony before the Committee on Naval Affairs, that the commander of the submarine fleet, Commander Yates Stirling, jr., stated that when he was asked to appear for maneuvers on the 1st day of November last he was compelled to report that there was only one submarine on the Atlantic coast in condition to be submerged. So I do not feel that our submarine flotilla, according to that testimony, is sufficiently formidable at the present time to offer him a valid excuse for refusing to vote for the submarine increase carried in this bill. My own idea is that the gentleman is opposed to any Navy at all, and for that reason voted against both battleships and submarines.

Mr. CALLAWAY. Mr. Chairman, will the gentleman yield?

Mr. J. R. KNOWLAND. I will.

Mr. CALLAWAY. Do you not think he was telling the truth when he named the number of submarines that we had?

Mr. J. R. KNOWLAND. We may have obsolete submarines, but what good are they if they can not be submerged?

Mr. CALLAWAY. They might be out of commission.

Mr. J. R. KNOWLAND. If they are out of commission, what use are they in case of a sudden war?

Mr. CALLAWAY. Do you know anything about the different submarines we have?

Mr. J. R. KNOWLAND. I know from the testimony, and I take it that is all you know about it. I have read it just as carefully as has the gentleman from Texas.

Mr. CALLAWAY. You heard a gentleman speak here this evening and tell how many submarines there are. I assume he was telling the truth; in fact, I know it as well as anything I can hear.

Mr. J. R. KNOWLAND. I assume that the gentleman in command of the submarine flotilla was also telling the truth.

Mr. CALLAWAY. Who said that we did not have but one?

Mr. J. R. KNOWLAND. Commander Stirling said that on November 1 last there was only one submarine capable of being submerged.

Mr. HENSLEY. He never stated anything of the kind.

Mr. J. R. KNOWLAND. I have the testimony showing that he did. When he was called upon to report for maneuvers with the fleet he reported there was only one submarine fit to be submerged.

Mr. PADGETT. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from California yield to the gentleman from Tennessee?

Mr. J. R. KNOWLAND. I will, if the gentleman will yield to me the time he takes up.

Mr. PADGETT. I will yield to the gentleman whatever time I take up.

Mr. J. R. KNOWLAND. Very well.

Mr. PADGETT. The gentleman's statement was misleading. He made the statement that we had seven submarines on the Atlantic coast; five of them were in Panama and in good shape.

Mr. J. R. KNOWLAND. But he said they were not equipped with the proper kind of torpedoes.

Mr. PADGETT. That is not the fault of the submarines. He said they simply had a short-radius torpedo. But in that connection I want to state that the range of the torpedo in our submarines has recently been cut down on the recommendation of the General Board, and even with its reduced radius it is superior to that of England or France, so there is nothing in that.

The fact is that there were five submarines at Panama in good condition. There were four at Norfolk, on their annual overhaul. There were some at New York undergoing their annual overhaul. He carried four with him to the maneuvers, but on the way one of them broke down—broke a crank shaft. The other two had batteries that were 4 years old, and they would not submerge well.

You will find all that recorded on pages 864, 865, and 866 of the hearings of Commander Stirling, so that at the time the gentleman refers to about there being only one, it was simply a date that had been selected when the others were taking their annual overhaul, as we do with our battleships and all other ships.

Mr. J. R. KNOWLAND. In other words, you do not challenge my statement that when called upon to mobilize the submarine flotilla he made the report to the department that there was only 1 of the 17 submarines on the Atlantic coast that could be submerged?

Mr. PADGETT. No; he did not say that.

Mr. J. R. KNOWLAND. He states that he made that report.

Mr. PADGETT. No. If you will look at pages 865 and 866 of the hearings you will see that he says this:

> I think I can explain where they got that impression. The commander in chief ordered a mobilization of the Atlantic submarine flotilla at Hampton Roads on the 1st of November of all available vessels. He left it to me to say what vessels I would bring down there. He did not consider the five at Colon.

He had already stated that the ones at Colon were in good condition. Then he added:

> That reduced the submarine flotilla to 12.
>
> Two of the 12 had but recently been turned over by the contractors. Their officers and men were new, and the boats had not been given their torpedoes; they had not left the navy yard. So I excluded them. That left 10, and 2 of them had been ordered by the Navy Department to have necessary alterations made on them at the contractor's yard at Groton.
>
> If the contractors had been ready to do the work, and if the department had held those boats up and sent them to Hampton Roads, they were perfectly able to go there and would have been efficient, but it would have cost the Government a good deal of money by holding up the contractors.

So that it was a matter of adapting the time so as to let the contractors fulfill their contracts.

Mr. J. R. KNOWLAND. How many does that cut it down to?

Mr. PADGETT. Eight. Then he says:

Of the eight, one of them had, after a submerged run, developed salt water in the battery. It was sent to the navy yard, and they were reconstructing the battery tank, and at the time of the mobilization the alterations had not been completed; and that left seven.

[Laughter.]

The *G*–¼ had only been in operation a few weeks, and had only joined the flotilla a couple of weeks before that—about 10 days before the order came—and I considered that her best duty would be to train herself in submerged running, and that the best locality to do that was where she could base on some vessel that could look out for her crews more or less, and so I gave her the *McDonough*, an old destroyer, and based her on New London, and she went out two or three times a day and got in good shape.

Not that she was not able to submerge, but that it was better for her to do her work at another place. He says that left six. [Laughter.] Then the colloquy continues:

Mr. ROBERTS. The *G*–¼ was the Lorenti boat?
Commander STIRLING. The *G*–¼ was the Lorenti boat.
Mr. ROBERTS. You say her batteries are too weak for underwater running?
Commander STIRLING. No; but batteries are defective. That left six. Two of those were the *G* boats, under alterations and in reserve. So that left only four.

[Laughter.]

So I took the four submarines from Newport to the mobilization, and one tender, the *Tonopah*. When we left Newport the condition of the submarines was this: There were two boats in good shape in every way. There were two other boats with negligible battery capacity. They could submerge for 10 or 15 minutes only. Their batteries were dead. They were 4 years old.

Mr. J. R. KNOWLAND. That left two. [Laughter.]

Mr. PADGETT. And the other, as I stated, broke a crankshaft. So that, as I said, there were a number in there that could submerge. All the others that could be submerged had been sent on their annual overhaul.

Mr. J. R. KNOWLAND. Well, the chairman of the committee having proven my case better than I could myself, I would like to yield him more time if he desires. [Laughter.]

Mr. PADGETT. You are perfectly welcome to my statement.

Mr. J. R. KNOWLAND. According to the chairman's own statement he finally got down to my figures, showing that the small Navy Member, Mr. WITHERSPOON, when he said that we had an ample number of submarines did not make a statement that was entirely in accordance with the facts. Although we have submarines, we do not have the number claimed, at least in condition for service. The committee evidently felt as I do, because they gave an increased appropriation for submarines, and I commend the committee for its action.

Mr. PADGETT. The committee did vote it. The chairman did not. But permit me to say that every year we send our battleships to the navy yard for their annual overhaul. Because we send them there for their overhaul and to be docked that does not mean that the battleships are inefficient or that they are incapable. It was a routine matter that at that time they were there for their annual overhaul.

Mr. J. R. KNOWLAND. All I can say in answer is that it is mighty fortunate for this Government that a sudden war did not break out with our submarine fleet in the condition in which it was found on the 1st day of November of last year.

Mr. PADGETT. On that very question Commander Stirling stated that if an emergency had arisen he could have had them all ready in 10 days or two weeks.

Mr. J. R. KNOWLAND. A delay of 10 days or two weeks at the breaking out of a war might prove serious.

Mr. PADGETT. That does not amount to anything. Now, in order to clarify the subject further, I will read again. The question was as to whether there was anything the matter. He said:

No; nothing seriously or fundamentally.

Then, on page 906 of the hearings:

The CHAIRMAN. These batteries that you spoke of in the other boats are simply exhausted by use, are they?
Commander STIRLING. By constant use; by charging and recharging.
The CHAIRMAN. That is just simply putting in new batteries, as you would have to do with any boat that you used that had batteries?
Commander STIRLING. Yes, sir; absolutely.
The CHAIRMAN. And that is the condition of those?
Commander STIRLING. Yes, sir.
The CHAIRMAN. And the other two that you mention, the Lake boats, they did not come up to contract?
Commander STIRLING. They never have.

Those were some that the Government has not yet accepted, and they have not yet been accepted.

The CHAIRMAN. And the department has not accepted them?
Commander STIRLING. No, sir.
The CHAIRMAN. And is requiring the contractors to put them up to contract?
Commander STIRLING. The Government is completing them at the navy yard, New York
The CHAIRMAN. And that they are doing?
Commander STIRLING. That they are doing; yes, sir.

And I may add that the Government is doing this at the cost of the contractors, they having requested the Government to do it. So that is the situation that was presented. These boats were simply undergoing their annual overhaul, as we do with our torpedo boats, as we do with our cruisers, as we do with our battleships; but it does not mean or argue that they were incapable.

Now, Mr. Chairman, I will yield to the gentleman five minutes out of my time, to make up for the time that I have used.

Mr. J. R. KNOWLAND. The gentleman will have to yield me more than that, because the understanding was that I was to be yielded the time he used out of my allotted time.

Mr. PADGETT. I will yield to the gentleman 10 minutes, though I only took 5.

Mr. J. R. KNOWLAND. I thank the gentleman.

The CHAIRMAN. The time of the gentleman has expired, and he is now recognized for 10 minutes more.

Mr. PADGETT. I will yield to the gentleman 15 minutes.

Mr. BROWNING. Have the 20 minutes expired which I yielded to the gentleman?

The CHAIRMAN. Yes. The Chair is controlling the time. The gentleman from California is recognized for 15 minutes.

DEMOCRATIC PARTY ON RECORD AGAINST AN ADEQUATE NAVY.

Mr. J. R. KNOWLAND. The gentleman from Michigan [Mr. KELLEY] this afternoon stated that upon the question of an adequate Navy the parties in this House had not divided, or, at least, that they were about evenly divided. Lest we forget, I want to call the attention of this House to the fact that the first year the Democratic Party came into control of this branch of the Government they met in caucus and voted against a single battleship. The gentleman from Massachusetts [Mr. ROBERTS], a Republican, moved, on May 28, to recommit the bill when reported from the Committee of the Whole to the House, with instructions to report back a provision for one first-class battleship. The amendment failed by a vote of—yeas 106, nays 140. Ninety-seven Republicans voted for the motion and but 9 Democrats. Going on record as against a single battleship were 137 Democrats and but 3 Republicans. A Republican Senate amended the bill by providing for two battleships, and the conferees were forced to finally agree to one.

In 1913 the naval bill as reported made provision for two battleships. An amendment was offered in the House to reduce the number to one. On this vote there were 174 ayes and 156 noes. Of those voting against two battleships, as recommended by a Democratic committee, were 146 Democrats and but 27 Republicans, while those who supported the two-battleship program and the Democratic committee were 102 Republicans and but 54 Democrats.

DEMOCRATIC OPPOSITION TO BATTLESHIPS CONTINUES.

The Senate provided for two ships by a vote of 55 to 16, and of the 16 small-Navy votes 12 were Democrats and but 4 Republicans. When the conference report came before the House the Senate amendment for two ships was defeated by a vote of 144 to 168. Of the 144 voting in favor of two battleships there were 94 Republicans and but 54 Democrats, while those opposing the modest program of two ships were 147 Democrats and but 20 Republicans.

Having felt the pulse of the American people, the naval bill of 1914 came from the Democratic Naval Committee with an authorization for two ships, but even in the committee there were some recalcitrant small-Navy Democrats, and on May 7 1914, the gentleman from Mississippi [Mr. WITHERSPOON], a member of the committee, moved to recommit the bill with instructions to report back a provision for one battleship only, which motion was lost by a vote of 106 in favor to 202 against, and of those voting for the small-Navy program were 96 Democrats and but 10 Republicans. This record is illuminating and conclusive in showing the attitude of a majority of the Democratic Party toward the American Navy.

PENDING BILL MORE IN HARMONY WITH PUBLIC SENTIMENT.

The bill now before the House authorizes 2 first-class battleships, carrying as heavy armor and as powerful armament as any vessel of their class and with the highest practicable speed. In addition, 6 torpedo-boat destroyers, 17 submarines, 1 oil-fuel ship, 1 transport, and 1 hospital ship are provided.

I want to say that the gentleman from Tennessee [Mr. PADGETT], the chairman of the committee, has, I believe, always, from the time he assumed the chairmanship of this committee and when he was the ranking minority member of that committee, been a firm advocate of an adequate American Navy.

Mr. PADGETT. I do not want the gentleman to mislead. He uses the word "adequate." Sometimes I have supported one, and sometimes I have supported two, and in the last Congress

I favored three, so that I have accommodated myself to the wisdom of the occasion.

Mr. J. R. KNOWLAND. The gentleman's wisdom has made his judgment sound. The program in this bill is in response to a well-defined public sentiment, which our Democratic friends are beginning to sense. The American people favor an adequate Navy. The advocates of a Navy capable at all times of upholding the dignity, honor, and prestige of this great Republic can not be classed as opponents of peace. Those who would neglect and weaken our Navy are the individuals who would jeopardize the peace of the Nation. I contend that one of the strongest influences for peace is a Navy strong enough to meet any international emergency.

INTERNATIONAL DISARMAMENT FAVORED.

I favor international disarmament, and would gladly vote in favor of this Nation joining in such a movement, but in the meantime let our Navy be equal to the world responsibilities that we have assumed. I am inclined to agree with the Secretary of the Navy, who honors us with his presence this evening, that this country would have a greater voice in urging disarmament while in a condition of preparedness than by allowing the impression to go abroad that we were weak, urging a peace program because we lacked an adequate Navy to protect our interests.

RESPONSIBILITY OF UNPREPAREDNESS WOULD REST UPON CONGRESS.

During the 11 years that I have been a Member of the House I have never failed to cast my vote in accordance with the views I now express. I have realized, as every sensible man must, that upon the shoulders of the Members of Congress would fall responsibility rest and the wrath of the people be visited should a sudden war find this Nation unprepared. Year after year I have heard the statement made on the floor of the House that the possibility of a war between this Nation and a foreign power was preposterous. Yes; and I have heard it just as positively asserted that a European war was almost beyond the realm of possibility. In this debate such statements will not be heard. Our small-Navy men have taken to the cyclone cellar.

VERA CRUZ INCIDENT.

With what suddenness we found ourselves in Vera Cruz. In this connection I may be pardoned for adverting to the fact that while there were some American citizens who wondered why we entered that Mexican port, there are many more who are in a quandary as to why we slunk away. It was an abandonment more than an evacuation. The only excuse for taking Vera Cruz was to obtain reparation from Huerta for indignities to the flag. It was a sudden and rather unexpected exhibition of backbone on the part of the administration which many Americans, irrespective of party, applauded. The demand for a salute of the flag was abandoned. We lowered the Stars and Stripes, yet unsaluted, and steamed out of the harbor; but scarcely had we weighed anchor when shots rang out from the shore signalizing the return of chaos then existing throughout the balance of Mexico.

HUERTA ELIMINATED BUT THE FLAG NOT SALUTED.

Oh, yes; it is true that while the flag was not saluted the demand for which salute brought us into Vera Cruz, resulting in the sacrifice of 19 American lives, we eliminated Huerta. Eliminated Huerta! For whom and for what purpose? What leader there to-day is one whit more desirable than the man we forced out to vindicate a policy? Has murder ceased? Do American citizens command any greater respect? Is American property any more secure?

LANGUAGE OF PRESIDENT INCONSISTENT WITH ACTIONS.

Does the language of the President concerning Mexico, uttered at Indianapolis on January 8, square with our performance at Vera Cruz? Here is what he said:

> It is none of my business, and it is none of your business, how long they—
>
> The people of Mexico—
>
> take in determining it. As far as my influence goes while I am President nobody shall interfere with them. Have not European nations split as much blood as they pleased in settling their affairs, and shall we deny that to Mexico?

Was it our business, then, to take Vera Cruz and shed blood to eliminate Huerta, although we may have disliked him? Have we not as much right to eliminate the bandit Villa or the bloodthirsty Carranza? Conditions in Mexico but emphasize the necessity for preparedness. Foreign nations hold us responsible, and will continue to look to this Nation while we see "that nobody interferes" during the continuance of the reign of terror.

RESPONSIBILITIES OF UNITED STATES INCREASING.

It should be borne in mind that up to 1898 the United States was almost isolated and was much less concerned with the affairs of the world, but the War with Spain brought in its wake the acquisition of the Philippines and Porto Rico and the independence of Cuba, the latter island coming under our protection.

MONROE DOCTRINE BROADENING.

As the years pass the Monroe doctrine seems to broaden and assume new significance, entailing greater responsibilities. We do not allow foreign nations to acquire territory nor secure a foothold in Central or South America. We practically guarantee them against invasion. Recently we have announced that no harbor or other property must be acquired on the American continent so situated that its occupation for naval or military purposes might threaten the communications or safety of the United States. This broadening of the Monroe doctrine was set forth in the Lodge resolution which passed the United States Senate on August 2, 1912, by a vote of 57 to 4, the resolution reading as follows:

> *Resolved*, That when any harbor or other place in the American Continent is so situated that the occupation thereof for naval or military purposes might threaten the communications or the safety of the United States, the Government of the United States could not see without grave concern the possession of such harbor or other places by any corporation or association which has such a relation to another Government, not American, as to give that Government practical power of control for military or naval purposes.

The threatened acquisition by a foreign power of a base on Magdalena Bay no doubt prompted this resolution.

PACIFIC ISLAND POSSESSIONS INCREASE RESPONSIBILITY.

Hawaii and Alaska have both increased the demands upon the Navy. Tutuila and Guam and other Pacific islands of naval importance add to our responsibilities. The Panama Canal is now open and naval experts regard the Canal Zone as the most vulnerable part of our entire possessions, and yet we hear it argued that we have no use for a large Navy.

SANTO DOMINGO AND HAITI.

The Monroe doctrine is responsible for our present interest in the affairs of Santo Domingo, which Republic has proven so useful to the present Secretary of State in finding places for deserving politicians, a rather new and unique argument, advanced for the first time by a Democratic Secretary of State, in favor of upholding the Monroe doctrine.

The black Republic of Haiti, now presided over by two opposing Presidents, at this very moment calls for the presence of an American naval vessel. Are we to meet these responsibilities? If so, is not an adequate Navy essential?

EXPERTS DECLARE NAVY NOT ADEQUATE.

Is our Navy adequate? Naval experts tell us it is not. Admiral Fiske, in the recent hearings before the House Committee on Naval Affairs, declared we were behind other nations in mines and air craft. (See p. 1007, Naval Hearings, Dec., 1914.)

Interrogated as to how long it would take our Navy to get ready to fight, he declared it would take five years. (P. 1023, Hearings.) Asked if we were doing the essential things to make ready, declared we were not. (Pp. 1047–1050, Hearings.) Assistant Secretary Roosevelt declared that in case of war there would be a shortage in the Navy of between 23,000 and 43,000 men. (P. 932, Hearings.) He also made the statement that it would take the ships in reserve three months to get ready for actual battle. (P. 939, Hearings.)

Admiral Fletcher, when asked how many unharbored places there were on the Atlantic coast where a landing could be made in case our fleet was unable to prevent the approach of a hostile force, stated that in smooth water and fine weather they could land almost any place (p. 536).

The CHAIRMAN. The time of the gentleman has again expired.

Mr. BROWNING. I yield to the gentleman 10 minutes.

Mr. J. R. KNOWLAND. Commander Yates Stirling, jr., in charge of the Atlantic submarine flotilla, to whose testimony I have already made reference, told some rather unpleasant truths concerning our submarine strength, or rather lack of strength, for which action he was reduced.

When the vessels now building are completed by the various nations, according to the Navy Yearbook just issued by the Senate Committee on Naval Affairs, the United States will be fourth in naval strength. Our ships lack speed, a fatal defect in the light of last Sunday's naval battle in the North Sea.

Had we followed the recommendations of the General Board since 1904 for a building program we would have authorized 38 battleships instead of 17. And this holds good for practically all of their other recommendations.

PACIFIC COAST LACKS PROTECTION.

It is admitted that the Pacific coast is not as well protected as the Atlantic. Naval strategists hold that it is unsafe to divide a fleet no less formidable than the one we now possess, and it has therefore been the policy to keep the fleet in the Atlantic. With the opening of the canal it is, of course, recognized that the Atlantic Fleet would be available in case of dan-

ger, provided, of course, that the canal was not rendered inoperative. With our Pacific possessions, and with the knowledge of the tremendous importance of that great ocean, and the problems it presents, it would seem important that we have a navy adequate to protect both oceans. We should have two effective units of the Navy. On April 10, 1908, on the floor of this House, I used these words:

> The people of the Pacific ask and insist—and their request is but reasonable—that there be permanently assigned to the far western seaboard of this great Nation a fleet of battleships commensurate with the growing importance of the Pacific.

The opening of the Panama Canal has, of course, resulted in a greater feeling of security on the part of the people of the Pacific coast, yet the necessity for a formidable Pacific fleet still exists. We also lack proper naval stations on the Pacific. The Atlantic coast is far better equipped.

FORTIFICATIONS USELESS WITHOUT A NAVY.

Fortifications are important on our great coasts, but these guns can do no damage to a blockading fleet if it keeps out of range. The Navy must drive off the enemy's ships. We were recently informed by Secretary of War Garrison, in response to a congressional resolution of inquiry, that there is no gun mounted on the fortifications of the United States proper more than 12 inches in diameter; that these 12-inch guns as mounted have a range of 13,000 yards, and that the larger dreadnaughts of the *Queen Elizabeth* type are equipped with 15-inch, 45-caliber guns with a range of 21,000 yards. In other words, one of these dreadnaughts of an enemy could exceed the range of our coast guns by 4 miles—but another argument showing the necessity of a formidable fleet.

WHAT THE NAVY MEANS TO GREAT BRITAIN.

In the present war Great Britain rules the seas, as she has since the days of Queen Elizabeth. Her navy has, to a very large extent, made of England what it is commercially and politically. In the present great European contest we are assuming a position of neutrality, but vexatious questions are continually arising. Americans are growing restive under the attitude of Great Britain toward our shipping. She laid down the terms upon which we can use the canal commercially, and we acquiesced in her terms.

It does not follow, however, that we will as meekly submit to a continuation of outrages to American commerce on the high seas.

It would seem to be the irony of fate that England was reported to be the first nation to violate the neutrality of the canal.

IS WAR POSSIBLE?

There never may be another war in which the United States may be involved, but is it safe to act upon that assumption? I sincerely hope that there will not be another conflict. It has never been denied, and can not be, that in May, 1913, and for several weeks thereafter, our gunners at Corregidor Island stayed at their guns night and day.

NECESSITY OF AN ADEQUATE NAVY.

The Spanish-American War was decided by the Navy at Manila Bay and Santiago Harbor. As has been stated so well, right backed by might is irresistible. We have a striking example of unpreparedness in the case of China, which nation, lacking an adequate army and navy, has suffered the greatest humiliation and been involved in costly and disastrous wars.

The United States can not assume its present position among the nations of the world without a navy commensurate with our needs. It is essential for the protection of our coasts, to guard the Panama Canal, to safeguard our insular possessions and dependencies, to uphold the Monroe doctrine, to protect our shipping, and to command the proper respect for our flag in every section of the world. [Applause.]

I yield back the remainder of my time.

The CHAIRMAN. The gentleman yields back four minutes.

Mr. STEPHENS of California. Mr. Chairman, believing that I have six minutes remaining to my credit, I yield that much to the gentleman from Washington [Mr. BRYAN].

Mr. BRYAN. Mr. Chairman, I am not going to attempt to discuss the Navy in its relation to our foreign affairs, the Mexican policy, or anything of that kind during the few minutes that are allotted to me; but I want to call attention to one or two features of naval accomplishment, which I think are very commendable and reflect credit upon the present administration of the Navy. In the first place, it has always been my delight to look upon our Navy with a great deal of pride. I believe the American Navy has a record of unusual accomplishment, and every American is justly proud of its achievement. We on the Pacific coast do not know very much about the modern Navy, because we seldom see the big units of the Navy referred to as the line battleships, which constitute the real Navy. We do not see any of the real battleships out there. Since, by order of that President of whom a great and much-loved historian, now in the White House, said his administration was one that reflected great credit and was one of ideas, 16 battleships turned their prows toward Puget Sound as they skirted the Horn, we have not seen a battleship. They came; and they went; and they never came back any more.

We have a few little boats, a few cruisers, but if the canal is kept open, I understand, we will see some real battleships once in a while, and that some of those big vessels will guard our interests out there occasionally.

The Secretary of the Navy has done some things in connection with the internal management of the Navy that I think he ought to be given due credit for. He has instituted certain rules and regulations for the control of the men in the Navy. For one thing he has issued an order that shuts liquor out of the Navy. [Applause.] I believe the Secretary should receive hearty commendation and the backing of every governmental officer and every element in the national administration in that particular movement, and in the enforcing of that order.

I know something about the influence of liquor on men in the Navy.

Mr. HENSLEY. Will the gentleman yield?

Mr. BRYAN. Yes.

Mr. HENSLEY. Does the gentleman realize that the Navy League criticized the Secretary of the Navy for that order?

Mr. BRYAN. Oh, yes; but that does not make any difference. The Navy League probably had some champagne on the banquet board at the time they criticized the Secretary. [Laughter.] I do not care to enter into any crusade against the Navy League, for the league may be doing some good along some other lines.

It was impossible to keep the men free from liquor if the officers of the Navy indulged in that way and had their mess rooms filled with liquor and every vessel ladened with it. So I think the Secretary of the Navy is entitled to great credit for that.

He is entitled to great credit for the movement to open the door to men in the Navy along certain lines of instruction so they can spend some of their time acquiring a little learning that we are all craving. He has revised the laws and rules of the Navy as to the punishment of deserters, and removed from men the infamy and criminality of penitentiary service for desertion in many cases. For these things he ought to be characterized as a real progressive Secretary of the Navy.

Now, I want to mention just one other matter. We have heard a good deal said about the trusts and about men using various opportunities to supply the Navy for graft and all of that. There is more or less truth in that, no doubt. But I want to call attention to the fact that there is over in New York a commission on industrial relations asking questions of representatives of the great interests of this country that is doing more to revise and modify the conditions as between the great interests and the average citizen of this country—the working classes and others—than any other man or any other agency has been able to do in a generation.

I heard them ask Mr. John D. Rockefeller, jr., the other day a series of questions, and I tell you that that commission, with Mr. Walsh as chairman, is accomplishing a wonderful task. He led Mr. Rockefeller through a series of questions and demonstrated before this commission and those that were listening there and those who read the proceedings that Mr. Rockefeller was entirely incompetent to serve as a director.

It has been demonstrated in these hearings that Mr. Rockefeller has certain high-sounding principles which are very good. Mr. Rockefeller really believes in a certain high standard of idealism, as I am convinced; but when he was compelled to analyze those views in the light of certain facts, which he has set forth before the commission in response to the queries of Mr. Walsh, his ideals seemed to vanish for want of support by his acts. He was searched as to his views on all features of the labor problem, as to unions, and the rights of the workers. He soon demonstrated a weakness in execution and an ignorance as to the problems concerning the workers in the Colorado Fuel & Iron Co. that made plain his incompetence and the rank injustice associated with absentee landlordism over such areas as were involved in this Colorado case.

It was admitted by Mr. Rockefeller that one Mr. Ivy was receiving $1,000 a month to produce publicity to send out to the public on the Colorado situation. One of the things Mr. Ivy was doing was to send to the Members of this House a bulletin at regular intervals on the strike out there. One of his bulletins told of how much salary the labor leaders were getting. In cases of political corruption on the part of Colorado Fuel & Iron Co. operators Mr. Rockefeller did not know that he would vote to discharge such operators. In cases of compensation to injured workmen Mr. Rockefeller was ignorant as to what

amount should be paid. Every phase was considered in the questions. No legal objections were offered or could be offered. The interrelation existing between Rockefeller profits and Rockefeller philanthropy was demonstrated. I heartily commend the work of Mr. Walsh and his associates. They are accomplishing more than anyone has the slightest idea of at this time.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BRYAN had leave to extend his remarks in the RECORD.

Mr. HENSLEY. Mr. Chairman, I yield 30 minutes to the gentleman from Virginia [Mr. SAUNDERS].

[Mr. SAUNDERS addressed the committee. See Appendix.]

Mr. BROWNING. Mr. Chairman, I yield 20 minutes to the gentleman from Ohio [Mr. FESS].

Mr. FESS. Mr. Chairman, war is a horrible thing to contemplate; it never comes as a rule by choice or option of the participants, and the results are not what the people who go into it expect. People can be very certain and positive in their insistence that there is no symptom of war anywhere, and yet, like a clap of thunder out of a cloudless sky, it breaks, and you are in war when you do not expect it. The history of most wars is but a comment upon this fact. Even in Congress, in 1814, could have been heard assurances that we were out of danger at the very time the Capitol was soon to be burned.

I appreciate the position that the distinguished Member from Virginia [Mr. SAUNDERS] has taken. I never have heard him speak that he did not edify the House; he speaks from a full mind and from conviction. I do think, however, that his conclusions are not altogether warranted to-night. I am not sure that unpreparedness, as he would have us believe, prevented the war in 1895 with England, and that preparedness had nothing to do with preventing it in 1867 with France in connection with Mexico. It seems to me the answer would be true of both cases if it was true in one.

But, Mr. Chairman, I did not rise to speak on that line. Remembering this day, January 29, I wish the membership of the House would think with me a few minutes upon the life of an Ohioan of whom we all are proud and whose memory is celebrated to-day throughout all the country. I refer to Ohio's great son, William McKinley. [Applause.]

Before entering upon that, however, let me remind the House, since war possibilities and defense have occupied the House, that we have had a few wars in our history, always had in the cost of life and treasure, but usually with results that were commendable. The first great war of vast importance to us was the French and Indian War, known as the Seven Years' War in Europe. The results to our Nation we do not yet appreciate, for that was the war that made it possible for this country to be the virgin soil of Anglo-Saxon democracy, rather than a Latin ecclesiasticism. It was not a conflict between two nations, but between two systems. It was settled at that time that here was to be planted the experiment of self-government based upon a free state, free church, and free school. But nobody could have believed in 1763, when the treaty of peace was signed and our country had but two and a half million people, that by 1915 we would be a Nation of English-speaking people double in population of that of any other nation speaking the language. No wonder that Lord Salisbury, in substance, said 16 months before he died, had it not been for the unwisdom of the mother country the capital of the British Empire might to-day be on the American Continent. Of course we are glad the mistake was made, for I do not think that this young Republic ever could have reached the plane under any other form of government that it has under its own. While it is true that in 1763 the treaty of peace finally decided that this was to be the birthplace of Anglo-Saxon democracy, the foundation had attached to it certain elements under which we could not progress. There was a modified system of feudalism; also the system of hereditary government with life tenure in office; also the system of primogeniture; also the system of entailed estate. While we say that the cause of the Revolutionary War was taxation without representation, that does not cover all of it.

The real cause of that war was these effete systems which obtained in the mother country and which she wanted to fasten upon this country, while the immediate cause was as stated. We went to war to free ourselves from these customs which could not be consistent with our ideas, and from 1775 until 1781 we fought the battles of independence in the Revolutionary War, with the result that the Republic, which had been born in 1763 by the first treaty of Paris, was given a new lease of life, when we started the real Republic in 1783 under the second treaty of Paris, 20 years after the first treaty of Paris. From that on until 1812 we had a period of wondrous growth, but in that year, after 5,000 American citizens had been impressed into the British Navy—I do not speak in the spirit of anger or criticism of Great Britain—but after those 5,000 had been impressed in the English Navy we went to war, covering years of dispute over England's contention on the right of search, the second war for independence, and ended it in 1815 a really great Nation before the eyes of the world. We should here remember that our Nation, differentiated by climate, soil, and occupation, and by what follows these differences, started two civilizations in this Republic, the one beginning with the cavalier on the James in Virginia and the other with the Puritan in Massachusetts, which ran in parallel columns in the western course of empire until finally the wave of southern civilization struck the rock of northern civilization, when our country went into the most dreadful vortex that is known to man—in the Civil War. One side was fighting for a principle of constitutional supremacy, born in the North out of natural conditions, while the other side was fighting for the rights of the States, born in the South out of conditions of nature. The one seemed to be embodied in the Hamiltonian theory of government, while the other in the Jeffersonian theory, and I hope that there is not a man on this or the other side of the aisle who can not see that without the Hamiltonian theory the Jeffersonian policy would not have been of value, and without the Jeffersonian theory the Hamiltonian policy would not have been profitable to the Nation. You can not have a nation builded as is ours with power or authority as one of the pillars and liberty as the other; you can not have a modern democracy built of a safe foundation without both of these fundamentals are recognized and represented.

The arch of the American Government is builded upon these two fundamental policies. One is power, authority, order in government embodied in national prerogative. That is Hamiltonian. The other is liberty, rights of the individual under government, and the rights of the State. That is Jeffersonian. Weaken one of these pillars that support the arch and you weaken the arch. We must preserve the Jeffersonian and we must have the Hamiltonian. We must preserve authority in the Nation and we must have the rights in the States. We must make a sharp distinction between the principle of State rights and State sovereignty. Dangerous would it be for this Nation if we ever forget the rights of the States. Dangerous would it be for this Nation if we should ever forget the prerogatives of the Nation. State rights must be maintained, State sovereignty must be surrendered. The State must maintain its rights in all matters pertaining to it that do not interfere with the Nation. The Nation must maintain its prerogatives in matters pertaining to all the States. We had a difference. That difference was fought out ultimately and settled, not that the Nation was to be wholly Hamiltonian, and not that it was to be wholly Jeffersonian, but it was to be a combination of the two. The contest between the two theories will continue. Our system keeps it alive, but never to be carried beyond debate. We see the Federal authority extended over the States to-day in wonderful fashion, but, strange to me, it is more on the Democratic side of the House than on the Republican side of the House. I think that I can say this without being offensive to the Democrats here, that I might say it is due to the fact that the party in power is always aggressive, always loose constructionists, always extending national authority, for no administration will willingly suffer embarrassment by refusing to do what seems to be the duty of the hour simply to maintain a position of consistency, even though it might seem a little stretch of the authority of the Nation. The party that is out of power is likely to become strict instead of loose in its construction, although loose constructionists when it is in power. The war closed in 1865. The results were world-wide in significance. The Nation was one in law, but there was a sore left, as might have been suspected. Four years of bloody strife would leave some sores hard to heal, even on both sides. One should not be surprised over such results. In 1898, on the 15th day of February, an incident occurred down here in Habana Harbor when 266 of our boys went down in the muddy waters of that bay. The morning after I walked the streets of a university town as a professor and noted in the countenances of citizens the promise of the tragedy of war to come. I spoke to the students as they gathered in front of one of the college buildings. They were wild. The sense of a national wrong was dominant, as the Nation's honor was at stake. They wanted to form companies; they wanted to call upon the governor of my State. In a word, they wanted to go to war. The most majestic figure—at least, one of the most majestic figures—our country has produced was the man at that time in the White House. He stood from February 15 until April 19,

from the day the *Maine* was blown up to the day when the declaration of war was made, like a majestic oak upon which the storm was beating. How he pleaded with the people of the country to suspend judgment, not to go into war; and yet, in spite of all influences against it, we went into war.

Mr. BAILEY. Will the gentleman yield?

Mr. FESS. Yes.

Mr. BAILEY. Does the gentleman think the country would have insisted on war had it known as much as the President of the United States knew at that time, that Spain had yielded every point in all the demands made?

Mr. FESS. It only demonstrates the heroic passion, which may be fickle, of our public life as expressed in public opinion.

Mr. BAILEY. The people knew nothing of that.

Mr. FESS. You do not mean the public was not pressing the President upon this occasion?

Mr. BAILEY. The public was pressing him. The public did not know of the facts.

Mr. FESS. I thought you meant that it was not. I happen to know that the President of the United States did not want war—was doing all he could to prevent it; but it came, and it came like other wars will come, when we do not expect it.

Mr. HENSLEY. Will the gentleman yield right there?

Mr. FESS. Yes.

Mr. HENSLEY. This insistence upon the part of the people for war was after the blowing up of the *Maine*, was it not?

Mr. FESS. Most of it.

Mr. HENSLEY. Have you ever contemplated what the future of this country would have been if the *Maine* had not been in the harbor of Habana at that time?

Mr. FESS. Do you mean if we had taken all our vessels off the sea?

Mr. HENSLEY. That was not the question. The gentleman understands that the *Maine* was lying right there in the harbor of Habana.

Mr. FESS. Yes; and the *Viscaya* was up in New York Harbor.

Mr. HENSLEY. And if the *Maine* had not been there, but had been at Hampton Roads at that particular time, have you contemplated what the history of the country would have been?

Mr. FESS. I do not want to enter upon that, but I will say to the gentleman from Missouri that he has suggested a thing that he ought not to have suggested. Probably I ought not to say what is in my mind, suggested by the interruption, but if in times of war we purchase ships of governments that are belligerent and put our flag upon them and send them across the sea and one of them is sunk, what will follow? In such a contingency it will be a bluecoat that is being attacked, and how long can you maintain the people of this country in a peaceful attitude if a thing of that kind would occur?

Mr. DECKER. Mr. Chairman——

Mr. FESS. I did not mean to inject that question, but it is worthy the consideration of those who see no possibility of war, especially at this moment.

Mr. DECKER. Well, you got it in.

Mr. FESS. It is in. Brother HENSLEY brought it in.

Mr. DECKER. I want to ask if the gentleman does not know that when we buy a ship either from a neutral nation or a belligerent nation, with the flag of this country on that ship, and that ship sails just the same as any other ship owned by a private individual, and along with that ship does not go the sovereignty of this country, that the people of this country are no more apt to take an interest in that private ship, because we do own only a small part of it, than if it was a ship of some powerful Ship Trust that would afterwards try to stir up a war and protect their own property if the ship was sunk?

Mr. FESS. My friend from Missouri may make the American people believe that what he has said here he believes will prevent trouble, but he will have a task on his hands to prove to the people that if the Government of the United States owns the vessel foreign powers do not fire upon the majesty of the Government if they fire upon that vessel. [Applause.]

Mr. DECKER. You mean to be understood that you are not willing to trust the intelligence of the American people in a war?

Mr. FESS. I mean to say that my friend from Missouri would be one of the first citizens to fire up quickly when the honor of the Nation was attacked, and you do not differ in that from the mass of our citizens.

Mr. DECKER. I do not want to take up your time, but I want to say that "the gentleman from Missouri" would not be any quicker to rise in defense of a ship owned by all the people than he would be to rise up against the defense of a ship owned by one American citizen.

Mr. FESS. When an attack is made upon all the people by not only attacking property belonging to them but their honor symbolized by the flag of their Nation, it is a little more serious than when made on one person or upon the property of a person or corporation.

Mr. DECKER. Why?

Mr. FESS. I do not wish to be discourteous——

Mr. DECKER. I beg your pardon.

Mr. FESS. I have pretty nearly forgotten where you took me.

Mr. HENSLEY. We had you down at Habana, Cuba.

Mr. FESS. You will allow me to resume the consideration of the question before us.

Mr. SAUNDERS. Will the gentleman from Ohio allow me to suggest an answer to the query of the gentleman from Missouri?

Mr. FESS. I am afraid you will embarrass me.

Mr. SAUNDERS. Oh, no. I was going to say that when our flag is fired upon it is a very different proposition than when an American is killed by some Canadian fishermen, which happened a few days ago.

Mr. FESS. Your observation is most timely and true. Now, Mr. Chairman, why I rose was to call attention at this time of stress and storm to the attitude of McKinley, whose birth is celebrated to-day, upon war and his part in that of 1898. You say it was not so terrible. War is always terrible. It is nothing if it is not horrible. The President was not in favor of it. He had his reasons. He had in his life tasted war. He knew its probable consequences. He feared it might apply the match that would involve the world. He did what he could to prevent it at the cost of many friends and expense of virulent criticism from both Democrat and Republican, and it is the finest example that I know of the danger of this Nation going into war before it knows what it is doing, and I do not believe that my good friend from Virginia [Mr. SAUNDERS] is altogether right when he says that there is no possibility of our being involved at the time when all Europe is in war itself. I am afraid that that might be used as an occasion for war.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. BROWNING. Mr. Chairman, I yield to the gentleman five minutes more.

The CHAIRMAN. The gentleman from Ohio is recognized for five minutes more.

Mr. SAUNDERS. Does the gentleman think——

Mr. FESS. I regret I can not yield further. I am sorry.

Mr. SAUNDERS. I yielded to my friend.

Mr. FESS. Well, I will yield to the gentleman.

Mr. SAUNDERS. Do you not think that the nations that are now embroiled would hardly care to take on an additional adversary?

Mr. FESS. Well, I am of the opinion that some of them who are very seriously embroiled would like to have us on their side. [Applause.] There are two sides, you know. Each combatant would be glad to see us involved; if they could get us to take sides, it would be to their advantage.

Mr. BARKLEY. The gentleman does not think that going to war with us will get us on their side, does he?

Mr. FESS. Mr. Chairman, I want to ask the Democratic side of this House to think with me just a moment as to whether the war of 1898, bad as it was, did not have a result that paid for all that it cost? I do not extol war. Far from me to do so. But this war had one great result. Senator Dolliver related to President McKinley the desire of Gen. Wheeler to go to Cuba. The President at first declined on the ground that the general was old. "He is a good citizen. He can do more for the United States at home here in Congress than he can by going down there and being shot at and killed." And when Senator Dolliver, then a Member of this House, carried that message to Gen. Joe Wheeler, the general seemed not pleased with the statement that he ought to stay here and represent his section of country in this trouble. "For," he said, "I do not need to be here. No man needs to be here to represent my section of the country in this trouble," making it clear that there was no hesitancy whatever, when the trouble was coming, from any section of the country. The President was touched by the story of the general's wish to fight under the flag against which he had fought in 1861 and commissioned him. When Gov. Gen. Weyler said that the first thing he would do would be to land troops in Florida, where he would be met by people of the Southland, who would join him in a march upon the Capital, you remember that the mayor of New York City laconically announced that "when you are ready to do it let me know, and I will send the policemen of New York City down there to arrest all who come over for trespassing on American soil."

The statement was an insult that the governor general offered to our great Nation, and when the crucial point came, and

war was declared, what happened? More troops in proportion to the population came from the section that the governor general referred to than came from the northern section; and we saw how the grandson of Robert E. Lee marched with the grandson of Gen. Ulysses S. Grant against a foreign enemy. And if there was not any other single result of the war with Spain, here is one that I think all will agree was the great reward. The sore that was kept somewhat open by unkind utterances in the press and on the rostrum was healed, it seems to me, entirely, because we were fighting a common enemy.

If that was not enough, the incident that occurred in Buffalo soon after was. After the President had finished one of his greatest speeches, in which he said "Our greatness is not in war, our greatness is in peace; it is not in discord, it is in accord," and then was receiving the men and women who wanted to shake his hand. In the group there appeared one with his hand bandaged, as if it were injured; and we are told that the President, looking upon him, had upon his face an expression of pity. But while he took the President's hand in one hand, he pressed the trigger with the other, and fired two shots in quick succession, and the President fell into the arms of those who were about him. Do you remember what he said as he saw the men clamoring for the life of the poor wretch who had committed the deed? "Let nobody hurt him; let nobody hurt him." And as they took him down the street to Mr. Milburn's home he said, "Be careful how you break the news to Mrs. McKinley."

The CHAIRMAN. The time of the gentleman from Ohio has again expired.

Mr. BROWNING. Mr. Chairman, I yield to the gentleman three minutes longer.

The CHAIRMAN. The gentleman from Ohio is recognized for three additional minutes.

Mr. FESS. When Dr. Mann, the surgeon, said, "Mr. President, we are going to operate upon you; the delay cost the life of one of our Presidents; we will not let it cost you your life." He replied, "You know best." And you all remember how from that fatal day until the end hope rose and fell with the passing hours. How well we all remember the story how, as they were about to apply the instruments, when they noticed the lips of the injured man moving, Dr. Mann, thinking it might be a dying message, pressed his ear to the lips of the President and heard his words, "Nearer, my God, to Thee; nearer to Thee." The hand of the doctor was almost palsied. He waited a moment and noticed the patient's lips again moving; he pressed his ear again and heard the words, "Angels to beckon me nearer to Thee." After days of suffering, and when at last the fatal moment had come, and when it appeared he had gone into his last sleep, his wife was taken away into an adjoining room. By the administration of oxygen he was revived. When he looked about, as if for her, she was brought back to him. To her he said: "Do not worry. It is better for us both. Good-by, all. God's will be done."

And President McKinley, who was born 72 years ago to-day, died, as he lived, one of the most beautiful and representative spirits America ever knew; and in these hours of war I think it is well for us to think of the man who tried to prevent war. [Applause.]

Among the lessons of his life we should consider, his policies for the Nation at this moment are of greatest importance. It is fitting to contrast his policies with those now in vogue.

As one nation is distinguished from another by various movements which distinctly mark each, so one generation in each nation is distinguished from another by the leadership it develops. The present day and leadership stands in sharp contrast from the last generation, with Ohio's most beloved son at the helm. In that day the dominant impulse was achievement. It had become a national passion. McKinley embodied in the best sense this national passion. He had devoted his time and had dedicated his talents to the Nation's largest possibilities in accomplishment. In this he best represented the inspiration not only of America's youth but of youthful America. What Emerson predicted for the individual, McKinley planned for the Nation. His passion was to see the United States absolutely independent of all the rest of the world in its productive ability. He religiously believed that duty demanded America first, just as life demands safety first. He contended that wise policy would develop all the Nation's natural resources, investing American capital, and the employment of American labor rather than going to Europe for goods. His slogan was, "Open our mills to American workingmen, not our markets to European-labor-made goods." His philosophy plants tin mills in America, not in Wales; it invests American capital, not European; it employs American labor, not foreign; it maintains a standard of living wage, not Europe's pauper hire.

McKinley's policy would manufacture in this country not only all the sugar we consume but much used by other countries, and at a price less than that paid to foreign producers. Under the fostering care of the McKinley theory our Nation has grown until it is now one and three-quarters times wealthier than the next wealthiest country on the globe. It has now double the railroad mileage of any two European countries. It has two-fifths of all the banking resources of the globe, including our own resources. We produce 40 per cent of all the pig iron in the world, 25 per cent of wheat, 60 per cent of coal, 70 per cent of corn, 65 per cent of cotton. It has the largest per capita circulation of all other countries. Its citizens, great and small, have larger deposits in savings banks than any other country. It has the happiest people on earth; better fed, better clothed, better housed, better educated; most public spirited of all the peoples of earth.

Only now and then do this people suffer an epidemic, caused by a spirit of unrest, due to an independence born of Republican prosperity. Twice since the advent of the party of Lincoln, Grant, Garfield, and McKinley has the Democratic Party afflicted the Nation by its free-trade propaganda—once in 1893-1897 and again in 1913-1916, 20 years later. Note the deadly parallel. In 1890, with the country enjoying great prosperity, capital fully invested, labor fully employed, the law bearing McKinley's name was placed upon the statute books. The cheap demagogue took the front of the stage and held sway until at the very height of the Nation's trade relations Cleveland was elected. The Wilson bill followed as an attack upon the employer of labor and in the pretended interest of the wage earner. The cheap propagandist attempted to assault the business integrity of the Nation's producers and at the same time promised to benefit the wage earner. He proposed to buy Europe's product at Europe's price without either displacing the American laborer whom he placed in competition with Europe's labor or even reducing his wage to the level of his competing wage earner in Europe. While few were so oblivious to the laws of production as to have faith in such promise, enough gave it credence to permit the experiment. What followed? Read the record. It is brief but complete. Democratic success at the polls. Tariff for revenue only, the Wilson bill. American markets open to Europeans. Cheap goods—American mills closed. Capital in hiding—labor out of employment—business generally paralyzed. Imports increasing, exports decreasing, buying more, selling less—balance of trade against us—gold going out of the country, deficiency in the Treasury—issue of bonds, suffering among the poor, soup houses installed by municipal authority, bread lines maintained by charity. Within three years loss to the country billions of treasure. In the face of such calamity quickly following upon the heels of universal progress under protection, the people called for a leader. Out of the masses came our hero. The honor belonged to the city of Canton to produce him.

Notwithstanding the hue and cry of the populistic nostrum vendor under the leadership of the present Secretary of State, who promised a cure-all in the famous 16-to-1 prescription, the people had been under the spell of the theorists long enough. They turned to the party of protection under the leadership of America's greatest protectionist, buried free coinage of silver together with the fatuous 16-to-1 pretense, and followed McKinley in the inauguration of the country's greatest era of prosperity.

For nearly 20 years the Nation has swept on in its marvels of growth to the point where it had reached the acme of greatness, where every man could find a market for what he had to sell, whether it was the product of the farm, the mine, the manufactory, or whether it was his capital or his labor—all found a ready market. Such states of prosperity produce more or less of independence. Hence the demagogic appeals find a hearing. The party of free trade, seeking an issue, admits a general prosperity but demands a "new freedom," whatever that means. I need not remind of how they succeeded. It is enough to say that the minority party slipped into power in both legislative and executive branches of the Government. When you read the record since 1913 you will think you are reading from a history of Cleveland's days. Democratic success at the polls; the Underwood bill; imports increasing, exports decreasing, American mills closing, American industries paralyzed, American labor out of employment, balance of trade against us until war-ridden Europe had to be fed; gold going out of the country; deficiency in the Treasury in spite of war tax; suffering universal in the cities; soup houses again in-

stalled; bread lines the longest in our history. And all this in the fact of the promise that no legitimate business will be hurt. When these assaults were being made threats were heard from Mr. UNDERWOOD and Secretary Redfield that any firm that reduced its output or slowed down would be investigated. Instead we now hear of the Socialist proposition that a Federal employment bureau must be created to find work for the unemployed. There is one employment bureau that we can afford to employ—American industry. President Wilson's psychological remedies will deceive no one.

As the people 20 years ago refused to be misled by political propagandists and returned to a protective tariff as a permanent remedy, so this year they refused to be caught up by high-sounding phrasing of "new freedom," "emancipation of business," "constitution of peace," and "watchful waiting," and again turned to the party committed to the principle of protection.

It is difficult to understand the credulity that could see in the European war distress to American industry. It is the one only item to save us from the blighting effects of a bill that not only paralyzed our home industries but suggested the iniquitous stamp tax as a remedy, which at best can be but temporary. The war, in the extent that it disturbs European production, annuls foreign competition with our labor, the very purpose of a protective tariff. In that degree it leaves the American market to be supplied by our own producers and loudly calls us to the foreign market, now unsupplied by the European producer, whose ability is arrested if not destroyed.

The recent election proved that the people of this country could not be deluded by such appeals, and they registered their protest in no uncertain tone. It is not the mere cutting down of a Democratic majority in the House from 145 to 30, but the nearness with which that majority came to being turned into a minority. The elements which prevented it will not be present in 1916. The work begun in 1914 will be completed by 1916. The policies of Wilson will give way to those of McKinley.

The CHAIRMAN. The time of the gentleman from Ohio has again expired.

Mr. BROWNING. Mr. Chairman, I yield two minutes to the gentleman from Minnesota [Mr. MANAHAN].

The CHAIRMAN. The gentleman from Minnesota [Mr. MANAHAN] is recognized for two minutes.

Mr. MANAHAN. Mr. Chairman, I was very glad to have the allotment of time which I expected to use in the discussion of this bill taken by my eloquent colleague from Ohio [Mr. FESS]. It seems to me that after hearing such a clear and philosophic discussion as he has given us it would be a discord to enter into a detailed comment upon this bill. I would not feel justified in doing it, even if time permitted.

However, let me say here that I am opposed to war and the spirit of war. Great armies and great navies create a warlike spirit in a people, and therefore I oppose great Army and great Navy appropriations. The taxpayers' money can be spent for better purposes. It is foolish to say that preparation for war averts war. It rather invites it. Look at Europe. What is the cause of the war hell now raging in Europe? The fault does not lie with the masses of the people of any country. The greed for property and lust for power of the great leaders of all the nations built the great armies and navies with which they first frightened and now destroy each other. Jealousy and hate are born of greed for wealth and lust for the land of other men. Shall we, as a Nation, yield to that same base avarice that has wrecked the civilization of Europe and brought hopeless woe upon her helpless millions? Shall we foster the spirit of war? If so, let us build great battleships and organize great armies.

Is there no danger in the spirit we foster? This talk of trade and profits, these schemes of capturing commerce lost by warring nations, this marketing while half the world lies bleeding and broken, may be business and may be legal, but it does not look good to me. It is more cold-blooded than stealing from the dead, for it takes food and drink from the wounded while they suffer. To what bottomless depravity does greed drive men and women? Some of us are so low and base that we rejoice in this cruel war, because it makes our profits larger, God help us.

But what shall be said of us as a nation, if for the profit and gain of greedy men we add to war's horrors and increase its roll of dead? What shall be said of our honesty as a Government if we take sides while pretending to be fair and neutral? Dare we pray for peace, like hypocrites, while we trade for profits in the hellish weapons of war?

ARE WE OUR BROTHERS' KEEPERS?

To hand weapons to angry, quarreling men is to invite the brand of Cain. To sell guns for gain to warring nations is adding avarice to the crimes of lust and murder, and men who will do it are akin to demons without any of the decent instincts of the brute creation. But what shall we say of our Government, representing us all, if it permits great, brutal corporations to sell shot and shell and hellish guns without limit to England and Russia and their allies when they know that Germany and Austria can not even buy our life-giving bread and meat? If that be neutral, neutrality has two faces, and both are false. If that be international law, international law books should be burned for the benefit of cold-blooded, international lawyers who quibble while trades thrive on widows' hearts and tears. But selling arms and munitions of war to the allies under present conditions is anything but neutral. It is unfair. It is un-Christian. It is greedy. It is base and un-Christian, greedy and unfair; it is murdering for money.

We are told that it would be an unfriendly act to refuse to sell war material to England. Therefore we must permit England to violate the plainest principles of international law by stopping our ships and taking our cargoes of food sent to starving women and children in Germany, and we must at the same time keep on manufacturing and selling to England guns and powder with which to shoot us later, if, forsooth, she should conclude to take our ships as well as our cargoes, and in case we resist. Is our Government afraid of the English Navy or is it because too many of us now in office are deep in our secret hearts in favor of England and against Germany, while we profess to stand on neutral ground?

At the beginning of this war my sympathies for France and Belgium were profoundly stirred by the published reports of the desolation wrought upon the people of those countries, but it was not long before I learned the deeper meaning of the awful tragedy and that fundamentally both sides were at fault and equally at fault in permitting the spirit of greed and imperialism to shape their courses. All deserved sympathy in equal degree, for all were reaping the bitter fruit of avarice and selfishness. They were, as nations, equally sick and equally mistaken, because they had permitted blind leaders to guide them and had forgotten the justice, fraternity, and statesmanship that Christ had taught in Judea.

We have in this country many men and women who came from Germany and Austria, whose hearts beat in sympathy with their struggling countrymen and who naturally grieve to see the Government of this land of their adoption and which they love with brave devotion lending itself to the service by indirection of the enemies of their fatherland. Our fellow citizens of German and Austrian blood are among our very best. They are loyal and devoted to the Stars and Stripes and to all that our flag stands for in nationhood and in honor. They are peace-loving, justice-loving, home-loving men and women. They are Americans with all their might and all their hopes, and as Americans they have the right, for the sake of America herself and for the sake of humanity, to join with all the rest of us who think more of human beings, of broken hearts, and tears, than we do of trade and profits, in demanding that our Government should stop the sale of munitions of war to any of the nations at war. To demand it in the name of God.

Mr. FESS. I ask unanimous consent that I may revise my remarks.

The CHAIRMAN. The gentleman from Ohio asks unanimous consent to revise his remarks. Is there objection?

There was no objection.

Mr. HENSLEY. Mr. Chairman, the naval bill under consideration carries $148,589,786.88, $4,000,000 more than the bill carried in 1914. In 1913 the bill carried $140,800,000, which was $4,100,000 less than the bill carried last year, and in 1912 the bill reported from this committee carried $123,000,000, which was over $17,000,000 less than the bill in 1913. The naval appropriation bill has been increased from year to year since 1897, when it carried only $33,003,224.03, over $100,000,000 less than the bill now carries. Since 1899 up to the present time, a period of 16 years, we have spent on our Navy $1,645,000,186, which represents about 50 per cent of the total volume of money in circulation in this country on the 1st of January last. It is stated that we are now spending each year on account of past wars and in preparation for wars which we all trust may never come about 70 per cent of our total revenues from every source, leaving only about 30 per cent of our revenues to be expended on the account of all the other multitude of purposes for which government is organized—for courts, for education, for public improvements, for the advancement of commerce, for agriculture, and for numerous other purposes. During the last 16 years—since 1899—Germany has spent on her navy $1,237,915,960. For this same period of time we have spent over $400,000,000 on our Navy more than has Germany. It is, therefore, plain that Congress has not starved the Navy. Is it fair that more than 50

per cent of the total revenues derived from all productive efforts throughout the country should be converted or perverted for destructive purposes?

If our Navy is no stronger than some gentlemen on the floor of this House would have you believe it is, then I insist that there should be an inquiry to ascertain the responsibility for the reckless expenditure of these enormous sums of money; and following the ascertainment of that fact, if it is a fact, as charged, that our Navy is inadequate, those who are responsible for this criminal waste in the disbursement of these vast sums should be held personally responsible. These same gentlemen who insist that we are wholly unprepared and that we would be entirely helpless to defend our country against an invading enemy attempt by comparison to show that our Navy is inferior to the navy of Germany. Some of the gentlemen in the Navy Department, under whose direction and supervision these vast sums are expended, profess to believe the same thing. If this is true, then these gentlemen in the Navy Department owe the American people an explanation. It certainly is an unfavorable admission on their part; and if our Navy is really inadequate, to authorize additional battleships will not promote the efficiency, as has been demonstrated by the present European conflict. It is not the battleships of Germany that has kept back the great combined fleet of England and France.

But, Mr. Chairman, as I have heretofore stated, these vast sums are appropriated from year to year without any regard to the real needs of our Navy, sacrificing the very thing in which these gentlemen appear to have such a deep interest—the adequacy of the Navy. The theory has been urged that preparedness in a military way on the part of a nation was a guaranty against war. This theory has been exploded by the European war, and if this Congress authorizes additional battleships another reason must be assigned therefor.

Many people heretofore believed the argument that preparedness prevented war, but since the naval bill was before Congress last year we have had some lessons taught us, one of which is that the doctrine of preparedness in a military way on the part of a nation as an insurance against war and a guaranty of peace is fallacious and silly. I did not believe this doctrine heretofore any more than I believe it to-day. I believed then, as I believe to-day, that preparedness on the part of a nation, like preparedness on the part of an individual, is not only calculated, but is most certain, to incite trouble and bring it about. History does not record an instance where a nation has been better prepared for war than was Germany at the outbreak of hostilities in the present European conflict. Did preparedness on the part of Germany insure peace? Not by any means. Preparedness on the part of each and all the nations involved in this titanic struggle produced, naturally enough, a feeling of apprehension, a feeling of nervousness. Each nation was alarmed over the prepared state of all the other nations, and when the first overt act was committed by one of the nations the other nations were seized with fear, and, all nations being prepared, the campaign of slaughter was precipitated throughout continental Europe. We all recall very clearly how Germany called out to Russia to quit mobilizing. The tension at that time throughout Europe was high, but Russia did not reply to the demand of Germany excepting to keep her hand on her weapon. Germany, figuratively speaking, said: "I have an automatic in my pocket; I am prepared"; and in that way, just as individuals frequently do, the weapons were drawn, the fatal shot was fired, and now all Europe is staggering from the effect of a campaign of carnage and murder, the greatest war since the dawn of creation.

Dr. David Starr Jordan a few Sundays ago, in a lecture here in Washington, declared that he was so certain that this conflagration would break out in Europe that 18 months prior to actual hostilities he went to Europe and, going from country to country, he studied conditions which, as he saw them, rendered escape from war impossible. He unhesitatingly checks the responsibility of this war up to the military people, and says that preparedness on the part of nations will as certainly eventuate in war, as certain as will two trains collide when running on parallel tracks at the same rate of speed, the tracks converging at a given point; in other words, that there is no means of escape. There was a time when individuals carried upon their person concealed weapons. It was an approved practice, and frequently men, because of trivial differences, were called upon the field of honor, and their lives went out, where nothing was involved. It was regarded as most honorable and courageous on the part of those who acted in this fashion. We know to-day that it requires more courage not to fight than it does to fight. We know to-day that it is cowardice on the part of an individual that prompts him to carry concealed weapons. The people of the Nation, when public sentiment was properly aroused, succeeded in stamping out the last vestige of this criminal practice, and I hope and pray that at the conclusion of the present conflict in Europe mankind will be wise enough and courageous enough to turn away from this barbaric practice that prevails in Europe to-day, and that reason may be enthroned and the criminal slaughter of men, women, and children may be averted forever thereafter. But I was asked a few days ago, "Would you have this Nation recede and go backward from the place she now holds in the catalogue of nations and become a China?" I answer the question, "No"; but the difference between our state of civilization and the civilization of China is not the difference based upon gunpowder and deadly instruments of warfare, and to me it seems so silly for anyone to so construe it.

It has been said that the future and the destiny of Europe in the last week of July was in the hands of a group of men numbering not over 50, and that what they did was never known to their respective nations in any detail until after the fell Rubicon had been crossed and a world war had been precipitated. Do you suppose that those nations engaged in this present war, if they could be restored to their former state before this war broke out, would be as ready to take the fatal step now, seeing and appreciating just what their experiences would be, as they were at the beginning last summer? Do you not believe that these 50 men would desire that others should share some of the responsibility of this world's tragedy? Do you suppose, even if those responsible for this war were ready to take this grave step, that you could marshal the millions of men upon the field of slaughter to-day? In other words, do you not suppose that if one should have gone to Europe before this war broke out, and had called out in trumpet tones to those countries that you wanted so many millions of men of Germany, so many millions of men of Russia, so many millions of men of France and of England; that you wanted the very flower of the country, the kind of men by whom the race should be perpetuated—that they would have asked you for what purpose? And do you suppose, if you had advised them that you wanted these people, together with billions of property to be destroyed, simply to entail upon the children yet unborn an indebtedness the burden of which will bow their forms to the grave, that those countries would have responded? And what more is involved in this struggle? Who brought it about? What good purpose will it serve when those countries are devastated? Mr. Chairman, as I see it, it is all the result of this mad, nonsensical, idiotic rivalry that has existed for many years between the nations of the world to excel each other in armament. On a former occasion I declared that the militarists of a nation feed upon their own appetites.

I described the appetites of the militarists as a great chasm, as a great opening into which we pour millions of money annually, and that the larger the amount we pour into it the larger becomes the cavity and the more insolent it becomes when it returns for increased appropriations. Mr. Chairman, if we authorize the building of one, two, or three battleships per year the other nations would authorize a like number, and at the end of the year our positions would, relatively speaking, remain the same. It is a beautiful system of rivalry which inures to the benefit of the great supply concerns and shipbuilding concerns. At all times there is an interchange of ideas with reference to improvements in the navies. Our Navy will steam out from Hampton Roads with an admiral and the very flower of the Navy officering the fleet and it will visit the different ports of the world. No sooner does the fleet reach a foreign port and has cast anchor until the boats are lowered and other boats come to meet the steamers and the representatives of the foreign nations are brought aboard these great dreadnaughts. These representatives are taken on board and every courtesy is extended to them. They are assured by the treatment they receive that they are among their friends, and only incidentally are the great engines of death pointed out to them and they are told, not in so many words, but practically, that while our relations with you and your country are friendly, we desire to call your attention to our state of preparedness, so that you will know exactly what we can do to you in case of hostilities. Nor does that end the perniciousness of this practice. When the fleet has made its rounds and returns to this country it all results in what? Ere long those countries visited respond to the spirit that is disseminated and to suggestions which have been made, and those countries authorize additional increases, and then at once the representatives of this great establishment here rush to the Committee on Naval Affairs of the House and of the Senate and they point with apparent apprehension to the actions of these other nations in making increases, and then, with all the eloquence of which they are capable, they appeal to the committee to respond with increases. Nor does this tell it all.

The same class of profit-sharing individuals who are present here at every session of Congress and who are disseminating this sort of spirit throughout the nations by means of the press, these men who are urging by every means within their power that we increase the armament of this country, are present in those other nations urging them to make additional increases; and let me say here and now, Mr. Chairman, that if we had a Navy to-day twice the size of the one that we have, if no nation on the face of the earth could float a navy comparable with ours, even then, without regard to the tax burden on the masses of the people, or even the adequacy of the Navy, they would urge increases with the same vehemence and earnestness that they are to-day. Can you hope to satiate their appetites? Never, so long as the world stands. I favor an adequate Navy for defensive purposes, and for defensive purposes only, but I refuse to let those who get a profit out of the increases be the judges of what constitutes an adequate Navy.

I have maintained all the time that the state of preparedness on the part of a nation determined its degree of aggression. In other words, that if a nation was thoroughly prepared her rights would not be predicated upon equity and justice, but would be based entirely upon the country's ability to enforce those rights because of her state of preparedness. In this connection I desire to quote from the testimony of an admiral in the Navy at the hearings before our committee at the last session:

Mr. WITHERSPOON. Do nations fight to maintain their rights without any reference to whether they are as powerful or less powerful?

Admiral VREELAND. I think the aggressor is generally the more powerful nation, because he thinks there is something to gain by warring, and the other party to the contest is forced into it.

Mr. WITHERSPOON. The aggressor, according to your idea, would go into war because he thought that he could win in the war; is that your idea?

Admiral VREELAND. He would not become the aggressor if he were sure of defeat.

Mr. FARR. Will the gentleman yield?

Mr. HENSLEY. I intend to take only a few minutes to make a little statement.

Mr. FARR. The gentleman quoted Admiral Vreeland a little while ago.

Mr. HENSLEY. Very well, I will yield.

Mr. FARR. Will the gentleman state what Admiral Vreeland said in regard to the number of wars that we have had because of unpreparedness?

Mr. JOHNSON of South Carolina. That was a mere opinion.

Mr. HENSLEY. That was a mere opinion and I shall not enter into that. I have not the time nor the disposition.

And further in this connection in support of the position I took I inquired of the admiral if the Navy that this country had during the Cleveland administration would in any sense compare with the navy that Great Britain had at that time, and he answered me that it would not. I then asked him how he accounted for the fact that Great Britain acceded to our position concerning the Venezuelan dispute. He answered me that the concession of Great Britain to this country was not contingent upon the size of our Navy; that Great Britain took her time and that when she saw that our position was a just one she acceded to it, but that if we had had a stronger Navy we could have been more aggressive and insistent, but, gentlemen, a part of that statement did not remain in the hearings after his testimony was audited. Statesmanship, based upon common sense and not militarism based upon a tax-burdened people, is what we need. Secretary Bryan when delivering the conclusion of this Government upon the California alien-land proposition, was asked, "Mr. Secretary, is this your last word?" The Secretary replied, "Baron Chinda, there is no last word between friends." If Secretary Bryan does nothing more to distinguish himself during his administration as Secretary of State, that alone is sufficient to add luster to his administration.

But, Mr. Chairman, if all these considerations should be dismissed at this time, if it is our purpose to ignore the great blood-bought opportunity that is being presented to us now to bring about an agreement between all the nations for disarmament at the conclusion of this war, if we fail to recognize the opportunity that is presented to this great Nation and refuse to appropriate a dollar toward the attainment of that capsheaf of all statesmanship, but stand upon the inhuman, uncivilized, and barbaric premise that a nation is only considered valuable and potential according to her state of preparedness and her ability to enforce her demands, even then it is a criminal waste at this time to appropriate the people's money for additional battleships without knowing what the conclusion of this great war in Europe shall bring forth.

The war in Europe has demonstrated that it is not the dreadnaughts which constitute the fighting efficiency of the Navy. The great combined fleets of England and France are impotent because Germany will not come out from behind her mines and forts and wage an unequal battle against superior numbers. The submarine has so thoroughly demonstrated its superiority over the battleship that it is reported that England has instructed her officers "to steam away from the vicinity of submarines at full speed, even if it is necessary to abandon a torpedoed sister ship and its drowning crew to their own fate." Is there anyone in this body who has not discovered that it is not the dreadnaughts of Germany that prevented the battleships of Great Britain from approaching their ports, but that it is the submarines, it is the mines, it is the air craft of Germany that has prevented the allies from approaching her ports. But suppose that this war had demonstrated that battleships are the best engines of defense, which is contrary to the facts, even then we would not need additional battleships now, for the reason that at the conclusion of the present foreign war all European countries will not only be indisposed, for at least years to come, to become embroiled in another war, but it will be a physical impossibility for any of such nations to carry on another war. And further, it was admitted before our committee, that no European nation would, under any circumstances, think of sending as much as 50 per cent of her naval strength against us; and that, as a matter of fact, the aggressive nation should have a naval force 50 per cent stronger than the defensive navy, which means that one of our battleships would be equal to four battleships of a foreign navy sent against us. The situation that is presented to any thinking individual by this war in Europe makes him apprehensive as to whether this shall be a war of extermination. Yes; one side or the other will be victorious, but I am afraid there will be few left to celebrate, and certainly they will not hunger and thirst for more wars right soon. Everyone appreciates the fact, as these European nations weaken each other, that from a military standpoint, relatively, we become stronger. Our Navy is much stronger to-day, for instance, on that account; and by the time this war is ended who can tell but what we may have the strongest Navy in the world? Up to the present time, so far as reported, the loss of the various nations has been as follows:

List of men-of-war lost by belligerents from July 1, 1914, to Jan. 1, 1915.

[NOTE.—Does not include "interned" vessels.]

Type.	Number.	Name.	Tons.
ENGLAND.			
Battleships	3	Audacious	24,000
		Bulwark	15,000
		Formidable	15,000
Armored cruisers	3	Aboukir	12,000
		Cressy	12,000
		Hogue	12,000
Cruisers	3	Hawke	7,350
		Good Hope	14,100
		Monmouth	9,800
Light cruisers	4	Amphion	3,360

		Zenta	2,264
Monitor	1	Temes	433
Torpedo boat	1		78
Training ship	1	Beethoven	

[1] Captured off Havre disguised as French collier. [2] Sold to Turkey.

And, furthermore, we should wait until after the close of this war before building additional battleships in order that we may in the construction of battleships if, indeed, it is then desirable or imperative, avail ourselves of all the lessons taught by this war.

We have just passed the centennial anniversary of the treaty of Ghent, a period of 100 years of peace with Great Britain, and we are living along by the side of the citizens of that country in perfect peace and harmony. We have never had a serious quarrel with Germany in our whole history. People from every country on earth have been pouring in here since this Nation was born, going into that great crucible out of which has come a type of manhood and womanhood the peer of any in the world. It seems to me that there is not only no excuse for authorizing additional battleships now, but that we should not place the stamp of approval upon this great carnage in Europe by going forward at this time.

I would be glad to see at least a million of dollars carried in this bill to promote peace, to bring about international disarmament at the conclusion of this horrible slaughter of men—one million for peace and one hundred and forty-eight million dollars for war! We should let the word go forth from this great Nation that we have the courage and manhood to do right in the midst of difficulties.

I shall ask leave to print the following letter from Lord Bryce, of England, addressed to Dr. Eliot, as follows:

Most persons in this country, speaking of England, including all those who work for peace, agree with you in deploring the vast armaments which European States have been piling up, and will hope with you that after this war they may be reduced, and safely reduced, to slender dimensions. Their existence is a constant menace to peace. They foster that spirit of militarism which has brought these horrors on the world, for they create in the great countries of the Continent a large and powerful military and naval caste which lives for war, talks and writes incessantly of war, and glorifies war as a thing good in itself.

Splendid letter, stating the situation clearly and nobly. Why can we not see it in this light and act accordingly.

The CHAIRMAN. The gentleman from Kentucky is recognized for 17 minutes.

[Mr. BARKLEY addressed the committee. See Appendix.]

Mr. BROWNING. Mr. Chairman, I yield two minutes to the gentleman from Oregon [Mr. SINNOTT].

Mr. SINNOTT. Mr. Chairman, I do not care to take up the time of the House this evening, the hour being so late, and so I will ask unanimous consent to extend my remarks in the RECORD on the question of the civil service.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. PADGETT. Mr. Chairman, I move that the committee do now rise.

Mr. HENSLEY. Mr. Chairman, I have some time left, and I promised the gentleman from Pennsylvania [Mr. BAILEY] that I would yield him 10 minutes.

Mr. PADGETT. Then I withdraw the motion.

The CHAIRMAN. The gentleman from Pennsylvania is recognized for 10 minutes.

Mr. BAILEY. Mr. Chairman, I have neither the ability nor the disposition to discuss this measure from the technical or professional standpoint. If we are to accept the theory upon which it is drawn, there is really an end of the discussion, for it can not be doubted that the great committee which is responsible for it, and which stands behind it with what it evidently regards as an unassailable array of facts, has done its duty in accordance with those facts in fullest measure.

But I refuse to accept the theory.

I refuse to believe that any such preparation for war as it implies is necessary or even excusable.

I refuse to believe that we are promoting peace and national safety by spending almost $150,000,000 on the Naval Establishment.

And I refuse to believe that anything in recent history has afforded justification for the notion that nations insure themselves against bloodshed and red ruin by what has come to be known as "preparedness."

In my judgment the committee has made an inglorious surrender to jingoism. It has knuckled to that noisy propaganda to which the President so recently paid his respects while addressing the Congress of the United States in this historic hall.

It is said in some quarters—

Remarked President Wilson in his annual message read before both Houses—

that we are not prepared for war. What is meant by being prepared? Is it meant that we are not ready on brief notice to put a nation in the field; a nation of men trained to arms? Of course we are not ready to do that; and we shall never be in time of peace so long as we retain our present political principles and institutions. And what is it that it is suggested we should be prepared to do? To defend ourselves against attack? We have always found means to do that, and we shall find them whenever it is necessary without calling our people away from their necessary tasks to render compulsory military service in times of peace. * * * We are at peace with all the world. No one who speaks counsel, based on fact or drawn from a just and candid interpretation of realities, can say that there is reason to fear that from any quarter our independence or the integrity of our territory is threatened. * * * We are not jealous of rivalry in the fields of commerce, or of any other peaceful achievement. We mean to live our own lives as we will; but we mean to let live. We are indeed a true friend to all the nations of the world, because we threaten none, covet the possessions of none, desire the overthrow of none. Our friendship can be accepted and is accepted without reservation, because it is offered in a spirit and for a purpose which no one need ever question or suspect. Therein lies our greatness.

But not in the estimation of the framers of the bill before us. Our greatness, as viewed by the proponents of this measure, lies in the floating fortresses which we have or design to build. It lies in the great guns which we have mounted upon these steel monsters of the deep. It lies in the caliber and the range of those guns. It lies in the fleetness of the great fighting machines which constitute our Naval Establishment.

It lies in battleships and destroyers, in submarines and floating mines, in all the paraphernalia of aggression which modern science, perverted to devilish purposes, has invented or developed. "We are champions of peace and of concord," says our great President. But who will believe us, in view of the concrete evidence supplied by this monstrous diversion of the people's substance into the enginry of destruction? Who will believe that we are indeed the champions of peace and of concord when we are straining the credit of the Nation in a mad competition for naval supremacy? Who will accept the views of President Wilson and his reassuring words when the Congress of the United States goes deliberately about belying them in a fashion so cynical and so unashamed?

Mr. Chairman, the country, owing to the unparalleled conflict across the seas, is facing what it has not before faced in many years. It is facing a huge and menacing deficit in the public revenues. According to estimates made by the highest authorities in the Government, this shortage in revenue will approximate $80,000,000. It may run beyond that great figure. Our customs receipts have enormously declined as a direct and inevitable consequence of the war. This decline would have been realized even had the tariff remained in force which the Democrats found in operation when they succeeded to the control of government. There never was before such complete exclusion of foreign competition with home industries as we have to-day. It is all but absolute. Protectionists in their wildest dreams never had in contemplation any such interference with com-

merce as war has effected. They never sought by any audacity of legislation so utter an embargo on foreign goods as we have had during the last six months. Yet, are they happy? Far from it. Never before were they more critical, more captious, more uncandid in dealing with the facts or less amenable to reason and common sense in considering cause and effect.

With a tenacity worthy of a better cause they stick to it that the Underwood tariff and not the war has depleted our revenues at the ports of entry. With calm disdain of the facts they ignore the circumstance that imports of dutiable goods have practically ceased, not on account of anything a Democratic Congress has done, but by reason of the disjointed condition of commerce resulting from the great struggle among nations.

This bill disregards the state of the Public Treasury as it disregards the state of the world at this moment as a result of the very "preparedness" which it is designed to afford the United States. It is drawn, not according to our means, but to fit the excitement of gentlemen who have wrought themselves up to a wonderful pitch of apprehension over imaginary foes. It is not a bill for national defense, because no one is threatening us. It is a bill for national aggression, because it can mean nothing else in the absence of danger from without. It is not a protective measure or a preventive measure, since we have seen that warships do not protect nor do dreadnaughts ward off trouble. On the contrary, we have seen in the light of battle flames covering half of Europe that they are a provocative of war, a certain incentive to strife, a constant and irresistible temptation to the exercise of force.

Mr. Chairman, in speaking on this floor last year on this general subject of preparedness I ventured to urge that we should learn to think in terms of peace rather than in those of war. It seems to me that we dwell altogether too much on the idea that some day we are going to run into trouble. Was not that the besetting weakness of the old-time bad man of the border? Was it not his practice to go loaded? And was it not his invariable fate either to kill some one or to be killed himself? Did the knife in his belt or the gun in his hip pocket ever really avert the trouble of which he was apprehensive? Did they not, in fact, stand as a guaranty that sooner or later he would come up with it and either die with his boots on or see to it that the other fellow did?

It is one of the melancholy results of the jingoistic agitation in which the gentleman from Massachusetts [Mr. GARDNER] has borne so conspicuous a part that it has inflamed the school children of the land with his own mistaken zeal for military expansion. All over the country boys and girls who ought to be thinking the thoughts of peace and dreaming of a future unvexed by war's alarms are engrossed in the literature of "preparedness" and steeped in the idea that patriotism means sword thrust and shrieking shell. Yet the highest patriotism is that which keeps the peace. The highest patriotism is that which appeals to reason and brotherly love and Christian forbearance rather than to the arbitrament of arms. He is no patriot who stirs racial prejudice, national jealousy, or commercial rivalry into flames of hatred. He is no patriot who teaches the youth of the land that it is more glorious to die for one's country than to live for it. The patriotism of a Franklin or of a Jefferson shines with a finer radiance than that of the fire eater who conjures with the sword and makes a fetish of the flag. We need patriotism, but not that sort which expresses itself in drum beats and bugle blasts. The patriotism we need is the patriotism which in the still small voice speaks to us of the golden rule and of the Sermon on the Mount.

Mr. Chairman, I am sincerely and unaffectedly sorry that a Democratic Congress is to become responsible for this monstrous appeal to force, for it is such an appeal and nothing else. We may gloss the fact over as we will, yet it remains a fact. It emphasizes an abandonment on our part of a traditional policy. It gives fresh notice to the world that we are of it in its suspicions and its turmoils and that what concerns it concerns us. This preparation of ours serves notice on it that it must watch its steps lest it trespass on forbidden ground. The pretense that this is not so is too flimsy to deceive anyone. All the peoples of the earth read in our busy augmentation of physical force a definite change of policy, a policy Democrats most justly denounced, only to adopt it themselves when the big stick dropped from the hand which had so long and so vigorously brandished it in the face of civilization.

When I became a Member of this body it was with the hope that I might have some small part in changing this policy for a better. I had hoped that my party and its leaders would set their faces against the doctrine of force. I had hoped and believed that they would set a new high mark of economy in public expenditures and in the encouragement of international disarmament. But here we find them outdoing even the Republicans in jingoistic enterprise and in profligate preparations for anticipated trouble which we infallibly invite by the preparation. And we may well pause to ask ourselves what the judgment of our countrymen and of posterity will be.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Be it enacted, etc., That the following sums be, and they are hereby, appropriated, to be paid out of any money in the Treasury not otherwise appropriated, for the naval service of the Government for the year ending June 30, 1916, and for other purposes.

Mr. PADGETT. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and Mr. SAUNDERS having assumed the chair as Speaker pro tempore, Mr. HAY, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 20975, the naval appropriation bill, and had come to no resolution thereon.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. GILL for one week, on account of death in his family.

To Mr. MORGAN of Louisiana, indefinitely, on account of illness in his family.

ADJOURNMENT.

Mr. PADGETT. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 10 o'clock and 58 minutes p. m.) the House, under its previous order, adjourned until 11 o'clock a. m. Saturday, January 30, 1915.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. Letter from the Acting Secretary of the Treasury, transmitting copy of a communication of the Secretary of War, submitting supplemental estimate of appropriations for the service of the War Department for the fiscal year ending June 30, 1916 (H. Doc. No. 1529); to the Committee on Appropriations and ordered to be printed.

2. Letter from the Acting Secretary of Labor, transmitting list of papers in the Department of Labor of no use in the transaction of current business and having no permanent or historical value (H. Doc. No. 1530); to the Committee on Disposition of Useless Executive Papers and ordered to be printed.

3. Letter from the Secretary of the Treasury, transmitting report showing the number of documents received and distributed by the Treasury Department during the calendar year ended December 31, 1914, together with the number remaining on hand January 1, 1915 (H. Doc. No. 1531); to the Committee on Printing and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. TEN EYCK, from the Committee on the Library, to which was referred the concurrent resolution (S. Con. Res. 28) accepting the statue of George Washington Glick, presented by the State of Kansas, and tendering thanks of Congress therefor, reported the same without amendment, accompanied by a report (No. 1337), which said concurrent resolution and report were referred to the House Calendar.

Mr. FERRIS, from the Committee on the Public Lands, to which was referred the bill (S. 5734) to extend the provisions of an act entitled "An act to provide for an enlarged homestead," approved February 19, 1909, to the State of Kansas, reported the same without amendment, accompanied by a report (No. 1338), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. NEELY of West Virginia: A bill (H. R. 21237) to incorporate the Seventh-Day Baptist General Conference; to the Committee on the Judiciary.

By Mr. HAYES: A bill (H. R. 21238) to suspend the requirements of law as to annual assessments and final proof under

certain conditions; to the Committee on Irrigation of Arid Lands.

By Mr. J. R. KNOWLAND: A bill (H. R. 21239) to increase the limit of cost of the site of a Federal building at Oakland, Cal.; to the Committee on Public Buildings and Grounds.

By Mr. MANAHAN: Joint resolution (H. J. Res. 411) for the appointment of a joint committee to investigate the fluctuations and control of the price of wheat and flour and the methods and practices of doing business on grain and cotton exchanges, and for other purposes; to the Committee on Rules.

By Mr. ANDERSON: Resolution (H. Res. 715) requiring the Attorney General to make an investigation of the prices of cattle and hogs and other farm products; to the Committee on the Judiciary.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. CLAYPOOL: A bill (H. R. 21240) to remove the charge of desertion from the military record of David Hart; to the Committee on Military Affairs.

By Mr. COOPER: A bill (H. R. 21241) granting an increase of pension to George D. Hart; to the Committee on Invalid Pensions.

By Mr. FAIRCHILD: A bill (H. R. 21242) granting an increase of pension to Henry Peckham; to the Committee on Invalid Pensions.

By Mr. GUERNSEY: A bill (H. R. 21243) granting an increase of pension to Henry O. Nickerson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 21244) granting an increase of pension to Oliver C. Smith; to the Committee on Invalid Pensions.

By Mr. HAMILTON of New York: A bill (H. R. 21245) granting an increase of pension to John Groat; to the Committee on Invalid Pensions.

Also, a bill (H. R. 21246) granting an increase of pension to Joseph H. Steel; to the Committee on Invalid Pensions.

By Mr. HAWLEY: A bill (H. R. 21247) granting an increase of pension to Peter A. Bender; to the Committee on Invalid Pensions.

By Mr. KETTNER: A bill (H. R. 21248) for the relief of Cyrus F. Goddard; to the Committee on Claims.

By Mr. LONERGAN: A bill (H. R. 21249) granting a pension to Matilda Myer; to the Committee on Pensions.

By Mr. NEELY of West Virginia: A bill (H. R. 21250) for the relief of Henry Borman; to the Committee on Military Affairs.

By Mr. SELLS: A bill (H. R. 21251) granting an increase of pension to John F. Hatley; to the Committee on Invalid Pensions.

Also, a bill (H. R. 21252) granting an increase of pension to William C. Ward; to the Committee on Invalid Pensions.

By Mr. SAMUEL W. SMITH: A bill (H. R. 21253) for the relief of Mary H. Marshall; to the Committee on War Claims.

By Mr. STEPHENS of California: A bill (H. R. 21254) granting an increase of pension to Viola R. Brackett; to the Committee on Invalid Pensions.

By Mr. STONE: A bill (H. R. 21255) granting a pension to Agatha Litchfield; to the Committee on Invalid Pensions.

By Mr. BRUCKNER: A bill (H. R. 21256) granting an increase of pension to William H. Terwilliger; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. ALLEN: Petition of Polish Alliance, Branch No. 19, Cincinnati, Ohio, protesting against restriction of immigration; to the Committee on Immigration and Naturalization.

Also, memorial of Ohio Canners' Association, approving adoption of the "most-favored nation" clause in tariff legislation; to the Committee on Ways and Means.

By Mr. ASHBROOK: Petition of Pattern Makers' League of North America, favoring the passage of the Smith-Burnett immigration bill; to the Committee on Immigration and Naturalization.

Also, petition of F. H. Smalley and 15 other citizens of Jeromesville, Ohio, protesting against legislation prohibiting the Government from printing stamped envelopes; to the Committee on the Post Office and Post Roads.

Also, petition of Penton Publishing Co., of Cleveland, Ohio, protesting against the passage of the Government shipping bill; to the Committee on the Merchant Marine and Fisheries.

By Mr. BAILEY: Petition of John Sobuskee Society, Croyl Township, Pa., protesting against passage of the immigration bill (H. R. 6060); to the Committee on Immigration and Naturalization.

Also, petitions of S. A. Nelson, Patton; Will Dunmire, Johnstown; and C. P. Campbell, Duncansville, all in the State of Pennsylvania, protesting against the Fitzgerald amendment to the Post Office appropriation bill, relative to freedom of the press; to the Committee on the Post Office and Post Roads.

By Mr. BARTHOLDT: Petitions of Men's Society of Central Verein and Young Men's Society of Central Verein, of Florissant; Catholic Knights of America, branch 400, of Kirkwood; branch 240, of Manchester; branch 309, branch 407, branch 552, branch 556, branch 847, branch 950, branch 1025, branch 1042, branch 1048, and branch 1052, of St. Louis; Thomas F. Golden, George G. Ernst, E. L. Ryan, L. L. Ryan, C. A. Watson, G. Fiebeger, also of St. Louis, all in the State of Missouri, praying to give the President authority to take steps to protect the sisters and Catholic priests in Mexico and protesting against the publication called the Menace; to the Committee on the Post Office and Post Roads.

Also, petitions of Stadtverband German-American Alliance, of Watertown, Wis.; William H. Tatge, Arnold H. Ehle, and Louis Brahmstadt, of Chicago, Ill.; Gottlieb Traut, of Rosebud, Mo.; Anton Streicher, Louis Streicher, and William Streicher, of Wellston, Mo.; Joe Diem, of Webster Groves, Mo.; and A. A. Weber, Glencoe, Mo., favoring a bill providing for the prohibition of the manufacture and sale of arms and munitions of war for the belligerent nations of Europe; to the Committee on Foreign Affairs.

Also, petitions of 51 citizens of St. Louis, Mo., favoring a bill providing for the prohibition of the manufacture and sale of arms and munitions of war for the belligerent nations of Europe; to the Committee on Foreign Affairs.

Also, petitions of citizens of Mankato and vicinity, of Minnesota; Catholic Union State League of Missouri, of St. Louis, Mo.; citizens of Quincy, Cal.; mass meeting of citizens of Pittsburgh, Pa.; Young Men's Sodality of Florissant, Mo.; Western Catholic Union State League, of St. Louis County, Mo.; and German Theater Society, of St. Louis, Mo., in favor of a bill providing for the prohibition of the manufacture and sale of arms and munitions of war for the belligerent nations of Europe; to the Committee on Foreign Affairs.

By Mr. BEAKES: Petitions of the German Landweher Verein, Jackson; the Vestry of St. Emanuel's Lutheran Church, Ypsilanti; Leonard Hasley and 22 citizens of Maybee, all in the State of Michigan, protesting against the shipment of arms to foreign countries; to the Committee on Foreign Affairs.

Also, petition of Chancy W. Rickerd and 96 citizens of Manitou Beach, Mich., urging Congress to invite all nations to join the United States in a world federation; to the Committee on Foreign Affairs.

Also, petition of the Ladies of Luther, Castle No. 1, Auxiliary to Knights of Luther; Oliver Cromwell Castle, No. 3, Jackson, Mich., in opposition to House bill 20644, relative to freedom of the press; to the Committee on the Post Office and Post Roads.

By Mr. CARY: Petition of Ed Marx, Gust Marx, George Laumer, George Balzer, Henry Schwarting, Henry Boll, Frank Kaemph, Frank Weber, and 60 others, all residents of Milwaukee County, Wis., urging and indorsing the passage of House joint resolution 377, to prohibit export of arms; to the Committee on Foreign Affairs.

By Mr. DALE: Petition of the Iron City Central Trades Council, of Pittsburgh, Pa., favoring passage of the immigration bill (H. R. 6060); to the Committee on Immigration and Naturalization.

By Mr. DILLON: Petition of citizens of McCook County and other citizens of South Dakota, protesting against export of war material by United States; to the Committee on Foreign Affairs.

Also, petition of citizens of Brule County, S. Dak., protesting against amendment to the Post Office appropriation bill by Mr. FITZGERALD, of New York, relating to exclusion of certain matters from the mail; to the Committee on the Post Office and Post Roads.

By Mr. DONOVAN: Petition of citizens of Connecticut, favoring House joint resolution 377, to forbid export of arms; to the Committee on Foreign Affairs.

By Mr. EAGAN: Memorial of mass meeting of citizens of Louisiana German-American Alliance, of Los Angeles, Cal., and citizens of Mankato and vicinity, protesting against export of war material by the United States; to the Committee on Foreign Affairs.

Also, memorial of Philadelphia (Pa.) Bourse, protesting against the passage of the ship-purchase bill (H. R. 18666); to the Committee on the Merchant Marine and Fisheries.

By Mr. ESCH: Petition of German-American Alliance, La Crosse, Wis., protesting against export of war material by the United States; to the Committee on Foreign Affairs.

By Mr. GALLIVAN: Petition of Bay State Automobile Association, favoring Adamson bill to eliminate discrimination against motorists; to the Committee on Interstate and Foreign Commerce.

By Mr. GRAHAM of Pennsylvania: Petition of J. S. Louis & Son, of Philadelphia, Pa., favoring an embargo on wheat; to the Committee on Foreign Affairs.

Also, memorial of Philadelphia Bourse, protesting against the passage of the ship-purchase bill (H. R. 18666); to the Committee on the Merchant Marine and Fisheries.

By Mr. JACOWAY: Petitions of S. N. Evans and Mr. and Mrs. Charles F. Roberts, of Little Rock, Ark., protesting against amendment to Post Office appropriation bill relative to freedom of press; to the Committee on the Post Office and Post Roads.

By Mr. KEISTER: Petition of 42 persons of Butler, Pa., favoring the passage of House joint resolution 377, prohibiting the shipment of arms and ammunition to warring nations of Europe; to the Committee on Foreign Affairs.

By Mr. KIESS of Pennsylvania: Evidence in support of House bill 20919, for the relief of Edward H. Dalton; to the Committee on Pensions.

Also, evidence in support of House bill 21048, for the relief of Anna Harleman; to the Committee on Invalid Pensions.

By Mr. McCLELLAN: Petition of Herbert L. Rickard, pastor Presbyterian Church, Hudson, N. Y.; Mrs. O. S. Griffin, county superintendent Mercy Woman's Christian Temperance Union; M. Catherine Allen, Mount Lebanon; Frederick Du Bois, of Highland, N. Y.; urging support and passage at this session of the Palmer-Owen child-labor bill; to the Committee on Labor.

Also, petition of Augustus Kohler and 123 others, of Kingston; Howard Moshier and Frederick Letzner, of Ellenville, N. Y.; favoring prohibition of export of arms, etc., by United States; to the Committee on Foreign Affairs.

Also, petition of Rev. Walter W. Reid and 52 others, of Monticello, N. Y., urging passage of Palmer-Owen bill; to the Committee on Labor.

By Mr. MOORE: Memorial of interdenominational meeting held at Friends' Meeting House, West Philadelphia, Pa., protesting against any increase in the armed strength of the United States; to the Committee on Military Affairs.

By Mr. MORIN (by request): Petition of citizens and organizations of Pennsylvania, favoring embargo on export of arms; to the Committee on Foreign Affairs.

Also (by request), petition of St. Michael's Polish Society, of Pittsburgh, Pa., against restriction of immigration; to the Committee on Immigration and Naturalization.

Also (by request), petition of meeting of Friends, Philadelphia, Pa., against increased appropriations for the Army; to the Committee on Military Affairs.

Also (by request), petition of priests of Scranton (Pa.) diocese and J. J. Curran, of Wilkes-Barre, Pa., against passage through the mails of certain publications; to the Committee on the Post Office and Post Roads.

By Mr. NEELY of West Virginia: Petition of Local Union No. 119, International Brotherhood of Blacksmiths, urging a satisfactory solution of the matter of employing American citizens in the various departments of the work on the Panama Canal in preference to aliens; to the Committee on Interstate and Foreign Commerce.

Also, papers to accompany a bill for relief of Henry Borman; to the Committee on Military Affairs.

By Mr. RAKER: Petition of F. L. Rector, E. A. Stewart, and H. Montgomery, of Summit, Cal., against Fitzgerald amendment to Post Office appropriation bill; to the Committee on the Post Office and Post Roads.

Also, petition of Board of Supervisors of Solano County, Cal., and Women's Civic Club of Eureka, Cal., favoring civil-service retirement; to the Committee on Reform in the Civil Service.

Also, petition of J. Shillinger, D. S. McCarthy, C. F. Merkle, H. E. Sountag, and E. B. Powers, of Chicago Park; Franz Fritsche, of Sonora; John A. Schroeder and others, of Mariposa, all in the State of California, and citizens of New Orleans, La., against export of arms; to the Committee on Foreign Affairs.

By Mr. REILLY of Connecticut: Petition of the Bridgeport (Conn.) Hardware Manufacturing Corporation and the S. S. Thompson Co., of New Haven, Conn., protesting against the passage of the ship-purchase bill (H. R. 18666); to the Committee on the Merchant Marine and Fisheries.

Also, memorial of 5,000 persons of the Order of the D. O. H. of Connecticut; Court Schiller, No. 117, F. of A., of Meriden, Conn.; and Windhorst Benevolent Society, of Meriden, protesting against export of arms, etc., by United States; to the Committee on Foreign Affairs.

By Mr. SABATH: Petitions of sundry Polish societies of the State of Illinois, protesting against the passage of the Smith-Burnett immigration bill; to the Committee on Immigration and Naturalization.

By Mr. SCULLY: Petition of citizens of Perth Amboy, N. J., favoring House joint resolution 377, to prohibit export of arms; to the Committee on Foreign Affairs.

Also, petition of Mercer County (N. J.) Branch of American Federation of Catholic Societies, against use of the mails by publication called the Menace; to the Committee on the Post Office and Post Roads.

By Mr. STEPHENS of California: Petition of 150 citizens of Los Angeles, Cal., protesting against Senate bill 6865, prohibiting sale of liquors in District of Columbia; to the Committee on the District of Columbia.

By Mr. STEPHENS of Texas: Memorial of the Memphis (Tex.) Commercial Club, favoring Federal aid in building a national highway from the Gulf of Mexico to Denver, Colo., via Memphis, Tex.; to the Committee on Roads.

By Mr. THACHER: Memorial of board of trustees of the German Baptist Church of Boston, Mass., favoring passage of bill to prohibit export of war material; to the Committee on Foreign Affairs.

By Mr. VOLLMER: Petitions of 880 American citizens for the adoption of House joint resolution 377, to prohibit the export of war material; to the Committee on Foreign Affairs.

By Mr. YOUNG of North Dakota: Memorial of German-American Alliance of Gladstone, N. Dak., favoring resolution to prohibit export of war material; to the Committee on Foreign Affairs.

HOUSE OF REPRESENTATIVES.

SATURDAY, *January 30, 1915.*

The House was called to order at 11 o'clock a. m. by Mr. UNDERWOOD, as Speaker pro tempore.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

O Lord, our Lord, how excellent is Thy name in all the earth, who hast set Thy glory above the heavens.

Help us, we pray Thee, to set our glory above the material, that we may rise out of the eating, drinking, counting man into the realms of the higher values; that truth may be stronger than wealth, nobility of soul than the plaudits of men, righteousness than temporal power; that our souls may touch the Eternal Soul and bring us into perfect harmony with the eternal fitness of things, after the manner of the Christ. And Thine be the praise forever. Amen.

The Journal of the proceedings of yesterday was read and approved.

SEGREGATION OF RACES IN STREET CARS.

Mr. WALTERS. Mr. Speaker, I ask unanimous consent that I may have three legislative days in which to file a minority report on the bill (H. R. 1718) to require all transportation companies, firms, and persons within the District of Columbia to provide separate accommodations for the white and negro races and to prescribe punishments and penalties for violating its provisions (H. Rept. 1340, pt. 2).

The SPEAKER pro tempore. The gentleman from Pennsylvania [Mr. WALTERS] asks unanimous consent that he may have three legislative days in which to file a minority report on the bill H. R. 1718. Is there objection?

There was no objection.

WILBER H. ESTEY.

Mr. LLOYD. Mr. Speaker, I present the following privileged resolution from the Committee on Accounts.

The SPEAKER pro tempore. The gentleman from Missouri [Mr. LLOYD] presents a privileged resolution from the Committee on Accounts, which the Clerk will report.

The Clerk read as follows:

House resolution 686 (H. Rept. 1339).

Whereas Wilber H. Estey was the clerk of the Hon. Edwin A. Merritt, jr., late a Member of the United States House of Representatives from the thirty-first district of the State of New York, and is not entitled to compensation under the law as such clerk after the death of the said Hon. Edwin A. Merritt, jr.: Therefore be it

Resolved, That the Clerk of the House is hereby authorized and directed to pay to Wilber H. Estey, out of the contingent fund of the House, the sum of $125, being an amount equal to one month's salary of a clerk of a Member of the House.

Mr. LLOYD. It is just following a precedent that has been established.

The SPEAKER pro tempore. The question is on agreeing to the resolution.

The resolution was agreed to.

PRINTING THE PRESIDENT'S VETO MESSAGE ON THE IMMIGRATION BILL (H. DOC. NO. 1527).

Mr. BARNHART. Mr. Speaker, some days ago, when the President's message vetoing the immigration bill was read on the floor of the House, the usual request followed for the publication of that message, and it was objected to. Since that time several resolutions have been introduced and referred to the Committee on Printing asking for the publication of this message. As a House document there have been printed 420 copies of the President's message in a pamphlet, which also carries the full text of the Burnett immigration bill. As a House document we are entitled under the present arrangement to 420 copies of it—not enough to supply one copy to each Member—but the Joint Committee on Printing under the law has the privilege of ordering a reprint of any public document to a number costing not more than $200. Under this law I have signed an order, as chairman of the Committee on Printing, for the publication of $200 worth of copies of this message and the bill combined, which will furnish 23,250 copies for the document room. I want to announce, so that the announcement may appear in the RECORD, that those copies will probably be available for Members to-morrow morning, and if that number does not prove sufficient and the demand is really pressing for more, the resolutions that have been introduced will then be considered by the Committee on Printing.

INTERNATIONAL CONGRESS ON EDUCATION.

Mr. RAKER. Mr. Speaker, I want to present a request for unanimous consent. On July 8, 1914, Senate joint resolution 157 was passed, and request was made by unanimous consent to lay on the table the House resolution—House joint resolution 291. The Clerk made a mistake and laid on the table House joint resolution 273, which was reported favorably from the Committee on Foreign Affairs, and which is a somewhat similar resolution to the Senate resolution 186.

I ask that the RECORD be corrected, and also the Journal, and that the House joint resolution 273 take its place on the calendar, as it would have done if this mistake had not been made. It is Calendar No. 246.

Mr. MANN. Mr. Speaker, I think it is too late to correct the RECORD and the Journal of this Congress. As I understand, under the order of the House, which was intended to apply to one resolution, the clerks were a little confused by resolutions covering somewhat the same subject and laid the wrong resolution on the table. I suggest to the gentleman that he ask unanimous consent to have that resolution taken from the table and restored to the calendar and that the proper resolution be laid on the table.

Mr. RAKER. Mr. Speaker, I ask, then, that the House joint resolution 273 be taken from the table and restored to the calendar.

The SPEAKER pro tempore. The request of the gentleman from California [Mr. RAKER] is that House resolution 273 be taken from the table and restored to the calendar. Is there objection?

There was no objection.

NAVAL APPROPRIATION BILL.

Mr. PADGETT. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 20975, the naval appropriation bill.

The motion was agreed to.

The SPEAKER pro tempore. The gentleman from Virginia [Mr. HAY] will take the chair.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 20975, the naval appropriation bill, with Mr. HAY in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the further consideration of the bill 20975, the naval appropriation bill, which the Clerk will report by title.

The Clerk read as follows:

A bill (H. R. 20975) making appropriations for the naval service for the fiscal year ending June 30, 1916, and for other purposes.

Mr. GILLETT. Mr. Chairman, I have for many years voted against large armaments. I have thought that the rule of force, the doctrine that might makes right, was steadily yielding to the enlightened love of justice, that a respect for the opinion of the civilized world was supplanting respect for the sword, and that in international life, as in private life, an appeal to law and to courts was displacing the appeal to battle.

I confess that recent events have caused me to revise my opinions. Among those nations which we have considered most progressive and civilized has suddenly burst forth a worship of force, a reversion to the primitive savage type, a lawless selfishness, a disregard of sacred obligations, of pity, of mercy, and of humanity, which is depressing and confounding. There is only one encouraging symptom. Amidst all this wreck of civilization there has issued from every nation involved an appeal to the judgment of the neutral world and an attempt to absolve itself from responsibility, which indicates a consciousness that after all there is another arbitrament than the sword and that the tribunal of public opinion is still recognized, respected, and feared. But there is no escape from the discouraging fact that in this enlightened age innocence will not insure against attack and that a nation which leads in the race of civilization may with cold-blooded deliberation plunge into a war of selfish aggression. What is our duty under these new conditions?

Although the shock may well disturb our complacent sense of security, we must not allow it to frighten us into hysterical apprehension or excite us into belligerent emulation. It is, above all, a time when we should keep calm and try to determine our necessities with cool and even-tempered judgment, without panic and without bellicose ambition. A navy and an army are not playthings to be indulged in from a jealous vanity that will not be content while our neighbor's toys are better than ours; they are simply a method of insuring possessions, and as in all forms of insurance the difficult problem is to ascertain truly the risk. That will be rated differently according to one's temperament, environment, and interest. Allowing that everyone was equally impartial, the results would differ greatly. By weighing as carefully as I can the various elements I have made up my mind what premium of insurance I think it wise to pay, and with diffidence and a profound recognition that only a real prophet could be certain that his conclusions were right I submit my opinion.

The first point to determine is the danger to be insured against. While the present European condition safeguards us against immediate attack, yet at the same time it vividly impresses us with the terrible effects of war and how science and invention have so changed conditions that a mighty but unequipped nation is helpless before a relatively small army furnished with modern engines of destruction, which can prevent the most heroic valor and endless numbers ever approaching near enough to inflict injury, and which can mow their irresistible way to certain victory. When the present European war ends is there danger that the victorious weapons will be turned against us? If there is, we can not too quickly begin to train our soldiers by the hundreds of thousands and manufacture artillery and ammunition on a corresponding scale, for if either side shall completely triumph it will possess the fleets of all and could easily sweep us from the sea and land here an army against which our enormous but untrained population would be helpless. Against such an attack the preparations urged by the most extreme and apprehensive advocates of increased defenses would be impotent; we need not to increase, but to revolutionize our whole system. The end of a war does not, as is sometimes suggested, leave the victor weak, but he is generally at the maximum of his fighting power and ready for new conquests, and we must recognize that it is easier to-day than ever before for one nation to be permanent masters of the world. A hundred years ago, when France had subjugated Europe, the means of transporting troops and intelligence were so slow and armaments so simple that the subject nations could organize and equip armies before their conqueror could prevent them. To-day if one power were mistress of Europe it could disarm other nations and forbid their organizing new armies, and so omnipotent is artillery and so slow its manufacture and so rapid transmission of news and troops that the conqueror, perfectly armed, could suppress any outbreak before it became formidable and keep all nations in permanent subjection. It is not difficult to conceive that if a military power should once establish its supremacy—by a complete victory, for instance, in the present war—it might disarm the rest of Europe, compel the other nations by annual tribute to support its armies permanently with perfect equipment, and thus establish a complete and inviolable despotism until perhaps after long years the demoralizing disintegration of such a military aristocracy worked its own downfall.

But I think that danger is slight. It does not look as if either side was likely to win a complete triumph, and in that case their mutual jealousies and fears will protect us in the future as in the past. And yet it is possible to conceive that if Germany should win and emerge completely master of Europe she might look across the ocean and see this commercial, helpless people, gorged with the wealth which had accumulated here while European capital was wasted and destroyed; and she might, without even a pretext except lust of power and dominion, send across and tie us to her chariot wheels with the rest of Europe. But, while conceivable, I do not think that danger is probable enough to warrant any expenditure to forestall it. Any ordinary preparation would be wasted; it must be either thorough or none at all. I have too high an opinion of the German character to insure against such an unprovoked aggression.

If, on the other hand, the allies should completely triumph whom have we to fear? Certainly not France. Certainly not Russia. England is the only possible menace. And an unprovoked attack from England is quite as inconceivable as from Germany. England is governed by public opinion. Its great English colonies are dependent only in name. They can separate when they will. She can have no ambition or hope to again annex us to the Crown. She can never become a great military despotism. I do not believe that, if she should be a victor in this war, she would wish to direct her newly developed military prowess against us. At any rate, I would risk waiting till the end of this war before insuring against that danger.

There is, indeed, one prolific source of conflict—the Monroe doctrine. That has never been acknowledged by Europe; it has no basis in law or convention or natural justice; it is a threat which we publish against a whole hemisphere, and whose only sanction can be in the physical force behind it. Its original purpose, of course, long ago passed away. For generations there has been no danger that any European nation would interfere in South America in order to perpetuate monarchical institutions. The motives which inspired the Holy Alliance would no longer actuate any European nation. But the doctrine which developed as a defense and protest against that alliance is still worshiped as a fetish, although its original motive is lost and it is perverted to quite different ends. I see no justification for it now in law or reason except self-interest, and that, when given as an excuse for breach of law, has not of late met much favor. No nation has ever cared to raise the issue with us, but if the prize was great enough or if our weakness was manifest, I can easily imagine that a nation might challenge the Monroe doctrine and assert that we had no international right to decide what should become of South America. I see but one reason why we should be unwilling to have lands south of us colonized by Europe, and that is fear of a fortified base of operations against us. But England and France and Spain already have such harbors. Against them, therefore, the argument does not apply. And if Venezuela for the past 20 years had been under English control it would have been vastly better for Venezuela, for the United States, and for the world.

If France had succeeded in establishing its power in Mexico in the sixties and we had acquiesced, I do not think we or Mexico would have suffered from the change. It is not at all improbable that but for the present war European nations might recently have said to us, "The lives and property of our subjects are being sacrificed in Mexico by a government which you were instrumental in establishing. We demand that you secure safety for our subjects or we shall interfere ourselves." Or it is possible that they might have interfered without even the preliminary appeal to us. Some of the nations to the south of us seem to enjoy indulging in breaches of obligations and violations of the rights of others, and then hope to go unpunished because the Monroe doctrine makes us their sponsors and defenders. Such a one-sided doctrine needs revision or abandonment. To me it seems a most probable and prolific source of war.

There is one other possible antagonist—Japan. And I would like to say here that I appreciate how impolitic and unwise it is to thus discuss publicly our relations with other nations and to treat them as problematical enemies. The mere suggestion of such relations tends to weaken friendship. As a maiden has taken the first long step toward surrender when she contemplates with herself its possibility, so a nation makes more easy and probable a conflict when she openly discusses its possible causes and chances. I deprecate such debate. But it has been precipitated by others, has become general and absorbing, and the question of our preparedness for war can not be answered without its free consideration. But if the situation demands discussion and frankness, we can at least be considerate, friendly, and respectful; and I feel like admitting that the danger of collision with Japan lies not with her but with ourselves. The attitude of some of our States has been so contemptuous, has so singled the Japanese out for unfriendly legislation, that you can not blame a high-spirited and powerful people, which has of late given so many proofs of its equality both as a nation and as individuals, if it resents bitterly being treated as an inferior and an outcast. Nor does it seem improbable that if this discourteous and irritating conduct continues it may cause a wave of outraged resentment to sweep the Japanese people into a hostile outbreak. We can not leave those who give just cause for such an attack to suffer alone, and must come to their defense. But in such a war, while I recognize that Japan could put in the field an army which would readily overwhelm ours, yet I believe our Navy is superior and that she would never dare attempt a landing on our shores. The Philippines, of course, we would lose. We would not even pretend to defend them outside of our forts. Any warships we had there would steam for home, and it would not take Japan long to overrun the country.

I have never been able to see why we should fortify those islands, for we could never defend them against any strong oriental power. But I should not mourn over their loss, because I have always considered them a burden rather than an advantage. I would gladly sell them now for what they cost us, and the natives would doubtless gladly be sold except for the hope that from us they will some day receive independence. But after the Philippines were lost I can not see that a war with Japan alone would have any serious effect on either combatant. Neither side would dare to send its navy to the distant home of its enemy, and we could but hurl epithets at each other across the Pacific, only varied by an occasional daring raid. Our Navy is certainly not so weak that it should fear attack in our own waters, and I can not conceive it so strong that public opinion would allow it to go 4,000 miles from home. Against war with Japan I do not think we are unprepared, and I am ashamed to admit that if such a war should come, it would probably be due to the unreasonable and unfeeling conduct of our own people. If we will but be patient and reasonable, and not follow demagogues, the problem of Japanese immigration can be satisfactorily solved through diplomatic channels. Japan does not wish her people to emigrate here, but she does not wish our laws to discriminate against her alone.

There is one other danger against which we must insure, and that is our emotional, self-satisfied, undisciplined spirit, which is constantly inflamed by the flatteries of Fourth of July orators claiming that we can whip a world in arms, and which might blaze up on any slight provocation and drive even a reluctant administration into war. Or we may have Presidents who will attack another nation because of the punctilio of a salute and who may not have the prudence to select an opponent of inferior size. A nation always ready to fight at the drop of the hat ought indeed to be fully armed, and one great benefit from this agitation about our preparedness for war is that it may convince us that it is wise to be less aggressive and belligerent and overbearing and more just and reasonable and pacific in our relations with other nations. It may make us realize that for war we are not a first-class power, and that instead of being able to "lick all creation" there is not a nation with a modern army which, if once landed on our shores, could not march resistlessly all over our continent. The army of Germany, Austria, Russia, France, England, Italy, Japan—any one of them could easily overthrow any force we could muster and take possession of our richest cities. If we wish to indulge our tendency to be self-willed and arbitrary and unyielding and dictatorial, then this war teaches us that we ought to begin to spend hundreds of millions a year in military preparations to defend that tendency. Unless we will be considerate and pacific and reasonable, we certainly are unprepared. But I should be glad to have our condition force upon us those commendable qualities.

One branch of our defense is thorough and adequate—our coast protections—and the criticism of it seems to me either blind to its real purposes or misinformed. Coast defenses are meant for a temporary check, not a permanent defense. They are not designed to protect us against an adversary whose army and navy are both superior to ours. Such an opponent, after demolishing our Navy, has but to land on an unfortified part of the coast and take our cities from the rear. We are protected against a sudden naval raid and nothing more. But against any adversary who does not dare land an army our coast defenses are impregnable. I do not believe a hostile navy would dare to attack them. Here and there may be a weak spot easily remedied, and while our guns must keep pace with the increasing power of the guns on battleships, we need not fear that our protected cities are in any danger of assault

by sea. An insufficient quota of trained artillerists for a full war basis is their greatest weakness.

I have thus discussed our dangers and our weakness. There is nothing hidden about them. Anyone can see them. They are not novel, though the present war has taught some new lessons. Their imminence and seriousness is a matter on which men will necessarily differ. How much risk you are willing to take will depend on temperament. To insure against all risk, we ought first to have a trained and equipped army of at least 500,000 men, with a reserve of as many more. That involves an annual additional expense just about equal to the present cost of the National Government. It involves conscription and compulsory service and a vast pension list, for the attempt to provide an adequate reserve by the militia has pitifully failed.

I think few persons would think the insurance worth the cost under present conditions. They would take the risk of waiting till the end of the present war. Between that establishment and our present Army, which is small but efficient, and capable of meeting any emergencies which may arise on this continent alone, I see no rational stopping place, unless it is to provide an ample garrison for Hawaii.

With the Navy the question to me is more difficult. With the recent changes in construction and ordnance, and the lessons taught by recent naval battles, the efficient force of our Navy is hard to estimate. I think here we can not afford to deteriorate, and, though I have misgivings about the distribution of the present appropriation, yet I have decided to support the program of the committee.

I am not without strong hope that the end of this war will solve some of our questionings. For a generation Europe has been an armed camp, with cost steadily mounting. We became so accustomed to it that we began to talk about it as an assurance of peace, and to persuade ourselves that handling the weapons of war did not beget war. But at last the crash came, and we see now how inevitable it was, and that these stupendous preparations could not be wasted forever. But their permanent expense is unbearable, and we must hope that in the treaties of peace some provision for general disarmament and the release into private activities of these enormous masses of men and of expenditure will be provided. When that glad day comes we can judge better of our duty. It may come before the appropriations in this bill are even allotted and change all our planning.

Meanwhile, the sensational agitation for an increase of our military establishment may have one unintended good result, if it brings home to us the fact that though perhaps the richest we are by no means the strongest nation of the world; that our wealth and commercial absorption is a temptation to a poorer but more martial nation to pick a quarrel with us, and so is a liability as well as an asset; and that arrogance and swagger are as unsafe as they are unbecoming. It may teach us that forbearance and courtesy are as prudent as they are admirable.

We have tried to lead in the movement for peace among nations, not, I believe, simply because it was for our interest, but because we thought it would benefit the whole world. This war has cruelly demolished that ideal. It has postponed indefinitely the realization of our hopes. But it ought not to discourage our purpose. It certainly shows in more lurid light than ever before the hideousness and destructiveness of war, the fallacy of the doctrine that the consciousness of great military power promotes peace.

If we wish to rank as an equal among the great military powers of the world, and to be absolutely secure against aggression or insult, and to be able ourselves to be domineering and self-willed, then I agree our only safe course is to double our Navy and increase our Army fivefold. But if we are willing to tread the more honorable path of justice and moderation and forbearance, relying upon the delicate balance of power in Europe to protect us in the future as it has in the past, and hoping that the treaty of peace will effectually curtail and limit future dangers and expenditures, then the appropriations we are this year making for our Army and our Navy are, in my opinion, a sufficient insurance against the risks which we can reasonably apprehend.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

PAY, MISCELLANEOUS.

The Secretary of the Navy shall send to Congress at the beginning of its next regular session a complete schedule or list showing the amount of money of all pay and for all allowances for each grade of officers in the Navy, including retired officers, and for all officers included in this act and for all enlisted men so included.

Mr. MANN. Mr. Chairman, I reserve a point of order on the paragraph.

The CHAIRMAN. The gentleman from Illinois reserves the point of order on the paragraph.

Mr. MANN. If I recall correctly, this same paragraph is in the current law?

Mr. PADGETT. Yes.

Mr. MANN. What is the object of repeating it? How many times do you want the Secretary of the Navy to send a report to Congress giving precisely the same information?

Mr. PADGETT. It shows the officers who have been changed each year, and it shows the expenditures during each fiscal year. It gives to Congress the benefit of the information.

Mr. MANN. I may not know what this means, and probably do not. I supposed when it was in the bill last year that it was intended to furnish the Congress information as to how much pay and allowances were granted to each grade of the Navy—not the total sum that had been paid for the preceding fiscal year. That is information that comes in the estimates, anyhow. The pay and allowances of each grade of the Navy do not vary from year to year.

Mr. PADGETT. No, sir.

Mr. MANN. What is the use of publishing it every year in an annual report?

Mr. PADGETT. The amount changes from year to year.

Mr. MANN. Yes; but that is the total. I supposed the purpose of this was so that we could find out how much the pay and allowances of a lieutenant or a lieutenant commander and other officers after so many years' service amounted to.

Mr. PADGETT. It was that, and also to give a report of the expenditure in the different grades.

Mr. MANN. That is not what it says. What was the report made by the Secretary in December?

Mr. PADGETT. He reported what is paid to the different grades.

Mr. MANN. In a separate report?

Mr. PADGETT. No; in the estimates.

Mr. MANN. He gives that every year, and always has done it. That is not a compliance with this section of the law. I do not know; it may be necessary to enact it every year to get the Secretary to act on it. I do not think he has made any report this year.

Mr. PADGETT. I do not recollect of any except in the estimates.

Mr. MANN. But that is not a compliance with this provision. We have had a provision in the law requiring him to make a report so that Members of Congress may know something which they never yet have been able to find out—how much the pay and allowances of naval officers amount to. I dare say that no member of the committee can tell offhand.

Mr. PADGETT. No; not offhand; but I think you will find it set out in the Yearbook.

Mr. MANN. You can find there that they have allowances for light and heat, and so forth, and you may make a computation yourself; but when you have done that you will find that they have medical attention, or something else of that sort which you did not know anything about and which you have not included. I suppose it was to give that information, which I think would be very valuable, but I see no objection in putting it into the bill every year. If we get it once, we will have it until there is a change in the law. The fact is the Secretary of the Navy has not complied with the law that we put in the last bill. I will not make a point of order now; but if he does not comply with the law this year I will make it in the next. Mr. Chairman, I withdraw the point of order.

Mr. MOORE. Will the gentleman yield?

Mr. PADGETT. Yes.

Mr. MOORE. I did not understand the chairman to say that a report had actually been made in accordance with this provision last year.

Mr. PADGETT. I said it was contained in the estimates, and then there is information given in the yearbook and also in the statistics issued by the department showing the allowances to each grade.

Mr. MOORE. If my recollection is correct, there was a desire to ascertain the amount paid to retired officers as distinguished from those in the active service.

Mr. PADGETT. If the gentleman will turn to page 1077 of the estimates, he will find the detailed expenses of the pay of the Navy. He will see that it takes up the grade of admiral and the different grades and gives it in detail.

Mr. MOORE. I thank the gentleman for the reference; but was it not the intent to obtain a separate report from the Secretary of the Navy which should be sent to Congress?

Mr. PADGETT. Beginning on page 1077 of the estimates, in appendix F, the gentleman will find a detailed estimate "for pay of the Navy, an estimate of the amount required to pay

officers of the United States Navy on the active list for the fiscal year ending June 30, 1916," and it is continued for several pages.

Mr. MOORE. Is there anything in that statement which indicates how much money is paid to the retired officers and the officers on the active list?

Mr. PADGETT. Yes; it shows the pay for active officers, and also at the various navy yards. I have not gone through it in detail.

Mr. MOORE. I do not wish to put the gentleman to any inconvenience, or to take up his time. The point is, is there any method by which Congress receives information as to the amount of money provided for in this bill that goes to the retired officers of the Navy?

Mr. PADGETT. Yes; on page 25 of the bill the gentleman will find pay and allowances of the officers on the retired list.

Mr. MOORE. What is the total amount?

Mr. PADGETT. Three million seventy thousand two hundred and thirty dollars.

Mr. SLOAN. Will the gentleman yield?

Mr. PADGETT. Yes.

Mr. SLOAN. How many of these Books of Estimates are sent to Congress, and are they for general distribution?

Mr. PADGETT. They are for general distribution, and are distributed through the document room.

Mr. SLOAN. How many are provided?

Mr. PADGETT. I do not know; there is an ample number. The gentleman can get them by applying to the document room.

Mr. BORLAND. Will the gentleman yield?

Mr. PADGETT. I will.

Mr. BORLAND. I understood the gentleman to say, in reply to the gentleman from Pennsylvania [Mr. MOORE], that the total annual expense for the officers on the retired list was over $3,000,000.

Mr. PADGETT. Three million seventy thousand two hundred and thirty dollars is the amount carried in the present bill.

Mr. BORLAND. That is the annual expense?

Mr. PADGETT. Yes.

Mr. BORLAND. How does that compare with the amount that other nations expend for officers on the retired list?

Mr. MOORE. Mr. Chairman, I yield to the gentleman from Missouri [Mr. BORLAND].

Mr. PADGETT. Mr. Chairman, I could not say exactly as to other nations, but it is much higher. The pay on the active list and the pay on the retired list is higher in the United States than in any foreign country. In all foreign countries except England they have conscription both in the army and in the navy.

Mr. BORLAND. England is the only country that relies on volunteer enlistment, as we do?

Mr. PADGETT. Yes.

Mr. BORLAND. England carries a retired pay of considerable size?

Mr. PADGETT. Yes; but her active and retired pay are both lower than in the United States.

Mr. BORLAND. England's Navy is much larger than ours—practically double, is it not?

Mr. PADGETT. Yes.

Mr. BORLAND. And the gentleman says our expense for officers on the retired list is larger than England's?

Mr. PADGETT. I do not know the totals. I am talking relatively. In other words, the allowance we make to officers on the retired list is greater than the allowance England makes. What the total is I am not prepared to say.

Mr. BORLAND. The gentleman has not the total. Is that to be found in any figures in the report?

Mr. PADGETT. No; I have not got it in my report. Mr. Chairman, I desire to make a statement for the benefit of the House.

The CHAIRMAN. The gentleman from Tennessee is recognized for five minutes.

Mr. PADGETT. Mr. Chairman, I have been asked as to what would be the course of procedure to-day—about how long we would continue in session. I will say that it is my desire to run until about 6 o'clock, but not to hold a night session. There were some Members who wanted to know whether there would be a night session. It is not my purpose to ask for a night session, but I would be glad to continue until 6 o'clock.

Mr. BUTLER. Mr. Chairman, we have been holding pretty long hours this week, and 6 o'clock is pretty late. Would it not depend upon the progress that we make with the bill?

Mr. PADGETT. If we can make first-class progress, we may get some time off that, but I would be very glad to run until 6 o'clock, if we can, but I shall not ask for a night session.

Mr. HAMLIN. Mr. Chairman, I am willing to concede to all men on this floor equal love of country and equal patriotism, but I also note on this question, as on most all other big questions, a diversity of opinion.

But, may I make this suggestion? I believe that the duties of a Member of Congress can be summed up in this one statement: That while serving in this capacity we are the guardians of the people's liberties, prosperity, and peace, and that the greatest of these is peace.

I believe that if President Wilson has done nothing else or shall do nothing else than to successfully steer the ship of state off the rocks of war, and thereby preserve the peace of our people, he will be entitled to have erected to his memory a monument towering toward the skies, bearing this inscription: "First in peace, always in peace, and forever in the hearts of his countrymen."

Mr. Chairman, I am willing to concede that we all earnestly desire peace, but differ only in the mode of preserving it. I am quite willing to concede to the "big Navy" advocates absolute sincerity of purpose; that they honestly believe that the best way—in fact, the only way—to successfully maintain peace with the other nations of the earth is to have a Navy big enough to blow them off the face of the earth if they do not remain steadfastly our friends. To this barbarous doctrine every fiber of my being dissents. I believe that such an idea is not only immoral, but fraught with great danger to the peace of the world.

You can not long keep a man your friend through fear, but you can make him your friend throughout time and eternity by kindness, which will ripen into love.

Mr. Chairman, I have walked up and down Pennsylvania Avenue, this city, with impunity and in absolute security for 10 years. Why? Not because all the savage instincts of man have disappeared—for if so, we would not now have any advocates of a big navy with us—but because I went about my business showing no disposition to interfere with the rights and liberties of any other man. But I apprehend that if I were to have donned a sombrero with a rattlesnake band on it, my trousers tucked in my boot tops, a red bandana handkerchief tied around my neck and a six-shooter buckled around me and a cigar in my mouth elevated at an angle of 45° and started down the Avenue that I would have been lucky to have got as far as Seventh Street before I would have found trouble with some fellow. Nations are not unlike individuals, for a nation is simply an aggregation of individuals. If a nation dons its war paint and buckles on 60 or 70 big battleships, with 40 or 50 submarines concealed in its bootlegs, and starts strutting out over the ocean highways, it is almost sure to run amuck with the inevitable result that that nation is instantly compelled to offer thousands of its best young men upon the altar as a sacrifice to the gods of war. Mr. Chairman, if I had a thousand boys, not one of them would enter the Army or Navy if I could prevent it in any way except as a volunteer citizen soldier, and only then to fight in the defense of their homes and their liberties.

It is a lamentable fact that as soon as the average man puts on the uniform, especially if he happens to be decorated with the insignia of an officer, he immediately conceives a supreme contempt for the civil authority. Ah! More still. His moral ideas seem to undergo a radical change. I fear it is too often true that the lesson of love for his God and his fellow man, lessons which he learned at his mother's knee, is forgotten, and not only that, but he seems to forget his God and learns to hate his fellow man. Do you say that I have put it too strongly? I would only be glad to know that I had, but I fear that I have not. There came to my desk yesterday, and I presume others received it, a pamphlet prepared by Dr. William White, the emeritus professor of surgery in the University of Pennsylvania. In that document I find extracts from the writings of an eminent military man, a citizen of one of the countries now engaged in the terrible war raging in Europe. It is surely the creed of the devotees of the mistaken doctrine of "preparedness." One can scarcely believe that in this age of civilization such astounding and iconoclastic statements could find utterance anywhere, but after all we can not deny that they are but the actions of the militarist expressed in words. Let me read you some of them:

A WAR PRIMER FOR AMERICANS.

Self-preservation is the State's highest ideal and justifies whatever action it may take if that action be conducive to that end. The State is the sole judge of the morality of its action. It is, in fact, above morality, or, in other words, whatever is necessary is moral.

* * * * * * *

Any nation in favor of collective humanity outside the limits of the State and nationality is impossible.

War is a biological necessity of the first importance, a regulative element in the life of mankind which can not be dispensed with, since with-

out it an unhealthy development will follow, which excludes every advancement of the race, and therefore all real civilization.

Just as increase of population forms under certain circumstances a convincing argument for war, so industrial conditions may compel the same result.

* * * * * * *

We can, fortunately, assert the impossibility of efforts after peace ever attaining their ultimate object in a world bristling with arms, where a healthy egoism still directs the policy of most countries.

We ought to know that there is no such thing as eternal peace.

* * * * * * *

War is in itself a good thing. It is a biological necessity of the first importance.

The inevitableness, the idealism, the blessing of war as an indispensable and stimulating law of development must be repeatedly emphasized.

War is the greatest factor in the furtherance of culture and power.

Efforts to secure peace are extraordinarily detrimental as soon as they can influence politics.

Efforts directed toward the abolition of war are not only foolish but absolutely immoral, and must be stigmatized as unworthy of the human race.

* * * * * * *

Efforts for peace would, if they attained their goal, lead to general degeneration, as happens everywhere in nature where the struggle for existence is eliminated.

Huge armaments are in themselves desirable. They are the most necessary precondition of our national health.

* * * * * * *

The State's highest moral duty is to increase its power.

The State is justified in making conquests whenever its own advantage seems to require additional territory.

Mr. HUMPHREY of Washington. Mr. Chairman, will the gentleman yield for a question?

Mr. HAMLIN. Mr. Chairman, I have only a few minutes, but I will yield for just a question.

Mr. HUMPHREY of Washington. I want to ask the gentleman whether in view of the notice that has been served on the State Department he thinks the shipping bill is a measure that is steering toward peace?

Mr. HAMLIN. I think it is. I see nothing to the contrary.

Mr. BUTLER. May I ask the gentleman a question?

Mr. HAMLIN. Yes.

Mr. BUTLER. Did we not have a war with Mexico last year?

Mr. HAMLIN. Oh, no.

Mr. BUTLER. I think history will put it down as a war.

Mr. HAMLIN. I do not think that the gentleman will conclude that the little skirmish at Vera Cruz amounted to a war.

Mr. BUTLER. Where we seized a port of a friendly nation?

Mr. HAMLIN. And then voluntarily withdrew.

Mr. GARDNER. Mr. Chairman, will not the gentleman tell us who the author is from whom he is reading?

Mr. HAMLIN. I have just stated that I am reading from a pamphlet prepared by Dr. J. William White, professor emeritus of the University of Pennsylvania.

Mr. GARDNER. But who is the author he is quoting there?

Mr. HAMLIN. The gentleman can consult the document.

The CHAIRMAN. Does the gentleman from Missouri yield?

Mr. HAMLIN. The gentleman from Missouri will state that the gentleman from Massachusetts can consult the document, and from that can obtain the information which he desires.

Mr. GARDNER. Why does the gentleman conceal that information from the House at this time?

Mr. HAMLIN. Under the circumstances the gentleman from Missouri feels that it would perhaps be the best thing not to state the name of the author.

Mr. GARDNER. Is the name of the author Treitschke?

Mr. HAMLIN. The gentleman can consult the document.

Mr. GARDNER. In other words, he is reading from a German author?

Mr. HAMLIN. Mr. Chairman, I decline to yield further.

The CHAIRMAN. The gentleman from Missouri declines to yield further. The time of the gentleman from Missouri has expired.

Mr. HAMLIN. Mr. Chairman, I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. Is there objection?

Mr. MOORE. Mr. Chairman, reserving the right to object, I desire to say just at this point—and I am not going to object—that Dr. J. William White, whom the gentleman quotes, is one of the most eminent physicians in this country, but he has written a book on just one side of the question.

Mr. HAMLIN. I am neither indorsing nor condemning Dr. J. William White's opinions.

Mr. MOORE. I merely wanted to state that in fairness to the gentleman.

Mr. HAMLIN. I am only reading extracts from writings of his in which he makes certain quotations.

Mr. Chairman, I am for peace, and I do not believe that the best way to secure and maintain peace is to prepare for war. Preparedness precipitates war. The so-called "small Navy" advocates are not alone in that opinion. There reached me through the mail, from what source I do not know, a document entitled "Austrian and Hungarian Notabilities on the War."

In this document I find an open letter to one of our colleagues, Mr. BARTHOLDT, from Missouri. This letter seems to have been written by the very eminent Baron Ernest von Plener, a member of the Austrian House of Lords. The following is a quotation from his letter:

OPEN LETTER TO MR. BARTHOLDT FROM BARON ERNEST VON PLENER, MEMBER OF THE AUSTRIAN HOUSE OF LORDS, OF THE COUNCIL OF THE INTERPARLIAMENTARY UNION, AND OF THE INTERNATIONAL ARBITRATION COURT.

DEAR MR. BARTHOLDT: As an old colleague of yours in the Council of the Interparliamentary Union, I have always highly appreciated your fair judgment and your impartial views; therefore I take the liberty to address to you a few remarks on the origin and real scope of the present war.

The English ministers and newspapers pretend that this war is a necessity and a justified necessity, for it is waged, they say, to put down the intolerable militarism of Germany, which, according to their opinion, is a standing menace to civilization, democracy, and the peace of the world. Now, let us look at the facts, and let us examine whether this war was really brought about by the military policy of Germany or whether the armaments of Germany and Austria-Hungary were not rather provoked by the aggressive military measures of Russia, France, and England.

Since the Morocco crisis the armaments of all European powers were increasing. The annual military expenditure rises in the years from 1908 to 1912 in all States by a little more than 20 per cent; the naval estimates of England rose in that period from 32.3 million pounds to 51.6 million pounds, or more than 59 per cent. The annual levy of recruits in France rose from 248,503 in 1906 to 276,000 in 1910–11, the rank and file of the French Army from 563,000 to 602,766 men, whereas Germany, with a much larger population, did not increase the peace footing of her army. The closer diplomatic connection between France and Russia brought on a positive agreement between the general staffs of the two armies, the purport of which far exceeded the terms of a mere political alliance. England drew the threads between the two allied powers tighter and tighter, and with the increase of her fleet the fighting power of the triple entente surpassed already then that of the triple alliance. In 1912 a new start in the armaments began. In Russia an extraordinary military credit of 1,350,000,000 rubles besides the regular estimates was passed by the Duma, which in the next year voted a supplementary extraordinary credit of 222,000,000 rubles. During the Balkan war Russia began the so-called trial mobilizations, retaining the men of the reserve force much longer in the front and thus increasing the rank and file of her army. The Balkan war had shifted still more the military balance, as the Balkan States, which mostly sided with the triple entente, came out with greater armies. Under these circumstances Austria-Hungary was obliged to increase her annual number of recruits for the common army from 103,100 to 159,500 men, bringing the peace footing from 293,800 to 344,000 men; a comparatively small increase of both landwehrs was a consequence of this measure. Germany, whose army counted in 1911 only 515,321 and in 1912 544,211 men (without officers and noncommissioned officers), could neither be indifferent to Russian armaments, so she raised it in 1913 to 661,176 men. Then followed France, who, under the avowed pressure of Russia, reintroduced the three-years' service and brought her rank and file by this measure to 734,292. Russia continued the system of trial mobilization, prolonging thereby the active service by four till five months, and since 1912 she retained the whole class, which ought to have been discharged, so that her peace strength rose from 1,520,000 to 1,829,000 men. Austria-Hungary, against whom these menacing forces were chiefly directed, increased in the spring of 1914 her levy for the common army by 5,600 men, and for the both landwehrs accordingly, a trifle in comparison with the Russian armaments.

Can anyone with these facts before him reasonably pretend that Germany is the moving agent of militarism in Europe? It was, on the contrary, the clear design of the triple entente to organize and increase her forces, so that they might eventually be superior to those of Germany and Austria-Hungary. It was England who, by her reckless building of battleships, stretched to the utmost the military and naval exertion of all the other States and so prepared the war.

Mr. Chairman, you will observe that he is endeavoring to place the blame on some other nation rather than his own for setting all Europe on fire.

Naturally none of the nations now engaged in that war wants to take the responsibility for that inhuman slaughter. But I especially call your attention to the causes which he says led up to that terrible war. He outlines, by giving the figures, the shameful race of the nations over there in preparing for war by increasing the number of men in their armies—men who were to be the victims to be offered as a sacrifice to the unholy god of war. But note what he says anent the building of battleships:

It was England who by her reckless building of battleships stretched to the utmost the military and naval exertion of all other States, and so prepared the war.

May we not take a lesson from this? We all agree that we want peace; then let us prepare for peace, and not war. Let us quit playing the "tumble bug," by looking one way and pushing the other.

We are about to authorize this year the building of two additional battleships, at a cost to the people of about $35,000,000. Can we justify this expenditure of the public money at this time? I do not believe that we can.

How much more glorious and Christlike it would be, while the world stands appalled at the fearful slaughter of human beings in Europe, if this Nation, instead of building great battleships, would lead the world back to the paths of peace and

to the principle taught by the Prince of Peace. This I conceive to be both our mission and our duty.

Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

Mr. GARDNER. If the gentleman from Missouri is going to talk that way, I shall object.

The CHAIRMAN. The gentleman from Massachusetts objects.

Mr. HAMLIN. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

Mr. MOORE. Mr. Chairman, I ask unanimous consent that the gentleman from Missouri be permitted to continue——

Mr. GARDNER. Mr. Chairman, unless the gentleman will print in the RECORD——

Mr. MANN. Mr. Chairman, I call for the regular order. Courtesy is wasted on the gentleman from Massachusetts.

Mr. GARDNER. Mr. Chairman, I call the gentleman to order; he is talking without recognition.

Mr. MANN. So is the gentleman.

The Clerk read as follows:

For commissions and interest; transportation of funds; exchange; mileage to officers while traveling under orders in the United States, and for actual personal expenses of officers while traveling abroad under orders, and for traveling expenses of civilian employees, and for actual and necessary traveling expenses of midshipmen while proceeding from their homes to the Naval Academy for examination and appointment as midshipmen; for actual traveling expenses of female nurses; actual expenses of officers while on shore patrol duty; for rent of buildings and offices not in navy yards, including the rental of offices in the District of Columbia; expenses of courts-martial, prisoners and prisons, and courts of inquiry, boards of inspection, examining boards, with clerks' and witnesses' fees, and traveling expenses and costs; stationery and recording; religious books; expenses of purchasing paymasters' offices of the various cities, including clerks, furniture, fuel, stationery, and incidental expenses; newspapers and periodicals for the naval service (hereafter subscriptions may be paid for in advance); all advertising for the Navy Department and its bureaus (except advertising for recruits for the Bureau of Navigation); copying; care of library, including the purchase of books, photographs, prints, manuscripts, and periodicals; ferriage; tolls; costs of suits; commissions, warrants, diplomas, and discharges; relief of vessels in distress; recovery of valuables from shipwrecks; quarantine expenses; reports; professional investigation; cost of special instruction at home and abroad, including maintenance of students and attachés; information from abroad, and the collection and classification thereof; all charges pertaining to the Navy Department and its bureaus for ice for the cooling of drinking water on shore (except at naval hospitals), telephone rentals and tolls, telegrams, cablegrams, and postage, foreign and domestic, and post-office box rentals; and other necessary and incidental expenses: *Provided*, That the sum to be paid out of this appropriation, under the direction of the Secretary of the Navy, for clerical, inspection, and messenger service in navy yards, naval stations, and purchasing pay offices for the fiscal year ending June 30, 1916, shall not exceed $290,000; in all, $1,000,000: *Provided further*, That the laws relating to annual leave contained in section 7 of the legislative act approved March 15, 1898, and the deficiency act approved July 7, 1898, shall hereafter apply to classified civil-service per diem employees of the clerical, drafting, inspection, chemical, messenger, and watch forces at navy yards, naval stations, offices of the United States inspectors of machinery and engineering material, offices of superintending naval constructors, and other offices and stations under the Navy Department.

Mr. MANN. Mr. Chairman, I reserve a point of order on the paragraph.

Mr. PAGE of North Carolina. Mr. Chairman, I make the point of order on the proviso.

The CHAIRMAN. Beginning in line 16?

Mr. PAGE of North Carolina. Beginning line 16, page 3, and ending with line 2, page 4.

The CHAIRMAN. Does the gentleman desire to be heard?

Mr. PADGETT. Mr. Chairman, I concede it is subject to a point of order.

The CHAIRMAN. The point of order is sustained.

Mr. MANN. Mr. Chairman, I still reserve a point of order on the paragraph.

The CHAIRMAN. The gentleman from Illinois reserves a point of order to the entire paragraph.

Mr. MOORE. I request the gentleman not to insist upon the point of order against this proviso, because that prevents a discussion which might show that there is great merit in the proposition.

The "per diem" employees are treated differently from other employees of the naval service with respect to leave. It is now useless to argue their case here, but in fairness to them I submit the following statement from some of my Philadelphia constituents:

In this connection it is stated that there are approximately 2,600 members of the clerical, drafting, inspection, chemical, messenger, and watch forces at the various navy yards and naval stations in the United States. These employees are members of the same group of the classified civil service as employees of the various legislative, executive, and judicial departments of the Government. They are required to conform to the same entrance-examination conditions, secure the same percentage from the examination in order to be placed upon the eligible list, and are subject to the same rules and regulations. In every respect they have exactly the same status as other members of the classified service, and yet they receive only 15 days' annual leave, while all other employees get 30.

At the present time employees are rated either per annum or per diem employees. The per annum employees receive 30 days' annual leave, while the per diem employees receive 15 days' leave. There are stationed at the various navy yards, inspection offices, and naval stations employees working side by side who are rated as per annum and per diem employees. The expression "per diem" is simply a measure of pay and not of employment. As an illustration, a per diem employee at the Navy Department would receive 30 days' leave, or, in other words, the same consideration as a per annum employee, but if that same employee were transferred to a navy yard, naval station, or other office under the Navy Department, he would receive only 15 days' leave.

It is evident from the above that employees of the same rating, doing the same kind of work, subject to the same rules and regulations, and under the same employer, are entitled to the same treatment in all respects, and at present the technical differences between per annum and per diem employers enables one group to receive 30 days' leave and the other 15. If the clause of the naval bill quoted above is passed by Congress, the inequality of treatment of employees described above will be eliminated.

Mr. HUMPHREY of Washington. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The motion is not in order, as the gentleman from Illinois has reserved a point of order on the paragraph.

Mr. HUMPHREY of Washington. Mr. Chairman, a few minutes ago the gentleman from Missouri [Mr. HAMLIN] took the floor and made a beautiful oration upon peace. I do not think there is any division in this House represented by that aisle upon the question of peace. So far as the President stands for neutrality, he has the undivided support of the American people and of the Representatives in this House; but the question I want to call attention to for a moment is that this morning, according to the press reports, we are notified by Sir Edward Grey that any attempt to buy interned vessels would be considered an unneutral act, and that that notice has been in the State Department for 10 days. Why has that information been kept from the public when the very question was being discussed——

Mr. BORLAND. Will the gentleman yield?

Mr. HUMPHREY of Washington. No; I will not yield.

Mr. BORLAND. Does the gentleman mean to say the State Department should make public all the information it has?

Mr. HUMPHREY of Washington. I do not yield to the gentleman.

Mr. BORLAND. Well, I make the point of order the gentleman is not discussing the paragraph under consideration.

Mr. HUMPHREY of Washington. Does the gentleman want to continue with this naval bill, or does he want to start some trouble?

Mr. BORLAND. I want the gentleman either to discuss the bill or permit a question.

Mr. MANN. Or let somebody else make his speech, and we are not going to have that.

Mr. BORLAND. Then, the gentleman can discuss the paragraph under consideration.

Mr. MANN. I make the point of order there is no quorum if the gentleman is going to have to yield to some one to make some other gentleman's speech.

Mr. HUMPHREY of Washington. The gentleman from Missouri a moment ago spoke for 10 minutes——

Mr. BORLAND. I make the point of order the gentleman is not confining his remarks to the paragraph under consideration.

Mr. HUMPHREY of Washington. Mr. Chairman, I make the point of order there is no quorum present.

The CHAIRMAN. The gentleman from Washington makes the point of order of no quorum. The Chair will count.

Mr. HUMPHREY of Washington. And you may have to keep one here the rest of the time you are discussing this bill.

The CHAIRMAN (after counting). Eighty-four gentlemen are present, not a quorum, and the Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

Adamson	Cantor	Eagle	Gudger
Aiken	Cantrill	Edwards	Hamill
Ainey	Carew	Elder	Hamilton, Mich.
Anthony	Carlin	Fairchild	Hamilton, N. Y.
Avis	Carter	Faison	Hart
Baker	Cary	Falconer	Helvering
Barchfeld	Clancy	Farr	Hill
Bartholdt	Claypool	Ferris	Hinebaugh
Bartlett	Collier	Finley	Holland
Beall, Tex.	Copley.	Floyd	Howard
Borland	Crosser	Francis	Hoxworth
Britten	Dale	Gallagher	Igoe
Brodbeck	Davenport	George	Jones
Brown, N. Y.	Davis	Gill	Keister
Brown, W. Va.	Difenderfer	Goodwin	Kelly, Pa.
Bruckner	Donohoe	Goulden	Kennedy, Iowa
Brumbaugh	Donovan	Graham, Ill.	Kent
Bulkley	Dooling	Graham, Pa.	Kindel
Burke, Pa.	Doremus	Green, Iowa	Kitchin
Byrnes, S. C.	Doughton	Gregg	Korbly
Calder	Driscoll	Griest	Kreider
Campbell	Dunn	Griffin	La Follette

Langham	Mondell	Prouty	Taggart
Langley	Morgan, La.	Ragsdale	Talbott Md.
Lee, Ga.	Morrison	Rauch	Talcott, N. Y.
L'Engle	Moss, Ind.	Riordan	Taylor, N. Y.
Levy	Mott	Roberts, Nev.	Townsend
Lewis, Pa.	Murdock	Rupley	Treadway
Lindbergh	Nelson	Sabath	Underhill
Lindquist	O'Brien	Scully	Vare
Linthicum	Oglesby	Sells	Volstead
Lobeck	O'Shaunessy	Sherwood	Walsh
Lott	Paige, Mass.	Shreve	Whitacre
Logue	Patton, Pa.	Small	White
McGuire, Okla.	Peterson	Smith, Idaho	Wilson, Fla.
Mahan	Platt	Smith, N. Y.	Wilson, N. Y.
Maher	Pou	Smith, Saml. W.	Winslow
Metz	Price	Stanley	Woodruff.

Thereupon the committee rose; and Mr. UNDERWOOD, having assumed the chair as Speaker pro tempore, Mr. HAY, Chairman of the Committee of the Whole House on the state of the Union, having under consideration the bill H. R. 20975, the naval appropriation bill, reported that that committee, finding itself without a quorum, he had caused the roll to be called, when 272 Members answered to their names, a quorum, and that he presented therewith the names of the absentees for printing in the Journal.

The committee resumed its session.

The CHAIRMAN. The gentleman from Illinois reserved a point of order on the paragraph.

Mr. MANN. I would like to ask the chairman of the committee in reference to the matter of subscription. I have no objection to authorizing subscriptions for newspapers and periodicals to be paid in advance. It says:

Newspapers and periodicals for the naval service (hereafter subscriptions may be paid for in advance).

I would like to know how it will be possible for anybody who is printing a volume of the Revised Statutes, bringing the permanent law down to date, to put that in. If you put in the law that subscriptions may be paid for in advance, of course that would be repealing the existing law and allow anything. If you want to identify what is intended, then you have to copy two pages of an appropriation bill. Now, I make a suggestion to the gentleman—this being subject to a point of order—that he strike out there, if he wants to make this paragraph law, and put it in form at the end of the paragraph that "hereafter subscriptions for newspapers and periodicals for the naval service may be paid for in advance out of appropriations made for such purposes." Then one would know what it means.

Mr. PADGETT. I am perfectly willing to accept the suggestion of the gentleman.

Mr. MANN. The gentleman withdraws the point of order. Will the gentleman from Tennessee offer an amendment? I want to make a point of order on the language on page 2, lines 21 and 22, which reads:

Hereafter subscriptions may be paid for in advance.

The CHAIRMAN. The point of order is sustained. The gentleman from Tennessee offers an amendment, which the Clerk will report.

The Clerk read as follows:

Insert at the end of the paragraph the following: "Hereafter subscriptions for newspapers and periodicals for the naval service may be paid for in advance out of appropriations made for such purpose."

Mr. COX. Mr. Chairman, I make a point of order against that.

Mr. PADGETT. Let me say to the gentleman this is only for official purposes, and under the ruling of the comptroller they can not be paid for.

Mr. COX. I think there is enough regular law in the naval appropriation bill. I make the point of order.

The CHAIRMAN. The point of order is sustained.

Mr. HAMLIN. Mr. Chairman, in the confusion a few moments ago I do not know whether I was granted leave to extend my remarks in the RECORD or not.

The CHAIRMAN. The gentleman was not. The gentleman from Massachusetts objected.

Mr. HAMLIN. Then, I ask unanimous consent to extend my remarks in the RECORD by printing some certain data that I was proceeding to read, and also some other data in regard to preparedness for war.

The CHAIRMAN. The gentleman from Missouri [Mr. HAMLIN] asks unanimous consent to extend his remarks in the RECORD. Is there objection?

Mr. HUMPHREY of Washington. I object.

The Clerk read as follows:

There shall be a chief of naval operations who shall be an officer on the active list of the Navy not below the grade of rear admiral, appointed for a term of four years by the President, by and with the advice and consent of the Senate, who, under the Secretary of the Navy, shall be responsible for the readiness of the Navy for war and be charged with its general direction. All orders issued by the chief of naval operations in performing the duties assigned him shall be performed under the authority of the Secretary of the Navy, and his orders shall be considered as emanating from the Secretary and shall have full force and effect as such. To assist the chief of naval operations in preparing general and detailed plans of war there shall be assigned for this exclusive duty not less than 15 officers of and above the rank of lieutenant commander of the Navy or major of the Marine Corps.

Mr. GRAY. Mr. Chairman, I reserve a point of order on this paragraph.

Mr. MANN. Mr. Chairman, I make a point of order against the paragraph.

Mr. PADGETT. I concede it.

Mr. HOBSON. Mr. Chairman, I do not concede it.

The CHAIRMAN. The Chair sustains the point of order, and the Clerk will read.

Mr. HOBSON. Mr. Chairman, I desire to discuss the point of order.

The CHAIRMAN. The Chair will hear the gentleman on the point of order very briefly.

Mr. HOBSON. I only desire to discuss it briefly, under the principle of the Holman rule. I will not make an extended statement, but I desire to call the Chairman's attention to the fact that this paragraph itself does not involve any expenditure, and, second, that its effect would be to very materially reduce the expenses of the Government under the present bill and under all future bills, and would enable a return to the Treasury of larger unexpended balances than have ever been so returned.

Now, there is nothing so wasteful as inefficiency. There is nothing so economical as efficiency, and with a given provision for naval or military status the injection of improved efficiency for any part of the establishment will of necessity result in economy of the operations in that part.

Now, to illustrate this concretely. I think the words of the president of the Navy War College would be more to the point than my own words, and I will read these for the Chairman's benefit. They occurred in an address delivered by the president of the War College of the Navy a few days ago before the Efficiency Club of New York, and it dealt with the question of efficiency in the Navy:

He said:

It is not my intention to go into questions of the efficiency of individual ships, the results of target practice, and kindred topics. I propose to deal with the efficiency of the Navy as a whole, considering it as a great and very complicated machine, upon which hundreds of millions of dollars have been expended, with one end in view, and only one—the development of a supremely efficient weapon for the defense of the country against any and every enemy which may come against us.

I was asked a few weeks ago what the War College considered that the fleet should do, and I replied:

"The War College considers that every effort of the fleet and every effort of the department in connection with the fleet should have for its sole aim the war efficiency of the fleet. Every effort which does not directly contribute to this end is in itself a wasteful expenditure of energy, and, so far as it is a diversion from this end, is distinctly harmful."

Now, Mr. Chairman, he then proceeds:

I am not one of those who hold that it is altogether inefficient. Unsatisfactory as conditions are, it would be very easy to exaggerate them. When things are wrong you can always find extremists to tell you that they are much worse than they actually are. Some people think that this is the only way to make an impression. Others are so constituted temperamentally that they can see nothing good in anything which falls short of perfection as they see it. * * *

There is much about the Navy which is splendidly efficient, but as a whole it is far less efficient than it can and ought to be. Our ships are fine. Our officers are capable, industrious, and ambitious. Our enlisted men are the equals of those in other navies. But efficient ships and officers and men do not alone make an efficient Navy. They must be welded into an efficient whole by a unity of organization and administration and purpose which coordinates their capabilities and directs their efforts toward a common end, wisely selected and very clearly seen. Here is the first point at which we are lacking.

Now, I do not desire to detain the Chair too long; but I wish to read further his specifications very briefly. I read:

I come now to what is perhaps the most important part of my subject—the organization of the Navy Department, viewed from the standpoint of efficiency. There can be no question that the existing organization is inadequate and would break down under the strain of war.

Mr. MANN. Mr. Chairman, I make the point of order that the gentleman is not discussing the point of order at all. He is discussing the merits of the proposition.

Mr. HOBSON. I am leading up to it directly.

Mr. MANN. The gentleman has been a long time leading and has not reached it yet; and therefore I make the point of order.

The CHAIRMAN. The gentleman will confine himself to the point of order.

Mr. HOBSON. I only ask the courtesy of the Chair, and I submit I am speaking to the Holman rule. That provision, in the first place, insures to the Treasury a larger unexpended balance than would be returned without it, and therefore it would result in a direct saving to the Government. But I can

not explain that in two minutes, since it involves the question of the efficiency of the whole organization.

The CHAIRMAN. The Chair will state to the gentleman from Alabama that unless he can show that a reduction of this expenditure appears as a necessary result from this provision in the bill, it would not come within the terms of the rule, notwithstanding some statement of opinion by somebody or by the gentleman himself. Even if the Chair himself believed that it would eventually reduce expenditures, yet that would not be sufficient, in the opinion of the Chair.

Mr. HOBSON. Suppose I could demonstrate that the operation of the Navy as a whole during the fiscal year provided for by this bill would be made more efficient, so that some of the activities required to be paid for would be found unnecessary and left out; if I could show that the efficiency of the naval service would be materially increased, would the Chair then consider the question of the point of order?

The CHAIRMAN. The Chair would not. The Chair will read the Holman rule to the gentleman.

Mr. HOBSON. I have just read it, Mr. Chairman.

The CHAIRMAN. Very well. If the gentleman has read the Holman rule and understands the Holman rule, he must understand that the paragraph is undoubtedly subject to a point of order.

Mr. HOBSON. Mr. Chairman, will the Chair excuse me once more? Has the Chair taken account of the question of the return to the Treasury of unexpended balances carried in the bill, and the fact that those are returned? Our present fiscal year will end by a return to the Treasury of more than $2,000,000, as I understand it, of unexpended balances from the operations of the previous year.

Now, if an amendment could be provided in the bill which would insure that under the operations during the fiscal year, under a greater efficiency, there would be a larger return to the Treasury of unexpended balances, would not that be exactly the equivalent, Mr. Chairman, of an amendment which would reduce expenditures? You might not be able to specify how much it would reduce in any particular paragraph the expenditures appropriated for in the bill itself, but——

The CHAIRMAN. The Chair thinks not. The Chair sustains the point of order.

Mr. HUMPHREYS of Mississippi. Mr. Chairman, I ask unanimous consent to extend my remarks by printing in the RECORD an account of the first battle between ironclads.

The CHAIRMAN. The gentleman from Mississippi [Mr. HUMPHREYS] asks unanimous consent to extend his remarks in the RECORD by printing an account of the first battle between ironclads. Is there objection?

Mr. MANN. Reserving the right to object, Mr. Chairman, what is this copied from?

Mr. HUMPHREYS of Mississippi. From the Vicksburg Herald. The editor of the paper is Capt. D. S. McNeely.

Mr. MANN. Is it original matter, or is it copied from some book?

Mr. HUMPHREYS of Mississippi. It is an article written for the Vicksburg Herald. Of course, there are a number of extracts and quotations made from different records.

Mr. MANN. How long is it?

Mr. HUMPHREYS of Mississippi. I think it would make about two columns in a newspaper.

The CHAIRMAN. Is there objection?

Mr. BARNHART. I object, Mr. Chairman.

The CHAIRMAN. The gentleman from Indiana [Mr. BARNHART] objects. The Clerk will read.

The Clerk read as follows:

Contingent, Navy: For all emergencies and extraordinary expenses, exclusive of personal services in the Navy Department or any of its subordinate bureaus or offices at Washington, D. C., arising at home or abroad, but impossible to be anticipated or classified, to be expended on the approval and authority of the Secretary of the Navy, and for such purposes as he may deem proper, $46,000: *Provided*, That the accounting officers of the Treasury are hereby authorized and directed to allow in the settlement of accounts of disbursing officers involved payments made under the appropriation "Contingent, Navy," to civilian employees appointed by the Navy Department for duty in and serving at naval stations maintained in the island possessions during the fiscal year 1916.

Mr. MANN. Mr. Chairman, I reserve a point of order on the paragraph.

Mr. DUPRÉ. Mr. Chairman, will the gentleman yield to me for a moment?

The CHAIRMAN. The gentleman from Illinois reserves a point of order on the paragraph.

Mr. MANN. Mr. Chairman, I would like to ask the gentleman from Tennessee [Mr. PADGETT] what is the object of continuing this proviso from year to year? I understand when the proviso first went in it was to permit certain accounts to be passed where, under an erroneous conception of the law, services had been rendered.

Mr. PADGETT. I am not able to explain why it has been in the bill in past years. I did not know but the same contingency might arise in the future.

Mr. MANN. Has it been in the bill for years?

Mr. PADGETT. It has been submitted in the estimates.

Mr. MANN. Oh, yes; the department frequently gets into the habit of wanting to do these things. I may be entirely mistaken, but I have a definite recollection that we put this in the bill before because they had employed certain civilian employees contrary to law, but in accordance with what they supposed was the law. Is it necessary now to continue that, when they know what the law is?

Mr. PADGETT. I am not prepared to answer definitely, but I think it would be safe to keep it in.

Mr. MANN. Very well. I will make the point of order on the proviso.

The CHAIRMAN. The gentleman from Illinois [Mr. MANN] makes a point of order on the proviso. The Chair sustains the point of order. The Clerk will read.

The Clerk read as follows:

Hereafter officers who now perform engineering duty on shore only and officers of the Construction Corps shall be eligible for any shore duty compatible with their rank and grade to which the Secretary of the Navy may assign them.

Mr. BORLAND. Mr. Chairman, I reserve a point of order on the paragraph.

Mr. DUPRÉ. Mr. Chairman, I move to strike out the last word. Will the gentleman withhold his point of order for a moment?

Mr. BORLAND. I will reserve it.

Mr. MANN. I make the point of order.

Mr. DUPRÉ. Will the gentleman withhold it for a moment.

Mr. MANN. The gentleman will get in later, when we really strike an appropriation.

Mr. DUPRÉ. What I have to say is not exactly applicable to the bill in question, but I think the gentleman from Illinois will be glad to hear it.

Mr. MANN. The gentleman had better wait until another paragraph is read. I make the point of order.

Mr. PADGETT. I will ask the gentleman what objection he has to this? We have inserted the word "Hereafter" in order to obviate the necessity of including the language in the bill every year.

Mr. MANN. I have no objection to it as a proper thing to do, but I am opposed to sticking in here a whole lot of legislation on this bill, which the committee ought to have reported as legislative propositions and taken up in the regular legislative manner.

Mr. PADGETT. This provision was in the bill last year.

Mr. MANN. Not in this form.

Mr. PADGETT. I know.

Mr. MANN. It was not carried as a proviso. It was in the bill as an annual matter for the current year, using the word "That" in place of the word "Hereafter."

Mr. PADGETT. That is true.

The CHAIRMAN. The Chair sustains the point of order.

Mr. PADGETT. I move to amend by offering the language in lines 9 to 12, inclusive, leaving out the word "Hereafter" and substituting for it "That."

The CHAIRMAN. The gentleman offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 5, after line 8, insert the following:

"That officers who now perform engineering duty on shore only and officers of the Construction Corps shall be eligible for any shore duty compatible with their rank and grade to which the Secretary of the Navy may assign them."

Mr. BORLAND. Mr. Chairman, I reserve a point of order on that. I should like to ask the chairman of the committee the purpose and operation of this. As I understand, it is to permit officers performing engineering duty on shore only and officers of the Construction Corps to be taken away from those duties and assigned to something else?

Mr. HUMPHREY of Washington. Mr. Chairman, I make a point of order against the paragraph.

Mr. PADGETT. I do not think it is subject to a point of order. It is a designation of the duties of these men. In the personnel act of 1899 it was provided that certain officers in the Engineer Corps should do engineering duty on shore alone. Last year we had this language, authorizing them to be detailed to do duty in the navy yards. It is not to take them from the

shore and put them on sea duty, but it is to allow the Secretary to use them in larger duty in the navy yards.

Mr. BORLAND. When they are taken away from the duty which the law specifies, must not their places be supplied by other men?

Mr. PADGETT. No; it just enlarges their duty. For instance, Capt. Burd, one of the most successful managers that we have, a man who has the largest experience in industrial work at the navy yards, has been made the superintendent of the New York Navy Yard under this language that was put in last year. If it were not for that language, he could not be allowed to do that duty, but would perform subordinate duty—some engineering work in the yard.

The CHAIRMAN. The Chair is ready to rule. The Chair overrules the point of order. The question is on the amendment proposed by the gentleman from Tennessee.

The amendment was agreed to.

The Clerk read as follows:

Aeronautics: The sum of $1,000,000 is hereby reappropriated, out of the total unobligated balances of all annual appropriations for the Naval Establishment for the fiscal year ending June 30, 1914, and made available for aeronautics, to be expended under the direction of the Secretary of the Navy for procuring, producing, constructing, operating, preserving, storing, and handling air craft and appurtenances, maintenance of air-craft stations, experimental work in development of aviation for naval purposes, and such other aeronautical purposes as the Secretary of the Navy may deem proper.

Mr. MANN. I make a point of order against the paragraph.

The CHAIRMAN. The gentleman from Illinois makes a point of order. The Chair will hear the gentleman on the point of order.

Mr. MANN. Mr. Chairman, I do not raise the point of order as to the right to make the appropriation, but as to the right to appropriate the total unobligated balances of all annual appropriations for the Naval Establishment for the fiscal year ended June 30, 1914, and to change the purpose for which those appropriations were made. I do not know just what is meant by the term "annual appropriations for the Naval Establishment." All of the appropriations made in this bill are annual appropriations, though many of them are made available until expended, some by the bill and others by the Revised Statutes. Now, the appropriations made last year are for the current fiscal year. A portion of them are made available until expended by the appropriation law, and many of them are made available until expended by the Revised Statutes. But this, if I read it correctly, would make all of the unobligated balances on July 1, to the extent of $1,000,000, available for a new purpose and change the law by which the money was appropriated for other purposes. I do not wish to take the time to discuss on a point of order the method of picking up a dollar here and a dollar there and a dollar somewhere else, in the form of unobligated balances, in order to make a new appropriation, but it is an abominable method of appropriation. It would take no more money out of the Treasury to appropriate $1,000,000 directly for the purpose, instead of directing somebody in the Treasury Department to determine what were unobligated balances, which it is impossible to determine for many months and probably years after the expiration of this fiscal year, in order to spend money for some purpose, theoretically but not in fact, because before they will know what the unobligated balances are this fiscal year will have expired.

Mr. PADGETT. Mr. Chairman, will the gentleman permit?

Mr. MANN. Certainly.

Mr. PADGETT. This is for the fiscal year 1914 and not for the present fiscal year, so that there can be no further obligations.

Mr. MANN. Oh, but there can be.

Mr. PADGETT. Oh, no.

Mr. MANN. Many of the appropriations in the appropriation law are made available until expended. There are many others for construction work under the general law made available until expended. You can find appropriations in the Navy Department for the fiscal year 1914 that will be a balance on the books 10 years from now.

Mr. PADGETT. I will call attention to the fact that there is a balance for transportation and navigation, $176,000; construction and repair, $1,030,000; equipment of vessels, construction and repair, $433,000; steam machinery, $446,000; equipment of vessels, steam engineering, $230,000; equipment of vessels, supplies and accounts, $110,000; making an aggregate of $2,427,539.76.

Now, I have a letter from the Secretary of the Navy stating that figuring up the accounts that have come in since the report was made——

Mr. MANN. Which shows that this report is inaccurate.

Mr. PADGETT. He states in the report that there will be additional items of more than $1,800,000 that can safely be reappropriated from these items.

Mr. MANN. I have no doubt of that, but that is not the point.

Mr. PADGETT. They are annual, they are not permanent appropriations.

Mr. MANN. That is not the point. If we start in on a system knowing that in nearly every appropriation there is some money left, to gather up these sums and reappropriate them as balances in the Treasury for different purposes, the Lord himself, with all His wisdom, could not tell where we stand financially at any time. The Navy Department has tried to state what the unobligated balances are, but they will not know until the accounts are all audited.

Mr. PADGETT. They know that there is nothing to reduce it below $1,800,000.

Mr. MANN. That has nothing to do with the point of order.

Mr. PADGETT. The point I make is that this being appropriated for 1914 no further obligations can be placed upon them. Therefore it is money that goes into the Treasury under the law, and can not be used by the department for any purpose except by authority of Congress, and that Congress can give authority to use that money which has not been obligated and can not be obligated under prior legislation; that it is perfectly competent in this bill to appropriate that money, to make it available for this purpose, because it is money in the Treasury which can not be used by the department, because the time for obligating it passed nearly a year ago.

Mr. MANN. Now, Mr. Chairman, the gentleman seems to assume that they can tell what the unobligated balances are. There are certain appropriations which can not be obligated after the close of the fiscal year for which they are made carried in the naval appropriation law, to which reference is made here. There are certain other appropriations which may be obligated until the money is all exhausted. It does not have to be obligated here, you can obligate it next year or the year after. Most of that is provided for in the appropriation law itself, and some apportioned by the Statutes at Large.

Now, under the law there is a provision that these appropriations which are not expended, where they do not remain available made for the fiscal year 1914, shall be covered back into the Treasury and become balances at the end of the year or two years' time from the end of the fiscal year. This committee has no authority to divert these appropriations, which are available until expended, nor has it any authority to change the law which requires that these appropriations shall be covered back into the Treasury in order to appropriate the money for another purpose.

Mr. FITZGERALD. Mr. Chairman, I make the further point of order that the appropriation is not authorized by law. There is no authority for the Secretary of the Navy to procure, produce, construct, or operate air craft, or to maintain air-craft stations, or to conduct experimental work in the development of aviation for naval purposes, or giving him general authority to spend appropriations for aeronautical purposes, as he may deem proper.

This paragraph proposes to confer on the Secretary of the Navy an authority which he does not have at the present time. I do not believe such authority can be found for the Chair as being possessed by the Secretary of the Navy. I have never known of any legislation which confers on the Secretary of the Navy authority either to establish or to maintain air-craft stations.

This paragraph further proposes to permit him to expend this appropriation as he may deem proper for aeronautical purposes. That is conferring a power that does not now exist.

Mr. STAFFORD. Mr. Chairman, just one word to supplement the argument of the gentleman from New York. Perhaps the chairman would like to know what was carried in last year's bill, so far as aviation was concerned. It says:

Aviation experiments: For experimental work and the development of aviation purposes, $10,000.

I recall distinctly, as does the Chair, that when this proposition was first placed in an appropriation bill it was in this form of language, and it is only for experimental purposes, whereas the clause under consideration provides for a permanent adjunct of the Navy.

Mr. PADGETT. I call attention to the fact that there are two or three other provisions in the current law of last year and the year before. There is a provision in the bill under "Steam engineering" and under "Construction and repair" for air craft. It seems to me, Mr. Chairman, that we have just as much right to appropriate this money as we have the right to appropriate any other money. It can not be used for any pur-

pose until it is authorized by Congress, and we can authorize its use for this purpose. If it were for the current year and could be obligated, we would be changing the law, because it would have been appropriated for a certain purpose, and the time had not expired for its use for that purpose; but this being for the fiscal year 1914, which terminated June 30, 1914, and there being no power to obligate this balance, it is money in the Treasury. I call further attention to the fact that we have air craft and we have stations. We have a station at Pensacola, Fla., where it is being maintained. It is in existence and is being maintained under appropriations heretofore made. I do not think that the point of order is well taken.

The CHAIRMAN. The Chair is prepared to rule. The point of order is made by the gentleman from Illinois. It appears that it has heretofore been decided that a reappropriation of an unexpended balance for an object authorized by law may be made on an appropriation bill for a similar object.

On February 12, 1897, the Post Office appropriation bill was under consideration in Committee of the Whole when the paragraph was read:

The Postmaster General is authorized to apply to the payment of the salaries of letter carriers for the fiscal year 1897 the sum of $23,000, being an unexpended balance of $13,500 of the appropriation for the current fiscal year for street letter boxes, posts, and pedestals, and an unexpended balance of $9,500 of the appropriation for the current fiscal year for package boxes.

On February 14, 1907, when the naval appropriation bill was under consideration in Committee of the Whole, this proviso was read:

And provided further, That the unexpended balances under appropriations "Provisions, Navy, for the fiscal years ending June 30, 1905 and 1906," are hereby reappropriated for "Provisions, Navy, for fiscal year ending June 30, 1908."

It was held that that was in order; but in this case the reappropriations asked for do not point out from what appropriations this reappropriation is asked, nor the specific amounts; nor does it appear that this appropriation is for a similar object. Therefore, the Chair, differentiating these decisions, which hold that a reappropriation is in order, is constrained to arrive at the conclusion that when the reappropriation is asked for it must specify from what appropriation heretofore made the reappropriation is asked and the specific amounts to be reappropriated. The Chair therefore sustains the point of order made by the gentleman from Illinois [Mr. MANN], and does not think it is necessary to pass on the point of order made by the gentleman from New York [Mr. FITZGERALD].

Mr. PADGETT. Mr. Chairman, I desire to offer an amendment.

Mr. MANN. Mr. Chairman, will the gentleman yield for a moment?

Mr. PADGETT. Yes.

Mr. MANN. Has the gentleman an amendment prepared upon this paragraph?

Mr. PADGETT. Yes.

Mr. MANN. Has it been carefully prepared?

Mr. PADGETT. No.

Mr. MANN. Why not pass it over until the gentleman can prepare an amendment carefully?

Mr. PADGETT. Mr. Chairman, I will ask unanimous consent to pass this provision with the permission to return to it when I can prepare an amendment.

Mr. FITZGERALD. I wish to be present at that time. Will it be at the conclusion of the bill?

Mr. MANN. Why not say that it will be when the bill is taken up the next day for consideration?

Mr. PADGETT. Yes.

Mr. FITZGERALD. I simply wish to know in order that I may be here.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent to pass over this subject until the bill is taken upon the first day after this day for the purpose of offering an amendment. Is there objection?

There was no objection.

The Clerk read as follows:

Arming and equipping Naval Militia: For the pay, subsistence, and transportation of such portion of the Naval Militia as shall engage in actual service or instruction afloat or on shore, and for pay, transportation, and subsistence of any part of the Naval Militia as shall participate in any cruise, maneuvers, field instruction, or encampment of any part of the Regular Navy afloat or on shore; for the purpose of providing for issue to the Naval Militia any stores and supplies or publications which are supplied to the Navy by any department; for the actual and necessary traveling expenses, together with a per diem to be established by the Secretary of the Navy, of the Naval Militia Board appointed by the Secretary of the Navy; and for the necessary clerical and office expenses of the Division of Naval Militia Affairs in the office of the Secretary of the Navy, $250,000.

Mr. FITZGERALD. Mr. Chairman, I reserve a point of order against the paragraph. Does not the legislative bill carry the clerical force of the Division of Naval Affairs in the office of the Secretary of the Navy?

Mr. PADGETT. No, sir; not entirely. Under the Naval Militia law in the Sixty-third Congress, a copy of which I have here, on page 7 it provides:

The actual and necessary traveling expenses of the members of such board, together with a per diem, to be established by the Secretary of the Navy, shall be paid to the members of the board. The expenses herein authorized, together with the necessary clerical and office expenses of the Division of the Naval Militia force in the office of the Secretary of the Navy shall constitute a charge against the whole sum annually appropriated under the appropriation for the arming and equipping of the Naval Militia in the annual appropriation for the Navy and shall be paid therefrom.

Mr. FITZGERALD. What is the date of that act?

Mr. PADGETT. February 16, 1914.

Mr. FITZGERALD. Mr. Chairman, in one respect that act has been modified, and that is by a change in the authorization of a per diem for the members of the Naval Militia Board. Under a more recent law there is a provision which prohibits the payment of more than $5 a day for actual expenses, although a rate of $4 a day may be established as a per diem in lieu of actual expenses. Section 13 of the act of August 1, 1914, for the sundry civil expenses of the Government, provides:

That the heads of executive departments and other Government establishments are authorized to prescribe per diem rates of allowance not exceeding $4 in lieu of subsistence to persons engaged in field work or traveling on official business outside of the District of Columbia and away from their designated posts of duty when not otherwise fixed by law. For the fiscal year 1916 and annually thereafter estimates of appropriations from which per diem allowances are to be paid shall specifically state the rates of such allowances.

I have sent for another act which limits the payment of more than $5 a day for actual expenses to any person. The provision in this bill permits a per diem to be established by the Secretary of the Navy without limitation. I do not wish to take the whole paragraph out, but I believe the gentleman should modify it to make it conform with the law.

Mr. PADGETT. Mr. Chairman, I have no objection to that.

Mr. FITZGERALD. The members of this Naval Militia board should not be allowed any higher per diem than is allowed to an other officer of the Government.

Mr. PADGETT. I am willing to accept such an amendment.

Mr. FITZGERALD. Then, I shall withdraw the point of order and suggest the insertion of an amendment that it be not to exceed $4 a day, to be established by the Secretary of the Navy.

Mr. PADGETT. Did the gentleman say $4 or $5 per day?

Mr. FITZGERALD. Four dollars in lieu of actual subsistence.

Mr. PADGETT. All right; just put it.

Mr. FITZGERALD. They can allow them $5 a day if they return a voucher for their actual expenses, but if they are to be allowed a per diem regardless of vouchers $4 is the limit.

Mr. PADGETT. All right; just offer the amendment.

Mr. FITZGERALD. I suggest to the chairman to insert after the words "per diem," in line 9, the words, "not to exceed $4," so it will read, "With a per diem not to exceed $4 to be established by the Secretary of the Navy."

The CHAIRMAN. The gentleman from New York offers an amendment which the Clerk will report.

The Clerk read as follows:

Amend, page 6, by inserting, after the words "per diem," in line 9, the words "not to exceed $4."

The question was taken, and the amendment was agreed to.

Mr. DUPRÉ. Mr. Chairman, I move to strike out the last word. Mr. Chairman, I take advantage of the silence of the parliamentary sharks who have been so much in action in the House this morning to ask the House to turn aside for a moment from the bloody naval engagements that we have been fighting here for the last day or two and take notice of the fact that to-day is the seventieth birthday of one of the most distinguished members of the Committee on Naval Affairs, my colleague, Gen. ALBERT ESTOPINAL. [Applause.] I think I voice the sentiment of the House when I steal a clever paraphrase of the toast of Old Rip which I heard the other day and say to the general, "I hope you will live as long as possible." [Applause.]

The Clerk read as follows:

Care of lepers, islands of Guam and Culion: Naval station, island of Guam: Maintenance and care of lepers, special patients, and for other purposes, including cost of transfer of lepers from Guam to the island of Culion, in the Philippines, and their maintenance, $14,000.

Mr. MOORE. Mr. Chairman, I move to strike out the last word.

Mr. MANN. Mr. Chairman, I reserve a point of order on the paragraph.

Mr. MOORE. Will the chairman of the committee advise us what interest the Federal Government has in paying for these lepers?

Mr. PADGETT. These were transferred under provision of law two years ago from Guam to one of the islands over there in the Philippines in order to segregate the lepers and get them away from Guam. They are on the island of Culion now. The whole expense is paid for under this appropriation, which has been running for a number of years.

Mr. MOORE. Well, do any lepers from the Philippines go to this island?

Mr. PADGETT. I think so.

Mr. MOORE. Has the question been raised as to whether the Philippine Government should pay this cost out of its own funds?

Mr. PADGETT. I do not now.

Mr. MOORE. We hear a great deal about the ability of the Philippine Government to take care of itself in matters of this kind, and it has been frequently commented upon that they receive very little assistance from the United States. May I ask the gentleman whether any other provision of this kind is contained in this bill?

Mr. PADGETT. No, sir; this is all.

Mr. MANN. Mr. Chairman, I withdraw the point of order.

Mr. MILLER. Mr. Chairman, I move to strike out the last word. I would like to inquire of the chairman of the committee; I notice this paragraph proposes to remove some lepers now at Guam.

Mr. PADGETT. They have been removed. This is language that was in the bill in order to take care of it if additional cases should arise, and the original language in the bill of several years ago is preserved. It was to free the island of Guam from lepers and place them at Culion instead of having a portion of them in one place and a portion in another.

Mr. MILLER. It is entirely proper, but I was wondering if there were any lepers remaining in Guam in any considerable number?

Mr. PADGETT. I do not know of any, but they have had them there for centuries, and a case might develop now and then.

Mr. MILLER. I will state to the gentleman I was there about a year ago, and at that time I was informed that the lepers had practically all been removed, but under this phraseology I thought it contemplated to remove some more.

Mr. PADGETT. I understand they have been removed, but if a case should arise they ought to have the power of dealing with it.

Mr. MILLER. One further inquiry. The amount appropriated herein is $14,000. Can the gentleman inform us how many lepers from Guam are now at Culion?

Mr. PADGETT. I do not know. That was disposed of several years ago, as I stated, and this amount is to take care of all the lepers confined at one place.

Mr. MILLER. Is there a separate account kept as to the expenses of caring for the lepers from Guam who are now at Culion?

Mr. PADGETT. I can not answer.

Mr. MILLER. Of course, the Philippine Government makes quite an extensive appropriation for the care of lepers at the Culion colony, and if we have transported some from Guam there, of course we ought to pay for them; but I was wondering if a separate account is kept or whether we gave a lump sum and they used so much for the care of the Guam lepers.

Mr. PADGETT. I can not say, but I do not think it is turned over in a lump sum. I think it is distributed in looking after and caring for the lepers.

The Clerk read as follows:

Recruiting: Expenses of recruiting for the naval service; rent of rendezvous and expenses of maintaining the same; advertising for and obtaining men and apprentice seamen; actual and necessary expenses in lieu of mileage to officers on duty with traveling recruiting parties, $130,000: *Provided*, That hereafter no part of any appropriation for the naval service shall be expended in recruiting seamen, ordinary seamen, or apprentice seamen unless, in case of minors, a certificate of birth or a verified written statement by the parents, or either of them, or in case of their death a verified written statement by the legal guardian, be first furnished to the recruiting officer, showing applicant to be of age required by naval regulations, which shall be presented with the application for enlistment; except in cases where such certificate is unobtainable, enlistment may be made when the recruiting officer is convinced that oath of applicant as to age is credible; but when it is afterwards found, upon evidence satisfactory to the Navy Department, that recruit has sworn falsely as to age, and is under 18 years of age at the time of enlistment, he shall, upon request of either parent, or, in case of their death, by the legal guardian, be released from service in the Navy upon payment of full cost of first outfit, unless in any given case the Secretary, in his discretion, shall relieve said recruit of such payment: *Provided*, That authority is hereby granted to employ the services of an advertising agency or agencies in advertising for recruits under such terms and conditions as are most advantageous to the Government.

Mr. McLAUGHLIN. Mr. Chairman——

Mr. MOORE. Mr. Chairman, I reserve a point of order on the proviso.

Mr. McLAUGHLIN. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The gentleman can not offer an amendment until the point of order is disposed of. Does the gentleman make the point of order?

Mr. FITZGERALD. Mr. Chairman, I reserve a point of order.

Mr. MOORE. Mr. Chairman, I do not make it, but I would like to have an explanation of this advertising proviso. Many lurid advertisements are posted in the cities. They are in the nature of inducements to young men to join the Navy for the purpose of seeing the world. The descriptive statements are very attractive and tend to lead young men to enlist because of the fraternal features of the service. I fear from requests that come along later asking for releases from the Navy that these highly colored advertisements may be overdrawn. I would like to ask the chairman's view of the matter.

Mr. PADGETT. I do not think there has been much of that to speak of in late years, and the Secretary has instituted a new policy, and whenever a man is dissatisfied in the Navy, instead of having to desert or run away he just lets him out. They have a waiting list for the Navy and have no trouble in keeping up recruits, and there is no trouble and no necessity for inducing the young men by any methods such as you have described.

Mr. MOORE. Can the gentleman tell us how much money is spent in advertising?

Mr. PADGETT. It is $14,519.39—a small amount.

Mr. MOORE. Does the proviso which precedes the advertising paragraph liberalize the department's treatment of the boys who enlist under age?

Mr. PADGETT. That has been the law for a number of years; and this year, instead of repeating the law as we have been doing, and as it has received the approval of the House a number of times, and instead of making it a limitation upon this bill and repeating it every year, we have made that the law, and thought we would just take it out without having to repeat it every year.

Mr. MOORE. The gentleman does not think, then, that the advertising for boys to enlist in the Navy has resulted in any abuse?

Mr. PADGETT. I do not.

Mr. COX. Mr. Chairman, I make a point of order against the last proviso. I have had enough trouble in regard to that in my district.

The CHAIRMAN. The Chair sustains the point of order. The gentleman from Michigan [Mr. McLAUGHLIN] offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 8, at end of line 11, add the following: "*Provided further*, That no part of the money hereby appropriated shall be used to pay for the printing, publishing, or circulating of posters, papers, or literature of any kind that in any respect gives misinformation as to the character of the service to be performed by men enlisted for service in the Navy or Marine Corps, or that is calculated to deceive men who apply for enlistment, or whose enlistment is sought by recruiting officers, as to the character of the service to be performed, the opportunities thereof, or advantage to be derived therefrom."

Mr. McLAUGHLIN. Mr. Chairman, inasmuch as the point of order was sustained to the proviso ending on line 14, I would ask unanimous consent that the amendment I offer be put in the proper place—at the end of line 11.

Mr. PADGETT. Mr. Chairman, I make a point of order against the amendment. Having stricken out the whole subject of advertising, the matter is not in the bill.

Mr. McLAUGHLIN. Mr. Chairman, I wish to be heard on the point of order.

The CHAIRMAN. The Chair will hear the gentleman.

Mr. McLAUGHLIN. The money to be used to carry on the recruiting service is not used altogether in advertising, or the printing and publishing of posters and literature of other kinds; it is not all paid to advertising agencies. Some advertising is done by and under the direction of the department itself, and my amendment is aimed at the correction of abuses by the department. It seems to me that the point of order is not good.

The CHAIRMAN. The Chair thinks the amendment is in order in the paragraph as to expenses for recruiting for the Naval Service. Now, this is simply a limitation on the expenditure of this appropriation. The gentleman from Michigan [Mr. McLAUGHLIN] is recognized for five minutes on his amendment.

Mr. McLAUGHLIN. Mr. Chairman, I am not satisfied with the answer made by the gentleman from Tennessee [Mr. PADGETT], the chairman of the committee, to the inquiry of the gentleman from Pennsylvania [Mr. MOORE] as to the character

of posters, literature, papers, and so on, printed by or under the direction of the Navy Department, and the methods employed by that department to secure enlistments. Every one of us has seen the great flaring posters, advertising in an attractive way, the Naval Service, and he knows they are calculated to deceive. Other papers and letters are issued by the department, or some agency employed by it, and some of them are calculated to deceive. They give misinformation as to the character of the service, its opportunities, and the advantages to be enjoyed by young men who engage in it. It seems to me the department can not be too careful in representations it makes to young men whom it would engage in its service. I venture to say there is not a Member on this floor but has had experience with the Navy Department in the matter of discipline imposed upon some young man from his district or in the matter of a desertion from the Navy, and he has learned that the young man enlisted on account of misrepresentation made to him by a recruiting officer or on account of a misunderstanding he received from posters or literature issued by or under the direction of the Navy Department. It is well known that enlistments about a year ago were obtained, a large number of them, I understand, by promises by the department, or by its authority, that foreign voyages would be taken, that enlisted men would have opportunity and advantage of visiting foreign countries, and when the men were enlisted and entered the service they found that no such voyages were even contemplated by the department. And so much trouble arose on account of those misrepresentations, or the subsequent attitude of the department, that some voyages were arranged and carried out.

Now, I insist that the department can not be too careful in the representations it makes, and in its methods and means of securing enlistments. A recruiting officer comes to a town and perhaps the first opportunity the boys there have ever had for coming in contact with a representative of the Government is then given them; they rely upon the representations he makes, and a deep and very unfavorable impression is made upon the youth of the country if his statements are false, or if the alluring advertisements which he displays are calculated to give a wrong impression of the service. Every one of them, or many of them, are actually false or misleading on their face. A boy is attracted, is unduly influenced by statements of the recruiting officer and by his beautiful pictures and alluring literature. He enters the service which he is led to believe offers great advantages and opportunities. Later he finds the service difficult and the discipline very severe, with few, if any, opportunities or advantages, such as he was led to believe he would enjoy.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. McLAUGHLIN. Mr. Chairman, I ask unanimous consent to continue for five minutes longer. I may not use it all.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. McLAUGHLIN. Further, in answer to the statement of the gentleman from Tennessee, the chairman of the committee, that young men may not find the service as attractive as they thought it was, and instead of deserting they are now permitted quietly and without trouble to retire, I wish to say that I think the gentleman overstates the situation. I know of a case where a young man on leave from his ship overstayed his time, and, on account of the experience he had on the ship, or on account of the severe discipline he had seen imposed in similar trifling cases, he was afraid to return. He remained away for a few days and communicated with his family and with me. I brought that matter to the attention of the Navy Department and offered to return the young man to his service, and he did voluntarily return. Some time elapsed before there was a trial, following an investigation of his case—perhaps several weeks—and when he was permitted to retire—permitted, as the gentleman from Tennessee says—it was on condition that his parents pay a large sum of money, an outrageous sum, it seems to me, to cover the expense, as it was called, of his outfit when he first enlisted. And added to that outrageous amount he was compelled to reimburse the Government by paying an additional sum; that is, the money he would have received from the time he left the ship until the end of the term of imprisonment—the entire pay that he might have received—not the money he did receive, but the money he would have received if he had not absented himself and remained away from his ship. And besides the money he was compelled to pay he was imprisoned 30 days.

Mr. CRAMTON. Mr. Chairman, will my colleague yield?

Mr. McLAUGHLIN. Yes.

Mr. CRAMTON. The gentleman is also aware, no doubt, that there are some cases where they are not even permitted to buy their way out under those conditions, especially cases where they have had somewhat of the benefit of the trade schools that have been established. I have in mind a case where a boy completed his first period of service and at the beginning of the second period received some of this benefit and became a coppersmith, and served part of his second year, and although his family needed his services to save their property they can not get him out even by buying.

Mr. McLAUGHLIN. Yes. Wrongs are committed that are difficult to characterize. There are wrongs in the system that exists in that department, and the young men are not properly treated. They are induced to enlist on account of misrepresentations made to them, and I am inclined to believe that the discipline is far too severe upon boys who come from patriotic homes to serve their country and, if necessity arises, to offer their lives in its defense.

I say these boys come from the patriotic homes of the country. Some of them are induced to leave school or to give up profitable employment. They are boys from our homes, accustomed to proper and considerate treatment; they are not tramps or outcasts of society, accustomed to the frowns and kicks and cuffs of those with whom they come in contact. They offer their services to their country, willing to do their duty, and in case of war—and service in war is always a possibility to those who enter the Navy—they are willing to offer their lives for the flag under which they enlist. The boys who are enlisting in the Navy are a credit to the service and to the country. They ought not to be deceived in order to induce them to enlist, and after enlistment they ought to be treated considerately and justly, consistent with proper and effective discipline, which discipline every intelligent man knows must be strict, and in some cases severe. If they are guilty of violating the regulations of the service; if, as in the case I have stated, they do not report for duty promptly after leave of absence; or, if by mishap they actually desert from the service, the punishment meted out to them and the treatment they receive ought not to be unnecessarily severe. In my judgment, the discipline and the punishment are in some cases too severe. In some cases called to my attention it is outrageous, and I am offering this amendment and calling the attention of the House and of the department to it with the hope that conditions may be radically changed and the objectionable features of the service as it relates to enlistment and service of the boys removed.

Mr. McKENZIE. Mr. Chairman, will the gentleman yield for a question?

Mr. McLAUGHLIN. Yes.

Mr. McKENZIE. Does the gentleman know of any general complaint being made by the boys in the Navy, or is it just an isolated case now and then?

Mr. McLAUGHLIN. I do not know how general the complaint is, but I was informed that the punishment imposed upon the young man I speak of and the money demands that were made upon him or upon his parents as a condition of his release from the service was the usual punishment and the usual money demand inflicted and imposed upon a boy who gets into the unfortunate condition in which this young man found himself as a result of carelessness, certainly without wrong intention. I believe these regulations, if they are general, are wrong and ought to be corrected.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. SHERLEY. Mr. Chairman, everybody agrees that false representations should not be made about anything. Certainly they ought not to be made about enlistment in either the Army or the Navy.

I do not agree entirely with the gentleman touching the situation. I have had a great many cases that came up, because I represent a city in which there is a very active recruiting both in the Army and in the Navy, and frequently the complaint of the boy has no basis in fact. Very frequently the young fellow happens to be out of a job or happens to be getting over a spree, and he concludes he will go into the Army or the Navy, without having seriously considered what it means. He gets in there and finds that he is required to do a day's work for a day's pay and to obey orders.

You will never have any army or navy fit to call by the name where a man is not required to obey orders. And then these young men either get homesick or they dislike the discipline or the change from their former free and easy life, and the first thing you know a request is made upon their Congressman to get them a discharge. It is surprising the amount of sickness that gets into a boy's family the moment a boy

enlists in the service, wants to get out, and it is surprising the number of other reasons that can be given.

Now, I thoroughly agree that if there are misrepresentations touching the service in either the Army or the Navy they should be stopped, but I do not believe that it is fair to the service to give the impression that young men are generally unfairly treated and that conditions in the service are such as to warrant young men shunning the service.

Most of the men I know are benefited by having served with the colors. I have in mind one particular instance in which a boy enlisted in the Navy. His mother came here to Washington and made a very pathetic appeal to get him out of the service, and there was some reason, because she was a poor woman and in extreme need. It was not possible to do it. That boy served out his enlistment, and one of the first acts he did after he had finished his enlistment was to come to me and say that he was glad that he had not gotten out of the service, that he had served those four years. The result of that service has been to make him a self-respecting man, a man who knew both how to take and give orders—and both are necessary in life—and he was a better citizen because of his service.

While I again repeat that I do not desire any misrepresentation of any sort, yet I think men ought carefully to weigh before they decide entering the Army or the Navy; but having entered it and having incurred obligations and having put the Government to expense, I think real men stand by their contracts, and there is a good deal of complaint made in life simply by the weaklings who do not want any sort of discipline placed upon them.

Mr. PADGETT. Mr. Chairman, I hope this amendment will not be agreed to. The committee has looked very carefully into this matter, and I do not think there is any necessity whatever for it. If there is any criticism whatever of the Navy, it is that the Secretary has gone too far on the side of leniency.

Now, there was, several years ago, too much rigidity, but the present Secretary has abrogated those rules and has gone to an extent where, as it appears in our hearings, the new rules that the present Secretary has put in force suggested a query from a number of the members of the committee as to whether or not he was not going too far on the side of ease and leniency in dealing with the boys, as against maintaining discipline. And so there is no criticism that can be made of the Secretary along that line, and I believe that members of the committee will indorse that statement.

Mr. MOORE. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Tennessee yield to the gentleman from Pennsylvania?

Mr. PADGETT. Yes.

Mr. MOORE. Will the gentleman inform the committee whether in the present state of the labor market there is any dearth of applicants for admission into the Navy?

Mr. PADGETT. I can state that I have a hearing here in which, last year, Admiral Blue stated that a tabulation was kept, and out of more than 5,000 who made application and enlisted in the Navy that were asked the reason why they enlisted, only about 318, I believe it was, stated that they had joined the Navy because they were out of work. The others gave other and different reasons.

Mr. MOORE. What is the present status of the applications? Have they enough?

Mr. PADGETT. They have a waiting list.

Mr. MOORE. There is a waiting list at this time?

Mr. PADGETT. Yes; and I want to state that the hearings showed, if I remember the figures correctly, that last year there was only one accepted out of six applicants. They sift them down to the best man and the best class of applicants.

Mr. MOORE. Then there is a greater number of applicants this year than the Navy can accommodate?

Mr. PADGETT. Far more.

Mr. MOORE. Did that condition prevail two years ago?

Mr. PADGETT. I think so.

Mr. MOORE. Does the gentleman mean to say that there was a waiting list two years ago?

Mr. PADGETT. In 1913; I think so.

Mr. MOORE. Was that so three years ago?

Mr. PADGETT. I am not prepared to answer.

Mr. MOORE. Is it not a fact that they were advertising then, because they needed men?

Mr. PADGETT. The Navy was not fully enlisted two years ago, but it is fully enlisted to-day.

Mr. MOORE. If the list is full and the Navy is turning away applicants, why is it necessary to advertise?

Mr. PADGETT. It is not at the present time; but we do not know what the condition is going to be a year from now.

Mr. COX. How many desertions are there from the Navy?

Mr. PADGETT. I can not give the gentleman the exact number, but I understand the percentage is gradually decreasing.

Mr. COX. Can the gentleman give an approximate percentage?

Mr. PADGETT. About 3 or 4 per cent.

Mr. COX. And the total enlisted naval strength is how much?

Mr. PADGETT. Fifty-two thousand and a few hundred this morning.

Mr. COX. And the desertions are between 3 and 4 per cent?

Mr. PADGETT. Yes; about that. I have a letter from the Secretary of the Navy this morning stating that the enlistment is entirely filled—52,000 and some hundred.

Mr. MANN. Mr. Chairman, the amendment offered by the gentleman from Michigan provides that it shall not be in order to issue literature of any kind containing misinformation which is calculated to deceive men who apply for enlistment or whose enlistment is sought by recruiting officers. Why should any gentleman object to providing that, in theory at least, the Government shall be on the square, and shall not be authorized to publish misinformation calculated to deceive young men?

Mr. PADGETT. Will the gentleman permit? I do not think there is any necessity for it, because the administration is not doing it.

Mr. MANN. I did not interrupt the gentleman in his statement.

Mr. PADGETT. I asked the gentleman if he would yield.

Mr. MANN. And then the gentleman proceeded before I did yield; but I will yield.

Mr. PADGETT. I thought the gentleman had yielded. The reason is because the administration is not publishing anything to deceive young men.

Mr. MANN. I heard the gentleman's statement.

Mr. PADGETT. I do not think it is necessary to insert that provision.

Mr. MANN. I heard the statement of the gentleman that he did not think it is necessary; but what objection can there be when other gentlemen charge, what everybody knows is true who has ever seen one of these circulars, that the Government issues matter which is calculated to deceive? I am not criticizing the Navy for attempting to fill up the ranks. I received a telegram yesterday morning from the secretary of the federation of labor in Chicago, stating that they appealed to me on a certain proposition in behalf of 250,000 laboring men in Chicago, most of whom are out of employment, and I assume that they know what the facts are. Of course, there is a waiting list in the Navy. With most of 250,000 laboring men out of employment in one city in the country, and the Navy Department buying foreign-made goods for the Navy and giving men no chance to work at an honest trade, why, they apply for a chance to be fed and have a little left over by seeking to enlist in the Navy. You could suppress all your literature, stop all your advertising, and simply indicate some place where men might enlist, and you could fill up the Navy three times in less than a week with men who are unemployed because of your foolish legislation. [Applause on the Republican side.]

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan.

The amendment was rejected.

The Clerk read as follows:

Gunnery exercises: Prizes, trophies, and badges for excellence in gunnery exercises and target practice; for the establishment and maintenance of shooting galleries, target houses, targets, and ranges; for hiring established ranges, and for transportation of civilian assistants and equipment to and from ranges, $99,800.

Mr. HULINGS. Mr. Chairman, I should like to ask the chairman of the committee what is the necessity for employing civilian assistants in these gunnery exercises, and if it is not possible for the service itself to provide all the necessary assistants in that particular?

Mr. PADGETT. No; it is not. In this target practice it is necessary to have certain civilian assistants for short periods of time.

Mr. HULINGS. Why is it necessary?

Mr. PADGETT. It is cheaper.

Mr. HULINGS. Is it any cheaper than to have the men do the work themselves?

Mr. PADGETT. Yes.

Mr. HULINGS. I know there is a theory in the Army and Navy, among a certain class, that it is rather derogatory to do any work, and therefore we see in all these bills provision made to employ men to keep these soldiers and sailors at their duty.

Mr. PADGETT. The bill has provided time out of mind for this appropriation, just as it does now.

Mr. HULINGS. The fact that it has provided for it time out of mind is not of itself any reason why it should be provided in the future.

Mr. PADGETT. I rather think so. I think what men find necessary is an argument. The common law grew up out of that.

Mr. HULINGS. I move to strike out, in line 5, page 9, the words "and for transportation of civilian assistants."

The CHAIRMAN. The gentleman from Pennsylvania offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 9, line 5, strike out the words "and for transportation of civilian assistants."

Mr. PADGETT. I hope the amendment will not be agreed to.

The amendment was rejected.

The Clerk read as follows:

Ocean and lake surveys: Hydrographic surveys, including the pay of the necessary hydrographic surveyors, cartographic draftsmen and recorders, and for the purchase and printing of nautical books, charts, and sailing directions, $105,000: *Provided*, That the Secretary of the Navy is authorized to detail such naval officers, not exceeding five, as may be necessary to the Hydrographic Office.

Mr. MANN. Mr. Chairman, I reserve a point of order on the paragraph. I would like to inquire first where it is proposed to have the printing done under this appropriation?

Mr. PADGETT. I do not know whether the Hydrographic Office itself does its own printing or not.

Mr. FITZGERALD. It does its own printing.

Mr. ROBERTS of Massachusetts. We were told by Capt. Washington that the cost of the printing was based on the estimates of the Public Printer. Whether that would indicate that the printing was to be done at the Government Printing Office I do not know.

Mr. FITZGERALD. The Hydrographic Office prints its own charts.

Mr. MANN. Then, if the cost is based on the estimates of the Government Printing Office, and they are to be printed there, why is not the item for printing carried where it belongs—in the sundry civil bill—instead of in this bill?

Mr. PADGETT. I want to say that I have a copy of some of the sailing directions here. I think there are about 38 volumes. They have to be rewritten and corrected and kept up to date, and the department is very much behind in this work. They have received notice from the British Admiralty that they will not hereafter furnish these sailing directions, and it is necessary that we should do that ourselves. In order to do it properly, it is necessary to have the work done by experienced naval men.

Mr. MANN. What does the British Admiralty do for sailing directions and charts of American waters?

Mr. PADGETT. They copy them from ours.

Mr. MANN. They can get ours, but they are not going to allow us to get theirs?

Mr. PADGETT. We have been purchasing theirs and using the English print.

Mr. ROBERTS of Massachusetts. We never have printed sailing directions for our own Navy. We have always depended on the British Admiralty for the books similar to those on the table before the chairman of the committee; covering all the naval waters, there are 38 volumes. Since the war has broken out the British Admiralty, through the selling agents, have notified the Hydrographic Office that no more sailing directions will be sold, as they are fearful that they may get into the hands of the enemy. We are further told by the Hydrographic Office that since the Admiralty has shut down, the Hydrographic Office of the Navy Department has been overwhelmed with requests from American merchants for sailing directions, and the Navy Department is not able to supply them. If we make this appropriation to print the sailing directions by the Navy Department, they can sell more than enough to pay the cost of the printing, and the Government will not only be self-supporting so far as providing the warships with sailing directions is concerned, but they will be able to make a profit on the sailing directions.

Mr. MANN. To get the information that I want to get a little more fully, I will ask the gentleman from Massachusetts a question. What do the merchant vessels of the world do now in reference to sailing directions?

Mr. ROBERTS of Massachusetts. Up to the time of the breaking out of the European war the merchant captains of the world could buy the British Sailing Directions from the agents in the various ports of the world. We had them in this country, where the Navy Department or any merchant captain could go and buy a book of sailing directions.

Mr. MANN. The question I asked the gentleman was, What do the captains of the merchant vessels do now?

Mr. ROBERTS of Massachusetts. They are doing without them, relying on the Coast Pilot for sailing directions.

Mr. MANN. Everybody knows that the gentleman from Massachusetts is mistaken about that. The merchant vessels of the world know a great deal more about sailing than the officers of the fleet will ever learn, because that is their whole business.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. PADGETT. Mr. Chairman, I ask that the gentleman's time be extended five minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. GARDNER. Will the gentleman yield?

Mr. MANN. Yes.

Mr. GARDNER. The gentleman from Illinois does not mean to say that our merchant vessels do not sail on British sailing directions, does he?

Mr. MANN. Certainly I do not; they do sail on them; and they get them without any difficulty, and they have always got them. When you talk about furnishing secret information to some enemy, why, every nation in the world has these charts; every merchant vessel that sails the seas; and it is nonsense to talk about secret information.

Mr. PADGETT. It is not secret information; it is public.

Mr. GARDNER. Is not this true, that vessels sail on the Coast Pilot and the Coast Pilot might be antiquated? It might not show a breakwater that had been recently constructed, or a new lighthouse, for instance. The merchant vessels and the smaller vessels often do not take pains to keep the Coast Pilot up to date.

Mr. MANN. They do attempt to keep the Coast Pilot up to date where they sail the seas.

Mr. GARDNER. Some do.

Mr. MANN. I do not know about those sailing out of the gentleman's district, but those on the Great Lakes do.

Mr. GARDNER. Oh, no; no self-respecting coastwise skipper would have one of those Coast Pilots aboard unless it was 20 years old.

Mr. MANN. They are that much behind the times. If the gentleman claims that, I will not deny it. [Laughter.]

Mr. PADGETT. I will read from a communication given us by Capt. Washington. In November last, he says, the following letter was received from the agent for the sale of British Admiralty Charts and Sailing Directions:

I am instructed to give notice that no supplies of Admiralty charts are to be made without authority to any European countries or subjects of those countries, with the exception of France, Russia, Greece, and Portugal. Applications for charts from all other parts of the world are to be submitted for consideration. Further, no sales are to be allowed to any customer until the bona fides of the purchaser has been satisfactorily proved and a certificate stating the name of the customer, nationality, service, and ship or shipping company for which the charts are required has been received.

Mr. MANN. Do they claim this is as the result of the war?

Mr. PADGETT. Yes.

Mr. FITZGERALD. Does not that apply to European countries exclusively?

Mr. PADGETT. No.

Mr. MANN. The gentleman will recall that last year they were insisting on the consideration of this bill, which was before the war broke out, that they must make themselves all of these foreign charts and cease to buy them. They made that claim then. The war comes along, and hence the claim is made that the war demands that this be done. They were insisting then that they had the power to do that, and the House on two occasions on a vote refused to give them that power.

Mr. PADGETT. Not only publishing the charts, but these Sailing Directions; and, as I said, there are 38 volumes.

Mr. MANN. No; it is what they are seeking now—power to print sailing charts for the entire world. They want to go into the business of making surveys all over the world, and printing the charts, and have different nations doing the same work over and over again. I can not imagine anything that is more expensively ridiculous than that.

Mr. FITZGERALD. These sailing charts are issued and printed from time to time, are they not?

Mr. PADGETT. Yes.

The CHAIRMAN (Mr. SHERLEY). The time of the gentleman from Illinois has expired.

Mr. PADGETT. Mr. Chairman, I desire to be recognized.

The CHAIRMAN. The gentleman from Tennessee is recognized.

Mr. FITZGERALD. Then, if the British Admiralty will not furnish the information about these charts, what are we going to do to make the corrections and changes necessary to keep them and make them of service instead of a menace to men who are relying upon them?

Mr. PADGETT. We have their charts up to date.

Mr. FITZGERALD. But our charts are changed every day almost. Even the charts that we issue of our own coast and the charts the British Admiralty issues of the coasts which they survey are changed and modified by the notations of new obstructions or new lights or improvements in rivers and harbors, or anything else that may be of use to the navigators. Are we to print these Sailing Directions, and then, unable to obtain the information that is necessary to keep them up to date, continue to sell these Sailing Directions that may be more of a menace than an advantage to those who use them?

Mr. PADGETT. No; they are to be corrected and made correct up to date.

Mr. FITZGERALD. How can they be corrected up to date if we can not buy any more?

Mr. PADGETT. We have them up to date.

Mr. ROBERTS of Massachusetts. Our own officers will correct them up to date.

Mr. FITZGERALD. We have not them up to date.

Mr. ROBERTS of Massachusetts. The last issue of the book is up to date, and our officers correct them from that on.

Mr. FITZGERALD. How are our officers going to correct them unless they have survey vessels?

Mr. ROBERTS of Massachusetts. It does not require surveys to correct sailing directions. The gentleman is confused as between charts and a book of sailing directions.

Mr. MANN. Of course it does not require a survey to correct a sailing direction, but it requires a survey to know whether you want to.

Mr. ROBERTS of Massachusetts. No, indeed; the corrections are for the most part from reports that come in through maritime channels and also through naval channels, changes in shoals, and newly discovered obstructions to navigation, and new landmarks, lighthouses, bell buoys, signals, and aids to navigation, and all those things. That is what goes into Sailing Directions and what needs correction.

Mr. FITZGERALD. These reports are sold either by the British Admiralty or the British Board of Trade.

Mr. MANN. Mr. Chairman, I make the point of order against the language in line 24, page 10, "and printing," specifically on the ground that this committee does not have jurisdiction over printing.

Mr. FITZGERALD. Mr. Chairman, I make the point of order to the authorization to detail five officers.

Mr. MANN. That is the proviso which has not yet been disposed of.

Mr. FITZGERALD. I want to be sure that that point of order will not be omitted.

Mr. MANN. First I make the point of order on this.

The CHAIRMAN. The gentleman from Illinois makes the point of order to the words "on printing," in line 24, page 10.

Mr. PADGETT. It is subject to the point of order.

The CHAIRMAN. The Chair sustains the point of order.

Mr. MANN. Mr. Chairman, reserving now the point of order on the proviso, what is the reason for the increase in the number of officers transferred?

Mr. PADGETT. They have four now, and it is stated that being so far behind on account of the war, and having to do so much work, they need additional officers. They wanted more than that, but the committee recommended one increase.

Mr. MANN. How much of an increase did they get last year?

Mr. PADGETT. One.

Mr. MANN. And they are further behind now than then?

Mr. ROBERTS of Massachusetts. Oh, no.

Mr. PADGETT. No.

Mr. MANN. Mr. Chairman, I would like to ask the question and get some answer to it without some one else trying to answer it. As I understand the gentleman, they are not further behind now than they were last year?

Mr. PADGETT. They are trying to catch up.

Mr. MANN. Notwithstanding the war, they are gaining?

Mr. PADGETT. I can not say that they are gaining.

Mr. MANN. Well, that is it; the gentleman answers one way and then when you get that answer and would ask another question he backs water. Are they gaining or not?

Mr. PADGETT. Well, I do not know.

Mr. MANN. Why did not the gentleman say so in the first place?

Mr. PADGETT. I did say so.

Mr. MANN. Until somebody answers who does know, I make the point of order.

Mr. ROBERTS of Massachusetts. If the gentleman will yield a moment. We are informed by the Chief of the Hydrographic Office that they need this additional officer to correct the sailing directions and get ready a large number of volumes for printing.

Mr. MANN. Well, let them use one of the four officers they have now to correct the needed sailing directions. What are they doing with them? Trying to correct 38 volumes in order to print them? That is the trouble with the Hydrographic Office, doing a lot of work it ought not to do instead of doing the work that is demanded——

Mr. ROBERTS of Massachusetts. Sailing directions are as necessary to the battleships as the compass is to the battleships.

Mr. MANN. Nobody ever disputed that. They need a great deal more than sailing directions on most battleships if they ever get to any place.

Mr. ROBERTS of Massachusetts. While we can not get the recognized sailing directions of the world because of the war in Europe, the gentleman from Illinois would have us continue in the position we are, whereby the United States will be under the thumb of some foreign nation for these needed sailing charts and sailing directions, and when the time of war comes in that foreign country we are absolutely without those needed charts and sailing directions, whereas the expenditure of a few thousand dollars would make us absolutely independent of any nation on earth.

Mr. MANN. I think the best place for the American fleet at present is in American waters. I make the point of order.

The CHAIRMAN. The gentleman from Illinois makes the point of order on the proviso. The Chair will be glad to hear from the gentleman from Tennessee.

Mr. PADGETT. I will ask the gentleman if he will not make it to the word "five" and let us have the language as it was last year?

Mr. MANN. I am willing to let it go at that if it is expected to stay there.

Mr. PADGETT. I do not know what the Senate is going to do.

Mr. BUTLER. Will the gentleman——

Mr. MANN. I am not quarreling with the committee now. I know what the gentleman expects to do; but I guess some of us will be here when the Senate amendment comes back. We knocked it out last year, and we can knock out the whole item. The Hydrographic Office will not stand scrutiny.

Mr. PADGETT. Mr. Chairman, I move to strike out the word "five" and insert the word "four."

The CHAIRMAN. Does the gentleman from Illinois withdraw the point of order?

Mr. MANN. The gentleman can offer his amendment afterwards.

The CHAIRMAN. The Chair sustains the point of order.

Mr. PADGETT. I offer an amendment to the proviso as printed with the substitution of the word "four" for the word "five."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 10, line 25, after the figures "$105,000," insert the following: "*Provided*, That the Secretary of the Navy is authorized to detail such naval officers, not exceeding four, which may be necessary to the Hydrographic Office."

The question was taken, and the amendment was agreed to.

Mr. FITZGERALD. Mr. Chairman, I offer an amendment to strike out, line 25, page 10, "$105,000" and insert "$80,000."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 10, line 25, strike out "$105,000" and insert in lieu thereof "$80,000."

Mr. PADGETT. Mr. Chairman, I was going to ask the gentleman to make his motion read $90,000, which was the amount of last year.

Mr. FITZGERALD. The gentleman can do that when I have finished what I have to say. Mr. Chairman, I have moved to strike out "$105,000" and insert "$80,000" because that is the amount the department estimated and requested Congress to provide. Ninety thousand dollars was appropriated for the current year. When the estimates of the Navy Department were being prepared the condition of the work in the Hydrographic Office must have been so very satisfactory that the department itself proposed to reduce the appropriation by 11 per cent. The estimates were prepared, it must be remembered, after the outbreak of the European war. The action of the agent of the British Admiralty in the sale of charts may not have been anticipated, but it was apparent to the department that $80,000 was the proper sum to request to carry on this work.

The Hydrographic Office has been for years endeavoring to reach out and grasp considerable power that Congress has repeatedly declined to permit it to exercise. All of the surveys, the furnishing of charts, Coast Pilots, and Sailing Directions for the coasts of the United States, including Alaska, the Philip-

pine Islands, Guam, the Hawaiian Islands, and entrances to the Panama Canal, are furnished by the Coast and Geodetic Survey. All information of a similar character on the Great Lakes is now furnished by the service in the War Department, which makes the Lake surveys.

The Hydrographic Office is supposed to make the surveys and soundings of certain other places and to correct and to keep up to date or to furnish charts of foreign countries. The $25,000 increase was proposed for the purpose of enabling the Hydrographic Office to print the 30 volumes of Sailing Directions heretofore mentioned. After the books are published additional or supplemental statements are continually issued in the form of leaves or pamphlets giving corrections and additional information which are absolutely essential if the books are to be used intelligently. We have no such system in existence, nor is it possible for the United States to institute a system by which in all maritime countries of the world agencies will be established through which the navigators of marine vessels of the world will report to some official of the United States information regarding changes or modifications or improvements in harbors that are essential if the sailing directions are to be continued in such shape as may be essential to be of any value.

I listened to the reading of the letter by the gentleman from Tennessee [Mr. PADGETT], in which assertion was made that it was impossible to obtain the British Admiralty Charts for sailing directions any further, and I noticed that there was no absolute prohibition against the selling of them to the United States. The object of the instructions issued by the British Admiralty was to prevent the sailing directions falling into the hands of the country with which Great Britain is now engaged in war. There is nothing to lead to the belief that the United States is to be excluded from this information, but if it be we have a simple and effective way to retaliate by refusing to furnish to other maritime nations the Coast Pilot and Sailing Directions of our own coast.

Mr. PADGETT. Mr. Chairman, I offer an amendment to strike out the "80" and make it "90."

The CHAIRMAN. The gentleman from Tennessee offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amend the amendment by striking out "$80,000" and inserting "$90,000."

Mr. PADGETT. That is the amount that has been carried for two or three years. Admiral Blue, chief of the bureau, says:

Since these estimates were made last summer, certain matters have turned up in connection with the war showing that those British Admiralty charts are at present very hard to get, and that there would be a good deal of difficulty in getting all of them if needed. We have recommended the cutting down of the appropriation from $90,000 to $80,000, although I am inclined to believe now it ought to be $90,000, on account of the difficulty in getting the British Admiralty charts.

When they struck out the printing it was my purpose to move to amend to make it "$90,000."

Mr. FITZGERALD. Why did not the department submit a supplemental estimate, as required by law, if it believed an additional amount was required in addition to that estimated?

Mr. PADGETT. I believe they thought the amount submitted in the estimates was sufficient.

Mr. FITZGERALD. The gentleman may think that way, but the law requires the department to submit such estimates. If the committee does not insist on the department complying with the law, it will not do so. The head of the department has submitted an estimate for $80,000, and there is nothing but the information furnished, not by the head of the department, but by the chief of some bureau, that an additional amount to what the department requested will be necessary. I do not believe that in a time like the present, with the existing condition of the Federal Treasury, the Congress should go out of its way and offer the department more money than the department requested in the manner provided by law.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Tennessee [Mr. PADGETT] to the amendment offered by the gentleman from New York [Mr. FITZGERALD].

The question was taken, and the Chair announced that the ayes seemed to have it.

Mr. FITZGERALD. Mr. Chairman, I ask for a division.

The committee divided; and there were—ayes 16, noes 23.

So the amendment was rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York [Mr. FITZGERALD].

The question was taken, and the amendment was agreed to.

Mr. STAFFORD. Mr. Chairman, I wish to offer an amendment.

The CHAIRMAN. The gentleman from Wisconsin offers an amendment, which the Clerk will report.

The Clerk read as follows:

At the end of line 2, page 11, insert: "*Provided*, That no books, charts, and sailing directions authorized hereunder shall be sold or exchanged with any nation that declines, through any governmental agency, the books, charts, or sailing directions published by such Government to sell or exchange them with our Government."

Mr. STAFFORD. Mr. Chairman, it has been officially called to the attention of this House that the British Admiralty has absolutely refused to exchange these charts and books which the maritime commerce of this country is dependent upon, but continues that policy with certain excepted nations, such as Portugal, Greece, France, and, I believe, Russia. I believe it is time to call a halt to this imperious policy of the British Admiralty. Frequently I have had occasion to present grievances of American shippers to the State Department for infringement by Great Britain of the rights of neutrals to ship merchandise to customers in neutral countries, and the only reply I would receive was that the British Admiralty was dominating the diplomatic policy of Great Britain. Has it come to that pass in the history of our Government when it can be officially brought to our attention by a representative of the Navy Department that the British Government declines and absolutely refuses to exchange its publications or allow us to have the benefit of a publication when we are giving them publications of a like character for their aid without some retaliatory action? They have gone far enough, I say, in trying to impede American commerce while letting their own commerce with neutral countries continue unimpeded.

The purpose of this amendment is to give notice that if they do not wish to exchange the 43 volumes of their publications so that they can come to our aid, then we will decline to furnish them the 14 publications of a similar character that we publish covering our jurisdiction. I think no one who has any American spirit in his veins will object, when we have had called to our attention the autocratic policy of the British Admiralty in trying to thwart and check our American commerce, to adopting this policy of reciprocity.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wisconsin [Mr. STAFFORD].

The question was taken, and the Chair announced that the ayes seemed to have it.

Mr. PADGETT. I ask for a division.

The committee divided; and there were—yeas 6, noes 25.

So the amendment was rejected.

Mr. MOORE. Mr. Chairman, this, of course, is the greatest age of all time, and it is capable of greater achievements than ever have been enacted before in the world's history; but it is also an age of the greatest bunk endured by humankind. We are susceptible to much that is not real. We are largely in the hands of fakirs, principally on the outside of Congress. We are even swayed in Congress by faking propositions. Men come to us who want to advertise themselves. They organize societies for the public uplift, and they impose themselves upon Congressmen. Some of them do this in order to assure themselves of good audiences when they get upon the lecture platform. I have no desire to pursue this further than to say that while we are discussing the Hydrographic Office in the matter of coast charts, I am reminded that that office still has before it, or in its custody, at least 21 volumes of observations made by Robert E. Peary, a civil engineer of the Government of the United States, who made important discoveries in the Arctic regions. Since those records were deposited with the Hydrographic Office Peary has been generally acknowledged as the discoverer of the North Pole.

It has been conceded by the whole world, but there are still men who love to appear in the public eye and who are actuated by a desire to make money upon the lecture platform, who insist that they have a right to dispute the fact.

The Congress of the United States settled this question; it had settled it not only upon the resolutions of the National Geographic Society, but upon the testimony of scientists the world over. With the acquiescence of the scientific societies of the world Congress passed an act recognizing the services of Robert E. Peary, making him a rear admiral, and ascribing to him, an American, the world achievement of reaching the North Pole. That act was passed and approved by the President March 4, 1911. It read:

Be it enacted, etc., That the President of the United States be, and he is hereby, authorized to place Civil Engineer Robert E. Peary, United States Navy, on the retired list of the Corps of Civil Engineers with the rank of rear admiral, to date from April 6, 1909, with the highest retired pay of that grade under existing law.

SEC. 2. That the thanks of Congress be, and the same are hereby, tendered to Robert E. Peary, United States Navy, for his Arctic explorations, resulting in reaching the North Pole.

Now, after four years the lecturer's press agency has got to work and Congress is asked to undo its own act. The Committee

on Education of the House has before it now a joint resolution which proposes "to establish the priority of the discovery of the North Pole and the region contiguous thereto." The old contention is to be reopened at our expense, for the benfit of whom? I shall read the resolution:

Whereas the discovery of the North Pole and the region contiguous thereto involves questions of historic, scientific, geographic, economic, educational, and commercial importance: Therefore be it

Resolved, etc., That the priority of discovery of the North Pole and the region contiguous thereto be established and declared by Congress, in order that lands discovered by American explorers in the far North may be described and designated as territory of the United States and so set forth in the maps prepared and distributed by the United States Government.

That is the resolution; but under the rose it might as well read, "*Be it resolved*, That we the Congress of the United States open this whole controversy and invite in all the friends of Doc. Cook to prove that he got somewhere near enough to the North Pole to justify the people coming to hear him on the lecture platform."

Members of Congress have been receiving messages from the press agents of the lecturer and they have been favored with copies of his book, but the limit has been reached when the Committee on Education begins to take the statements of a stenographer as to the doctor's dictation for the magazines from his hotel retreat at Newburgh on the Hudson.

Mr. Chairman, the amount of mail matter that comes to us every morning from people who get the idea that they are the real and only uplifters of the country is amazing. Some of it may be earnest, but much of it designing. We are bombarded with vaporings along with good sense, but we ought to be able to distinguish the work of those who are shrewd enough to employ the services of press agents to inspire us with misinformation.

The CHAIRMAN (Mr. SHERLEY). The time of the gentleman from Pennsylvania has expired.

Mr. MOORE. I ask unanimous consent to proceed for one minute more.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. MOORE. Some of you gentlemen have been receiving communications similar to the one I hold in my hand, showing the extent to which this thing is worked. It is not that the laws that are actually passed here are not sufficient to occupy our attention. We have to deal with certain people who live upon their wits, just the same as if they were "passing it" to us on the street. Here is the latest message bearing the earmarks of the publicity artist. It is coming in now from gullible writers who do not know they are aiding the publicity game:

I believe that Harry K. Thaw has been persicuted enough and should be given his liberty at once; and restored to his Family and beg you sir; to use your influence in Congress to pass a law in accordance with the Constitution.

[Laughter.]

The CHAIRMAN. The time of the gentleman from Pennsylvania has again expired.

Mr. TOWNER. Mr. Chairman, in very much of what has been said by my good friend from Pennsylvania [Mr. MOORE] I think all of us will agree. However, I think the gentleman is very much mistaken when he says that Congress has determined that Lieut. or Capt. or Admiral Peary discovered the North Pole. The difficulty about the action of Congress in regard to that was that it did not say so. The language of the resolution and of the law is that he reached the pole, and these distinctions were given him on that account.

Mr. MOORE. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Iowa yield to the gentleman from Pennsylvania?

Mr. MOORE. The act says that Peary "reached" the pole.

Mr. TOWNER. But it does not say that he discovered the pole. For that reason the question, as these other men claim, is left open for consideration still.

Mr. MOORE. Mr. Chairman, will the gentleman yield now?

Mr. TOWNER. Certainly.

Mr. MOORE. Is it not a fact that Lieut. Peary reached the pole near enough for all purposes of discovery?

Mr. TOWNER. I presume it is. I am not arguing that proposition.

Mr. MOORE. Why open this question, then, in the interest of a gentleman who is lecturing and who has press agents paid to furnish us with information about his achievements?

Mr. TOWNER. I hope that all of us have open minds regarding that question now; and certainly I am not here as the advocate or the representative of anybody who believes that anybody else discovered the North Pole. But I am merely correcting the gentleman's statement when he said to the House that Congress had determined that Lieut. Peary had discovered the North Pole.

I agree, Mr. Chairman, that it would have been better, perhaps, for all if Congress had so determined, because then, so far at least as official action is concerned, it would have been settled. But to say that the North Pole was reached is not to say that the North Pole was discovered. Both of these contending parties and perhaps others may have reached the North Pole, and still the question of discovery or priority in reaching the North Pole may be an entirely open question.

Mr. BUTLER. Mr. Chairman, will the gentleman yield?

Mr. TOWNER. Yes.

Mr. BUTLER. I am somewhat acquainted with this dispute, which has been going on now for about six or seven years. May I ask the gentleman what part of the controversy the Committee on Education is hearing—what part of it—whether or not Cook reached the North Pole first? Is that the contention, I will ask the gentleman?

Mr. TOWNER. I will say to the gentleman that the Committee on Education have taken no action in regard to the matter. They have only given a preliminary hearing to some parties that the chairman decided would perhaps be able to give us information.

Mr. MOORE. Will the gentleman yield?

Mr. TOWNER. Yes.

Mr. MOORE. Would it be violating the confidence of the committee if the gentleman told us who has appeared before the committee thus far? The newspapers have stated that a stenographer who took notes for Dr. Cook appeared before the committee.

Mr. BORLAND. Mr. Chairman, I rise to a point of order. I do not know what pertinency this has to the bill.

Mr. MOORE. Mr. Chairman——

The CHAIRMAN (Mr. SHERLEY). Does the gentleman from Missouri make the point of order?

Mr. BORLAND. I make the point of order.

The CHAIRMAN. The Chair sustains the point of order.

Mr. MOORE. I should like to be heard on the point of order.

The CHAIRMAN. The Chair has ruled.

Mr. MOORE. We are discussing a paragraph that pertains to the hydrographic service of the Navy Department.

The CHAIRMAN. The Chair is aware of that. The point of order is made that the gentleman is not speaking in order, and the Chair sustains the point of order.

Mr. MOORE. A parliamentary inquiry, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. MOORE. Would it have any effect on the mind of the Chair if I should call the Chair's attention——

The CHAIRMAN. That is not a parliamentary inquiry. The Chair sustains the point of order. Without objection, the pro forma amendment will be considered as withdrawn, and the Clerk will read.

Mr. MOORE. A parliamentary inquiry, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. MOORE. Is it not proper to discuss the matter of coast charts of the Arctic regions when we have reached the paragraph pertaining to the Hydrographic Office in the Navy Department, which prepares those charts?

The CHAIRMAN. The Chair will endeavor to pass upon the character of the discussion on any paragraph when a point of order is made. The Clerk will read.

Mr. MOORE. Then the Chair declines to answer?

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Ocean and lake surveys: Hydrographic surveys, including the pay of the necessary hydrographic surveyors, cartographic draftsmen and recorders, and for the purchase and printing of nautical books, charts, and sailing directions, $105,000: *Provided*, That the Secretary of the Navy is authorized to detail such naval officers, not exceeding five, as may be necessary to the Hydrographic Office.

Mr. HUMPHREY of Washington. Mr. Chairman, I move to strike out the paragraph.

The CHAIRMAN. The gentleman from Washington moves to strike out the paragraph.

Mr. HUMPHREY of Washington. Mr. Chairman, it seems to me that it was refined cruelty to stop me this morning right in the midst of a two-minute speech, and therefore I ask unanimous consent that I may speak out of order for three minutes.

The CHAIRMAN. The gentleman from Washington asks unanimous consent that he may speak out of order for three minutes. Is there objection?

Mr. BORLAND. If the gentleman will confine himself to three minutes, I will not object.

Mr. HUMPHREY of Washington. I will not make any promises as to what I may do. I have made the request. If you want to object, you may object.

The CHAIRMAN. Is there objection to the request of the gentleman from Washington?

Mr. BORLAND. The gentleman has had time to discuss his political views, but I am willing he should take three minutes.

The CHAIRMAN. Is there objection?

SEVERAL MEMBERS. Regular order!

Mr. HUMPHREY of Washington. Mr. Chairman, this morning I started to reply to the oration on peace delivered by the gentleman from Missouri [Mr. HENSLEY], and I was going to call attention to the fact that this morning the press carried a notice that Sir Edward Grey has served notice upon the State Department that to purchase the interned ships, as proposed under what is known as the administration shipping bill, would be an unneutral act.

Mr. ALEXANDER. Will the gentleman yield for a question?

Mr. HUMPHREY of Washington. If I can get an extension of time of two minutes, I will.

The CHAIRMAN. Does the gentleman from Washington yield to the gentleman from Missouri?

Mr. HUMPHREY of Washington. No; not now; unless I can get an extension of time.

The CHAIRMAN. The gentleman declines to yield.

Mr. HUMPHREY of Washington. I will at the end of three minutes, if I can get any more time.

Mr. ALEXANDER. The gentleman seemed to want information on this subject, and I thought I would give it to him.

Mr. HUMPHREY of Washington. The gentleman can give it in his own time.

The question I started to ask was, If the statement is correct that that information has been in the State Department for 10 days, why has it not been given to the country? That is one of the vital questions in that bill. That is one of the propositions that the body at the other end of this Capitol rejected only yesterday by a vote, declaring that they would not prohibit the purchase of these interned vessels; and we have it upon the authority of the Secretary of the Treasury, and I presume it is fair to say that he represents the administration, that the purpose under this bill is to purchase these interned German ships. Now, if the President is in favor of peace, as we all believe and all hope he is, why is he insisting on this bill being pushed through at the expense of every other matter pending before this Congress, to pass this bill that—as has been expressed by Senator ROOT—means the buying of a quarrel? Is he headed in the direction of peace when he does that?

Just one more proposition in regard to Mexico. The distinguished gentleman from Missouri [Mr. HAMLIN] said we had no war down there. I should like to know what you do term it? Nineteen of our own men and more than 100 of the Mexicans were killed. We are told that they collected a million dollars—and for what? Who had the authority to collect that million dollars? Where is it, and what are they going to do with it? Is that calculated to produce peace?

Mr. Chairman, I did not care to make this speech, only I wanted to demonstrate that I could do it; that is all.

Mr. UNDERWOOD. Mr. Chairman, I move to strike out the last two words. I expect to make a statement that is not strictly in order; but, in view of what the gentleman from Washington [Mr. HUMPHREY] has said, I think it should go into the RECORD at this point. Of course, if any gentleman desires to object, I will surrender the floor.

A great many statements are made in the newspapers, some of which come from reliable sources and some not; but about great matters of state, that involve our intercourse with foreign Governments, I think it is not timely, nor is it wise, for Members of the House to rely on those statements and base their positions upon them without first taking the trouble to inquire as to whether the statements are correct or not. As to the statement which the gentleman has just made, I saw the telegram in the morning paper stating that there was a letter from Sir Edward Grey protesting against the purchase of these ships, and I called up the State Department on the phone and asked if that statement in the morning paper was correct, and I am authorized by the State Department to deny categorically that the statement is correct. There is no such letter there, and there never has been such a letter there. [Applause on the Democratic side.]

The CHAIRMAN. The question is on the motion to strike out the paragraph.

The question was taken, and the amendment was rejected.

The Clerk read as follows:

Naval training station, Cal.: Maintenance of naval training station, Yerba Buena Island, Cal., namely: Labor and material; buildings and wharves; general care, repairs, and improvements of grounds, buildings, and wharves; wharfage, ferriage, and street car fare; purchase and maintenance of live stock, and attendance on same; wagons, carts, implements, and tools, and repairs to same, including the maintenance, repair, and operation of one horse-drawn vehicle to be used only for official purposes; fire engines and extinguishers; gymnastic implements, models, and other articles needed in instruction of apprentice seamen; printing outfit and materials, and maintenance of same; heating and lighting; stationery, books, schoolbooks, and periodicals; fresh water, and washing; packing boxes and materials; and all other contingent expenses; maintenance of dispensary building; lectures and suitable entertainments for apprentice seamen; in all, $70,000.

Mr. PAGE of North Carolina. Mr. Chairman, I reserve a point of order for the purpose of asking the chairman what is the necessity of this provision for the operation of one horse-drawn vehicle that has not been provided for before?

Mr. PADGETT. We have had it before and maintained it.

Mr. PAGE of North Carolina. It does not appear in the bill.

Mr. PADGETT. It was not necessary until the legislative bill of last year was passed, which contained a provision requiring it to be inserted in the proper bill.

Mr. PAGE of North Carolina. That requires it to be provided for specifically?

Mr. PADGETT. Yes; and that accounts for these provisions in all these places.

Mr. PAGE of North Carolina. I withdraw the point of order.

Mr. MANN. Mr. Chairman, I move to insert the words "passenger-carrying" after the word "horse-drawn."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 11, line 11, after the words "horse-drawn," insert the words "passenger-carrying."

Mr. MANN. Without that the language in the bill means nothing.

The CHAIRMAN. The question is on the amendment.

The question was taken, and the amendment was agreed to.

The Clerk read as follows:

Naval War College, Rhode Island: For maintenance of the Naval War College on Coasters Harbor Island, including the maintenance, repair, and operation of one horse-drawn passenger-carrying vehicle, to be used only for official purposes, and care of grounds for same, $25,250; services of a lecturer on international law, $2,000; services of civilian lecturers, rendered at the War College, $300; care and preservation of the library, including the purchase, binding, and repair of books of reference and periodicals, $1,300: *Provided*, That the sum to be paid out of this appropriation under the direction of the Secretary of the Navy for clerical, inspection, drafting, and messenger service for the fiscal year ending June 30, 1916, shall not exceed $12,500; in all, Naval War College, Rhode Island, $28,850.

Mr. MANN. Mr. Chairman, I move to strike out the last word. What is the particular necessity of providing "that the sum to be paid out of this appropriation under the direction of the Secretary of the Navy for clerical inspection, drafting, and messenger service shall not exceed," and so forth?

Mr. PADGETT. At the War College they have a large force to do the work. The officers gather there, they suggest plans and devise plans, and they need a large clerical force for this purpose.

The CHAIRMAN. The pro forma amendment is withdrawn, and the Clerk will read.

The Clerk read as follows:

BUREAU OF ORDNANCE.

Ordnance and ordnance stores: For procuring, producing, preserving, and handling ordnance material; for the armament of ships; for fuel, material, and labor to be used in the general work of the Ordnance Department; for furniture at naval magazines, torpedo stations, and proving ground; for maintenance of the proving ground and powder factory and for target practice; for the maintenance, repair, or operation of horse-drawn passenger-carrying vehicles, to be used only for official purposes at naval magazines, the naval proving ground, Indianhead, Md., and naval torpedo stations, and for pay of chemists, clerical, drafting, inspection, and messenger service in navy yards, naval stations, and naval magazines: *Provided*, That the sum to be paid out of this appropriation under the direction of the Secretary of the Navy for chemists, clerical, drafting, inspection, watchmen, and messenger service in navy yards, naval stations, and naval magazines for the fiscal year ending June 30, 1916, shall not exceed $468,000; in all, $5,795,420: *Provided*, That hereafter no part of any appropriation shall be expended for the purchase of shells or projectiles for the Navy except for shells or projectiles purchased in accordance with the terms and conditions of proposals submitted by the Secretary of the Navy to all the manufacturers of shells and projectiles and upon bids received in accordance with the terms and requirements of such proposals: *Provided*, That this restriction shall not apply to purchases of shells or projectiles of an experimental nature or to be used for experimental purposes and paid for from the appropriation "Experiments, Bureau of Ordnance."

Mr. MANN. Mr. Chairman, I reserve a point of order. What is the change, if any, made in the proviso to that carried in the existing current law?

Mr. PADGETT. I do not think there is any at all.

Mr. MANN. Then what is the object of inserting permanent law again? The gentleman awhile ago wanted to make permanent law in order that the provisions might be eliminated from the appropriation bills hereafter. We carried this item in the bill last year.

Mr. PADGETT. There is no change in it.

Mr. MANN. I think the gentleman ought to move to strike it out.

Mr. PADGETT. I overlooked the word "hereafter," and therefore failed to leave it out.

Mr. MANN. I withdraw the point of order.

Mr. PADGETT. Mr. Chairman, I move to strike out the proviso beginning with the word "Provided," line 17, page 16, down to the end of the paragraph.

The CHAIRMAN. The question is on the amendment.

The question being taken, the amendment was agreed to.

Mr. HOBSON. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

On page 17, at the end of line 2——

The CHAIRMAN. The Chair will state to the gentleman from Alabama that the proviso has been stricken out.

Mr. HOBSON. This has nothing to do with the proviso, and it comes in at the end of the paragraph, and so it would begin on page 16, line 17.

The Clerk read as follows:

Page 16, at the end of line 17, insert the following:

"*Provided*, That no part of this appropriation shall be expended for the purchase of armor-piercing shells or projectiles for the Navy unless such shells of 12-inch caliber are found by tests to be able to penetrate 10 inches Kruppized plate without breaking up when fired with a standard service-powder charge at an actual range of 12,000 yards."

The CHAIRMAN. Does the gentleman from Tennessee desire to be heard on the matter?

Mr. PADGETT. I have no argument to make.

Mr. HOBSON. Mr. Chairman, am I to understand that a point of order has been raised?

The CHAIRMAN. The gentleman from Tennessee reserves the point of order.

Mr. HOBSON. Mr. Chairman, the purpose of this amendment is to standardize the armor-piercing projectiles upon which our Navy is so largely relying for its effectiveness. The requirements provided here simply make it necessary for acceptance of the shell, that the expenditure of money from this appropriation for shell shall not proceed unless this type of shell can be shown to be reasonably effective at the usual battle ranges under ordinary service conditions.

Mr. MADDEN. Mr. Chairman, will the gentleman yield for a moment?

Mr. HOBSON. Yes.

Mr. MADDEN. Does this involve the purchase of a particular type of shell?

Mr. HOBSON. No; it involves no purchase at all. It simply puts a limitation upon the purchase of shell of a type unless they comply with the condition imposed.

Mr. MADDEN. Would there be any difficulty in getting the kind of shell that would meet the provisions named in this proposed legislation?

Mr. HOBSON. Not if they are to be effective.

Mr. MADDEN. Would there be any difficulty in getting the type of shell the gentleman describes?

Mr. HOBSON. I think there would be.

Mr. MADDEN. If we could not get them, what would the effect on the utility of the Navy be?

Mr. PADGETT. Just shut up the purchase of all kinds of shells.

Mr. HOBSON. Oh, Mr. Chairman, the gentleman from Tennessee is mistaken. He will get time in his own right in a moment. Mr. Chairman, this armor-piercing shell has as its object the penetration of the heavy armor of naval vessels. Its effectiveness against light construction is meager, because it goes through and does not explode; that is, upon light superstructure work and sometimes upon light armor. Its effect in that case would not be as great as other types of shell. In the penetration of heavy armor, however, at battle ranges of 12,000 yards, this situation will arise. Our ships have 12 and 13 and even 13½ inches of Kruppized armor. All we are building now have that or better; so have similar ships abroad. The armor-piercing shell must penetrate that heavy armor at battle ranges or the shell is not effective. If the armor-piercing shell is to be an effective shell, then it ought to be able to stand up and not go to pieces when it strikes the armor it is intended to penetrate. For my part, I believe that this shell can be so constructed. I will say to the gentleman that in tests not long ago—and all this is the outcome of a long series of tests—the department, speaking in generalities, was disappointed because of the fact that the armor-piercing shell did not perform the service to make it effective at ordinary battle ranges under these conditions. I took up the question with them as to the improvement of the armor-piercing shell. They have undertaken to bring about these improvements. What happened was that the shell itself would break up on the outside of the armor. The effectiveness of an armor-piercing shell depends on its ability to get through the armor so that the explosion of the shell will take place behind the heavy armor. If that takes place then it can blast through the protective deck and get into the vitals and destroy the ship. If that is not the case, then it is ineffective. The Navy has been stocking up for years and years with millions of dollars worth of these ineffective shells.

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. HOBSON. Mr. Chairman, I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. HOBSON. We have been stocking up for years and years, and now we have a vast supply of these armor-piercing shells on hand; and I feel, as I believe those who have been following these experiments with me do, that the armor-piercing shell must be improved or must give way to another type. Unfortunately only a few manufacturers make the armor-piercing shell, and we are practically compelled to rely upon them. The provision of permanent law which has just been referred to has for years effectively prevented other companies coming in and starting up to compete. Be that as it may, we ought to require that in the expenditure in the future of such large sums of money for shells intended to perform a certain duty that they ought to endeavor to make the shell effective.

Mr. MADDEN. The gentleman's idea is that unless the shell can be made as effective as described in his amendment, instead of purchasing new shells which will not meet the requirements we should proceed to the use of the shells that we already have in stock, until the experiments have improved the efficacy of this shell?

Mr. HOBSON. The gentleman is correct.

Mr. MADDEN. But that in the meantime no new shells be purchased?

Mr. HOBSON. Not of that type. If that shell can not be effective at a reasonable range, it ought to be abandoned. Twelve thousand yards is a short battle range. It has been used in the present war, even with 8 and 9 inch guns. Off the coast of Chile the battle was fought at twelve and fourteen thousand yards, and likewise the battle of the Falkland Islands, and if this shell can not penetrate 10 inches of armor at 12,000 yards, we ought not to depend upon it in the future.

Mr. MADDEN. Are we purchasing that shell now?

Mr. HOBSON. Yes; exclusively.

Mr. MADDEN. What thickness of armor does it penetrate?

Mr. HOBSON. I will say to the gentleman that down here at Indianhead, at a short range, they seem to have reasonable penetration, but when we get up to twelve and fourteen thousand yards, or even 10,000 yards, they fail. They can not penetrate, in fact, even 8 inches of armor at that distance.

Mr. TOWNER. Mr. Chairman, will the gentleman yield?

Mr. HOBSON. Yes.

Mr. TOWNER. I want to call the attention of the gentleman to the statement made by Admiral Strauss in the hearings, in which he said:

We do not manufacture the armor-piercing shell. We are going to manufacture some experimental armor-piercing projectiles ourselves.

In view of that experimental work on the part of the department, would it not be unwise for Congress to limit the expenditure to a particular class of shell at this time?

Mr. HOBSON. Mr. Chairman, if the gentleman will permit me, this amendment would not limit the expenditure for any class of shell; that is, would not compel the purchase of any other class of shell.

It covered experimentations which have been going on all these years and which we hope will produce that incentive in private manufacturers that will make a shell that will be effective. Now, in order to make a shell effective, whether from experimentation in the Navy or outside, this appropriation is available for that purpose. In other words, the effect of this would be that instead of having a stereotyped test of a shell at Indian Head Proving Grounds, where under certain conditions close to the muzzle of the gun the shell penetrates certain thicknesses of armor plate, and then by certain calculations they assume it will penetrate an enemy's armor at battle ranges, we have under the direction of the special subcommittee the tests on the long ranges. There is no difficulty in the test. You can hit at those ranges. We fired eighty-odd shots, and got 26 hits—a large part of them at 12,000 yards.

Mr. TOWNER. That is very true, as I understand it, but——

Mr. HOBSON. So there will be no difficulty in this new type of test.

Mr. TOWNER. But this limitation is on the 12-inch shell.

Mr. HOBSON. If they can not produce an effective 12-inch shell they can not produce an effective shell of other caliber. If the shells are not effective, it is a waste of money to continue buying them.

Mr. TOWNER. That is exactly the point. Now, you are limiting this purchase to a certain type of shell, if we adopt the gentleman's amendment before the department——

Mr. HOBSON. Pardon me, there is no limitation.

Mr. TOWNER (continuing). Has made these experiments in order to ascertain whether it should be of value.

Mr. HOBSON. Pardon me; we are not limiting the purchase of any type. What we do is that while they are now spending so much money on this particular type that type ought to be effective before the money is spent in the future.

Mr. HELM. Will the gentleman yield?

Mr. HOBSON. Yes.

Mr. HELM. Do I understand the gentleman to state that this particular type of shell is a shell that is being used almost exclusively by the Navy?

Mr. HOBSON. Practically exclusively.

Mr. HELM. And it is ineffective?

Mr. HOBSON. It is ineffective.

Mr. HELM. Then please explain to me what is the necessity or sense in expending $100,000,000 of money for battleships when we have shells that are ineffective?

Mr. HOBSON. The gentleman is absolutely correct; that is a searching question. If our battleships can not execute at battle ranges, why, it is a waste of money to build battleships; but the experiments that have been going on have convinced me that the A. P. shell can be improved; that they can make a shell, if they would, that would fill these reasonable requirements; and that if they will not do it, they can make other shells that will be effective.

Mr. HELM. Will the gentleman yield again?

Mr. HOBSON. Certainly.

Mr. HELM. How long has the Navy been using this particular type of shell?

Mr. HOBSON. They have been using it for years, but assuming all the time it would do the work, and then, when they tried it, it would not do it.

Mr. HELM. Do I understand, now, we have been expending from $125,000,000 to $150,000,000 for purchase or construction of battleships and have only this type of shell available for use?

Mr. HOBSON. That is the situation. We have spent millions and millions on that shell and we have had the greatest difficulty in obtaining the experimentation to improve that shell, or develop other types if they can, but I believe we can do it.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HELM. I believe a crime has been committed somewhere then, because from the statement of facts made by the gentleman there has never been a time when our battleships could have gone into an action or engagement with an enemy, since they have virtually been without ammunition, if the shells are worthless, as described by the gentleman from Alabama.

The CHAIRMAN. The time of the gentleman has expired. Does the gentleman from Tennessee withdraw the point of order?

Mr. PADGETT. Mr. Chairman, I do not know that it is a good point.

Mr. HOBSON. If the gentleman desires to discuss it, I also desire to discuss that phase of it.

The CHAIRMAN. The Chair thinks the point of order is not well taken.

Mr. PADGETT. Mr. Chairman, I want to be heard on the amendment. Now, I wish to call the attention of the committee to this proposed amendment. I think it is a very hazardous amendment. In the first place the shells that we are using are the same class of shells that are used in all the navies of the world, the armor-piercing shells, and ours are as good as those of any other country, and our experts say they are better. Now you notice the wording of this limitation——

Mr. HOBSON. Would the gentleman yield; I will not take up his time and I will ask for an extension in case he needs it. Can the gentleman tell us that the shells in use elsewhere are limited to this type of shell and are not superior to these?

Mr. PADGETT. My information is that ours are not only equal but superior to the armor-piercing shells in use in all other navies and they are so regarded, and many countries buy their shells here from the same people who make ours.

Mr. HOBSON. I would like for the gentleman to specify in these generalities he is giving, if he has no objection.

Mr. PADGETT. I have nothing to specify. I have stated it explicitly. Now let me call attention to the wording: "*Provided*, That no part of this appropriation shall be expended for the purchase of armor-piercing shells and projectiles of the Navy." Now, that includes 14-inch shells, 12-inch shells, 13-inch shells, 10-inch shells, 8-inch shells, 6-inch shells, all of which are armor-piercing shells, and none of these shells are to be purchased if the 12-inch shell does not accomplish what the gentleman thinks it ought to accomplish.

Mr. HOBSON. Will the gentleman yield again there?

Mr. PADGETT. Yes.

Mr. HOBSON. I want to say to the gentleman that if he wishes to put in a similar limitation upon the 14-inch shell that it must penetrate 12 inches of armor at 14,000 yards, and a 10-inch that it must penetrate 8 inches at 10,000 yards, I have no objection.

Mr. PADGETT. He prohibits the caliber of all kinds of shell in the event that the 12-inch shell fails to accomplish the purpose he designates.

Mr. HOBSON. The gentleman does not take the amendment to include all types?

Mr. PADGETT. No.

Mr. HOBSON. The double word "shells or projectiles" was used, because projectiles or shells have been found together in the proviso that was stricken out.

Mr. PADGETT. Shells and projectiles are synonymous. Now, the wording, "*Provided*, That no part of this appropriation shall be expended for the purchase of armor-piercing shells or projectiles for the Navy," comprehends all shapes and classes of shells from the largest to the smallest.

Mr. HOBSON. Of the armor-piercing type?

Mr. PADGETT. Certainly. That was what was intended. I thought you meant all types.

Mr. HOBSON. It would prohibit the purchase of 14-inch shells of this type if it was found that the 12-inch shell—a fair representative of the type—did not do its work. The failure of the 12-inch would be a fair index of the whole type.

The CHAIRMAN. The time of the gentleman has expired.

Mr. PADGETT. Mr. Chairman, I ask unanimous consent for five minutes more.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent for five minutes more. Is there objection?

Mr. MANN. Mr. Chairman, how long will the debate run on this amendment?

Mr. PADGETT. Just a few minutes.

Mr. MANN. Why not arrange the time?

Mr. PADGETT. Mr. Chairman, I ask unanimous consent that the debate close in 10 minutes, 5 minutes for myself and 5 minutes for the gentleman from Alabama [Mr. HOBSON]. I do not want to cut it off, however——

Mr. MANN. I would like five minutes.

Mr. GRAHAM of Illinois. Mr. Chairman, I would like five minutes.

Mr. HOBSON. The gentleman from Illinois [Mr. GRAHAM] wants five minutes and the gentleman from Ohio [Mr. BATHRICK] wants three.

Mr. PADGETT. I will ask that debate close in 20 minutes, 10 minutes to be controlled by myself.

Mr. ROBERTS of Massachusetts. I would like 10 minutes on this.

Mr. PADGETT. I will say in 20 minutes, 10 minutes to be controlled by myself and 10 minutes by the gentleman from Alabama [Mr. HOBSON].

Mr. HOBSON. And I will yield to Mr. GRAHAM of Illinois.

Mr. GARDNER. The gentleman has not stated yet whether he wishes to close debate on this amendment or the paragraph?

Mr. PADGETT. On the paragraph.

Mr. GARDNER. I will have to object, because I wish to be heard on the paragraph and not on the amendment.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent that all debate on this paragraph and the pending amendment close in 20 minutes. Is there objection?

Mr. GARDNER. Mr. Chairman, I object to that, because I want to discuss the question of mines, which I understand is included, although not by name, in this amendment.

Mr. PADGETT. I will make it on this amendment, then. If that takes up the question of mines, I will want five minutes in which to reply. I will say 30 minutes.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent that debate on this paragraph and all amendments thereto close in 30 minutes.

Mr. MANN. Fifteen minutes to the gentleman from Tennessee.

Mr. PADGETT. And 10 minutes to the gentleman from Alabama [Mr. HOBSON] and 10 minutes to myself on this particular amendment, and then 5 minutes to the gentleman from Massachusetts [Mr. GARDNER] and 5 minutes to myself on the other matter.

The CHAIRMAN. Is there objection?

Mr. FOWLER. Reserving the right to object, I have an amendment which I desire to offer myself. During the general debate on this bill I was assured by the chairman of the committee that I could have 20 minutes for the purpose of discussing the question of shells.

The CHAIRMAN. Is there objection?

Mr. FOWLER. Mr. Chairman, I object.

Mr. MANN. Does the gentleman want to use his 20 minutes on this paragraph?

Mr. FOWLER. There is no other paragraph in the bill in relation to this matter.

Mr. MANN. Very well. I thought there was a sort of understanding myself.

Mr. HOBSON. Limit it to this particular amendment.

Mr. MANN. We would never get through. I think there was an understanding that my colleague was to have time.

Mr. PADGETT. I did not know that he wanted it at this time.

Mr. MANN. Make it 50 minutes, of which he will have 20 minutes.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent that debate on this paragraph and amendments close in 50 minutes. Is there objection? [After a pause.] The Chair hears none.

The gentleman from Tennessee is recognized for 20 minutes.

Mr. PADGETT. I want simply to add that, having as good shells if not better than all other nations, it would be wise for us to impede the procurement of projectiles elsewhere. I reserve the remainder of my time.

Mr. WEBB. Mr. Chairman, I want to ask the chairman of the committee a question.

The CHAIRMAN. The gentleman from Tennessee [Mr. PADGETT] reserves four minutes.

Mr. WEBB. Mr. Chairman, I want to ask the chairman of the committee what has been done with reference to the power-explosive shells?

Mr. PADGETT. There have been considerable tests made, and tests are being conducted now.

Mr. WEBB. I was interested in the matter four or five years ago, and I believe I started the fight on the experiment with explosive shells.

Mr. PADGETT. They have expended four or five hundred thousand dollars.

Mr. WEBB. Has it been effective?

Mr. PADGETT. I do not know. We are hoping that something can be realized, but heretofore they have not been able to meet our expectations.

Mr. BUTLER. Now, Mr. Chairman, I wish to ask the gentleman a question. It is very plain from the evidence that we have had here from time to time that we have as good armor-piercing shells as any other nation has?

Mr. PADGETT. Yes; if not better.

Mr. BUTLER. And if we do not use these shells, what in the world will we have to shoot out of these guns?

Mr. PADGETT. Nothing in the world.

Mr. BUTLER. We will have to shoot mush, probably.

Mr. PADGETT. Just shoot powder. We will have no shells. And, then, I want to add again that our condition as to shells, while it is good, is not plethoric, and we ought to have these shells.

Mr. J. M. C. SMITH. Mr. Chairman, will the gentleman yield to me for a short question?

Mr. PADGETT. Yes.

Mr. J. M. C. SMITH. What is the lifetime of these shells?

Mr. PADGETT. Just as long as the world lasts, if the shell is not destroyed.

Mr. J. M. C. SMITH. It is different from the cartridges intended for small arms?

Mr. PADGETT. Yes; it has no powder to it. It is separate from the powder.

Mr. J. M. C. SMITH. I see.

Mr. PADGETT. Mr. Chairman, I reserve my time.

The CHAIRMAN. The gentleman has used three minutes. Does the gentleman from Alabama desire to use some of his time?

Mr. HOBSON. I will yield four minutes to the gentleman from Illinois [Mr. GRAHAM].

The CHAIRMAN. The gentleman from Illinois [Mr. GRAHAM] is recognized for four minutes.

Mr. GRAHAM of Illinois. Mr. Chairman, it was my good fortune to be present at several of the tests which have been referred to, and as the result of my observation at those tests I am in sympathy with the amendment offered by the gentleman from Alabama [Mr. HOBSON].

The chairman of the committee says that our armor-piercing shells are as good as, if not better than, the armor-piercing shells made in other nations; but he did not say, as I understood him, that other nations had no other kind of shells than the armor-piercing variety, and if he had said that he would not have convinced me as to the fact. Anyone who has read the account of the Battle of Tshushima Straits in 1898 and noticed the execution done there by Japanese shells will realize they were more efficient than armor-piercing shells. If one will read also of the recent battle near the Falkland Islands or the recent battle in the North Sea, he must reach the conclusion that shells other than armor-piercing shells were there used. According to the experiments I saw the armor-piercing shells would not sink a ship in a week. All they would do at ordinary battle range, if they had penetrated the armor at all, would be only to make a hole in it, and it could be easily stopped and the water kept out, so that no danger would follow.

The experiments I witnessed show that the 12-inch armor-piercing shell at 12,000 yards would simply get its nose through the armor, but the shell would not follow the nose. It would explode outside; and while it made the armor plate look badly, by smudging and discoloration, it did it no further harm. It merely made a hole in the armor plate that could easily be stopped. As battle ranges now are 12,000 yards or more, and the armor-piercing shell will not pierce armor at that distance, I ask what use it is? Why invest money in it? Is it on the theory that the Hindus used to act upon when they would bring out drums and gongs and tin pans and make frightful noises when there was an eclipse of the sun, on the theory that a great dragon was eating it up and they would frighten it away with noise? Are we to frighten our enemy with noise? That is the only use of armor-piercing shells to-day, and this amendment would require them to perfect the armor-piercing shell so that it will do execution; do more than merely make a noise.

But there are other shells. The reading of current history as well as past history proves it. The *Empress of India*, a British ship, was sunk at 18,000 yards by a shell that tore the side out of the ship. The historian of the Battle of Tsushima Straits tells us that the shells made great holes in the ships as big as barn doors. Those could not have been armor-piercing shells, because armor-piercing shells will make only a hole equal to the diameter of the shell—10 or 12 or 14 inches, as the case may be.

The CHAIRMAN (Mr. PAGE of North Carolina). The time of the gentleman has expired.

Mr. HOBSON. Mr. Chairman, I would like the gentleman from Tennessee [Mr. PADGETT] now to use a part of his time. I will be ready after he does.

The CHAIRMAN. The gentleman from Tennessee [Mr. PADGETT] is recognized.

Mr. PADGETT. I yield four minutes to the gentleman from Massachusetts [Mr. ROBERTS].

Mr. ROBERTS of Massachusetts. I would like to have five.

The CHAIRMAN. The gentleman from Massachusetts [Mr. ROBERTS] is recognized for four minutes.

Mr. ROBERTS of Massachusetts. Mr. Chairman, I am not just certain in my own mind what the gentleman from Alabama [Mr. HOBSON] contemplates in his amendment. If it is his intention by the amendment to compel the Navy Department to continue tests to perfect the armor-piercing shell, I am in sympathy with him. If it is his purpose, however, to stop the purchase of shells of all calibers, as his amendment provides, until we can secure a shell that will do what he wants it to do, I am not in sympathy with the amendment.

The gentleman from Alabama and many other gentlemen, both on this floor and outside, are criticizing the Navy Department and this Government to-day because we have not a sufficient reserve of war material, and I do not think I disclose any Navy secrets when I say we have not a sufficient supply of shells of all calibers in the Navy to-day. If the amendment of the gentleman from Alabama is adopted, we can not buy a shell in the next fiscal year—a shell of any caliber—unless in the short intervening time a 12-inch shell is perfected that will penetrate armor, Kruppized, 10 inches thick at 12,000 yards, and I do not believe the gentleman from Alabama for a moment thinks that such a shell could be perfected within that short time.

Now, we should go on just as we have been going on, purchasing the best there is in existence to-day, and I agree with him that we should at the same time be making the experiments to discover, if possible, something better than that which we have to-day.

Mr. PADGETT. That is being done.

Mr. ROBERTS of Massachusetts. If the gentleman from Alabama will change his amendment so as to provide for a continuation of experimentation, I will be with him. Otherwise it seems to me suicidal for this Government to stop the purchase of all shells until we can invent one that will do a certain thing, particularly when the experts tell us that we have as good if not a better shell than any of the other nations of the earth. And I want to say to my friend from Illinois [Mr. GRAHAM], if he will think a moment, the other day down the river he saw a type of shell fired from one of the guns of our battleships, a shell that explodes on impact, a standard service shell, the semiarmor-piercing shell, so that to-day the Navy of this country is not confined solely to armor-piercing shells. We have the armor-piercing, and we have also what is called the semiarmor-piercing, that explodes on impact, and gives the effect of the outside explosion, which the gentleman from Illinois speaks of as doing such great destruction in the Russo-Japanese War.

Mr. GRAHAM of Illinois. Will the gentleman yield there?

Mr. ROBERTS of Massachusetts. I will if I have time for just a brief question.

Mr. GRAHAM of Illinois. Have we any semiarmor-piercing shell which explodes on impact and produces the effect I have described? In other words, are those shells charged with a high explosive?

Mr. ROBERTS of Massachusetts. I presume they are charged with as high an explosive as can safely be fired from a gun.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HOBSON. I yield three minutes to the gentleman from Ohio [Mr. BATHRICK].

Mr. BATHRICK. Mr. Chairman, the subcommittee on ordnance of the Committee on Naval Affairs have been engaged for the last four years, together with gentlemen from the Navy Department, in making certain experiments with certain kinds of shells. We have different classes of shells, one of which has just been described, and I think the others have not been described so thoroughly. We have an armor-piercing shell which, according to the tests, will not pierce 10-inch armor at 12,000 yards. We have the semiarmor-piercing shell, which will explode on impact. Now, the semiarmor-piercing shell that explodes on impact has been for many years practically laid upon the shelf and entirely out of use, and it seems to be outside of the range of contemplation by our experts, who have been trying to get something with which to defend this country.

The time is coming when the experience of the world in warfare, both in the Russo-Japanese war and, I think, in the present war, will have demonstrated that a shell which explodes upon impact is effective. There is in process of experimentation and perfection a shell which is worthy of sincere attention. It is intended to strike the water before it gets to the ship, if it can not hit the ship, and then run upon the water for quite a distance and not ricochet from the water over the ship, but run upon the surface of the water and then sink, and shortly after it sinks explode near enough to the hull of the ship, if it is properly placed, so that the explosion will blow in that portion of the vessel under the water line which is not as well protected as the part over the water. The recent successful experiment in this line was with the Isham torpedo shells. Thus there are three shells.

It has been demonstrated, as I have said, that the armor-piercing shell does not pierce at the battle range of 6 nautical miles, or 12,000 yards. We have observed that it does not, notwithstanding the experiments with varied charges of powder at Indianhead and on shorter ranges. As far as I am concerned, taking into consideration the supply of 12-inch or other armor-piercing shells that we have on hand now, I think it well to instruct the department not to purchase——

The CHAIRMAN. The time of the gentleman has expired.

Mr. HOBSON. I yield one minute more to the gentleman.

Mr. BATHRICK. I am perfectly willing to instruct the department that no part of this appropriation shall be used for purchasing 12-inch shells or larger of the A. P. type, unless the manufacturers can demonstrate that they are effective at the medium battle range of 12,000 yards. The gentleman from Alabama [Mr. HOBSON] has perfected his amendment, which I hope he will submit in lieu of the one he first introduced, so it will overcome the objections that were made by the gentleman from Tennessee [Mr. PADGETT], that it would prevent the department buying any kind of shell until the A. P. shell is perfected.

Mr. GRAHAM of Illinois. What do the manufacturers agree to do in that respect?

Mr. BATHRICK. That is a matter we are coming to. We insist they shall improve these shells, and we want more work put on explosive, or torpedo, shells.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HOBSON. I should like to have the gentleman from Tennessee conclude, and then I will close on this amendment.

Mr. PADGETT. Mr. Chairman, a parliamentary inquiry. I understand that under the rule the chairman of the committee has the right to conclude the debate.

The CHAIRMAN. The gentleman is correct. The chairman of the committee has the right to close. The Chair recognizes the gentleman from Alabama [Mr. HOBSON], who has two minutes remaining.

Mr. HOBSON. Three minutes, is it not?

The CHAIRMAN. No; the gentleman had six minutes, and yielded four minutes to the gentleman from Ohio [Mr. BATHRICK]. The gentleman has two minutes remaining.

Mr. HOBSON. Mr. Chairman, I desire to say that no American really knows what other nations are doing along this line. They are keeping everything secret. Of course, we know that they have used an A. P. type of shell for a long time. They have probably developed their A. P. type to a higher degree of efficiency than ours.

It is a mistake to say that we are furnishing the ships of the Navy with semi-A. P. shells. The semi-A. P. shell has not been issued to ships for years and years. Those that were fired the other day had been brought from a magazine where they had been for 20 years. To-day we are completely dependent on the A. P. shell. Under my amendment, if the A. P. shell is found effective then we can continue to spend the appropriation for them. If it is not effective we could not. Why should we spend any more money for them if they are not effective? We can develop another kind of shell. We can improve this type of shell. Heretofore improvements have been slow. There is practically no competition among producers and manufacturers and little experimentation on the part of the Government. I am perfectly willing to limit this amendment to 12-inch shells and over, and I will offer that amendment when the time comes.

Mr. GARDNER. Mr. Chairman, I am in sympathy with doing everything possible for the high-explosive shell, and yet I am afraid if the gentleman's amendment is adopted we shall not be able to get armor-piercing shells for 12-inch guns for use on ranges of less than 12,000 yards if, by any chance, a battleship of the United States is engaged in action.

Mr. HOBSON. We have a vast supply—of course the chairman might question the use of the word "vast"—but we have a large supply of ineffective shells, and I do not want to increase that supply. We can not fight effectively at battle ranges, and if we can not fight at battle ranges with the armor-piercing shell, we ought to know it and develop the use of the torpedo shell, which has reached the point where it can be used effectively. We ought not to send good after bad——

The CHAIRMAN. The time of the gentleman has expired.

Mr. FOWLER. I will yield the gentleman five minutes.

Mr. HOBSON. I do not think it would be fair to take the five minutes on this amendment. The gentleman was granted time on another matter, and I appreciate his courtesy. Perhaps the gentleman can give me some of his time in discussing other matters, but I understood that on this particular amendment the time has been limited.

The CHAIRMAN (Mr. PAGE of North Carolina). The statement of the gentleman from Alabama is correct.

Mr. HOBSON. I appreciate the offer, but I can not accept it.

Mr. PADGETT. Mr. Chairman, as soon as the debate on this amendment is disposed of, can not we dispose of the amendment before we take up the other proposition of the gentleman from Illinois [Mr. FOWLER]? I think that would be the better practice.

The CHAIRMAN. If the gentleman from Tennessee will indulge the Chair, he has three minutes remaining on this amendment, and he has five minutes reserved for the other.

Mr. PADGETT. I know that, but I wanted to know if we can not dispose of this amendment before we take up the other matters.

The CHAIRMAN. That is a matter for unanimous consent.

Mr. PADGETT. Then, I will ask unanimous consent that at the conclusion of the three minutes we vote on the amendment of the gentleman from Alabama.

Mr. HOBSON. Reserving the right to object, I want to ask the gentleman if it was not the understanding that the question of what is called "mine explosives" and "mine effects," which bears on the use of the torpedo shell that will run under the water and explode under water—if it was not stated that that was to be the subject matter of discussion?

Mr. GARDNER. I was going to move to strike out the last word on that, because we could not get at the situation to which I object by any motion.

The CHAIRMAN. The present occupant of the chair is informed that there are five minutes reserved to the gentleman from Massachusetts [Mr. GARDNER], five minutes to the gentleman from Illinois [Mr. FOWLER], and five minutes to the chairman of the committee on another proposition. The request of the gentleman from Tennessee was that at the expiration of three minutes the committee should vote on his amendment.

Mr. MANN. I ask for the regular order.

Mr. HOBSON. A parliamentary inquiry, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. HOBSON. If the Chairman will refer to his own record, he will find that the request for unanimous consent——

Mr. MANN. The gentleman is not making a parliamentary inquiry.

Mr. HOBSON. There can be but one parliamentary inquiry at a time.

Mr. MANN. I am making the point of order that the gentleman is not making a parliamentary inquiry.

The CHAIRMAN. The Chair has stated the parliamentary status.

Mr. HOBSON. I know, Mr. Chairman; but the request for unanimous consent was that 50 minutes' debate should be entered into and apportioned in such-and-such a way, when debate on this amendment and all amendments thereto should be considered as closed, and that was the unanimous-consent request that was granted by the committee.

The CHAIRMAN. As the Chair is informed, there is a distinct understanding as to debate on this particular amendment.

Mr. HOBSON. There is no question about the matter on the debate. The debate on this amendment is to close in three minutes, which the chairman, the gentleman from Tennessee is to have; but the question of taking the vote on this amendment before we know what the other matters are to be discussed, that question was not involved. The question for unanimous consent was that all debate should continue for 50 minutes, and then close on this amendment and all other amendments, and a variation from that would require unanimous consent.

Mr. MANN. Just what does the gentleman from Alabama want to get at?

Mr. HOBSON. I do not know just what is going to be said by the gentleman from Massachusetts, and I do not know what is going to be said by the gentleman from Illinois [Mr. FOWLER], but I believe that this discussion will have a direct bearing on the merits of this amendment.

Mr. MANN. I ask for the regular order.

The CHAIRMAN. The regular order is to recognize the gentleman from Tennessee for three minutes.

Mr. PADGETT. Mr. Chairman, I can add but very little to what I have said. This proposed amendment would be hazardous to the Navy. It proposes to stop the purchase of all armor-piercing shells that are used by the navies of all countries in the world that have navies, when we are informed by the men who have the best information on the subject that our shells are as good if not better than those of all other countries; when all other countries are using principally armor-piercing shells, and when they are buying largely armor-piercing shells from factories in this country where we buy ours.

And yet the gentleman proposes to stop the purchase of shells and leave the Navy without the use of shells, whether we can use them in 10,000 or 6,000 yards, if his project is not carried out to his satisfaction.

The idea to me seems preposterous, that under the conditions existing, with the situation we have before us, when we need these shells, when they are the best of the kind, when they are the standard shells of the world, for us to attempt to stop the purchase and hazard the safety of the country. I call for a vote.

Mr. HOBSON. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. HOBSON. Is a vote now in order?

The CHAIRMAN. A vote is in order now under the agreement, as the present occupant of the chair understands.

Mr. HOBSON. Mr. Chairman, I offer an amendment to my amendment. After the word "Navy" insert the words "of 12-inch caliber or larger."

Mr. ROBERTS of Massachusetts. Mr. Chairman, does the gentleman ask unanimous consent to do that?

Mr. HOBSON. Mr. Chairman, I am offering an amendment to my own amendment.

The CHAIRMAN. The gentleman can not offer an amendment to his amendment at this time.

Mr. BATHRICK. Mr. Chairman, I offer the following amendment as a substitute for the amendment of the gentleman from Alabama.

The CHAIRMAN. The Clerk will report it.

The Clerk read as follows:

Substitute for the pending amendment:

"*Provided*, That no part of this appropriation shall be expended for the purchase of armor-piercing shells of 12-inch caliber or larger unless such shells are found by tests to be able to penetrate 10-inch Kruppized plates without breaking up the shell, fired with a standard service powder charge at an actual range of 12,000 yards."

The CHAIRMAN. The question is on agreeing to the substitute offered by the gentleman from Ohio.

The question was taken, and the substitute was agreed to.

The CHAIRMAN. The question now is on the amendment of the gentleman from Alabama as amended by the substitute of the gentleman from Ohio.

The question was taken; and on a division (demanded by Mr. PADGETT) there were—ayes 65, noes 39.

Mr. PADGETT. Mr. Chairman, on that I demand tellers.

Tellers were ordered, and the Chair appointed Mr. PADGETT and Mr. HOBSON to act as tellers.

The committee again divided; and the tellers reported—ayes 55, noes 44.

So the amendment in the nature of a substitute was agreed to.

The CHAIRMAN (Mr. HAY). The gentleman from Illinois [Mr. FOWLER] is recognized for 20 minutes.

Mr. FOWLER. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 16, after the figures "$5,195,420," in line 17, insert:

"*Provided*, That no part of said sum shall be used for the purchase or manufacture of armor-piercing shells until $250,000 shall have been used for the purchase or manufacture of high-explosive shells.

Mr. MANN. Mr. Chairman, on that I make the point of order.

The CHAIRMAN. The Chair sustains the point of order.

Mr. FOWLER. Mr. Chairman, I will be glad to be heard on the point of order.

The CHAIRMAN. The Chair will hear the gentleman.

Mr. FOWLER. Mr. Chairman, I offered a like amendment and discussed it at the last session of this Congress and had all the authorities here and presented them. It is a limitation upon the appropriation. All of the authorities universally, so far as I was able to find at that time, held that an amendment which was a limitation upon an appropriation was not subject to a point of order. I do not have the authorities with me at this time, because I did not think it would be disputed that a limitation upon the appropriation was subject to a point of order. This amendment, in effect, provides that the amount which is carried in this paragraph for armament shall not be used for the purchase of armor-piercing shells until $250 000 have been used for the purchase of high-explosive shells, which is a limitation upon the paragraph.

Mr. MANN. Mr. Chairman, while it is true that this amendment starts out in the form of a limitation, yet it is not offered as a limitation. It is not in effect a limitation. The purpose is to control the discretion of the department and direct the department to purchase $250,000 worth of shells of a particular kind. That is not a limitation. That is a direction, a positive direction.

Mr. FOWLER. Mr. Chairman, will the gentleman yield?

Mr. MANN. Certainly.

Mr. FOWLER. I will ask the gentleman if it is not a fact that the gentleman from Alabama [Mr. HOBSON] offered a like amendment to an appropriation bill at a former session of Congress, and it was held that it was a limitation and was not subject to the point of order?

Mr. MANN. I do not remember whether that was the case or not. The gentleman ought to have his authorities here if that be the case.

Mr. FOWLER. Mr. Chairman, I desire to ask the gentleman from Illinois if it is not a fact that I offered a like amendment at the last session of Congress to this same paragraph and if the point of order was not interposed and overruled?

Mr. MANN. I do not recall; but if that is the case the gentleman ought to have the record here to show it.

Mr. FOWLER. Mr. Chairman, I desire to ask the gentleman if he did not sit at the time as chairman——

Mr. MANN. I will say to the gentleman that I did not, because I was a very humble member of the minority during the entire Sixty-second Congress.

Mr. FOWLER. But the gentleman does not let me finish the inquiry. I ask the gentleman if it is not a fact that he sat as chairman of a like committee when the Hobson amendment was offered to this one, and if he did not overrule the point of order?

Mr. MANN. I do not think I did, and if I did I am ashamed of such a ruling. I would like to see the gentleman produce the ruling. I do not think I ever made such a ruling.

Mr. KEATING. Will the gentleman yield?

Mr. FOWLER. No; the gentleman from Illinois has the floor.

Mr. MANN. Probably if I was in the chair, I held a proper amendment in order. I dare say I did hold an amendment in order, but I defy the gentleman to produce an amendment I did hold in order like this one.

The CHAIRMAN. It has been ruled that an amendment may be offered and is in order as a limitation. While this amendment apparently is a limitation upon an appropriation, it includes a positive enactment which establishes a rule for the department to follow, and therefore is legislation, and the Chair sustains the point of order.

The gentleman from Illinois [Mr. FOWLER] is recognized for 20 minutes.

Mr. FOWLER. Mr. Chairman, I would be glad for the Chair to read the ruling at the last session of Congress on an amendment of this same character.

The CHAIRMAN. The Chair has not the time to look up all these rulings——

Mr. FOWLER. I know that is true.

The CHAIRMAN (continuing). But the Chair read the ruling in the last Congress, and finds the Chair at that time overruled the point of order. But the Chair, while very much averse to differ with the chairman of the committee who presided over the Committee of the Whole last year, yet feels constrained, after looking up the matter as carefully as possible, to rule otherwise.

Mr. FOWLER. I had at that time an amendment just like one offered by Capt. HOBSON at a session of Congress the session before, which I presented to the Chair at that time, and read it, and I think the amendment itself is in the proceedings.

Mr. MANN. Is the Chair still holding the point of order under consideration?

The CHAIRMAN. The Chair, at the request of the gentleman from Illinois, was trying to find the ruling of the Chair on this amendment at the last session. The Chair sustained the point of order, and recognizes the gentleman from Illinois [Mr. FOWLER], under the agreement, for 20 minutes.

Mr. FOWLER. Mr. Chairman, I desire to enter a motion to strike out the last word.

The CHAIRMAN. The gentleman is recognized, under the agreement, for 20 minutes.

Mr. FOWLER. Mr. Chairman, I desire to congratulate this House upon the action which it has just taken. In my opinion it is the wisest step which has been taken in naval affairs since I became a Member of the House four years ago. I became a student of naval affairs soon after I was elected, and I have devoted a large part of my spare time to the study of this question. I have consulted with experts, I have gone to experiments, and I have read the history of experiments for the last 15 years upon the question of armor plate and upon the question of shells. I have come to the conclusion from reading the authorities on military affairs that an armor-piercing shell falls far short of the contention of the inventor of the shell and of those who advocate it. It has been laid down by the writers upon shells that the armor-piercing shell is helpless beyond 8,000 to 10,000 yards, and the passage of the Hobson amendment just now is in the right direction, and it means that if the armor-piercing shell can not be perfected so that it can be utilized as a successful missile its death knell has been sounded by the vote here to-day. If there is anything which has been demonstrated by the conflict raging in the East it is that superiority in naval engagements consists, first, in the speed of the vessel, and, second, the high-explosive shell thrown from the big gun. The effect of the bombardment at the siege of Liege surely is enough to convince all intelligent readers that that mighty fort was destroyed by high-explosive shells, not shells filled with black powder, but shells filled with a much more deadly and much more highly explosive material than powder. That these shells, which have been used and are now being used by every one of the warring powers in the East, are far superior to the armor-piercing shell no one can doubt, and in the face of our own experiments here in America and the experiments which have been made by other countries and the lesson that we are learning to-day from the European war, how can the chairman of the Committee on Naval Affairs doubt but what he has been mistaken all the past years of his service in this House when he has stood firmly by and fought the battles for the armor-piercing shell? How can he say that the armor-piercing shell is superior to any other shell manufactured in the world?

The battle at Tsushima was a battle between the armor-piercing shell and the high-expolsive shell, and the armor-piercing shell had behind it superior guns and twice as many battleships, whereas the high-explosive shell had behind it much inferior guns and only one-half as many battleships, and yet the David, the little Japanese Fleet, with the high-explosive shell, felled the Goliath Russian Fleet and sent him to the bottom of the sea. That was a contest between American inefficiency on the question of shells and the eastern efficiency upon shells, for we had furnished Russia her shells. Mr. Chairman, I witnessed a demonstration last Wednesday which, in my opinion, stands at the top of all experiments with shells. It is within the reach of America to reach out her hand and take advantage of that great improvement in shells, and if we as Representatives fail to do this I fear that that invention may fall into the hands of other countries and be used to our great detriment in the future should we be so unfortunate as to be drawn into naval engagements with any of the great powers of the East. My term of service will soon end here in the House, but I never have seen a moment that was so glorious and so gratifying to me as the hour and the time when the Chair announced from the rostrum that an advanced step had been taken for America and for the American Navy. [Applause.] Mr. Chairman, on last Wednesday I witnessed an experiment with a semiarmor-piercing shell in its flight of 10,000 yards through the air and its contact with the water. It exploded instantly on hitting the water, having nothing behind it except a small charge of black powder, and the fragments flew into the air, which proved that it was ineffective as an explosive against the side of a vessel; whereas, on the other hand, I witnessed an experiment at the same time with a high-explosive shell, the result of which was highly satisfactory to all present. Its marvelous results indicate that the warship supplied with it would hold a decided advantage over her enemy in naval engagements. If all of the Members of this House could have witnessed this experiment, I have no doubt but what Congress would go still further and provide for the purchase of this new shell, so that our Navy might be supplied with this marvelous invention.

Tell me that the ingenuity of America will not be accepted by an intelligent Congress when we find our Navy perfectly helpless in her projectiles! The vote just now taken on the Hobson amendment, to the effect that no more armor-piercing shells will be bought unless it can be demonstrated that the armor-piercing shell can be improved so that it will penetrate a 10-inch armor 12,000 yards away, answers this question.

Mr. Chairman, how much time have I remaining?

The CHAIRMAN. The gentleman has 10 minutes remaining.

Mr. FOWLER. Well, Mr. Chairman, I am so overjoyed because of the magnificent victory which I witnessed last Wednesday, and the swift victory following it here on the floor of the House, that I am willing to divide my time with other gentlemen, so they may have an opportunity to express their views. I yield five minutes of my time to the gentleman from North Carolina [Mr. WEBB], reserving the other five minutes. [Applause.]

Mr. WEBB. Mr. Chairman, I am highly gratified at the half step the Committee of the Whole has just taken in adopting the amendment of the gentleman from Alabama [Mr. HOBSON]. For six years I have been working intermittently in the endeavor to have made experiments with high-power explosive shell as a competitor to the A. P. shell, as it is called. I do not know what influence it is in the Navy Department, Mr. Chairman, that has prevented what I call a bona fide test with these high-power explosive shells, but I know the experiments have been very, very slow, and the reports, for some reason or other, have not been satisfactory. And yet six years ago it became apparent that these A. P. shells would not penetrate armor plate of a certain thickness, and it seemed to me it was a contest between the armor-plate people to see if they could make armor plate that an A. P. shell could not penetrate, while the A. P. shell makers were doing their best to make a shell that could penetrate armor plate. And it was at least suspicious, Mr. Chairman, that the armor-plate people and the A. P. shell people did not want any innovation in the nature of an explosive shell, because if that shell becomes more effective than the piercing shell the armor-plate people and the A. P. shell both will be practically eliminated at once. But whether that is true or not, Mr. Chairman, I contend that the Navy Department ought to have long ago, if it has not done it already, make a bona fide test to see what efficacy there is in the high-power explosive shell, and let the country know it and let this House know it. We have been for six years, in my recollection, trying to get the Navy Department to make these simple tests, and I understand they are making some of them now. For my part, I would like to see the amendment of the gentleman from Illinois adopted, requiring the Navy

Department to expend $250,000 at least in making a sincere, bona fide test, in order to ascertain the efficiency of these explosive shells. I made an effort to get such an amendment adopted long ago.

I heard a lecturer yesterday describing the effect of the German 42-centimeter or high-power shell when it hit the ground. It became necessary for the Germans to place 42-centimeter shells in front of one of the most impregnable forts. The shells were placed with wonderful accuracy. Well, on the occasion of his visit the lecturer went to the ground where the shells had fallen and exploded, and there he found, with great regularity, five different indentures in the earth, each of them 61 feet in diameter, 183 feet in circumference, and 23 feet deep, cut out with the form of a well-shaped funnel, with no earth around it and no dust about it. The power of that explosive shell had blown the dust and dirt into the air, as it were, and out into the wheat fields and the forest. If that can be done, I contend that the Navy Department, which has been spending thousands and millions of dollars every year for penetrating shells and other experiments, ought at least to spend a few dollars in experiments with shells to be exploded on the outside of a battleship, which many experts contend will make it unnecessary to purchase armor-piercing shells.

Mr. PADGETT. Will the gentleman yield?

Mr. WEBB. Yes, sir.

Mr. PADGETT. I want to say that the Navy Department is using that high explosive that you refer to in the armor-piercing shell. It is the highest explosive known.

Mr. WEBB. The gentleman says they are using the explosive in the armor-piercing shell. Then, why it is that they are so insistent and wedded to the use of the armor-piercing shell? Why do not they make a test of the high-explosive shell? I contend that the Navy Department ought to make some such experiments, and as long as I have a seat in this House I shall insist that they shall make a fair, bona fide test of such shells for the benefit of the people and of this House. [Applause.]

Mr. FOWLER. Mr. Chairman, I yield five minutes to the gentleman from Alabama [Mr. HOBSON].

Mr. HOBSON. Mr. Chairman, this question of torpedo shells has reached the development stage, though, of course, experimentation has not ended. A little further on, on the next page of the bill, we shall reach the question of the provision for ordnance experiments. It has been cut down from $150,000 last year to $100,000 this year. When we reach that point in the bill I propose to offer an amendment to raise the $100,000 to $200,000, so that we can continue and expand these most valuable experiments. But we have really, Mr. Chairman, reached the point where the purchase of a limited number for use would be advantageous. Before the end of next fiscal year, and probably sooner, it will be advantageous and wise to expend this amount for this type of shell. I do not know that the wording of the amendment offered by the gentleman from Illinois [Mr. FOWLER] is the best. The Army torpedo shell rather than the high-explosive shell would be better perhaps, but the object is the same. Successful torpedo shells are now near realization in our country. In all probability torpedo shells are now in use in the navies abroad and in the armies as well.

If we give due encouragement to our inventors, there are certain elements of our shell that will make it superior to the torpedo shell of other countries. We should keep it superior to other torpedo shells. The time has about come when this torpedo shell ought to be included in our appropriation bills. Now, I realize that the provision of the bill itself permits of the purchase of torpedo shells as well as other types of shells. The discretion of the department ordinarily is all that should be required for making a choice or an allotment between types, leaving the appropriation in a general provision, allowing the department to purchase the shells that it regarded as best.

But I confess, Mr. Chairman, that my experience as chairman of the special Subcommittee on Ordnance Experiments of the Naval Committee, extending now over several years, has convinced me that the Bureau of Ordnance is loath to make any purchase of torpedo shells and is loath to make any experiment with torpedo shells. It is much to be regretted.

Such an amendment as is proposed would be the equivalent of a coercion upon the Bureau of Ordnance. That is what it would mean, coercion as to the expenditure of the $250,000. Under the amendment there would be no option for the bureau for this amount. While it would be with reluctance, I would vote for such an amendment.

The CHAIRMAN. The time of the gentleman from Alabama has expired. The gentleman from Massachusetts is recognized for five minutes.

Mr. GARDNER. Mr. Chairman, I want to get some information from the chairman of the committee, if possible. Admiral Fiske, in his evidence, on page 1007 of the hearings, says:

> I think, of course, it is very well known that we are behind other nations; for instance, the two great naval nations of Europe, in the matter of mines and aircraft. I think that in the case of an attack on our coast by one of those powers our inadequacy would be very keenly felt.

Now, can the gentleman tell me, as a matter of fact, what various different items in the naval appropriation bill the appropriations for mines are drawn from? I understand there are two or three different items under which mines can be provided. How do we stand, as a matter of fact, in the matter of the mines which are under the jurisdiction of the Navy Department?

Mr. PADGETT. The mines are provided for under the appropriation for "Ordnance and ordnance stores."

Mr. GARDNER. Well, it was testified last year by Admiral Strauss that they also could be appropriated for and the money used under "Armor and armament."

Mr. PADGETT. Yes.

Mr. GARDNER. How many more subdivisions are there where appropriations for mines are tucked away?

Mr. PADGETT. Those are the only two that I recall at present.

Mr. GARDNER. How much are you appropriating for mines this year?

Mr. PADGETT. It is embraced in the lump-sum appropriations, in these two appropriations; in the $5,795,420 appropriated for ordnance and ordnance stores.

Mr. GARDNER. Can the gentleman give me any idea as to how much you are appropriating for mines in this bill?

Mr. PADGETT. No. There is no specific estimate submitted for mines. They submitted a total estimate to take care of the mines as well as the other items, but there was no specific estimate submitted for mines.

Mr. GARDNER. Can the gentleman tell me what mines we have got in the Navy?

Mr. PADGETT. Yes, sir; I could do so, but I do not think it would be proper to make it public. I will make this statement, however, that the Navy Department had on hand a certain number of mines, and the General Board, of which Admiral Fiske was a member, recommended that we should have a given number in addition to that, and thereupon that additional number was ordered and is now being constructed at the navy yard at Norfolk, and when that number that was ordered is completed we shall have 50 more than the General Board recommended as the proper number to have.

Mr. GARDNER. Now, does that include all sorts of mines—the $70 cheap mines and the anchor mines?

Mr. PADGETT. Those are the expensive mines; the large mines.

Mr. GARDNER. What did Admiral Fiske mean by his evidence, then?

Mr. PADGETT. I am unable to say. Admiral Fiske was a member of the General Board. The General Board recommended that there should be a given number, and thereupon the department ordered the number that it would be necessary to get to make that number, added to what we had on hand; as a matter of fact, 50 more than that number.

Mr. GARDNER. I thank the gentleman. Now, as a matter of fact, the Army has furnished me a statement as to the mines which they have on hand for seacoast defense. If the Army can reveal not only how many mine cases they have on hand, but also how many mines, the Navy can afford to do the same thing.

Now I am going to read some more from Admiral Fiske's evidence. Admiral Fiske says:

> For carrying and laying mines we have the *San Francisco*, a vessel of about 4,000 tons. She has, I think, 336 mines, mines not of the most modern type, but still good for use. That is all we have at present.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. PADGETT. Mr. Chairman, I will yield to the gentleman three minutes out of my five.

The CHAIRMAN. The gentleman from Massachusetts is recognized for three minutes more.

Mr. GARDNER. I will try to get through with less. Now, referring to Admiral Fiske's words there, I assume he refers to mine-laying ships when he says "That is all we have at present."

Mr. PADGETT. Let me call this to the gentleman's attention: The department ordered and has under construction at the present time at the Norfolk Navy Yard 2,200 mines, which is in

addition to the number which I did not state which was on hand.

Mr. GARDNER. And when will they be finished?

Mr. PADGETT. They are commencing the delivery in the present month.

Mr. GARDNER. And when will they be finished? Within two years?

Mr. PADGETT. I can not say exactly, but within a few months.

Mr. GARDNER. The whole of them?

Mr. PADGETT. Yes.

Mr. GARDNER. How are those mines going to be laid? Here is an extract from page 1001 of the hearings:

Mr. ROBERTS. How many of the mine-laying ships should we have?
Admiral FISKE. We have the *San Francisco*.
Mr. ROBERTS. How many should we have?
Admiral FISKE. Germany has five, I believe.
Mr. ROBERTS. Do you think we should have five?
Admiral FISKE. I think so.
Mr. ROBERTS. Should we have more than that?
Admiral FISKE. Yes; I should think so. Our coast is very much longer than Germany's coast. I should think we should have more than that.

Has there been any step taken by the committee to remedy that situation?

Mr. PADGETT. No. There are a number of types of ships that can be used for the purpose of laying mines. There are other ships that are recommended that are more essential and more important, and the committee has provided for that class of ships when we can use other ships that we have for mine laying.

Mr. GARDNER. The gentleman knows that Admiral Fiske does not agree with him on that point?

Mr. PADGETT. Admiral Fiske does not disagree with the idea that they can be used.

Mr. GARDNER. No. He says they are not appropriate for any other Navy purpose, if fitted for mine laying.

Mr. PADGETT. He says the ones they use are better.

Mr. GARDNER. Now, one moment further. I read:

Mr. ROBERTS. Would we need a special appropriation to bear the expense for an extensive development along that line?
Admiral FISKE. I believe Germany spent $500,000 in 1913 on mines. They are supposed to have about 20,000 mines. How close those figures are to the actual facts I do not know. That is what I hear. I have a good many sources of information, and I am under the impression that they have 20,000 mines.

Mr. PADGETT. That is the mines. You were talking about the ships.

Mr. GARDNER. Yes; but I was taking his evidence in the order in which it appears in the hearings.

Mr. PADGETT. Mr. Chairman, I do not desire to make any statement further.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Purchase and manufacture of smokeless powder, $1,150,000: *Provided*, That no part of any money appropriated by this act shall be expended for the purchase of powder other than small-arms powder at a price in excess of 53 cents a pound: *Provided further*, That in expenditures of this appropriation, or any part thereof, for powder, no powder shall at any time be purchased unless the powder factory at Indianhead, Md., shall be operated on a basis of not less than its full maximum capacity.

Mr. FOWLER. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Illinois offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amend, on page 17, in line 6, by striking out the figures "53" at the end of said line and inserting in lieu thereof the figures "50."

Mr. FOWLER. Mr. Chairman, I offer this amendment in the interest of economy. It has been demonstrated that we manufacture powder at a cost of from 30 to 34 cents. In fact, I believe we can manufacture it for less than that. We have been paying 53 cents for the last three years for the powder that we purchase. As I recollect, prior to that time we had been paying a much larger sum, as high perhaps as 80 or 85 cents per pound. It is to the credit of some Members, and especially the gentleman from Kentucky [Mr. SHERLEY] who is chairman of the subcommittee on coast defenses, that a reduction has been made in the purchase price of this powder. If we can manufacture powder at a cost of 30 to 35 cents a pound, then the difference between that and 53 cents a pound is an exceedingly large profit. That is nearly double. If we could manufacture it for 26½ cents a pound, then the price that we are now paying would be exactly double.

Mr. PARKER of New Jersey. Will the gentleman permit a question?

Mr. FOWLER. Yes.

Mr. PARKER of New Jersey. Does not the gentleman think that in the present state of affairs, when powder is so much in demand, it is rather dangerous to put a maximum price on it?

Mr. FOWLER. We have already fixed a maximum price at 53 cents. We have done that to my recollection in the last three bills, or at least in the last two, and my recollection is in the last three. Now, if it has been demonstrated that powder can be manufactured for from 30 to 35 cents a pound, then the difference between that price and 53 cents a pound is an exorbitant profit, which ought not to be imposed upon the people of this country. We represent individual districts primarily, and at large we represent America. That being the case, it becomes our duty to see that no company or combination of companies shall impose upon the Treasury of the United States.

Mr. BROWNING. Will the gentleman yield?

Mr. FOWLER. I yield to the gentleman from New Jersey.

Mr. BROWNING. I should just like to ask the gentleman whether it costs any less to manufacture powder now than it did three years ago, when this proviso was put in the bill?

Mr. FOWLER. No; I think not.

Mr. BROWNING. Then why should we reduce it?

Mr. FOWLER. We reduced it then, because we had not, as I recollect, determined exactly what the cost of the production of powder was.

Mr. BROWNING. I think the gentleman will find he is very much mistaken in what he says the cost of Government manufacture is.

Mr. FOWLER. No; I am not mistaken. If I were mistaken about it then I would feel ashamed to offer this amendment; but knowing my ground I feel certain that the amount which we are now paying for powder is exorbitant, and I do not think, in the light of the information which we have received during the last five years concerning the cost of the manufacture of powder, that we can justify ourselves in voting to pay to any corporation or any trust in this country 53 cents a pound.

Mr. BROWNING. If the gentleman will look at the hearings before the Naval Committee, I think he will find it was testified by Admiral Strauss that the powder manufactured by the Government cost it about 44 cents a pound.

Mr. FOWLER. I know what the testimony has been heretofore. I know it has been that it cost about 34 cents a pound, instead of 44 cents a pound, and I believe it can be manufactured at a much less cost than that.

The CHAIRMAN. The time of the gentleman has expired.

Mr. FOWLER. I ask unanimous consent to proceed for two minutes.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent to proceed for two minutes. Is there objection?

There was no objection.

Mr. BUCHANAN of Illinois. Will the gentleman yield?

Mr. FOWLER. Yes.

Mr. BUCHANAN of Illinois. The figures as to the cost of manufacture are obtained only from the Government manufacture, are they not?

Mr. FOWLER. Yes.

Mr. BUCHANAN of Illinois. Is it not a fact that the powder manufacturers, known as the Powder Trust, have never permitted an examination of their books; that they have refused it, and that the probability is that they are manufacturing it for very much less than the Government is, owing to the fact that the Government pays about 25 per cent higher wages, giving annual leave and other privileges to the working people that the Powder Trust does not?

Mr. FOWLER. I understand that is largely true, Mr. Chairman; and for that reason and others I have seen fit to offer this amendment. I do not think there is a member of the Naval Affairs Committee who will dispute that the Government is now manufacturing powder at not to exceed 34 cents a pound and that we are paying, according to the law which is on the statute books, the sum of 53 cents a pound, which ought not to be the case. The difference between 34 cents and 53 cents is too great. It runs up to nearly 100 per cent, and 10 per cent is considered a handsome profit on any investment.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. PADGETT. Mr. Chairman, the limitation fixed in this bill is the same as is fixed in the Army appropriation bill. Congress has kept the two services upon the same basis. I agree fully with the suggestion made by the gentleman from New Jersey [Mr. PARKER], that this is not the time to fix a price limitation so low that we might not be able to get powder if we needed it.

Mr. FOWLER. Will the gentleman yield?

Mr. PADGETT. Yes.

Mr. FOWLER. Why do they not take off the maximum limitation of 53 cents and leave it open?

Mr. PADGETT. Simply because we keep it as we had it last year and as the House has fixed it this year in the Army appropriation bill, which has preceded our bill.

Mr. FOWLER. Then you are in favor of the limitation?

Mr. PADGETT. Yes.

Mr. FOWLER. Then you can not agree with the gentleman from New Jersey [Mr. PARKER].

Mr. PADGETT. The gentleman from Illinois made a very positive statement about the cost of powder, and said it was from 30 to 35 cents. The committee went into that matter with Admiral Strauss, and the cost of powder, as will be found on page 200 of the hearings, was thirty-six and a fraction cents a pound, and that did not include any allowance for interest on the investment, nor does it include any allowance for taxes, and there are other matters that enter into the cost of powder by the powder manufacturer that is not expresesed in these items. So that the gentleman's statement is below the figures given by Admiral Strauss.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois.

The question was taken; and on a division (demanded by Mr. BUCHANAN of Illinois) there were 11 ayes and 31 noes.

So the amendment was rejected.

Mr. BUCHANAN of Illinois. Mr. Chairman, I move to strike out the last word. The item that provides for the Government to run the Indianhead powder mill to its full capacity was an amendment that I offered in the House, and was my first effort in Congress. It passed the House, but was squeezed out in the conference between the two Houses. At that time it seemed to be dangerous for the Government to extend its powder plant and manufacture its own powder, because it was thought that the Powder Trust would go out of business and refuse to manufacture it unless they could be satisfied with the amount of their contract and the amount of the profit that they desired. Of course these trusts, especially the large ones that have been proved guilty of violations of the law are very modest in their requests and demands for profit. We have now just voted down an amendment that provided for reducing the price of powder from 53 to 50 cents, which would give a fair profit to the Powder Trust, but if there was an effort made to increase wages or something of that sort we would hear a great many cry out for economy. This amendment would have probably saved the Government quite a good deal of money. There is no doubt but that there is sufficient profit for the powder manufacturer. If this trust is so powerful as to be dangerous unless we satisfy them, if we are not going to have their powder, probably there would be other manufacturers that would be glad to make a sale of powder at a fair price and a fair profit.

There is no doubt in my mind that private powder manufacturers are manufacturing powder for even less than the Government reports that it cost them to make the powder. While it is true we have had the representative of the Powder Trust before the committee, and he makes it appear that it costs 44 or 45 cents a pound, yet while it is said that figures do not lie, sometimes liars figure, and it is the general custom of these trusts, especially those that have little regard for the law except to keep out of its toils, not to have much regard for truth.

So it is that we do not know the facts. They have refused to show their books; they have refused to let experts of the Government who want to get at the facts as to the cost of these things see what it has cost them; they prefer to see the head of the company, or some one who will not give away their methods and the cost, come before the committee and make explanations. They have always refused to open their books and give the facts in regard to the cost of the manufacture of war munitions.

Instead of the 50 cents that you have just voted down being too small, in my judgment it is too large. There is one gratification about it, and that is that Government powder manufacturing is being extended and becoming much more efficient from the fact that the Government has undertaken to manufacture it. When the people wake up to the fact that they are being plundered by these corporations, they are going to demand of their Representatives that they will support measures that will permit the Government to manufacture all of its war munitions, so that you can have the best and the cheapest that there is and give working men the best conditions by permitting them to have a part in the industry. We know that under Government employment workingmen get better conditions, more wages, get annual leave, get sick leave, and still find the cost of the manufacture of the war munitions much less than it can be purchased or contracted for. Still we find great opposition, as a rule, to extending our plants or establishing plants for the manufacture of munitions of war.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. PADGETT. Mr. Chairman, I desire to ask the gentleman a question and ask unanimous consent that his time be extended for one minute.

The CHAIRMAN. Without objection, the gentleman's time will be extended for one minute.

There was no objection.

Mr. PADGETT. Mr. Chairman, I will ask the gentleman if two years ago the Naval Committee did not report in favor of enlarging the plant at Indianhead in order to make more powder, and if the gentleman did not file a minority report against the enlargement of the powder plant at Indianhead?

Mr. BUCHANAN of Illinois. I never was opposed to an enlargement of the powder mill in any capacity that would be necessary to manufacture the powder that the Government needs.

Mr. PADGETT. Mr. Chairman, I call the gentleman's attention to the fact that he, in writing, filed a minority report protesting against the enlargement of the powder plant at Indianhead, stating specifically that it was large enough to manufacture all the powder we needed.

Mr. BUCHANAN of Illinois. Was that true?

Mr. PADGETT. It was not; and we enlarged it over the gentleman's protest and his minority report.

The CHAIRMAN. The time of the gentleman from Illinois has again expired.

Mr. BUCHANAN of Illinois. Mr. Chairman, I ask unanimous consent to proceed for two minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. BUCHANAN of Illinois. Mr. Chairman, I signed a minority report, which in the main, of course, I was in favor with, one year ago, to prevent the building of useless battleships, because the only benefit they are is to give a few men work and the armor-plate ring about $2,000,000 profit to every battleship that is built. If we could stop that useless expenditure of money, perhaps we would have in our plant at Indianhead sufficient capacity to manufacture what powder we need. That was one of the things that the minority was in favor of at that time; but I would like to say to the chairman of my committee, who is a lovable gentleman, that it was over his protest that I secured the passage of an amendment—I think it was four years ago—which provided for the extension of the powder mill, and perhaps he did not exercise his efforts very strongly to keep it in the bill when in conference. Therefore it was squeezed out; so it might be asked of him whether in that conference at that time, when this amendment to increase the capacity for the Government to operate that factory to full capacity—whether or not he did, in representing this House in conference, exercise his influence as he should have exercised it to keep the amendment in. Due to the fact that we did not keep it in, we did not have this sort of legislation for a year afterwards.

The CHAIRMAN. The time of the gentleman from Illinois has again expired.

Mr. COOPER. Mr. Chairman, I move to strike out the last word. Not being a member of the Committee on Naval Affairs, I am obliged to rely in considerable measure on the good judgment of that committee to guide me in my vote on propositions of this kind. But at this point I desire to call attention to certain testimony concerning the cost of making powder, a subject which seems to be in dispute here. On page 207 of the hearings I find the following:

The CHAIRMAN. I will ask you if you can put in the hearings a statement as to the cost of manufacturing powder?

Admiral STRAUSS. The powder for this year?

The CHAIRMAN. I mean for the fiscal year ending June 30.

Admiral STRAUSS. For the fiscal year ending June 30, 1914, the cost, including all overhead charges, administration, etc., was $0.38072 per pound. That is, about 38 cents.

Mr. BROWNING. Does that include packing?

Admiral STRAUSS. That includes everything—the packing, tug service——

Mr. BROWNING. And freight?

Admiral STRAUSS. And freight. It includes everything that is incident to the production of power at Indianhead.

The CHAIRMAN. Does it embrace the administration charges of the force that may be used here in Washington?

Admiral STRAUSS. It does not embrace the cost of clerical work here in the department.

The CHAIRMAN. What do you estimate that to be, or have you an estimate of what that would be, if added?

Admiral STRAUSS. Oh, it would be a very small amount, the pay of one clerk and part of the pay of one officer, so far as the Bureau of Ordnance is concerned——

Mr. ROBERTS. It would be a small part of a cent?

Admiral STRAUSS. A very small fraction of a cent.

He was then questioned about insurance, and replied that the Government plant insured itself. Then Mr. ROBERTS, of that committee, took up the inquiry as follows:

Mr. ROBERTS. Does it include interest on capital?
Admiral STRAUSS. Yes, sir; we have allowed 3 per cent on the plant value and the stock in suspension. That is included.
The CHAIRMAN. Did you say 3 cents or 3 per cent?
Admiral STRAUSS. Three per cent on our total investment—that is, buildings and machinery——
Mr. ROBERTS (interposing). And land?
Admiral STRAUSS. Land and stock in suspension. The investment in land is very small.
The CHAIRMAN. What do you include the value of the plant at?
Admiral STRAUSS. We estimate the plant value to be $1,278,870.
The CHAIRMAN. What do you include for stock in suspension?
Admiral STRAUSS. The stock in suspension is estimated at $1,010,000. That includes materials for the manufacture of powder and powder not yet completed.

On page 211 I find the following:

Mr. BROWNING. As I understand you, Admiral, the stability of the powder produced by the Government and that bought from private manufacturers is about the same?
Admiral STRAUSS. I think it is about the same.
Mr. BUCHANAN. What is the difference in the cost?
Admiral STRAUSS. Last year our total cost for powder produced at Indianhead was about 38 cents, and we purchased it at 53 cents.

The Clerk read as follows:

Naval Proving Ground, Indianhead, Md.: For machinery for extension of powder factory, to be available until expended, $141,620.

Mr. FOWLER. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 17, line 17, strike out the figures "$141,620" and insert in lieu thereof "$350,000: *Provided*, That $200,000, or so much thereof as is necessary, be used for the construction of a Government plant for the manufacture of high-explosive shells."

Mr. PADGETT. Mr. Chairman, I make the point of order against the amendment.

Mr. FOWLER. Mr. Chairman, I concede that if the chairman of the committee or any other gentleman desires to interpose a point of order against the proposition it is subject to the point of order.

The CHAIRMAN. Does the gentleman from Tennessee make the point of order?

Mr. PADGETT. I do.

The CHAIRMAN. The Chair sustains the point of order.

The Clerk read as follows:

Torpedoes and appliances: For the purchase and manufacture of torpedoes and appliances, to be available until June 30, 1918, $1,000,000.

Mr. GARDNER. Mr. Chairman, I move to strike out the last word. Is it the intention of the Naval Committee to provide torpedoes or to provide for money to manufacture torpedoes to be 21 feet in length and 21 inches in diameter for the use of submarines? In other words, are the long-range torpedoes to be made for submarines?

Mr. PADGETT. No; they are not. The submarines are not fitted to use that size torpedo. At submarine range the torpedo is not so large. They go up near the ship. The farther they are off, the smaller the angle and the greater the danger of missing, so they go up close to the ship to fire.

Mr. GARDNER. Now, I invite attention to the evidence of Admiral Fletcher. On pages 542–543 of the hearing, speaking of these long-range 21-foot torpedoes, Mr. WITHERSPOON asked:

Mr. WITHERSPOON. Now, what I want to ask you is: Are the latest submarines equipped with that torpedo?
Admiral FLETCHER. No; they are not equipped with that torpedo.
Mr. WITHERSPOON. Well, can they be equipped with it?
Admiral FLETCHER. My impression is that they will be equipped with them eventually.
Mr. WITHERSPOON. The highest grade of torpedo?
Admiral FLETCHER. Yes.
Mr. WITHERSPOON. There is no reason why the submarine should not have the same powerful torpedo that a battleship has, is there?
Admiral FLETCHER. No reason; but a long-range torpedo is not so essential on a submarine that can get close to a battleship.

Mr. PADGETT. Will the gentleman permit me just at that point?

Mr. GARDNER. In just a minute I will yield to the gentleman. Now, Admiral Strauss said, and the Secretary of the Navy quoted him when he made answer to something which I had not said, but which appeared in a morning newspaper—Admiral Strauss said that the *Aboukir*, the *Cressy*, and the *Hogue* were blown up at short range, and apparently he drew the inference that short-range torpedoes are all we need for our submarines. Mr. Chairman, the next bunch of ships will not be blown up at short range. Many a man has been killed with a revolver at short range, especially when he was not on his guard; but any sensible man would rather have a long-range weapon than a short-range weapon, if he was bent on the destruction of an enemy. Of course, it must be assumed that the long-range torpedo has high speed and power. I am afraid the great trouble is that Admiral Strauss does not want to scrap his old short-range torpedoes. Let me read you from the admiral's own statement in his report made as Chief of Bureau of Ordnance before this agitation was begun. The report is dated September 23, 1914. Here is what the admiral says on page 8:

The torpedo situation is developing very satisfactorily with the exception of modern torpedoes for battleships anterior to the *Nevada* and *Oklahoma*. For cruisers of the *Tennessee* class and for the scouts—

Now, that is a formidable list of vessels he is describing—

At present all of these vessels are equipped with short-range torpedoes which may be considered obsolete for the battle fleet.

That statement was made before I began a discussion of the torpedo situation and before it became an issue. Now, Mr. Chairman, the admiral says that the battleships anterior to the *Nevada* and *Oklahoma* are all equipped with short-range torpedoes. The fact is that all our battleships are anterior to the *Nevada* and the *Oklahoma*. Neither of them has yet been completed. In other words, every battleship of the United States Navy is equipped with short-range torpedoes, which may be considered obsolete for the battle fleet, but the unpleasant fact is completely shrouded in that paragraph which I just read.

Mr. PADGETT. Mr. Chairman, I want to state that we have established in this country a range of 4,000 yards as a proper range for the submarine torpedo and later the General Board has considered the matter very carefully, and they have reduced that range from 4,000 to 2,000 yards as a proper range for the torpedoes. And I may say further that the range that the board has established—that is, the reduced range—is twice the range of the submarines of countries in Europe, so that even with our reduced ranges we are twice the range of England, France, and Germany.

Mr. GARDNER. Will the gentleman yield?
Mr. PADGETT. Yes, sir.
Mr. GARDNER. How does the chairman know that?
Mr. PADGETT. I have a letter from Admiral Strauss.
Mr. GARDNER. Will the gentleman read that letter?
Mr. PADGETT. Yes, sir; I have no objection to putting it in the RECORD.
Mr. BUTLER. Let it be read.
Mr. PADGETT. Now, I want to state this about torpedoes: A great deal has been said about torpedoes. We have a full supply of torpedoes for every torpedo tube we have in submarines, torpedo boats, and battleships, including the ones that were authorized in the last bill.

That is, Congress has appropriated for and we have either on hand or ordered a full supply for every tube that we have up to and including the authorizations in the last bill, and in addition to that we have on hand and ordered a reserve equal to the supply for all of our tubes, lacking only six torpedoes. We had ordered from abroad seven torpedoes, known as the Fumi torpedo, which we were cut off from getting by reason of the war, and if we had had those seven we would have had one extra for all the tubes that we have.

Mr. GARDNER. Will the gentleman yield?
Mr. PADGETT. I will yield.
Mr. GARDNER. Now, the gentleman is saying that we have the torpedoes needed according to the estimate of Admiral Strauss.
Mr. PADGETT. No, sir; it is the amount that has been fixed. There is no secret about it. I did not give the aggregate amount; but I have no objection——
Mr. BUTLER. I think the letter really ought to be read.
Mr. PADGETT. I will read it in a few minutes.
Mr. GARDNER. I would like to have it read in a few minutes; but I would like to ask, counting in all your short-range torpedoes, how many does that give for each torpedo tube on the fleet.
Mr. PADGETT. That is what I am coming to right now. In the vessels of the *Ohio* class, 3 of them, the fill or supply is 24 torpedoes, or 8 torpedoes for each ship. Each torpedo has a fill with that type of ship. Of ships of the *Virginia* class there are 5, and 16 torpedoes is a fill or supply for that class of ship. The *Connecticut* class is 18. The *Michigan*, the *Delaware*, the *Florida*, and the *Wyoming* class is 12. The *Texas* and the *Oklahoma* class is 16, and the *Pennsylvania* and the *California*—the *California* being the one authorized in the last bill—are 24 for a fill or supply, and 24 being reserved would make 48 for each one for that class of ship.

The CHAIRMAN. The time of the gentleman from Tennessee [Mr. PADGETT] has expired.

Mr. PADGETT. Mr. Chairman, I ask unanimous consent for five minutes more, that we may get information about these matters.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. PADGETT. Now, you take the cruisers. There are four of the cruisers that require 16 torpedoes each; there are other cruisers that require 8. All of the destroyers that run from 4 to 12 and the submarines, running from 3 to 14, have a fill. Now, then, as I stated, we have not only the complete fill but we have a complete reserve ordered and on hand, lacking 6, and if we had gotten the 7 that were ordered abroad we would have 1 surplus.

Now, the torpedoes that are being manufactured from the million dollars that was appropriated last year are the best types of torpedoes, and the million dollars that is provided in this bill is for the purpose of supplying and remaking and building up to it the older type of torpedoes that we have. In other words, some of the torpedoes are being made shorter in certain respects and with larger heads, in order to carry a larger quantity of high explosives. So this talk you have heard over the country about our torpedo situation is not correct.

Mr. GARDNER. Mr. Chairman, inasmuch as the gentleman has had his time extended for five minutes, I ask unanimous consent that my time be extended.

Mr. PADGETT. I join in the request.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. HELM. You stated a while ago that the board had reduced the range from 4,000 to 2,000 yards.

Mr. PADGETT. The fighting range.

Mr. HELM. I would like to have you make that a little clearer, inasmuch as it is somewhat hazy. In other words, they give instructions that a submarine should endeavor to get within 2,000 yards of the ship before firing?

Mr. PADGETT. They have not reduced the torpedo.

Mr. HELM. You and I are in a battle, or our ships are in a battle with the enemy, and they are going to stand where we tell them to stand. Is that the idea?

Mr. PADGETT. No; but the submarine is to endeavor to sail within 2,000 yards and fire.

Mr. HELM. Now they have only had to sail within 4,000 yards?

Mr. PADGETT. Four thousand yards was the limit that was fixed heretofore; so that 2,000 yards is twice the distance prescribed for England, France, and Germany.

Mr. HELM. In other words, so I understand you, good fighting requires you to be within 2,000 yards of an enemy before you will fire a torpedo?

Mr. PADGETT. No. Now, we started out with the torpedo at a 1,000-yard range. That was their running range. We have in a few years developed until we are manufacturing now torpedoes with a 10,000-yard limit, which is 6 sea miles, or nearly 7 land miles.

Now, I may say—and I am not giving away any secret—that we are developing a torpedo with a range of 13,500 yards. That does not mean, however, that when we get the torpedo with a range of 13,500 yards the 10,000-yard range torpedo is useless and a failure, and that in making the 10,000-yard torpedo now it does not mean that we will throw away the torpedo with a range of 7,000 yards that we made the year before last. They are still valuable and useful.

The CHAIRMAN. The time of the gentleman from Tennessee has expired.

Mr. PADGETT. Mr. Chairman, I ask for five minutes more. I will then yield to the gentleman from Massachusetts some time.

Mr. GARDNER. I do not ask the gentleman for time. I ask the committee to yield time to me.

Mr. PADGETT. I will join in giving it to you. I want you to have the time.

The CHAIRMAN. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

Mr. PADGETT. Now, you can realize at once that if you are firing at 10,000 yards, a little variation at the start with the torpedo will carry the torpedo wide of the mark at that range, but the same variation at a range of 2,000 yards would make very little difference. The angle broadens geometrically as the distance increases.

Now, then, the battleships and the submarines are equipped with those long-range torpedoes, because they fire them at long range. The submarine can submerge beneath the surface, with its periscope above, and can steam under the water and get up closer, so that the General Board has prescribed it as a regulation that they should endeavor to get within 2,000 yards and reduce to the minimum the angle of variation, so as to multiply very largely the chances of hitting.

Now, I yield the floor, Mr. Chairman.

Mr. MADDEN. Mr. Chairman, will the gentleman yield to me for a question before he sits down?

The CHAIRMAN. The gentleman from Massachusetts [Mr. GARDNER] asks unanimous consent to proceed for five minutes. Is there objection?

There was no objection.

Mr. MADDEN. I just wish to ask the gentleman from Tennessee a question, because it must be admitted by everybody that the statement as made by the gentleman is true, otherwise every time you sent a torpedo out from a ship it would sink the other ship, and that is why we have so many torpedo boats that do not sink ships. That is the reason why whole navies are not sunk by torpedo boats every 10 minutes.

Mr. PADGETT. Yes. Before the gentleman from Massachusetts [Mr. GARDNER] takes the floor, Mr. Chairman, I desire to have the letter of Admiral Fiske read, and I will ask that it be read at the Clerk's desk, because my voice is not in good condition.

The CHAIRMAN. Without objection, the Clerk will read the letter referred to.

The Clerk read as follows:

NAVY DEPARTMENT,
BUREAU OF ORDNANCE,
Washington, D. C., January 22, 1915.

Hon. L. P. PADGETT, M. C.,
Chairman Committee on Naval Affairs,
House of Representatives, Washington, D. C.

MY DEAR MR. PADGETT—

1. In response to your request of yesterday I am submitting the following information concerning the torpedo situation:

2. We are building the longest-range torpedoes for all those vessels that, by reason of their construction, are able to take them, and are furnishing torpedoes of improved range for the older ships as fast as they can be turned out. A great many of the vessels already built have been supplied with the increased-range torpedo.

3. The torpedo station is using the million dollars appropriated at the last session in building these increased-range torpedoes; and if Congress appropriates the million asked for this year, that will be allotted to the torpedo station for the same purpose. We have three factories at work on torpedoes—the Bliss Co.'s large plant in Brooklyn, the growing plant at Newport, and last year, in order to further the manufacture of torpedoes in this country, we gave an order to the Washington Navy Yard.

4. No other source of supply is open to us. We had one foreign source of supply, but we did not consider the torpedoes manufactured by that firm equal to our own. We ordered seven trial torpedoes from another manufacturer in Europe some two years ago. They have never been delivered. However, we are fairly well off for torpedoes with respect to the number fixed upon by the General Board as an adequate supply. We are manufacturing great numbers, the majority of which are for ships now being built, and all of which will be ready when the ships are delivered to the Government.

5. Beginning with June, 1913, orders have been placed for torpedoes which to date nearly equal the total accumulation of torpedoes in the United States Navy up to that time. To be exact, for every 100 torpedoes on hand and ordered at that date 96 have been ordered since then.

6. Turning now to the question of torpedoes for submarines I desire to say that it is not now nor has it ever been contemplated that a submarine should fire as long a range torpedo as a surface vessel. The reason for this is so obvious that I will not go into it. Generally speaking, the error of a torpedo is in direct proportion to the distance it has to travel. Therefore an important element in the successful shot is, of course, as short a range as possible. The submarine is able to fire at shorter ranges, with a consequent greater hope of hitting, than a vessel exposed to the fire of the enemy.

7. With a battleship the torpedo is an auxiliary weapon and must await its chance to be used during the general engagement with guns, and a long-range torpedo is therefore necessary. The torpedo boat should have a long-range torpedo for the reason that torpedo vessels are particularly vulnerable, and in order to survive or even deliver their shot they are compelled to sacrifice some chance of hitting by firing at long range.

8. It is an advantage to reduce the size of torpedoes for submarines; and since this can be done with a sacrifice of useless range, it is a wise policy to have a reduced range for submarine torpedoes. On the other hand, if it is determined that the submarine torpedoes at present are not too large to be handy, by keeping the same dimensions the explosive charge can be largely increased. Very recently the General Board has recommended that this latter step be taken; that is, that the range of submarine torpedoes be reduced and the explosive charge increased. The range will still be very large as compared with the range of submarine torpedoes abroad. If we are to trust our information from abroad, the range of our submarine torpedoes, even when reduced, will be about twice that of the submarine torpedoes used in Germany, France, and England.

Respectfully,

J. STRAUSS,
Chief of Bureau.

The CHAIRMAN. The gentleman from Massachusetts [Mr. GARDNER] is recognized.

Mr. GARDNER. Now, Mr. Chairman, out of the 520 torpedo tubes in the Navy only 112 are on submarines. I want to ask the chairman of the committee if it is not designed to use 18-inch torpedoes on the new submarines? I think they call them "Mark 7," or something of the sort.

Mr. PADGETT. I think the 18-inch is to be used.

Mr. GARDNER. And what is the range of those 18-inch torpedoes?

Mr. PADGETT. I think they use only the 18-inch on the submarines.

Mr. GARDNER. And what is their range?

Mr. PADGETT. It is less than 4,000 yards. Some of them run up to 7,000.

Mr. GARDNER. It is between 4,000 and 7,000 yards, is it not?

Mr. PADGETT. Yes, sir.

Mr. GARDNER. Mr. Chairman, I do not mean to criticize the Ordnance Department. I mean merely to state the facts. The mere fact that the Ordnance Department is not to blame or that it is doing the best it can, would not alter the situation if war were to break out to-morrow. I do not mean to say that the Ordnance Department is not justified in retaining old torpedoes of short range if they have none better; but, as a matter of fact, we do have a lot of short-range, out-of-date torpedoes, and I object to their being reckoned as if they were up-to-date torpedoes. I do not in the least care whose fault it is or whether it is anyone's fault. We have not got the goods. I do not mean to say that the Bureau of Ordnance has not supplied long-range torpedoes to all vessels which are fitted to receive them. I do not know whether they have or not. I do mean to say that, whether they are fitted to handle them or not, the fact remains that most of our ships are not fitted with the best torpedoes. I do not mean to say that the Ordnance Department is not supplying torpedoes as fast as they can be turned out, which the Admiral claims in his letter. I suppose, of course, that they are being supplied as fast as they can be turned out, but they can not be turned out fast enough with the appropriations which you have been allowing them to have, Mr. Chairman.

Mr. PADGETT. Will the gentleman permit a question just there?

Mr. GARDNER. Yes.

Mr. PADGETT. I wanted to say that provision is made for supplying the vessels that have been authorized, and the letter of Admiral Strauss stated that the torpedoes would be ready at the time the vessel was completed. What is the use of completing the torpedoes in advance of the vessel?

Mr. GARDNER. Yes; I am not saying that you can put long-range torpedoes on those old vessels. I am saying that the old vessels do not, as a matter of fact, have them, which is another illustration of the obsolescence of the second-line battleships.

Now, let us get down to these short-range torpedoes for the submarine fleet. I am now going to read something from Commander Stirling's evidence, on page 884 of the hearings. Commander Stirling commands the submarine flotilla. Mr. WITHERSPOON said:

> Now, Commander, in regard to these 18 submarine boats on the Atlantic coast that you have described, are they all equipped with torpedoes that you say will shoot 5,000 yards?

As a matter of fact, there are only 12 submarines in commission on the Atlantic coast, unless you count the 5 at the Panama Canal. Mr. WITHERSPOON says:

> Are they all equipped with torpedoes that you say will shoot 5,000 yards?

That is the 18-inch torpedo which the chairman says is desirable. Commander Stirling answered, "No, sir." Then I read further:

> Mr. WITHERSPOON. How many of them are equipped with as powerful a torpedo as that?
> Commander STIRLING. Four.
> Mr. WITHERSPOON. Only four?
> Commander STIRLING. Yes, sir.

Mr. Chairman, I do not say that those old-fashioned submarines can be equipped with the best modern 18-inch submarine torpedoes. Very likely it is impossible. What I am pointing out is that they are not so equipped. From the point of view of our national defense it does not make the slightest difference what the cause is.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired. The Clerk will read.

Mr. MANN. Mr. Chairman, I move to strike out the last two words.

The CHAIRMAN. The gentleman from Illinois moves to strike out the last two words.

Mr. MANN. This item of a million dollars is made available until June 30, 1918, and the item immediately preceding, for ammunition for ships of the Navy, is made available until expended. Is the gentleman able to state what the balance is in the Treasury at any particular time of all the appropriations which have been made for ammunition for the ships of the Navy? In other words, for the current year the amount is $3,178,890. Is that practically expended during the year, or is there a sum accumulating as a balance in the Treasury?

Mr. PADGETT. My understanding is that it has been practically expended. For instance, on page 220 of the hearings Admiral Strauss states that, based on the bid in 1914, the expenditure amounts to $2,782,535——

Mr. MANN. To cut it short, does the gentleman know what is the balance in the Treasury on this character of appropriations?

Mr. PADGETT. I understand that there is an unexpended balance for projectiles at the present time of about $800,000.

Mr. MANN. I am asking about the item of ammunition for ships of the Navy. What is the unexpended balance in the Treasury of that item at any time that the gentleman figures on?

Mr. PADGETT. That is what I am trying to give the gentleman.

Mr. MANN. The gentleman is talking about projectiles.

Mr. PADGETT. They purchase projectiles.

Mr. MANN. I know, but I am talking about the item of ammunition for ships of the Navy, made available each year until expended, and I want to know whether they are accumulating a credit balance or whether they are expending the money.

Mr. PADGETT. They are expending the money each year, but this last year, on account of getting projectiles at a very reduced price, far less than they had ever gotten them for before, there was an unexpended balance of about $800,000, so that this year the committee took that into consideration, and we did not appropriate as much as we had heretofore appropriated.

Mr. MANN. Then there is no occasion for making this item available until expended?

Mr. PADGETT. That has been the custom.

Mr. MANN. I know, but if it is being spent every year there is no occasion for putting in the bill the words "to be available until expended," so that no one can know how much has been expended and know how much of a credit balance they have unless he goes to the Treasury Department and looks at the figures. It is a very loose system of making appropriations, unless they want to have some money accumulate there, and if this amount is being expended every year, next year, when we reach this item, I will make a point of order on it.

Mr. PADGETT. I do not think they are accumulating any fund there.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Experiments, Bureau of Ordnance: For experimental work in the development of armor-piercing and torpedo shell and other projectiles, fuses, powders, and high explosives, in connection with problems of the attack of armor with direct and inclined fire at various ranges, including the purchase of armor, powder, projectiles, and fuses for the above purposes and of all necessary material and labor in connection therewith, and for other experimental work under the cognizance of the Bureau of Ordnance in connection with the development of ordnance material for the Navy, $100,000.

Mr. HOBSON. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 18, line 17, strike out the figures "$100,000" and insert "$200,000"

Mr. HOBSON. Mr. Chairman, for several years we have been making experiments under this appropriation through a subcommittee of our Committee on Naval Affairs. The experiments have related largely to the development of the torpedo shell. In this connection we experimented with the armor-piercing shell. Experiments along both lines ought to be continued. The experiments with the armor-piercing shell at long range involves placing on a platform of an old ship expensive armor plate.

Again, we should take up experiments to reduce the rolling of vessels in a seaway to produce a steady platform for our guns. There are indications that the German Navy has some such device, reputed to be a tank system, under which it can maintain a steady platform in a seaway. This seems to have been used in the fight off the Chilean coast, where the Germans in a half gale and heavy sea, at 12,000 yards, made excellent target practice against the English vessel, and although one English vessel had heavier guns, they seem to have made no hits at all. At all events, this line of experimentation ought to be taken up. It will involve a considerable expenditure. I do not think the addition of $100,000 would be excessive.

We have heretofore allowed $150,000. Last year and the year before it was $150,000. It is the consensus of opinion of those connected with the experiments that no expenditure has given larger returns for the amount involved. It is a small amount compared with the total expenditure on the Navy, whose whole efficiency is affected. It will tend to make more effective the attacking power of our ships, whether using armor-piercing shells or torpedo shells.

In the Navy Department there is no agency provided by law for experimentation. The chiefs of the bureaus are loaded down with details of administration. This is the main cause of our being backward in experimentation and our relying mainly

upon experimentation and development abroad, causing us to follow instead of leading.

The present great war will certainly cause many improvements, many new lines of attack and defense, abroad, which will require extra experimentation for us to keep abreast of in this country. It would be a wise precaution to have a fund rather in excess of than short of the usual amount for experimentation.

I am hoping that the subcommitte of the House committee may be supplemented by a subcommittee of the Committee on Naval Affairs in the Senate, to make a joint subcommittee on naval experimentation, which will continually cooperate with a special board from the Navy Department.

Since the special board appointed by the Navy Department has taken up the experimental work, progress has been great. In the past progress has been limited, dependent as the work was on the Chief of the Bureau of Ordnance, burdened by administrative duties; but now a special board of officers has been appointed to conduct the experiments in connection with our subcommittee, and the results have been gratifying.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HELM. Mr. Chairman, I am opposed to the amendment. If there ever was a time, Mr. Chairman, when we can eliminate expenditures for experimental purposes it does seem to me that this is the time and the occasion. With 20,000,000 men now under arms in Europe engaged in war and employing every conceivable instrument of warfare that has ever been invented—in the air, on the land, on the sea, under the sea—when every possible test of every character and kind is now being made in Europe, why the War Department and why the Navy Department can not content themselves for 6 months, or for a matter of 12 months, and see how these tests turn out, I can not conceive. We have simply acquired the habit of appropriating and can not stop it. Such appropriations are neither businesslike nor wise.

These tests are being carried on on the most gigantic scale that has ever been undertaken since the world was created, and here our Army and Navy insist upon spending millions upon millions of dollars merely for experimental purposes, when if they had somebody over there to stick around and see what was going on, who could come back and tell our officers in the War Department and the Navy Department what they saw and how it was done and the correct and approved way to do it, we could save millions of dollars in this experimental business.

Mr. HOBSON. Will the gentleman yield when he gets to a good stopping point?

Mr. HELM. Well, there is no good stopping point in this amendment, but I will yield to the gentleman.

Mr. HOBSON. It is simply to let the gentleman know that any line of attack that is brought to the front there, which they may develop abroad, would have to be developed through experimentations in our country, and we ought to have the money available. For instance, with submarines, when any new line of attack is developed we ought to be able to go on and remain abreast of those nations that are experimenting on a larger scale.

Mr. HELM. Mr. Chairman, if the Germans and the English and the French and the Russians work out these war problems, if they demonstrate what can be done in the air, on land and sea, and under the sea, why should we be expending several million dollars here to construct airships, submarines, and torpedoes that are ineffective for war, and if these nations can construct torpedoes or submarines and demonstrate how close you have to go to a warship before you fire, what is the use of our expending two or three million dollars to find out what the angle of departure and the distance of attack is, whether it is 400 yards or 200 yards, and the size, length, and caliber of the torpedo? It seems to me that it is perfect folly for this department to be insisting upon these unreasonable, enormous, and indefensible expenditures. When these problems are being worked out to a mathematical certainty, why should we spend several million dollars, especially when we are told that we are confronted with a deficit of $80,000,000?

Mr. HOBSON. This is only a hundred thousand dollars.

Mr. HELM. Well, a hundred thousand dollars for a particular type of shell; the bill is full of similar projects. If you will just be content and possess your soul in patience, the history of this war will be written, and these facts in due time will come out, and whether we want battleships hereafter or submarines or whether we want fast ocean cruisers, and the innumerable equations incidental to each. All of these things are being daily tested out. What man on this floor can get up and tell what any of these naval engagements turned on? What did the battle off the coast of Chile hinge on; what did the battle off the Falkland Islands hinge on? Why do you want to set up a target and shoot at it when the nations at war are making daily tests on each other, and every phase of battle is being developed, from which instruction can be derived without cost?

The CHAIRMAN. The time of the gentleman from Kentucky has expired.

Mr. PADGETT. Mr. Chairman, I do not think there is any necessity for this increase in the appropriation, and I hope the amendment will not be agreed to. They speak of the experiments with the torpedo shells. We have expended already more than $300,000 experimenting with them, and we are now conducting experiments provided for under the last bill that will cost between thirty and forty thousand dollars or more. The department says that this $100,000 is all that will be needed next year. Our appropriations and our expenditures are going to be sufficiently heavy, and I think that we can very safely act upon the assumption that it is not necessary for us to crowd these increased appropriations upon the department. My experience has been that they ask for all that is needed, and I hope the amendment will not be agreed to.

[Mr. BATHRICK addressed the committee. See Appendix.]

Mr. GARDNER. Mr. Chairman, I desire to offer the following amendment.

The CHAIRMAN. There is an amendment pending. Does the gentleman desire to offer an amendment to the amendment?

Mr. GARDNER. No.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Alabama.

The question was taken, and the Chair announced the noes seemed to have it.

Mr. HOBSON. Division, Mr. Chairman.

The committee divided; and there were—ayes 9, noes 28.

So the amendment was rejected.

Mr. MADDEN. Mr. Chairman, I make the point of order of no quorum.

Mr. PADGETT. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and Mr. UNDERWOOD having resumed the chair as Speaker pro tempore, Mr. HAY, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 20975, the naval appropriation bill, and had come to no resolution thereon.

ADJOURNMENT.

Mr. PADGETT. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 45 minutes p. m.) the House, under its previous order, adjourned to meet to-morrow, Sunday, January 31, 1915, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. Letter from the president of the East Washington Heights Traction Railroad Co., transmitting report of the East Washington Heights Traction Railroad Co. for the year ending December 31, 1914 (H. Doc. No. 1532); to the Committee on the District of Columbia and ordered to be printed.

2. Letter from the president of the Georgetown Gas Light Co., transmitting detailed statement of the business of the Georgetown Gas Light Co. for the year ending December 31, 1914 (H. Doc. No. 1533); to the Committee on the District of Columbia and ordered to be printed.

3. Letter from the president of the Chesapeake & Potomac Telephone Co., transmitting a complete report for year 1914 of the Chesapeake & Potomac Telephone Co., to be substituted for the report transmitted January 12, 1915 (H. Doc. No. 1534); to the Committee on the District of Columbia and ordered to be printed.

4. Letter from the Sergeant at Arms of the House of Representatives, transmitting list of property in charge of the Sergeant at Arms on the 1st day of December, 1914 (H. Doc. No. 1535); to the Committee on Accounts and ordered to be printed.

5. Letter from the Sergeant at Arms of the House of Representatives, transmitting, pursuant to law, report of receipts and disbursements from December 1, 1913, to November 30, 1914 (H. Doc. No. 1536); to the Committee on Accounts and ordered to be printed.

6. Letter from the president of the Capital Traction Co., transmitting report of the Capital Traction Co. for the year ending December 31, 1914 (H. Doc. No. 1537); to the Committee on the District of Columbia and ordered to be printed.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. HOBSON: A bill (H. R. 21257) to create the office of Chief of Naval Operations, and for other purposes; to the Committee on Naval Affairs.

By Mr. TEN EYCK: A bill (H. R. 21258) to provide for the repaving and relaying of Broadway between the Watervliet Arsenal Grounds in the city of Watervliet, N. Y.; to the Committee on Appropriations.

By Mr. BROUSSARD: Joint resolution (H. J. Res. 412) to suspend the final proviso of paragraph 177, Schedule E, of the act of October 3, 1913; to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BAILEY: A bill (H. R. 21259) granting an increase of pension to Eliza Shank; to the Committee on Invalid Pensions.

By Mr. BURGESS: A bill (H. R. 21260) granting an increase of pension to Charles B. Perry; to the Committee on Invalid Pensions.

By Mr. CANTRILL: A bill (H. R. 21261) for the relief of the legal representatives of John Roach, deceased; to the Committee on War Claims.

By Mr. DOOLITTLE: A bill (H. R. 21262) granting an increase of pension to Harriet Overlin; to the Committee on Invalid Pensions.

By Mr. FOWLER: A bill (H. R. 21263) granting a pension to Sarah J. Floyd; to the Committee on Invalid Pensions.

Also, a bill (H. R. 21264) granting a pension to Flossie M. Ramsey; to the Committee on Invalid Pensions.

Also, a bill (H. R. 21265) granting an increase of pension to William Frailey; to the Committee on Invalid Pensions.

By Mr. GREEN of Iowa: A bill (H. R. 21266) granting an increase of pension to Frank M. Applegate; to the Committee on Invalid Pensions.

By Mr. FIELDS: A bill (H. R. 21267) granting an increase of pension to R. F. Rice; to the Committee on Invalid Pensions.

By Mr. SIMS: A bill (H. R. 21268) for the relief of the legal representatives of John S. Rogers, deceased; to the Committee on War Claims.

Also, a bill (H. R. 21269) for the relief of the legal representatives of E. Q. Rogers, deceased; to the Committee on War Claims.

By Mr. TUTTLE: A bill (H. R. 21270) for the relief of the Boonton Building and Loan Association, of Boonton, N. J.; to the Committee on Claims.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. ASHBROOK: Memorial of National Council, Daughters of Liberty, favoring passage of the Burnett Immigration bill; to the Committee on Immigration and Naturalization.

By Mr. BALTZ: Petition of sundry citizens of Highland, Ill., protesting against Senate bill 6865, for prohibition in the District of Columbia; to the Committee on the District of Columbia.

By Mr. BARCHFELD: Petition of Gesangverein Concordia of Concordia, Pa., and Trinity Evangelical Church, of Sheridanville; Branch 14, Knights of St. George, and sundry citizens of Pittsburgh, Pa., protesting against export of war material by United States; to the Committee on Foreign Affairs.

By Mr. BELL of California: Memorial of Merchants' Association of New York and Shipowners' Association of the Pacific coast protesting against passage of ship-purchase bill (H. R. 18666); to the Committee on the Merchant Marine and Fisheries.

Also, petition of George W. Haskell and 45 other citizens of South Pasadena, Cal., protesting against the Fitzgerald amendment to the Post Office appropriation bill relative to freedom of the press; to the Committee on the Post Office and Post Roads.

Also, memorial of Louisiana mass meeting committee, protesting against export of war material by United States; to the Committee on Foreign Affairs.

Also, petitions of Mabel Vail, Sarah Huestis, Eunice F. Strathman, Charles H. Johnston, and Isabel Johnston, all of Pasadena, Cal., and Alice E. and Paul Hutchinson, of Altadena, Cal., protesting against increased appropriations for war preparations; to the Committee on Military Affairs.

By Mr. CARY: Petition of Fred Rische, Dr. E. Bentzein, Wisconsin Verein No. 8, L. Bannam, and 162 others, all residents of Milwaukee County, Wis., indorsing and urging the passage of House joint resolution 377; to the Committee on Foreign Affairs.

By Mr. CURRY: Memorial of 108 citizens of Napa, Cal., favoring passage of Senate bill 6688, to lay embargo on arms shipped from United States; to the Committee on Foreign Affairs.

By Mr. DALE: Petition of Fulton Street Board of Trade, Brooklyn, N. Y., favoring the passage of House bill 5139, for retirement of civil-service employees; to the Committee on Reform in the Civil Service.

Also, memorial of the Commercial Telegraphers' Union of America, favoring passage of the immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

Also, memorial of Washington Central Labor Union, protesting against prohibition in the District of Columbia; to the Committee on the District of Columbia.

Also, memorial of National Council Daughters of Liberty, favoring the passage of the immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

Also, memorial of the New York Commandery of the Naval and Military Order of the Spanish-American War, favoring creation by Congress of a national-defense commission; to the Committee on Rules.

Also, memorial of the Merchants' Association of New York, protesting against the passage of House bill 18666, the ship-purchase bill; to the Committee on the Merchant Marine and Fisheries.

By Mr. DANFORTH: Petitions of Fr. Brede, O. A. Chadde, Hermann Duill, J. D. Garin, A. H. Gefell, Sylvester Hasenauer, Dr. M. S. Jacobson, H. J. Karweick, John Karweick, Charles Kermann, G. G. Kircher, Edward Ledertheil, Christian Lohfinch, Fred Meyer, Fred Nettelman, J. H. Oberlies, W. F. Steinwachs, Rudolph Schlotz, Philip Weber, and Wilhelm Weichbrodt, all in the city of Rochester, N. Y., favoring passage of House joint resolution 377, to prohibit exportation of arms, ammunition, and munitions of war to Europe; to the Committee on Foreign Affairs.

Also, petition of Merchants' Association of New York, protesting against passage of the ship-purchase bill (H. R. 18666); to the Committee on the Merchant Marine and Fisheries.

Also, petition of Rev. G. Muhlhauser and 44 others, of Hamlin, N. Y., favoring resolution to prohibit export of war materials; to the Committee on Foreign Affairs.

By Mr. DILLON: Petition of Roman Catholic State League of South Dakota, and sundry citizens of South Dakota, favoring resolution to prohibit export of war materials; to the Committee on Foreign Affairs.

By Mr. ESCH: Petition of Washington Central Labor Union, protesting against prohibition in the District of Columbia; to the Committee on the District of Columbia.

Also, petition of Baraboo (Wis.) Commercial Association, favoring passage of House bill 5308, relative to taxing mail-order houses; to the Committee on Ways and Means.

Also, memorial of National Council, Daughters of Liberty, favoring passage of the Burnett immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

By Mr. FARR: Resolutions adopted by the priests of the Scranton (Pa.) diocese, against "certain libelous, obscene, and scurrilous publications regarding priests, nuns, and Catholics in general," transmitted through the United States mails; to the Committee on the Post Office and Post Roads.

Also, petitions of J. J. Murphy, Patrick O'Hara, M. Good, J. F. M. Quillan, James O'Hara, W. A. Butler, S. M. Hartman, P. I. Dougher, John Hyland, M. Napka, F. J. Lanover, Daniel Conroy, John Meehand, J. L. Casey, of Olyphant; T. V. Gallagher, of Peckville; J. P. Gillespie, Henry Hough, Gerald Lanahan, J. J. O'Hara, Thomas Good, Frank Farrell, Thomas Heary, J. J. Casey, John T. Taylor, R. M. Lynch, Thomas Meehand, Bernard Carr, James McNale, P. J. Swift, Patrick Conny, John F. Kilcullen, Peter Foley, Edward Conroy, M. J. Ruddy, Philip Hastings, John G. McCormick, Patrick O'Malley, J. W. Jordan, B. M. Kennedy, M. J. Carrington, B. J. Lynch, C. V. Robinson, Edward Norton, James L. Kilcullen, Gerald Twaddle, J. J. Dodgson, John J. Loftus, Joseph L. Kennedy, James E. Loftus, Thomas Donnelly, Charles Williams, Patrick Mackrell, James Mackrell, W. L. Burke, William Boland, James J. Flynn, John J. Price, M. F. Walsh, John F. McLaughlin, James Miskell, John Keegan, W. F. Shea, Michael Murphy, Henry Hall, Rev. E. Kuger, William Patten, George R. Mason, Joseph Hines, James L. O'Malley, Frank Sullivan, Thomas J. Doherty, John J. Flynn, H. V. Boland, John Kane, John A. Dempsey, John Dougherty, N. F. Byrne, Michael Lynch, Frank J. Brogan, T. F. Fadden, J. C. Boland, T. J. Carey, John P. Quinn, Edward Hoban, sr., P. F.

McHale, H. O'Boyle, T. F. Swanwick, William Patten, of Olyphant; James Harton, Rev. Joseph Dudkiewich, of Priceburg; James Hughes, of Jessup; Rev. W. Kurytomir, of Old Forge; J. M. Gallagher, John Flynn, of Peckville; Rev. John W. Healey, F. J. Buruk, M. J. Walsh, P. J. Kilken, J. A. Dempsey, of Jermyn; J. F. Homer, Joseph A. Reed, Rev. A. J. Brennan, Rev. Frank V. Zurisatti, Rev. George Oziz, Rev. A. Hopkins, J. L. Pistor, E. V. Brennan, of Scranton; and priests of diocese of Scranton, all in the State of Pennsylvania, against the circulation of certain anti-Catholic periodicals; to the Committee on the Post Office and Post Roads.

By Mr. FITZGERALD: Petition of Board of Aldermen of New York City, against passage of immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

Also, petition of 25 citizens of Brooklyn, N. Y., favoring passage of a law providing that when a citizen of one State is acquitted of any and all charges of crime in another State that he should be allowed to return to his own State; to the Committee on the Judiciary.

Also, petition of San Francisco Chamber of Commerce, favoring appropriation for coast survey; to the Committee on Appropriations.

By Mr. GOEKE: Petitions of Rev. P. G. Bergen and 109 others, citizens of Delphos; H. A. Brandt and 14 others, of Covington; W. J. Steinle and 44 others, of Delphos, Ohio, favoring resolution to prohibit export of war material; to the Committee on Foreign Affairs.

By Mr. GORDON: Petition of citizens of Cleveland, Ohio, favoring embargo on arms; to the Committee on Foreign Affairs.

By Mr. GRAHAM of Pennsylvania: Petition of the Frankford Arsenal Association, Philadelphia, Pa., against certain sections of Army appropriation bill; to the Committee on Military Affairs.

Also, petition of citizens and organizations of Pittsburgh, Cincinnati, and National Councils, Daughters of Liberty, favoring passage of immigration bill over President's veto; to the Committee on Immigration and Naturalization.

Also, petition of Friends, of Philadelphia, Pa., against increase in national armament; to the Committee on Military Affairs.

By Mr. GUERNSEY: Petition of F. E. Winslow, of Presque Isle, Me., and 45 other citizens, protesting against excluding certain papers from the mails; to the Committee on the Post Office and Post Roads.

By Mr. HENSLEY: Petition of J. F. Emmons and others, of Grandin, Mo., protesting against the enactment of House bill 20644, being a bill to prohibit the circulation through the mails of scurrilous, indecent, and libelous publications; to the Committee on the Post Office and Post Roads.

Also, petition favoring the enactment of House joint resolution 377, signed by Rev. John Krueger and others, of Farrar, Mo.; to the Committee on Foreign Affairs.

Also, petition favoring the enactment of House joint resolution 377, House joint resolution 378, Senate bill 6688, and House bill 19548, to prohibit the sale and export of arms, ammunition, and munitions of war to any of the friendly nations at present at war in Europe, signed by I. F. Silberstein, F. W. Hoetker, and others, of De Soto, Mo.; to the Committee on Foreign Affairs.

By Mr. KIESS of Pennsylvania: Evidence in support of House bill 20919, for the relief of Edward H. Dalton; to the Committee on Pensions.

By Mr. LONERGAN: Communications of Herman Vater, George Wessels, Christian F. Recknagel, and Louis Lehr, all of New Britain, Conn., concerning House joint resolution 377, House joint resolution 378, Senate bill 6688, and House bill 19548; to the Committee on Foreign Affairs.

By Mr. MAGUIRE of Nebraska: Petition of citizens of Osage, Nebr., favoring embargo on arms; to the Committee on Foreign Affairs.

Also, memorial of sundry citizens of Johnson County, Nebr., favoring resolution to prohibit export of war material; to the Committee on Foreign Affairs.

By Mr. MAHAN: Petition of sundry citizens of Clinton, Conn., favoring resolution to prohibit export of war material; to the Committee on Foreign Affairs.

By Mr. MOON: Petition of Germania Lodge, 507, Deutschen Orden der Herngari, Chattanooga, Tenn., favoring embargo on arms; to the Committee on Foreign Affairs.

By Mr. YOUNG of North Dakota: Petition of North Dakota State League of the Fargo Diocese and the German Roman Catholic Central Verein, Berwick, N. Dak., favoring resolution to prohibit export of war material; to the Committee on Foreign Affairs.

HOUSE OF REPRESENTATIVES.

SUNDAY, *January 31, 1915.*

The House met at 12 o'clock noon and was called to order by Mr. UNDERWOOD, Speaker pro tempore.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Infinite and eternal energy, our God and our Father, out of whose heart came life and all its possibilities, the wisdom that illumines, the faith that sustains, the hope that cheers, the love which binds us together into friendship and families; we are here to-day because of these indissoluble ties in memory of two souls who have answered the summons and passed into the great beyond from whence no traveler returns. To recall their deeds, sing their praises is to put an estimate on their virtues. We thank Thee that the good in man lives to inspire others to the nobler virtues. These men were chosen servants of the

people because in them was ability, integrity, honesty, zeal, high ideals, and lofty purposes, and though they have passed on they live in the hearts of their countrymen. May those who knew and loved them best look forward to a reunion in one of the Father's many mansions where the ties of friendship and love will never again be severed. And songs of praises we will ever give to Thee in the name of Him who taught us faith, hope, love. Amen.

The SPEAKER pro tempore. The Clerk will read a letter from the Speaker.

The Clerk read as follows:

JANUARY 29, 1915.

Hon. SOUTH TRIMBLE,
Clerk of the House:

I hereby designate Hon. OSCAR W. UNDERWOOD, of Alabama, as Speaker pro tempore to preside on Sunday, January 31, 1915.

Your friend,
CHAMP CLARK.

The SPEAKER pro tempore. Without objection, the approval of the Journal of yesterday will be postponed until to-morrow. [After a pause.] The Chair hears none. The Clerk will read the special order.

THE LATE SENATOR JOSEPH F. JOHNSTON AND THE LATE REPRESENTATIVE WILLIAM RICHARDSON.

The Clerk read as follows:

On motion of Mr. UNDERWOOD, by unanimous consent,

Ordered, That Sunday, January 31, 1915, be set apart for services upon the lives, character, and public services of Hon. JOSEPH F. JOHNSTON, late a Senator from the State of Alabama, and Hon. WILLIAM RICHARDSON, late a Representative from the State of Alabama.

Mr. BLACKMON assumed the chair as Speaker pro tempore.

Mr. UNDERWOOD. Mr. Speaker, I offer the resolutions which I send to the Clerk's desk.

The Clerk read as follows:

House resolution 716.

Resolved, That the business of the House be now suspended that an opportunity may be given for tribute to the memory of the Hon. JOSEPH F. JOHNSTON, late a member of the United States Senate from the State of Alabama, and to the memory of the Hon. WILLIAM RICHARDSON, late a Member of the House of Representatives from the State of Alabama.

Resolved, That as a further mark of respect to the memory of the deceased and in recognition of their eminent abilities as distinguished public servants, the House at the conclusion of these memorial proceedings shall stand adjourned.

Resolved, That the Clerk communicate these resolutions to the Senate.

Resolved, That the Clerk be instructed to send a copy of these resolutions to the families of the deceased.

Mr. UNDERWOOD. Mr. Speaker, I move the adoption of the resolutions.

The question was taken, and the resolutions were unanimously agreed to.

Mr. UNDERWOOD. Mr. Speaker, we meet to-day to do honor to the memory of comrades who have fallen on the battle field in life's great struggle. We mourn their loss; we cherish their memory; we love the recollection of their friendship; and we honor the high character, the sterling courage, and the purity of purpose that was so eminently portrayed in the lives of our departed colleagues.

I could ask no higher privilege and find no sweeter duty than the right to place on the records of this House my remembrances of Alabama's great son, the late Senator JOSEPH FORNEY JOHNSTON.

He was born in North Carolina in the year 1843. When only a schoolboy he joined the Confederate Army in April, 1861, served during the entire war, was four times wounded in battle, and rose to the rank of captain.

At the close of the war between the States he made his home in Alabama, and for 17 years practiced law in Selma, with marked ability and success, retiring from the active practice to engage in banking in Birmingham for 10 years, when he was elected governor of Alabama, serving the people for 4 years with exceptional ability.

He was unanimously elected to the United States Senate by the Legislature of Alabama to serve out the unexpired term of the Hon. Edmund W. Pettus, ending March 3, 1909, and also for the full term ending March 3, 1915. He died in the city of Washington on the 8th day of August, 1913, at his post of duty.

From the time he first made his home in Alabama until his death Senator JOHNSTON actively participated in public affairs. He was there during what is called the "reconstruction period" and was a leader in the movement by her citizens to drive from the conduct of her affairs the carpetbaggers and their ignorant coadjutors, to end discord and corruption, and to restore to the intelligent and the virtuous the State government. That being secured, Alabama began a period of advancement and development which the world is coming to appreciate. If a story of Senator JOHNSTON'S life were written from 1874 until the date of his death it would tell of nearly every important movement connected with the history of the State itself, so closely was he identified with its political, material, and educational development and policies. He was active in promoting its development. He was interested in whatever tended to the advancement of Alabama and her people. He was willing "to spend and be spent" in her interest, and his willingness to serve gave occasion for many drafts upon his time and energies which he always tried to honor. As a consequence he drew to him a very large number of loyal friends and supporters in all parts of the State who implicitly followed his lead upon all questions. His influence was accordingly far-reaching, and, be it said to his credit, his influence was for good.

Senator JOHNSTON was a man of positive convictions and firm purpose. When he had decided upon his course his perseverance and persistence in following it account for much of his success. His political life illustrates these qualities. He was defeated for the gubernatorial nomination in his own party and then was twice elected by it as governor. He was likewise defeated for Senator and then was twice elected as Senator, once to fill out an unexpired term and then for a full term. In these battles he naturally gave and received hard blows, but he lived to see the day when many strong men who had been pronounced in their opposition to some of his views became his most active supporters, for they realized that whatever view he urged, it was an honest view; that whatever purpose he had, it was a manly and upright one; and whatever conviction he entertained, he had the courage to support it. When he found the way of duty, he never flinched in following it. And it is but natural that such a man tied men to him.

Behind a reserved and apparently cold exterior Senator JOHNSTON had a heart that was very tender. He was responsive to the calls of charity and, without ostentation, he aided many needy ones. His love for the old Confederate veterans who were in need amounted almost to a passion. He cherished the memory of the days when as a mere boy he fought for the South; and, assuming that all honorable men would give him credit for honesty of conviction, he had no unkind words for those whom he opposed in war, and met all men upon the dead level of personal integrity and manhood. But the old Confederate soldiers never appealed to him in vain. When he became governor they did not always address him by that tile, and when he became Senator they did not call him Senator. They preferred, and he liked to be called by them, Captain.

Senator JOHNSTON'S life was a successful one. His few political disappointments seemed but to nerve him for another combat, and he won. His character and life are well worth the study by the young men of his adopted State, and because of the elements of force to be found in it we can see the reason he succeeded. But not alone in his work as lawyer, banker, business man, and statesman do we find the inspiration of his activities, for back of these, as back of all strong American life and hope, is the home. And it was in his beautiful home life that Senator JOHNSTON shone at his best. There he was the devoted husband and affectionate father, and there he received the homage that kindness and sympathy and love elicit and there he placed upon his children "the imperishable knighthood" of the Fifth Commandment.

Senator JOHNSTON possessed the elements of real greatness. His character was strong; his standards lofty. He worked hard and perseveringly. He died at his post of duty, and I have no doubt that if it had been given him to choose the place of his death the choice would have been to die while in the discharge of a duty. He left us a good example of his life, and to his family he left the heritage of a good name.

When Earth's last picture is painted,
And the tubes are twisted and dried,
When the oldest colors have faded,
And the youngest critic has died
We shall rest, and, faith, we shall need it—
Lie down for an aeon or two;
Till the Master of all good workmen
Shall set us to work anew.

And only the Master shall praise us,
And only the the Master shall blame;
And no one shall work for money,
And no one shall work for fame;
But each for the joy of the working,
And each in his separate star
Shall draw the Thing as he sees it
For the God of Things as They Are!

Mr. WEBB. Mr. Speaker, it is but proper that we pause for a few moments and turn aside from the duties of the hour to

say a word of those who have been our coworkers but who have been called to their reward.

JOSEPH FORNEY JOHNSTON was unanimously elected to the United States Senate by the Legislature of Alabama August 6, 1907, to fill out the unexpired term of Hon. E. W. Pettus, deceased, ending March 3, 1909. He was then reelected for the full term expiring March 3, 1915. While still in the service of his country as Senator from Alabama, on August 8, 1913, he died at his post of duty in the city of Washington.

I and the people whom I represent are proud to claim a peculiar interest in his record and achievements.

On March 23, 1843, he was born at Mount Welcome, on the banks of the Catawba River, in Lincoln County, N. C., which is in the district I have the honor to represent. His early youth was spent at Mount Welcome on his father's extensive estate, consisting of about 2,500 acres of land, on which was operated iron forges, flour and saw mills, in addition to the farm. He first attended a school in the neighborhood which was maintained and supported by the community composed of his father, Dr. William Johnston, Rev. Dr. Robert Hall Morrison, Dr. Hunter, the Cahills, and the Rosells. From there he went to Catawba College, at Newton, N. C., which was under the management of Maj. Finger, afterwards superintendent of public instruction in North Carolina. He then spent some time at the Charlotte Military Institute under Gen. D. H. Hill, and later, about 1859, he went to Alabama and entered the Wetumpka Military School.

His father's home was a center of culture, refinement, and genial hospitality. Its environments were wholesome and pleasant, such as should bring out the manly qualities of the boy. Those acquainted with him in his early youth tell us that young JOHNSTON was always a sturdy, manly boy from his earliest days and possessed much dry humor. As illustrating this they relate of him, that when he was only about 6 years old the ball of beeswax, used for the thread in sewing, was missing. Someone said, "I think Josie has it." He stood before them, looked into their faces and said, "Search me." They did and found the missing beeswax.

Although he left North Carolina at an early age and settled in Alabama, where he spent the active years of his life, he never lost interest in his native State. He could not outlive the feeling that the old Johnston homestead in Lincoln County, where his ancestors lie buried, was his home and the people around it his neighbors and friends. His friends in North Carolina always felt that should an occasion arise where they needed his help, that they had in him a true friend and advocate.

He was truly of the aristocracy of the South. He held this rank because of his gentle birth, as well as his manly traits of character. In his veins mingled the blood of the Scotch-Irish, the Huguenot, and the Swiss people, blended to form a character possessed of modesty and gentleness, yet grand in heroic suffering and chivalric daring.

His paternal grandfather, Col. James Johnston, was an active patriot throughout the American Revolution, and one of the immortal heroes of the Battle of Kings Mountain.

His maternal grandfather, Gen. Peter Forney, was likewise a patriot and gallant soldier in the cause of American freedom. His father was a French Huguenot and his mother a Swiss. Gen. Forney served in both branches of his State legislature, represented his district in the Thirtieth Congress, and was a presidential elector on the Jefferson, Madison, Monroe, and Jackson tickets.

With such an ancestry it is not strange that when the South took up arms in behalf of her independence he and his four brothers, Gen. Robert D., William H., Capt. James F., and Bartlett S. Johnston, entered the Confederate service and were loyal and gallant soldiers.

When the war commenced Senator JOHNSTON was attending high school at Talladega, Ala. He enlisted at the age of 18 in Company I, Eighteenth Alabama Regiment, April 21, 1861, as a private, and was mustered into service at Auburn in that State. This company was under the command of Capt. Mickle and was known as the Shelby Rifles. In the same year he was made orderly sergeant. He was in the Battle of Shiloh, and in the rear-guard fight at Iuka, where he was promoted to second lieutenant by Gen. Bragg. He had his right arm broken while in the Battle of Chickamauga. It is related of him that in that battle, while lying down under fire, a canteen some yards in front of him was repeatedly hit by bullets. He crawled out and, throwing it away, said, "That thing makes me nervous." He was with Gen. Bragg in his march to Kentucky and in the Battle of Perryville. He was transferred to the Army of Northern Virginia as aid-de-camp on the staff of Gen. Robert D. Johnston, his brother, and later appointed captain of Company A, Twelfth North Carolina Regiment.

A shell exploded over his head at the Battle of Spottsylvania, causing him to bleed freely from the eyes, ears, nose, and mouth, and disabling him for duty for some time. He was with Gen. Early in all the fighting in the Valley of Virginia until again wounded by a shell in the right ribs. He fell from his horse and was left on the field. Late in the night he regained consciousness and had the presence of mind to work the piece of shell out of his side and stop the flow of blood by the use of his handkerchief.

As evidence of his cool daring it is related that while he was in the fight in the Wilderness a shell plowed a furrow in front of where he was lying and he immediately crawled into the furrow. A soldier called to him to come back, but he calmly replied, "They can't hit here again."

He was again wounded by a shell, this time in the left side, at Hares Hall, on March 25, 1865. In this fight Gen. Robert D. Johnston fell and sprained his ankle; Capt. Nicholson was killed; and Capt. Hayne Davis, of Gen. Johnston's staff, lost his right arm.

After the war was over he and his companion, Maj. Burton, went to Alabama to bravely battle against the adverse conditions and to give their best efforts to the rebuilding of the South. When Senator JOHNSTON started out for Alabama on his new task he carried with him a mule and an ambulance which he had brought back from the war. His less fortunate friend had only a mule. Senator JOHNSTON stopped in Jacksonville and studied law under his first cousin, Gen. H. Forney. He sold the ambulance and mule, and from them obtained sufficient funds to live on until he was licensed to practice law. He then went to Selma, Ala., and worked in the law offices of Pettus & Harolson. After practicing with them for a short time he formed a partnership with R. M. Nelson. Soon after this he was elected chairman of the Democratic executive committee for the State, and conducted the reconstruction campaign in which Alabama was redeemed.

He was a delegate to the Chicago convention that nominated Mr. Cleveland for President. He was, however, a loyal supporter of Mr. Bayard to the finish. There were with him in this delegation seven of his cousins, who were also for Mr. Bayard. When the convention contest was on he was approached and virtually promised political control in Alabama if he would lead the delegation over to Mr. Cleveland, but his reply was that "I am for Bayard all the time."

He continued to live and practice law in Selma for about 18 years, after which time he moved to Birmingham and accepted the presidency of the Alabama National Bank. In 1896 and again in 1898 he was elected governor of the State of Alabama, serving four years.

In presenting this brief review of the life and achievements of Senator JOHNSTON, I desire to acknowledge my indebtedness to my friends, Mr. A. Nixon, clerk of the Superior Court of Lincoln County, N. C., and Bartlett S. Johnston, a brother of the Senator, for many of the facts and incidents which I have related.

I have not spoken of his record while a member of the United States Senate. This is still fresh in the minds of his associates, who have already spoken of it, and these utterances have found place in the permanent records of Congress.

Mr. Speaker, we may well repeat of this gallant, splendid gentleman the words Mark Antony used, in Shakespeare's Julius Cæsar, after he had routed Brutus in battle. When Brutus, despondent, commanded his faithful servant Strato to kill him with his own sword, Mark Antony, coming upon him sitting against a tree, dead, halted his triumphant army and, amid perfect silence, pointing to the dead Brutus, said: "His life was gentle, and the elements so mixed in him that nature might stand up and say to all the world, 'This was a man.'"

Mr. TAYLOR of Alabama. Mr. Speaker, JOSEPH FORNEY JOHNSTON was a rare man, adaptable, capable, successful.

His success in life came to him naturally through a long line of ancestors and associations, and he grew as a sturdy oak grows in the forest, because he had it in him, and nothing could hinder or check his rising above his fellows—a leader because he was born that way.

Of his early boyhood I have heard little. He had early and good schooling, the best to be had in his day. He was educated beyond the school and had barely entered college life when war came, and the boy of 18 became a soldier and a good one. He could not help it. It was his nature to be thorough, and he acted up to his nature. Four wounds and many battles proved his courage and his capacity, and he left the service at the close of the war a captain, still little more than a boy in years. He studied law as he acted the soldier, and he studied to win, and

won. He became a good lawyer, a business lawyer, a man of coolness, sagacity, and judgment. He was not a great lawyer, but ranked high in his profession. The life of an attorney was too slow for him. He gave it up and became a banker, and as a banker and business man of affairs he won his highest recognition in private life.

JOE JOHNSTON, as he was familiarly known throughout the State of Alabama and almost throughout the South, was gifted with social virtues and accomplishments. He could and did hold his own in every gathering together of the people in his community. He was courteous, gentle, attractive in his home life and among his friends and acquaintances. He was a charming host, a fascinating guest, ever welcome, and ever ready with wit and repartee to make an occasion better for his presence.

He was ambitious as is every man of courage, intelligence, and energy. Naturally he entered political life, but not till success in business enabled him to do so without injustice to his family.

For many years his part in public life was active and effective work for his party in the State of his adoption, for he was born a North Carolinian and was proud of it. In the dark days of the South, through reconstruction and its horrors, no man stood more bravely at his post or did more unselfish and effective service than Senator JOHNSTON. He was for a long time chairman of the Democratic executive committee of the State, and he did his work well and faithfully.

When he presented himself for office, he did not succeed at once. He was elected governor after he had failed three times to get the nomination.

But Capt. JOHNSTON learned the battle of life under leaders who knew when to retreat and understood but would not accept defeat. So he tried again and succeeded. He was twice governor of the State. His two administrations were stormy and he made many enemies and bitter ones, but the weight of opinion was and is that he was a good governor, an exceptionally good one, and added much to the history of Alabama that will be matter of pride to our people while time lasts.

I am persuaded to believe Gov. JOHNSTON had for years the largest personal following of any public man in Alabama in his day.

He made friends easily and he held them, for he was loyal to his friends and fearless in the expression of his loyalty when necessity arose to claim evidence of it. It is not to be wondered at that JOE JOHNSTON ended his career as man, citizen, and public officer as a twice elected Member of the United States Senate.

Senator JOHNSTON was a member of the Episcopal Church. His attendance and attention to duty were the same as in business life—regular. He was a busy and a useful Member, as prompt and punctual at services, vestry meetings, at general conventions and convocations, and as faithful as when he was a soldier in the ranks and under military discipline.

Again, it was simply the nature of the man.

Few men have done so well with their lives as this distinguished gentleman, and fewer still have done better. A worthy life well spent and approved by his countrymen, who loved him while living and will honor his memory forever.

In camp and court, in banking house and at church his voice is hushed. He can not answer, but his record answers for him—"Present and accounted for."

Mr. BURNETT. Mr. Speaker, a little less than seven years ago we assembled in this Hall to pay tribute to the memory of Alabama's two distinguished Senators, Morgan and Pettus. They were men whose names were interlinked with the history of Alabama from its early days.

Almost their entire lives were devoted to their State, and they died holding the highest commissions of public trust that their people could place in their devoted hands.

When honor called them they unsheathed their swords for Alabama, and not till the stars and bars were furled forever did they quit the field of courageous duty. When they returned with heavy hearts to devastated homes and saddened people they set about to help inspire the hearts and restore the wrecked and ruined fortunes of sorrowing men and women.

To-day we meet again to pay tribute to the memories of two other Alabama heroes who "died in the harness" while laboring for the people who had honored them. Senator JOSEPH F. JOHNSTON and Representative WILLIAM RICHARDSON, like Senators Morgan and Pettus, dedicated their long and useful lives to Alabama and her people. They were both my friends, and to the memory of both I ask to pay my humble tribute of respect.

Senator JOHNSTON was a native of North Carolina—that grand old State that has given to Alabama many of the bravest and noblest of her sons. Through his veins flowed the blood of heroes of '76. He was a grandson of Col. James Johnston, of the Revolutionary Army, and the great-grandson of Gilbert Johnston, who on Culloden's field shed his blood in the cause of the Pretender.

When a boy at school Senator JOHNSTON heard the bugle call to arms, and from private to captain this brave boy in gray followed the varying fortunes of the "storm-cradled nation" till its sun went down forever amid the gloom of Appomattox. Four times wounded, this intrepid young Confederate rose each time from the bed of suffering to unsheath his sword in behalf of a stainless flag and an honored cause.

Just before the war he came to Alabama and cast his lot with her people, in sunshine and shadow, till God called him, and then with devoted hands and solemn steps we laid him to rest amid her magnolias and her pines.

I first knew Senator JOHNSTON when, as one of Alabama's chosen chiefs, he was called to lead her struggling people against the rule of the satrap and the carpetbagger, who were sapping the very heart blood of his people.

No leader was ever more fully trusted or more highly honored. As chairman of the State Democratic committee he was one of those who helped to throw off the yoke of the oppressor and to redeem his State from the thraldom of those who sought to crush out a prostrate people.

He never sought any office except that of governor and United States Senator. In both these high stations he manifested the same industry and devotion to duty that characterized his life on the field and in the private walks of life.

He had a passion for work. In one of his campaigns for governor he wrote more than 5,000 letters with his own pen.

In 1906 he was nominated alternate Senator and on the death of Senator Pettus was elected by the legislature as his successor.

When the Democrats secured the majority in the Senate he was made chairman of the Committee on Military Affairs and was assigned to several other important committees.

In his career as Senator he was thoughtful of every detail of interest to his people. No little pension case or post-office matter was too small for his attention.

His humblest constituent was as dear to him as the greatest steel magnate in his State.

While he was a man of detail, he also had many of the elements of splendid statesmanship. Wherever duty pointed there his footsteps led him.

In one great case which came under his jurisdiction as Senator he knew that a decision one way might mean his defeat, and yet he believed that duty led that way, and with splendid courage he followed what he thought was right.

His fatal illness was only for a few days, and his colleagues, with sad hearts and tear-dimmed eyes, listened with bated breath when the news was brought that Senator JOHNSTON was no more.

I was one of those who attended his funeral, and from all over Alabama came the multitudes to mingle their tears with those of his beloved State.

When I saw this vast concourse that crowded the little church and thronged the streets I said, as was said of another, "Behold how they loved him."

He died as he had lived, "on the field of duty." He is gone, but "his deeds do follow him."

Mr. AUSTIN. Mr. Speaker, I first met the late Senator JOHNSTON 25 years ago when he was the president of one of the leading banks of Birmingham, Ala., and our second meeting was here in Washington after his election to the Senate and at the beginning of my service in this House in the Sixty-first Congress. During the last few months of his life we were thrown together daily, having our residence in the same apartment house. There not only grew up a close friendship between us, but the members of our families soon learned to love each other.

I had every opportunity to observe the official conduct of the Senator and can truthfully say I do not believe a more faithful, tireless worker ever served in either House of the American Congress. There seemed no limit to his power of endurance, of constant, ceaseless toil, not only for his immediate constituents, but for the country at large. Up to the very hour of his fatal sickness he was at work night and day. During the long extra session of this Congress he was in his seat in the Senate, not only during every day, but in attendance at every night session. He did not leave or do all of his work at the Capitol, but performed much of it at home.

Considering his age and the vigorous, active life he had led, it was a marvel how much he would accomplish; how much hard and difficult work he could crowd into a day. He was so true to the interest of his people, so conscientious in the performance of his duties, so anxious to continue to the end his splendid record as a faithful public servant that he let no opportunity pass to do good—to accomplish results; to advance and promote the interest of his beloved State and Nation. He was not only a constant, endless worker, but he possessed that rare virtue of always having the courage of his convictions. He was not a trimmer; he never dodged; he hated hypocrisy, and had no patience with the demagogue.

He had high and lofty ideals of his duties and responsibilities, and hence he lived the life of an honorable, worthy, patriotic statesman. He was not only loyal and faithful to the State and Nation he served so well, but he was true and devoted to the countless thousands of friends who stood by him in all of his contests before the people of Alabama.

I never knew a more considerate, loving husband—so full of gentleness, tenderness, and sweetness for his thoughtful, devoted wife. This kind and genial man, warm and generous friend, devoted husband and indulgent father, fair and manly opponent, incorruptible and courageous public servant, was a martyr to duty, to the people's cause. Finally, weary, tired out, overworked, and exhausted, "God touched him, and he fell asleep."

Tennessee joins Alabama in paying a just and loving tribute to her fallen leader, her brave and gallant Confederate soldier, her wise and progressive governor, her efficient and faithful Senator.

Mr. HEFLIN. Mr. Speaker, again the flag on the Capitol has stood at half mast. Another Member of the national official family has gone. A desk in the Senate Chamber has been covered with flowers. A United States Senator is dead. Alabama heard with profound sorrow of the death of Senator JOSEPH F. JOHNSTON, and she mourns the loss of a devoted, able, and honored son. He gave the best years of his young manhood in battle for his State and he spilt his blood in the settlement of the great question that determined finally and forever the indisputable status of the Union.

When the war was over he returned to Alabama and there reconsecrated his heart, his strength, and his all to the highest and best interests of his State. Mr. Speaker, in reconstruction times he was a terror to the vandal horde that came into Alabama to incite the negroes and to plunder our people, and no one did more than he to protect our women from the lust and carnality of the brutes in our midst and to drive out the scalawags and carbetbaggers and to give back home rule and self-government to the State that he loved. He helped to bring his beloved Commonwealth back into cordial relationship with her sisters in the great household of sovereign States. He was honored and loved by our people. They called him to the high office of governor in the State of Alabama, and in that responsible and exalted position he reflected great credit upon himself and the people of the State.

He brought about many substantial and helpful reforms in the civic conduct of the State, and his administration was a distinct blessing to the people of Alabama.

Mr. Speaker, he lived to see a man born in the South elected Chief Executive of the Nation, and the people of Alabama, having honored him with a seat in the United States Senate, it was his proud privilege to serve in that august body when a Southern-born Democrat sat in the White House as President of the United States.

His was a unique and splendid career, full of faithful service and distinguished honors, and he died highly esteemed by his associates in the Senate and greatly loved and honored by the people of his State.

Mr. ABERCROMBIE. Mr. Speaker, we have assembled today for the purpose of paying tribute to the lives and characters of two of Alabama's most distinguished citizens, two of the Nation's most faithful servants—former United States Senator JOSEPH FORNEY JOHNSTON and former Representative WILLIAM RICHARDSON.

While I enjoyed the privilege of a personal acquaintance with each of them, while I held them in equal esteem, and while I purpose to pay a tribute to each, I will be pardoned if, on account of my longer and more intimate acquaintance with him, I should speak at somewhat greater length of Senator JOHNSTON. During his incumbency as governor of Alabama I had the honor of being a State officer, a quasi member of his cabinet, and in that capacity had an unusual opportunity to observe his habits, to study his methods, and to appraise his character.

Senator JOHNSTON was born in the State of North Carolina March 23, 1843, and was the son of Dr. William and Nancy (Forney) Johnston. He died in the city of Washington on the 8th day of August, 1913, having attained the age of 70 years 4 months and 15 days. His funeral was one of the most largely attended that ever occurred in Alabama, so universally beloved was he by his people.

In the days of his youth educational advantages were meager and beyond the reach of most people, but notwithstanding those limitations and the exigencies of war that called him from the schoolroom while yet in his teens, he possessed a highly cultivated mind. He was a well-educated man, though he never attended college or university. In this time of schools, colleges, universities, libraries, newspapers, and other educational agencies, it is difficult for us to appreciate the obstacles to learning that beset the youth of that day. Only the most indomitable could overcome them. He belonged to that type. Indeed, for tenacity of purpose he was equaled by few, surpassed by none. Once formed, he never abandoned a purpose except in response to the dictates of reason and conscience.

When 18 years of age, responding to the call of duty as he interpreted it, as did tens of thousands of other young Southerners, he withdrew from the high school in which he was a student and enlisted as a private in the army of the Confederate States of America. He served faithfully and gallantly throughout that mighty struggle, participated in a number of battles, received four wounds, and was promoted to the rank of captain. When the tremendous contest was over, regarding the issue as a closed matter, accepting the result philosophically, he joined his fellows in the task of rehabilitating the Southland, and for the remainder of his eventful life wrought heroically and effectively in that stupendous undertaking.

After reading law at Jacksonville, Ala., in the office of his kinsman, Gen. William Henry Forney, who was subsequently a distinguished Member of this body, he located at Selma, in that State, where he pursued his profession from 1866 to 1884, a period of 17 years. At the bar, as in the army and elsewhere, he was successful. A man of his capacity, diligence, determination, and straightforwardness always succeeds.

As is the case with most successful lawyers Senator JOHNSTON was a good business man, and in 1884 he removed from Selma to Birmingham, where for the next 10 years he was president of the Alabama National Bank. He was one of the organizers and the first president of the Sloss Iron & Steel Co., a pioneer in the development of the Birmingham district, and many of the most successful business and industrial enterprises of that remarkable district are due to his initiative, foresight, and leadership. He was a born leader, and was equally at home as soldier, lawyer, financier, and statesman.

During the exciting, troublesome, and cruel times of the reconstruction era, when the crushed and unhappy Southland was experiencing a perfect nightmare of humiliation, injustice, and horror, Senator JOHNSTON was a wise, fearless, and efficient leader of his people, and in his capacity as chairman of the State Democratic executive committee of Alabama was influential in the ultimately successful struggle for the reestablishment of white supremacy in the Southern States. It was largely through his efforts that the white people of Alabama regained control of the State government, and it was but natural, therefore, that they honored him with every public office to which he aspired.

He was elected governor of Alabama in 1896 and again in 1898. His administration began during the great and widespread financial and industrial depression of that period, and was characterized by the highest types of ability, courage, and patriotism. Taxes were more nearly equalized, schools were promoted, economies were inaugurated, business and industry were encouraged, laws were vigorously enforced, and the State entered upon an era of progress and prosperity. While some of his policies were assailed by political opponents, all now concede that his administration as governor was able, patriotic, and efficient.

In August, 1907, he was elected to the United States Senate to fill the unexpired portion of the term of former Senator Edmund Winston Pettus, who died while in office. He was reelected for the term ending in March, 1915. As a Member of the Senate, he soon won the confidence and esteem of his colleagues, and was noted for his energy, breadth of view, cheerfulness, and devotion to duty. Indeed, it is a matter of common knowledge among his colaborers in Congress, especially among members of his own State delegation, that his death was hastened by close application to arduous duties incident to the frequent and continued sessions of Congress after he became

a Member of the Senate. His colleagues urged him to take a rest, but he refused to do so and went down at the post of duty. When his death was announced, a distinguished member of the Alabama delegation truthfully said of Senator JOHNSTON, "He was a victim of his devotion to public duty."

With all of his varied activities in secular affairs, in each of which he was signally successful, he did not neglect the spiritual side of his nature. He was long a communicant of the church of his choice, the Episcopal Church, and he displayed there the same elements of popularity and leadership that characterized him in secular life. His church conferred many honors upon him, and I have never witnessed so beautiful a testimonial as that incident to his funeral, which I had the honor of attending. The entire city of Birmingham seemed to be in mourning, and every portion of Alabama was represented.

Like most other men of great achievement, Senator JOHNSTON was in large measure the architect of his own fortune. He began at the bottom; he ended at the top. In both private and public life he was wedded to high ideals, and no man was ever more tenacious in the advocacy of the principles for which he stood. A more determined, a more courageous, a more conscientious, a more patriotic man I never knew, and I had opportunity to know him in many trying conditions. But with all of his tenacity and firmness I never knew him to cease to smile. He was cheerful under all circumstances. Indeed, cheerfulness was one of his most striking characteristics, and fortunate is the man who can smile.

> Laugh and the world laughs with you;
> Weep, and you weep alone.

A man's character is measured by his ethical standards. Senator JOHNSTON's code of ethics is reflected in the following quotation from the speech which he delivered in the Senate on the occasion of the death of his illustrious predecessor:

> It seems to me, Mr. President, that a man who nurses an injury and prides himself on relentlessly pursuing an enemy may be an able man, but never can be either a great or a good man. * * * A man who steels himself against forgiveness and goes through life with resentment in his heart will never command the admiration of his people, or deserve their leadership. How much nobler it is to have it recorded of a man that he loved his friends and conquered his enemies by the generosity of his disposition.

Alabama has sent many able men to the Senate of the United States. In the years to come she may send many other able men to that august body, but she will never commission for that high service a man of more stainless honor, of more incorruptible character, of more unwavering courage, of more stalwart patriotism than was JOSEPH FORNEY JOHNSTON.

Mr. MULKEY. Mr. Speaker, we have met to-day in this hall to pay tribute to the memory of two great American statesmen, patriots, and Christians. Both were an honor to the Nation and to their State, and of whom it may truly be said, that the world is better by their having lived.

I did not have the pleasure of knowing, personally, Congressman RICHARDSON, and I shall leave the eulogy upon him to be pronounced by others; but I do not affect to be ignorant of his exalted character, of his achievements in public life, and of his devotion to duty. I shall speak to-day with reference to the late Senator JOHNSTON, whose personal and intimate acquaintanceship it was my privilege to form.

Senator JOHNSTON, a North Carolinian by birth, was a descendant of the Johnstons, a Scotch-Irish family which emigrated to America after the Battle of Culloden and settled in North Carolina, and of the Forneys, a Huguenot family which left Moragne at the time of the religious persecutions.

His grandfather, Gilbert Johnston, with the latter's father, also bearing the name Gilbert Johnston, residents of Anandale, were devoted followers of Prince Charlie in all of the vicissitudes of the pretender after the Battle of Culloden, in which both participated. Both father and son were compelled by the royalists to flee from Scotland. They stopped for a time in Ireland and then came to North Carolina, where a brother of the elder Gilbert Johnston was the royalist governor of that province. The elder Gilbert Johnston was outlawed by the Crown for his adherence to the cause of the pretender, and, although he was protected by his brother, the governor, he was unable to hold property in his own name on account of the law of escheat which would have forfeited his holdings to the Crown.

His grandson, James Johnston, was a colonel of the Revolutionary forces; and he, in turn, was the grandfather of JOSEPH F. JOHNSTON.

JOSEPH F. JOHNSTON was attending a military school for boys in Alabama at the time of the secession of the Southern States. His brothers, some of whom had graduated and some of whom were in attendance at the University of North Carolina, all enlisted; and JOSEPH F. JOHNSTON also enlisted, at the age of 17, in the Eighteenth Alabama Regiment. On the promotion of his elder brother, Robert D. Johnston, to the rank of brigadier general for repeated acts of gallantry in the field, JOSEPH F. JOHNSTON, who at that time held a lieutenancy, was transferred to the Twelfth North Carolina Regiment and became a captain upon the staff of his brother, Gen. R. D. Johnston.

Capt. JOHNSTON was wounded five times during the Civil War, and in the fighting near Winchester a shrapnel exploded and a fragment of the shell passed entirely through his chest, so seriously wounding him that he made his way with great difficulty to his home in North Carolina, where he finally recovered from the wound and rejoined his regiment before the close of the war.

The family was of course impoverished, their available resources having been invested in securities of the Confederate Government. His father had died some years before the war, and the product of the plantation owned by his mother was barely sufficient to support the mother and his two sisters. The family resources were further taxed in order to enable his elder brothers, Robert D. Johnston and William H. Johnston, to complete courses at the law school of the University of Virginia and at the College of Physicians and Surgeons in New York, respectively. JOSEPH F. JOHNSTON was accordingly compelled to begin life with a total cash capital consisting of a mule and wagon and a box of tobacco, with which he set out for Jacksonville, Ala., where he began the study of law in the office of his cousin, William H. Forney, who had been a major general in the Confederate service and who for many years represented his district in the Congress of the United States.

After having been admitted to the bar Capt. JOHNSTON moved to Selma, in Dallas County, the home of John T. Morgan and Edmund W. Pettus. He was at first associated in the office of Brooks, Haralson & Roy, and subsequently, during his residence in Selma, practiced law with Col. W. R. Nelson and with John P. Tillman. He moved to Birmingham in 1884, at the instance of clients who had become interested in the Birmingham district, and induced Capt. JOHNSTON to retire from the practice of law and organize the Alabama State Bank (afterwards the Alabama National Bank). In Birmingham he early identified himself with the industrial development of that city and district, becoming president of the Sloss Iron & Steel Co.

In the days of reconstruction Capt. JOHNSTON was unsparing in his efforts to restore normal conditions. The dangers and burden of the civil strife which beset the people of Alabama at that time, and particularly in those counties in which the recently freed blacks were largely in the majority, were no less acute than those of actual war, and for his consistent and patient service in this respect Capt. JOHNSTON had become a member of the State Democratic executive committee and was serving as chairman of that committee in 1874 when the election by the Democrats of George S. Houston as governor put an end to the intolerable régime of the carpetbaggers in Alabama. Feeling that his militant service of his State and people, beginning with four years of civil war and ending with nine years of no less tempestuous political turmoil, had for a time discharged his public obligations in that connection, he devoted his attention to the practice of law and, on moving to Birmingham, to the development of that city and district.

The experiences of Capt. JOHNSTON and his associates during reconstruction days constitute the most profoundly interesting pages in the history of Alabama, and it is unfortunate that complete annals of that turbulent period have not been made available for the historian of the future.

It is quite proper that we should meet on occasions like this and, in a feeble way, rehearse the character of great men. It is fitting not only because it shows our appreciation of their lives and services to their country, but is high evidence that as a Nation we cherish the memory of those whose judgments have guided us and aided materially in producing that happiness and prosperity and good fellowship so universally enjoyed by us. Moreover, by it we teach future generations the value of great lives and the importance of a cultivation of their ideals. I would not want to live in a country which would not honor its patriot dead. Failure in this regard is the surest sign of national decay.

The erection of statues and monuments to the distinguished dead, and the commemoration of their lives and proclaiming their virtues, must of necessity impress those who are to follow, and upon whose shoulders shall rest the great responsibility of guiding this Nation to its final high destiny, with the idea that no Nation can long endure whose guiding hand is without virtue, character, or patriotism.

It is our duty to transmit to future generations the virtues of our illustrious men, not so much merely to keep these men alive in their memories, but that their examples may be emulated and their high ideals adopted.

No one need be alarmed as to the final destiny of this Republic as long as we, as a Nation, delight to extol the virtues of our truly great men. From it we are inspired by patriotic impulses and press forward with more determined zeal to reach that high mark in whose direction their own strong efforts were aimed.

Senator JOHNSTON is dead. He died as he lived, in the service of his country. He felt a deep interest in the progress of mankind. He directed his talent to their elevation and increased happiness at all times, forgetting himself, or rather unconscious of himself. He was wholly unselfish and always solicitous and considerate of the welfare of others. He never did any act, knowingly, which was calculated to deceive or injure others. He was incapable of it. He was delighted most when he was doing something for the comfort and well-being of his fellowman. The ends at which he aimed, both in public and private life, were his country's and his God's. He was a godly man, the first great essential to wisdom. As a soldier in the unhappy struggle of 1861, he never faltered in what he conceived to be his duty, and came from the battle field to a desolate home, honored by his people for his courage, bravery, and fidelity to the cause he so valiantly espoused. When the smoke of battle cleared away and the burning issue which had divided the two sections of our country had been settled by the sword, he took steps to aid in the rescue of Alabama from misrule and to elevate her to that station among the States of the Union to which she was entitled.

As governor of Alabama he distinguished himself in many ways. His administration of affairs was noted by an era of prosperity in that State without parallel or precedent. He urged many reforms, and his ideas were adopted into statutory laws.

It would not be appropriate here to detail his great work as governor of the State. He set an example of economy and honesty in every department of the State which has resulted to its betterment. Through him the convict system was placed upon a more humane basis; reform schools were adopted; curtailment of child labor in our factories provided for; a more symmetrical system of taxation inaugurated; a system of rigid examinations of public officials and of their books and accounts enacted; and in fine the interest of the people carefully and scrupulously guarded. He was a very popular governor, though, of course, as all men in public life, he had his political enemies. But they respected, though they feared him. The people of his State appreciated his extraordinary talents and powers displayed in the Senate of the United States. Here he shone as a particularly bright star. He was a constructive statesman and yielded his convictions to no man. In casting his vote he did not stop to inquire whether he was with the majority or minority. He voted, spoke, and acted from the dictation of his own conscience, and not from the viewpoint of policy or of the demagogue. He did not have to explain his votes and position on public questions to the people of Alabama. We understood him and knew that his chief joy was in his country's good.

At the time of his death he was a candidate for reelection to the Senate. No one seriously doubted that he would be elected. Most everybody in every walk in life was his friend. How could they have been otherwise? Every public act of his was in sympathy with their needs.

But he met the common fate of men. He has passed from this world. Though no more, yet his character, his notable achievements, and his public spirit will never die. They will endure as long as time itself. He was true to himself, and it followed, as night the day, that he could not be false to others. But, sir, his great work may go on; his great mind may be engaged in the amelioration of mankind. Of the future life but little is known. It is shrouded in mystery and doubt. We all dread to meet it, because we do not know with certainty what it is. We think, we imagine, we often suit it to our own conditions, yet none of us is satisfied with our own diagnosis.

But whatever may be our doubts and fears, who would or could deny that the great mind of Senator JOHNSTON did not die with him, but that it has gone to a happier and better world, there to inspire, improve, and advance in a greater degree than ever before the general condition of mankind, and who doubts that he is now exalting other nations and peoples to a higher degree of righteousness.

Senator JOHNSTON was a Democrat of the old school. He was eminently safe and sane. He did not seize and grab every political heresy sweeping over the country and nurture it in order to advance his own political fortunes. He stood for the Constitution and sound government. He was not swept off his feet, nor was his judgment disturbed, by the vaporings of either the demagogue or the alarmist. He was not afraid of the arguments of political revolutionists as long as reason was left free to combat them. Senator JOHNSTON did not live in vain; his life tended to make the world richer and better; his examples may well be emulated and his character and integrity serve as a model for all. I repeat, he died as he had lived, in the service of his country, and the sky upon which he closed his eye was cloudless.

Mr. HARRIS. Mr. Speaker, there are occasions when the inmost feelings of the heart may find but poor expression in mere words. Especially is this true in moments of exalted joy or in the hour of personal grief, and it is with the latter emotion that I rise to pay my humble tribute to the memory of one whom I had the privilege of counting as a cherished friend. We were born in adjoining counties in the State of Alabama, and our later lives were spent in cities but 25 miles apart. In our youth the same blue bending skies smiled upon us, our hearts thrilled to the same emotions, our eyes fed on the same delightful scenes, and our ears drank in the same music of the crooning minor strains that softly came from the lips of the simple negroes who picked the snowy harvest of our cotton fields or gathered the golden ears of the ripened corn. When the dark clouds of war burst in their fury over the land we loved we donned the same uniform and fought for the same principles, and when at last the cause we both had bled for was lost we returned to our homes to face the same duties and to solve the same problems. Both of us chose the law as our profession and, living in the same circuit, practiced in the same courts for many years. So when WILLIAM RICHARDSON died I lost not only my Representative in the Congress of the United States, but a brother lawyer, a companion in arms, and a lifelong friend. It is therefore with a heavy heart that I approach this duty, a duty which stirs many memories of the past and brings to recollection the personality of one of the bravest, truest, noblest sons that Alabama ever gave to the world.

But few men in this House, and but few living in this day and generation, can realize and understand the tremendous difficulties and almost unsurmountable obstacles which confronted a young man of Judge RICHARDSON'S age when the Civil War closed.

Reared in riches and luxury up until about 18 years of age, when he enlisted in the Confederate Army, with his education only fairly commenced, he emerged from that terrible war to return home to find the beautiful surroundings which he left in devastation and ruin, with all species of property swept away except the land, and without hope of help from any quarter to face the uninviting future, and you may be sure it took a brave heart and resolute mind for him to overcome such difficulties and build up such a splendid record, which he has left to the world.

WILLIAM RICHARDSON was born in Athens, Ala. His father and mother were natives of Virginia. His mother was the daughter of Capt. Nicholas Davis, also a Virginian by birth, who became a distinguished citizen of Limestone County, Ala., and who was a member of the convention that met in Huntsville to draft the constitution under which Alabama was admitted as a State in 1819. Capt. Davis was a boyhood friend of Henry Clay and a lifelong supporter of that great statesman. On his father's side Judge RICHARDSON was the descendant of a distinguished family of lawyers and planters.

As a boy WILLIAM RICHARDSON was educated in the schools of Athens, Ala., and later in Wesleyan University of Florence. When only a little over 16 years of age he enlisted in the Confederate Army as a private, but was soon promoted to a captaincy for conspicuous gallantry. He was severely wounded at the Battle of Shiloh and was made a prisoner of war, but upon his recovery escaped, and after much hardship made his way to Nashville, Tenn. From there he attempted to get through the Union lines to rejoin his command. His companion in this attempt was James Paul, a daring Confederate spy, of whose identity young RICHARDSON was in complete ignorance. The two were captured by Union soldiers and, incriminating papers being found on the person of Paul, both were taken to Murfreesboro, Tenn., imprisoned, court-martialed, and condemned to be shot. On the very night before the morning set for their execution they were rescued by that wizard of the saddle, Gen. Nathan B. Forrest, who had learned of their cap-

ture, and with a force of 1,100 men suddenly attacked the town, forced his way to the prison, released the captives, and escaped with them.

Capt. RICHARDSON was again seriously wounded at Chickamauga, where he lay on the battle field for six days and was kept alive during this time by his faithful negro servant. Before his full recovery Gen. Lee had surrendered and young RICHARDSON returned to his Alabama home. He studied law, was admitted to the bar, and soon gained an enviable reputation as a brilliant advocate and an eloquent speaker. Entering the field of politics, he was elected a member of the State legislature from his native county in 1874. Soon thereafter he removed to Huntsville, and in 1875 became probate judge of Madison County, which office he held until 1886. In 1890 he became a candidate for the Democratic nomination for governor, and in the convention at Montgomery, although one of the leading candidates, having carried every county in the State north of Birmingham, he withdrew his name in order to harmonize the factional differences of his party.

From 1886 until he was elected to Congress in 1900 he practiced his profession and was recognized as one of the ablest lawyers in the State. His natural eloquence and analytical mind made him especially effective in jury cases, and he was ranked by many of his brother lawyers as one among the leading criminal lawyers in Alabama.

On the 2d of July, 1900, Judge RICHARDSON was nominated for the short term in Congress to succeed Gen. Wheeler, resigned, and from his election in the following November to the day of his death, March 31, 1914, he served the people of the eighth congressional district of Alabama in this House. That he served his people faithfully and well is perhaps best attested by the fact that for almost 14 years he had practically no opposition. Seldom is such universal approbation given to a public servant, and perhaps seldom has it been so well deserved. Of his service to the country while a member of this body I need not speak. Almost all of the Members present served with him and know of his ability, his loyalty, his justice, and his absolute freedom from prejudice and narrowness of mind. His services as chairman of the Committee on Pensions gained for him the esteem and approbation of his colleagues, irrespective of party lines. Democrats, Republicans, and Progressives alike admired him for his courage, his ability, his integrity, and his patriotism. Sectional prejudice found no room in his great heart, and the veterans who had worn the blue always found in him a sympathetic companion and a staunch friend.

Before he had reached manhood's meridian Judge RICHARDSON had the great misfortune to lose his beloved wife, and thenceforth his private life was devoted to the tender care of his five children—four daughters and a son. His devotion to his children was beautiful and only equaled by theirs to him. Strong and fearless as a man, as a father he was all tenderness and love, and perhaps the only pride he ever exhibited was that called forth by his children. May the grief which still wrings the hearts of those children be softened by the gentle hand of time to a blessed and hallowed memory to serve as a guide and a benediction to the end of their days.

Judge RICHARDSON'S service to the district which he so well represented in this House will never be forgotten by his constituents. At a recent meeting of the Tennessee River Improvement Association held in the city of Decatur, Ala., on the 3d day of December, the following preamble and resolutions were unanimously adopted:

Whereas, since the last annual meeting of this association the Hon. WILLIAM RICHARDSON, one of its most influential and active members, has passed into the beyond: Therefore be it

Resolved by the delegates assembled in annual meeting of the Tennessee River Improvement Association, the death of Judge RICHARDSON is a great loss to this association and a deep sorrow to each and all of its members, and that we hereby express our appreciation of his wise counsel and earnest endeavors in behalf of the purposes and object of this association, upon the floor of our conventions, before the Rivers and Harbors Committee of the Congress of the United States, and as an influential Member of Congress from the eighth district of Alabama, where his fund of accurate and useful information and his aptness in communicating the same was of untold value in our battle for recognition by Congress of the commercial value of the Tennessee River.

Resolved further, That in sorrow we miss his presence here to-day. He was a chivalrous, loyal, broad-minded, courtly, and lovable gentleman.

Resolved finally, That these resolutions be spread on the minutes of this association, and that a copy be sent to members of his family and be published as the secretary of this association may direct.

Mr. Speaker, the ranks are growing very thin now, the ranks of men with eyes growing dim and hair grown gray, who served in that great fraternal struggle which tried their souls, the ranks of the veterans of the Civil War. I miss them sadly as they fall out, one by one, at the stern command of death. A feeling of loneliness creeps over those of us who still are left, and the thought comes to me that not very many days are left before we, too, must hear the soft, sweet notes of "taps." And yet I know that the old veterans are still unafraid. They do not believe with the orator who said that—

Every life, no matter if its every hour is rich with love and every moment jeweled with a joy, will at its close become a tragedy as sad and deep and dark as can be woven of the warp and woof of mystery and death.

For them death is no tragedy deep and dark, for I know they believe that for him who suffers it 'tis but the opening of a portal to the dawn of a grander, richer, more glorious existence, and that when the final summons comes to each of them in turn he may be sure that his loving comrades who have gone before will meet him with outstretched spirit hands to clasp again the hand of him they loved on earth, and bid him welcome as he touches the unknown shore. And so believing, I say in all hope and in all reverence to my companion in arms and friend, Goodby, goodby, until we meet again.

Mr. MANN. Mr. Speaker, during my 18 years of service in this House Alabama has had an exceedingly strong representation both upon this floor and upon the floor of the Senate. I shall not recount the names of the distinguished gentlemen who have represented that State here and in the Senate, but I am very sure that during that period of time no other State has had a stronger representation than the State of Alabama, and I doubt very much whether any other State on the average has had the same degree of capacity in its membership in the two bodies as the State of Alabama, and I am glad to say that I think the strength of the representation of the State in the two bodies will continue. We are about to send from this House to the other body one of the strongest men who has ever sat in either body, and I believe the system which they have in that State of returning many of their strong men has been a great benefit to the country, and among the men who have been sent by that State there has been no other one who had a gentler soul, a sweeter disposition, and a more pleasing companionship than Mr. RICHARDSON. I had the honor of serving with him for many years on the Committee on Interstate and Foreign Commerce during a time when that committee had charge of many important matters of legislation. The Revenue-Cutter Service was reorganized. The Public Health Service was reorganized. The Lighthouse Service was reorganized. The Life-Saving Service was greatly extended. The Department of Commerce and Labor was created. The Bureau of Corporations was organized. The powers of the Interstate Commerce Commission were made adequate. The Panama Canal was provided for and largely constructed, and in all of these matters Mr. RICHARDSON had very great prominence. He was in the minority during that time, but in that great committee partisan considerations do not have very much influence, and the advice and help of Mr. RICHARDSON was constantly sought and always freely given.

His disposition was of such a character that all who knew him loved him, and those who came most closely in contact with him loved him most. He and I served on several conference committees where the difficulties were many, and it was through his influence and help that many of the good things in the legislation which came from our committee were enacted into law.

When he died I was a member of the committee appointed by this body to attend the funeral exercises. It is the only time I have left the House on an occasion of that character. It was a source of pride to me to be there when the final obsequies were enacted. I myself do not look with dread upon death. Mr. RICHARDSON had lived a long and useful life. He was entitled to leave us and go to the other world and be at rest. And at these funeral exercises one of the most affecting scenes which I have ever witnessed occurred. At practically the close the ex-Confederate veterans, who were there to pay their tribute to their comrade, formed in line and marched around the burial plot—old men who had served as comrades of Mr. RICHARDSON in the great struggle. And among these men was a Senator of the United States, Senator THORNTON of Louisiana, a member of the Senate committee, and bringing up the rear of the procession, as one of the men who had taken, at least, a humble part, was an old colored man—a procession of old men who had taken part in the war, composed of those who loved him, and paying their last tribute to him, from a distinguished Senator of the United States to a humble colored laborer. All who knew him loved him, whether of high or low degree. And there can be no pleasanter recollection for those who remain behind than to know that the one who has departed has been revered, respected, and loved by all.

Mr. ADAMSON. Mr. Speaker, it is not my purpose to speak of Senator JOHNSTON, although I knew him well and loved him well, personally and officially, for 10 or 15 years, and greatly admired his character and great ability. I was more intimately associated, however, with Judge RICHARDSON, of whom I wish to speak.

Mr. Speaker, although Judge RICHARDSON was illustrious in the State of Alabama and to a large extent known throughout the Union before he came to Congress, I had never enjoyed the pleasure of his personal acquaintance until he succeeded the late lamented Gen. Wheeler in Congress as the Representative of the eighth district of Alabama. During that term I became acquainted with him and was glad when at the beginning of the next term he became associated with me on the great Committee on Interstate and Foreign Commerce of the House.

His industry, his great talents, and wide learning, with his discriminating legal mind, admirably fitted him for usefulness on that committee. From the beginning he took a leading part in its deliberations, grappling with masterful familiarity the manifold and multifarious questions involving every phase, condition, and instrumentality of interstate and foreign commerce. It was his lot to participate in some of the most important legislation that has marked the development of this great country in the last half century, in all of which he did his part and did it well, like a man, a lawyer, a patriot, and a statesman.

At the beginning of the Sixty-second Congress, when the Democrats organized the House, Judge RICHARDSON was made chairman of the Committee on Pensions, but continued his membership on the Committee on Interstate and Foreign Commerce until the end of that Congress, when a rule was adopted limiting eligibility to membership on one of the large committees. Thereupon, much to the regret of all the members of our committee, he gave up his place with us and continued as chairman of the Committee on Pensions until his death.

As one of the committee designated by the Speaker to attend the funeral of Judge RICHARDSON I was much gratified to find our estimate of Judge RICHARDSON shared by the people of his home town and district, who manifested their affection for him and their grief over his loss by assembling in thousands to pay a last tribute of respect and affection by casting a flower and a tear on his grave.

He was a good man, a good lawyer, a good friend, an industrious student. He loved his country, and possessed all the elements to make a great Congressman. May it be the good fortune of this Republic to find many others like him to steer the ship of state through perilous storms and breakers to a haven of peace, prosperity, and glory, and perpetuate forever the greatest Republic ever known to man.

Not only in the piping times of peace did Judge RICHARDSON exhibit his exalted character, exemplifying a splendid manhood and capacity to grapple with the great questions of life, but he had illustrated the valor of a warrior and patriot on the tented field. He followed the ill-fated but glorious flag of the Confederacy through four years of hardship and valor, under the leadership of the greatest military heroes who ever led marshaled armies to glory. He was several times wounded, and when he had suffered and fought through the unsuccessful conflict, the cause in which he gloried having gone down before overwhelming numbers and unlimited resources, he laid down his sword in that good faith which characterized his compatriots throughout the South and veritably ended the war at Appomattox, although some people on the other side, more familiar with fighting battles with ink and execrations than with sword and bullets, failed to recognize the end of the war.

Having failed in their efforts to secede and preserve and reestablish the ideal government originally planned by the framers of the Union itself, he and the other leaders and heroes of the South immediately renewed their allegiance to the Union; and from 1865 to the day of his death he labored with unabated energy, patriotism, and devotion, with ability and zeal rarely equaled, to promote the prosperity and happiness of the State of Alabama and the greatness and glory of the Republic of the United States of America.

Mr. HAYES. Mr. Speaker, during our service together in this House I came to know Hon. WILLIAM RICHARDSON of Alabama well. He was one of the squarest, ablest, kindliest, and sweetest men I ever knew. In his young manhood he had played his part in the titanic struggle between the States. The marks of two wounds, which he bore in his body, were mute evidence of the fidelity, zeal, and courage with which he served the cause of the Confederacy. Some of the unusual trials and sufferings which he endured during his four years of service in the army have been recounted here to-day. A nature less noble and lovable than his would have been embittered by these terrible experiences. But WILLIAM RICHARDSON was incapable of harboring hatred or bitterness or revenge. When the cause for which he had fought was lost, he adjusted himself to the new conditions and did his part in working out the great problems of his country. How well he performed his part after he came to this House most of us who are here can testify. He was incapable of sectional prejudice, and in the discharge of his official duties had an eye single to the welfare of the people of every section of his country. He was modest almost to a fault, but always faithful to every duty, which he discharged with signal ability.

It is a splendid tribute to the judgment and discrimination of his constituency that they were loyal to him to the end, and returned him to this House term after term without serious opposition. He fully merited their confidence. It is a pleasure and a privilege to render this public tribute to his beautiful, lovable, and noble character, and make this feeble acknowledgment of the value to this House and to his country of his public services.

It should be a source of great pride and satisfaction to his friends and dear ones that without respect to party and without exception his colleagues who have served with him in this great historic body will always remember him, not only with respect for his unsullied character and admiration for his abilities, but with the tenderest feelings of affection for him as a man and a friend.

None knew him but to love him,
None named him but to praise.

Mr. AUSTIN. Mr. Speaker, in the death of our late colleague, Judge WILLIAM RICHARDSON, the State of Alabama lost one of its best and most faithful public servants; the Nation an able and patriotic defender; the men who served in the Mexican War, the Union and Confederate Armies, and in the Spanish-American War a true and tried friend; and this House a beloved and honored Member.

I knew Judge RICHARDSON from my early boyhood days, being natives of adjoining counties in Alabama, and while he and my father were not of the same politics and on opposite sides during the Civil War, they were lifelong friends. The district which Judge RICHARDSON served with signal honor and ability for 14 years borders on the southern boundary line of Tennessee, no great distance from the district which has favored me with a seat in this body.

Many of the pioneer settlers of northern Alabama or the Tennessee Valley came from eastern Tennessee, and were of the brave, strong, and industrious Scotch-Irish stock. The great Tennessee River flows through the two districts, uniting our sections by one of nature's great agencies of commerce and development. There are many common ties between our people, and in the passing of Judge RICHARDSON I lost not only a true friend but my constituents one who was ever ready to cooperate with their Representative in promoting and advancing the interests of east Tennessee.

A short time after my election to Congress in 1908, Judge RICHARDSON, with a strong delegation, visited my district, attending the Tennessee River Improvement Association at Harriman, Tenn. He made a most favorable impression on all who came in contact with him, and I gratefully remember the kind and generous reference he made to me in his speech on that occasion, and his kind assurance that he would aid me in every possible way when I reached Washington City and entered upon my official duties. Like all of his promises, it was faithfully kept.

His career in Congress was but a repetition of the course he had followed as a Confederate soldier; as a practicing attorney; as a State lawmaker; as a judge—one of conscientious devotion to duty. He was an untiring worker, an unselfish patriot, and an incorruptible statesman; an honorable, manly, brave man, and generous to a fault. The possession of these qualities is the explanation of his lasting hold upon the hearts and affections of the splendid people of the eighth district of Alabama. The Republican leader of this House, Mr. MANN, of Illinois, has just mentioned a great number of important, far-reaching constructive pieces of national legislation our late colleague aided in preparing and passing, and for which this and future generations will owe a debt as long as the Republic lives. Of the countless thousands who joined the Confederacy and fought under the Stars and Bars, Judge RICHARDSON was

one of the very first to forget and forgive, and I am sure was proud and happy that we were once more a prosperous, reunited, and happy people. He not only lived to see this, but was a strong factor in bringing it about.

In this connection I could not possibly present a higher, grander tribute to this man of kind, generous, and chivalrous deeds than to close my imperfect tribute by quoting a speech which he delivered in this House on January 21, 1901, when the bill was under consideration to establish a national soldiers' home near Johnson City, Tenn.—a noble, patriotic speech, for which the people of eastern Tennessee will revere, honor, and love his name and memory for all time.

Judge RICHARDSON said:

"Mr. Speaker, I am grateful to the distinguished chairman of the Military Committee [Mr. Hull] for the courtesy extended me. As an ex-Confederate soldier, I am glad to have this opportunity of bearing testimony in this public manner of my high regard, esteem, and respect for the Federal soldiers. It is true that the district in Alabama that I have the honor to represent lies but a short distance from where this home is to be established, and, not only speaking for myself, but for all classes of my people, I say, without hesitancy, that we welcome the establishment of homes in the South for disabled Federal soldiers. Since the close of our great Civil War I have been a sincere and earnest advocate of fair, just, and liberal pensions, as well as national homes for the disabled Union soldiers. It gives me pleasure to support a bill of this kind appropriating $250,000, and even if you should make the amount $350,000, I would cheerfully do likewise.

"I believe, Mr. Speaker, that this is the way—yea, the best way—to reconcile whatever troubles or heartburnings there may have been in the South, and especially in the locality where it is proposed to establish this home. There has never been any trouble, Mr. Speaker, between the Federal soldier and the Confederate. The history of the world has never presented a parallel to the welding of the lives and friendships that has taken place in the last 30 years between Federal and Confederate soldiers. The effect of these friendly associations between brave men who had met each other on bloody fields of battle is bearing fruit as our numbers daily are passing away. When His Excellency the President of the United States [Mr. McKinley] made his tour, some two years since, through the South and said the time would soon come when the Government would take care of the graves of the Confederate soldiers, this sentiment was greeted and welcomed by millions of brave and true men in the South. We knew that the President was sincere. He spoke it not only as President, but as a brave soldier. I sincerely believe, Mr. Speaker, that the location of this home in east Tennessee, and steps of this kind which are being inaugurated and approved, will yet lead to the consummation of the desire which exists in the conservative mind of the North and the South to see a home built which will admit both Federal and Confederate disabled soldiers. Such a home, of course, should be under the rule and government of the Federal homes law.

"I would welcome that time. One of the first bills, Mr. Speaker, introduced by me in this House was to establish a home of that kind in the vicinity of the beautiful city of Huntsville, Ala., the most attractive section of the Tennessee Valley. Such a measure, Mr. Speaker, will do more to allay the passions and prejudices produced by the war than anything else that we can do. The soldiers of the Grand Army of the Republic, the Confederate soldier, Republicans and Democrats, among our people, all speak out for such a home. I am glad that this home proposed by the bill under consideration will be established in that beautiful and historic section of east Tennessee. And for myself let me say, as an ex-Confederate soldier, treasuring the memories, as I reverently do, that are dear to my heart in connection with that wonderful struggle, honoring the brave men who fought on the other side, it gives me an amount of pleasure that I can not express in the few minutes allowed me to-day to cast my vote for this bill. [Loud and long applause.]"

Mr. BURNETT. Mr. Speaker, Judge WILLIAM RICHARDSON was a native of Limestone County, Ala. He, like Senators Morgan, Pettus, and Johnston, was an actor in the most terrific drama that was ever played on the American stage.

In war and in peace he knew no standard but honor and no watchword but duty. He came of a long line of splendid southern ancestors, and every heart throb and pulse beat was for his people and his native State.

When a young man the call to arms was sounded, and young RICHARDSON unsheathed his sword and never returned it to its scabbard until the history of the end of the Confederacy had been written in blood and glory.

He was severely wounded at the Battle of Chickamauga and carried with him to his death the effects of that awful wound. What he suffered from that shot no one but he and God knew, as he never paraded his troubles before his friends.

He was captured during the war and, as I now recollect the story, was condemned to be shot as a spy. He was in his cell with a comrade one night awaiting the execution of the death sentence, which was to be carried out next morning at sunrise, when he heard the clattering of hoofs outside, and he said to his comrade, "That's Forrest's men." Sure enough it was. That wizard of the saddle had heard of the sad plight of these two Confederates, and made a raid on the town where they were incarcerated and released them.

When the titanic struggle was ended Judge RICHARDSON returned to a wrecked and ruined country. A few of his friends joined with those who conspired to complete the financial ruin of our State, and then young RICHARDSON again threw himself into the breach and helped to drive out those who would fatten on a prostrate foe.

With the eye of an eagle, he was ever watchful of the interests of Alabama; with the courage of a lion, he never quailed before her oppressors; with the heart of a maiden, his sympathies were ever with the distressed; and the night was never too dark nor the day too cold for him to go the length of his cable tow to aid a struggling brother.

His home was in Huntsville, one of the most cultured cities of the South. Among lawyers he always stood at the head of the list; among statesmen he always stood the peer of any. In civic life and in devotion to home and friends he had no superior.

Before we had emerged from the dark days of reconstruction he was elected by the people of his county as judge of the probate and county courts of Madison County and held that honored position until 1886. He was elected to fill the unexpired term of the gallant Joe Wheeler, in the Fifty-sixth Congress, and had an honorable career in this body until God called him. Much of the most important legislation of the time he was here bears the influence of his mind. His work for Muscle Shoals and the Tennessee River was ardent and indefatigable. If the scheme for water-power development and the opening of that great stream is ever consummated, the people of the Tennessee Valley ought to erect a monument to the name of WILLIAM RICHARDSON.

In his early married life he lost his wife, and with four beautiful little daughters and a baby boy he started life anew, with a sad and dreary heart.

His devotion to the memory of that companion and his love for his little ones restrained him from ever marrying again. He reared his daughters himself, in his own home, and his devotion to them was perfectly beautiful.

On account of the proximity of our districts and the fact that we lived at the same hotel in Washington much of the time that he was in Congress, I perhaps enjoyed more intimate relations with him than any other Member of the delegation.

We came into the Fifty-sixth Congress at nearly the same time. As he filled out an unexpired term, he entered a few months later than I did. During our long and intimate acquaintance I always found him every inch a man. Devoted to his family, loyal to his district and his people, true to his friends, true to himself, devoted to the memory of the lost cause, his like will not always be found.

His memory will long be kept green by those who loved and honored him.

Earth was poorer and Heaven was richer when this noble friend of myself and of my family was called to God.

Mr. SIMS. Mr. Speaker, it was my good fortune when I was only about 15 or 16 years of age to live in Waterloo, Ala., in a county in the congressional district which our departed friend, Judge Richardson, represented. The district which he represented was the eight district of Alabama, and the one that I have the honor to represent is the eight district of Tennessee, and in addition to the fact that each is the eighth district in our respective States, they are contiguous. One of the counties of my district borders on one of the counties of that district, and from earliest childhood I have known more Alabamians than people from any other State in the Union, and nearly all of them came from the eighth district of that State. Consequently, having lived in Alabama, and having associated with her people intimately, although I never knew Judge RICHARDSON while I lived in Alabama or before I came to this body, I felt an interest in him, which was brought about largely by the conditions I have just described.

In addition to that he had two brothers living in Nashville, Tenn., prosperous business men, and men who always took a lively and active interest in the political, moral, and general welfare of our State. I knew both of those gentlemen before I met Judge RICHARDSON, and they were no ordinary men. Consequently, Judge RICHARDSON seemed to me very much as a Tennesseean. When he entered this body, being the successor of the distinguished Confederate general, Joseph Wheeler, and having been a Confederate soldier himself, all these things added to the interest I already felt in him. From the time I first knew Judge RICHARDSON to the last time I ever joined him in service in this House and in service upon the Interstate and Foreign Commerce Committee, of which we were members for two terms prior to his death, nothing ever occurred that did not add to the good feeling and high opinion which I had of him. And every act of his life after my acquaintanceship with him was such as to make one feel more kindly toward him, until it grew into real affection.

During the latter part of his life, when he would try to discharge his public duties, and when it was evident to everyone he was not able to do so, I often asked him not to go to the committee meetings, because he did not look strong enough, and told him that we would do the work for him, but he was always insistent, and went to his labors when he ought not to have done so. The former distinguished chairman of the Committee on Interstate and Foreign Commerce, the gentleman from Illinois [Mr. MANN], and also the present distinguished chairman, the gentleman from Georgia [Mr. ADAMSON], have paid tribute to his efficient and hard work upon that committee. He was absolutely independent in thought, and in the many hearings that occurred before that committee, when he and I were members, we would often differ, and sharply differ, as to certain propositions and theories and as to what ought or ought not to be in the proposed legislation, but always with a courtesy and dignity on his part that left no stings, but made you think all the more of the man and admire all the more his courage to thus so sharply differ with men who loved him and whom he in turn loved. On the floor of this House I have sometimes, but not often, differed with him as to what was good legislation and beneficial to our country and as to what was bad as we saw it, but I always knew that he was just as sincere and honest in his views upon the questions which were then being discussed as I claimed to be myself. And although an older man, he was easy to become acquainted with, and the longer you knew him the more he grew upon you until it became a positive pleasure to me to associate with him not only in the duties that were common to us but in every way that men and friends can be associated.

As such associate and companion in legislative labors I feel that I have sustained a great loss, and such no doubt is the feeling of all who were so closely associated with him as to know his true value as a Member of this House. He was one of those men who was so impressive in his genial yet strong personality that he will always remain firmly fixed in the minds of all who were so fortunate as to have known him intimately. Any constituency in any State could well be proud of so able and so good a Representative in this body, and if the able gentleman who has been chosen to represent the good people of the eighth district of Alabama serves his constituents as well, as ably, and as faithfully as did Judge RICHARDSON I predict for him a long term of distinguished service in this body.

Mr. HEFLIN. Mr. Speaker, it has long been the custom of both branches of Congress to hold memorial services in honor of the men who died while serving their country as Members of Congress. It is a splendid custom, and I commend its observance to all those who are to come after us. It is fitting that the deceased Member's colleagues should have the privilege of recounting his deeds and commending his virtues, and, Mr. Speaker, we are here to-day to pay to the memory of a once brave and able Member of Congress the tribute of our respect and esteem.

It is comforting to the brave soldier to know that if he dies in battle far away from home and loved ones that some of his comrades will tell the story of his valor and heroism, and, Mr. Speaker, it is comforting to a Member of Congress to know that when he has answered his last roll call and gone from the forum of congressional debate, that his colleagues will say something of his work here and speak of his service to his country.

Mr. Speaker, the service here is often strenuous, always exacting, and trying, at times, on both the ability and moral stamina of the Member. It is ours to promote the general welfare—to benefit the country by our service and to guard the Constitution so that we may bequeath to posterity, unhampered and unimpaired, the priceless heritage of civil and religious liberty. Here we have to do with the great problems that affect the destiny of our country and the welfare of the human race, for, as Jefferson has said, "One single good government is a blessing to mankind." Here men have given the best years of their lives striving earnestly to be of value to their day and generation, and here they have rendered noble service to their country.

The man whose memory we honor to-day was an able and faithful public servant. He was a splendid representative of the South "when knighthood was in flower." Judge RICHARDSON, when but a beardless youth, entered the Confederate Army, and no braver soldier ever donned a uniform or drew a battle blade. Believing that the State had the right to secede; that sovereignty resided with the State, and that to the State allegiance was due, he endured the hardships and privations of the Confederate soldier, and participated in a struggle where the mingled blood of brothers, North and South, cemented the sections in the bonds of an everlasting union.

He accepted in good faith the arbitrament of the sword, and this faithful follower of the Stars and Bars became the devoted defender of the Stars and Stripes, and here in the Hall of the National Congress he counseled with men of the Union Army and together they worked for the good of the Republic.

He was a loyal friend, an able and faithful representative of his people, and a splendid type of the American citizen.

Mr. DENT. Mr. Speaker, it is always painful to contemplate death, but as death is inevitable it is meet and proper that those of us who linger behind should by some appropriate ceremony pay our respects to the memory of the friends and associates who have preceded us to the grave. It is more than difficult, Mr. Speaker, to do justice to such an occasion, but it is a privilege which the living have, to make the attempt. Nothing that we can say here will add either to the name or to the fame of those whose spirits have winged their flight to the unknown realm above, but we can at least recall their virtues so that those who come after them may profit thereby.

It is in this spirit that I shall attempt briefly to speak of the life and character of the late Judge WILLIAM RICHARDSON. Notwithstanding the fact that considerably more than a score of years separated our lives, I know that there was a bond of friendship between us. Upon practically all political questions Judge RICHARDSON and I were in entire accord, and our personal relations were of the most friendly character. I recall distinctly my first introduction to Judge RICHARDSON. It was when he was a candidate for the Democratic nomination for Governor of the State of Alabama. I recall his appearance and his manner. I well remember the dignified black suit and the immaculate white shirt—a style of dress that he was wont to wear unto the day of his death. I well recall also his pleasing conversation and his most cordial manner. It was years afterwards, however, that we met as colleagues in this body. It was then that I came to know Judge RICHARDSON and, knowing him, to honor, to respect, to admire, aye, to love him. Judge RICHARDSON was a modest and a courageous gentleman. He possessed that kind of courage which is always associated with modesty—the finest type of courage to be found among men. Judge RICHARDSON was a patriot, if by patriotism we mean a fearless, intelligent, and conscientious devotion to what one believes to be to the best interest of his country. His record as a Confederate soldier, as a private citizen, as a Member for many years of this body, speaks for itself, and is above reproach. His remarkable career in the Confederate Army he never capitalized politically, and even in private conversation with his closest friends he was diffident in speaking of it.

Judge RICHARDSON belonged to the old, chivalrous school of southern gentlemen—men who were neither boisterous nor ostentatious, as is often pictured by inimical critics of the South, but men who fearlessly discharge their duty, let the consequences be what they may. He was kept in Congress by a fond constituency until claimed by death. Among others, I attended the funeral in his home city of Huntsville, where his remains were interred. I saw gathered there, from all the ranks of life and from all over the Tennessee Valley, a great concourse of people to pay tribute to his memory. I saw gray-haired, wrinkled, and decrepit Confederate veterans, when his coffin was lowered in the grave, march solemnly around it and drop in it a sprig of green. I saw delicate, refined, and sympathetic women cover the new-made grave with all the varieties

of flowers that spring puts forth in that sunny clime, and when I turned away with head uncovered and eyes moistened with tears, I said, "Surely, as I firmly believe, if there be a kingdom of the righteous, the soul and the spirit of Judge RICHARDSON is now resting in peace."

Mr. BYRNS of Tennessee. Mr. Speaker, when I entered the Sixty-first Congress, among the first, if not the very first of those who had seen prior service in Congress, to greet and cordially welcome me as a colleague was the Hon. WILLIAM RICHARDSON, of Alabama. From that time until his death he was my good friend, and I profited greatly from his helpful advice and suggestions. The particular interest that he took in me from the outset was no doubt largely influenced by the fact that in my home city there lived two brothers and a sister who were among its most influential and prominent citizens, and who had commended me to him. So deep was my appreciation of his generous friendship and his kindly and helpful advice, so great my admiration for his many noble qualities as a man and as a distinguished Member of this body, that I could not let this opportunity pass without paying a brief, though necessarily inadequate, tribute to his memory. It is not my purpose to speak of the life of Judge RICHARDSON, or to refer particularly to the great service which he rendered to his State and the Nation. I will leave that to others who served for a longer time with him in Congress. We have just listened to an excellent address by his successor in Congress and his lifelong and intimate friend, Hon. C. C. HARRIS, who has pictured to us the high sense of duty which prompted every act of Judge RICHARDSON through all the years of his life.

Indeed, Mr. Speaker, this high sense of honor and duty was the guidepost which directed him at every turn in the pathway of his life. It governed and sustained him, when, as a mere boy during the Civil War, he was captured at Murfreesboro, Tenn., and ordered to be executed within a few hours, being saved from such a fate only by the timely and unexpected arrival of that wizard of the saddle, Gen. Bedford Forrest. His neighbors will tell you that this same high principle controlled him during all the subsequent years of his life while he lived among them as an honored friend and neighbor. It was surely so, Mr. Speaker, after he became a Member of this House, where, as one of its most useful, faithful, and influential Members, he devoted so many years of his life in splendid service to his State and the Nation. It was particularly so during the last few months of his life, when dread disease had taken hold of him and death was haunting his footsteps. Feeble though he was, he insisted on attending the sessions of the House and giving personal attention to the needs and wishes of those whom he directly represented. To a man of his high ideals I am quite sure it must have been a consolation that he was permitted to pay the debt which we must all ultimately pay while actively engaged in the service of his country, leaving behind him as a heritage to his family not only a high and honorable name, but also an enviable record of earnest and faithful devotion to duty. And, Mr. Speaker, what better fate could befall any man? We all must face death at some time, and I know of no better end than that which fell to the lot of our distinguished colleague and friend. He died after a long life of usefulness, rich in honors and richer in the love and affection of all who knew him.

Mr. Speaker, I have never feared death very much. Sooner or later it must come to us all. For the same reason, I do not believe that the majority of mankind actually fear death. We dread it rather because of the uncertainty and the fear that the record of our lives may not be such as to entitle us to receive the reward of another and an infinitely more happy life. But there can be no such fear as to our deceased colleague. He was called upon to perform much service in this life, and it can be truthfully said that he was faithful to every trust, whether great or small, and we have the promise of the Divine Master that such a man shall be ruler over many things in the great beyond.

Mr. Speaker, I know of no man who more truly lived up to the injunction of the poet:

> So live that when thy summons comes to join
> The innumerable caravan which moves
> To that mysterious realm where each shall take
> His chamber in the silent halls of death,
> Thou go not, like the quarry slave at night,
> Scourged to his dungeon, but sustained and soothed
> By an unfaltering trust, approach thy grave
> Like one that wraps the drapery of his couch
> About him, and lies down to pleasant dreams.

Mr. ABERCROMBIE. Mr. Speaker, this is a solemn hour, and it furnishes occasion for serious reflection.

Once more we have been reminded of the verity of the biblical decree, "It is appointed unto men once to die." From that divine edict there is no escape.

Death is the final and common conqueror. With imperial and impartial tread it enters the gilded palace and the lowly hovel. Its awful presence stills the tongue of criticism, silences the voice of anger, restrains the pen of censure, softens the heart of hatred, and turns our thoughts toward those things the contemplation of which elevates the mind, quickens the conscience, and purifies the soul.

How strange it is that we think seriously of death only when confronted by death!

In the death of our friend and colleague Representative WILLIAM RICHARDSON his district lost a brilliant and faithful servant, the State of Alabama a loyal and distinguished son, the United States a devoted and useful officer, the cause of liberty a prudent and zealous champion. Throughout a long and active life, given chiefly to the public service, he was ever a shining example of loyalty to purpose, of devotion to country, and of faithfulness to duty.

He died in Atlantic City, N. J., on the 31st day of March, 1914, at the age of 74 years 10 months and 23 days. His birthplace was Athens, Ala., and the date of his birth was the 8th day of May, 1839. His health had been failing for some time, and his death was not unexpected by his family and friends.

As was true generally of the youth of that time in that new country, his opportunities for the acquisition of an education were limited; but, availing himself industriously of the means within his reach, after attending school in his home town, then a mere village, he entered and in due season graduated with highest honors from the Wesleyan University at Florence, Ala., an institution now long nonexistent. The colleges and universities of that time in all parts of the country were far below those of to-day in both admission and graduation requirements. As a matter of fact, the best of the higher institutions of that day were not superior, if, indeed, they were equal, to the high schools of the present.

The wonder is that so many who came up under the conditions of that period were able to overcome apparently insurmountable obstacles and acquire the education necessary for success and distinction in all the fields of human endeavor. Representative RICHARDSON belonged to that class of men who succeed regardless of untoward conditions. He possessed the rare powers of concentration and application, and these combined with a strong intellect enabled him to acquire much knowledge. He was a man of great learning.

Not long after leaving college he enlisted as a private in the Army of the Confederacy in which he served with great prowess from 1861 to 1865. He was wounded three times, once desperately, and was promoted to the rank of captain on account of conspicuous gallantry on the field of battle. A unique and harrowing experience was his during that sanguinary conflict. While traveling unknowingly with a spy he was arrested by Federal soldiers and, with the spy, condemned to be executed at sunrise on the following day. Only a timely rescue by Gen. Nathan Bedford Forrest saved his life. In the performance of duty danger had no terror for him. He was among the bravest of the brave.

When the war ended he returned to his home and studied law, which was his profession for the remainder of his life, and in which he won signal success. Having served a term in the Legislature of Alabama he removed to Huntsville, which was his home thereafter. He was for many years judge of probate, and his friends still boast that his record was the best ever made in that office.

He was a candidate for the gubernatorial nomination of his party in 1890 and was defeated by only a small number of votes. Four years later he served as delegate at large to the national Democratic convention. On the 3d day of July, 1900, following the resignation during the Fifty-sixth Congress of Gen. Joseph Wheeler, who for many years had represented that district, the eighth Alabama, he was nominated unanimously by his party for both the unexpired and the succeeding term in the House of Representatives, and he served continuously thereafter until the date of his death in the Sixty-third Congress.

His health began to fail about two years ago, prior to which time he took a prominent part in the proceedings of the House and participated in many of the debates, always with credit to himself. He served on some of the most important committees and at the time of his death was chairman of the Committee on Pensions. In his capacity as a Member of Congress he had to do directly with those who to him had been both foe and victor in time of war, and from the very beginning of his

service here he had their confidence and esteem. In no other Government than this glorious Republic could a thing like that have happened. It only shows how completely the animosities of the great war have passed away. That is an honor of which his descendants even to the remotest generation may justly feel proud.

In this connection I am reminded of a bill passed during this Congress in furtherance of the feeling of amity to which I have referred. How appropriate and how beautiful it was for a Representative from Pennsylvania [Mr. GRAHAM] to introduce and, by unanimous vote in both the House and Senate, to secure the passage of a bill having for its object the complete obliteration of sectional prejudice so far as that can be done by law. I refer to the act repealing the statute requiring proof of loyalty to the Union of those who seek reimbursement for damages sustained during the Civil War. The speech made by Mr. GRAHAM when that bill was under consideration in the House was one of the most eloquent and patriotic that was ever delivered in Congress or elsewhere. I wish it could have been heard by every citizen of this great country.

As a public speaker Representative RICHARDSON displayed oratorical ability of a high order. In debate he was ready, poised, argumentative, and fair, and on all occasions was lucid, instructive, eloquent, and convincing. As an orator he was in demand throughout Alabama, especially on patriotic occasions, and he never failed to measure up to the expectations of his audience.

But, Mr. Speaker, in view of what others have said, it is unnecessary for me to dwell longer upon the details of the remarkable career of our late friend and colleague. From the date of his entrance into the combat of life his record was one of achievement, and in its every stage discloses a brilliant mind, a determined will, a cultivated conscience, and a generous soul, all of which go to constitute a well-rounded character, and are absolutely essential for real success. A born leader of men, he was ever accorded preferment by his fellows. His career illustrates the power of a combination of intelligence, character, and application, and will stand as a perennial inspiration to the youth of the land.

A good and great man was lost to the world when WILLIAM RICHARDSON died. True to himself, true to his country, true to his God, he abides with Him—

> Who shines in the sun, refreshes in the breeze,
> Glows in the stars and blossoms in the trees,
> Lives through all life, extends through all extent,
> Spreads undivided and operates unspent.

Mr. UNDERWOOD. Mr. Speaker, my affection and respect for the person and character of our friend and colleague, WILLIAM RICHARDSON, will not permit me to indulge in mere words of praise. He was my friend and comrade for many years. I knew and loved him for his charming personality, his high character, and his eminent abilities. He early realized the responsibilities of life as a soldier in the War between the States, and with courage he met every responsibility from that hour to the day of his death. Tried in many and important public and private stations, he was faithful in all. Courteous and kindly in manner, he was determined and persistent in purpose and action. Tolerant and conservative always, he had fixed principles to guide his course through life and positive convictions that he maintained on all public questions. He thought clearly and always expressed himself forcefully. He was a hard worker, a diligent seeker after the truth. Possessed of rare good judgment and great common sense, he was a safe counselor. He made friends through life because people believed in him and trusted him. He carried conviction with what he said because he himself was convinced before he acted. He was a leader of men because his leadership was marked by courage and honesty of purpose. He was respected by all who knew him because he deserved it. He loved his country and was a true American, but he was primarily a son of the Southland, bound in heart and memory to the history and traditions, the honesty and good repute of the old South. He honored his native State of Alabama, and Alabama honored him to the day of his death. Great as is the history of Alabama and her many distinguished sons, there never trod on Alabama soil a more knightly gentleman than WILLIAM RICHARDSON, and there sleeps not beneath Alabama's sod a more loyal, gentle, and brave son than her late Representative.

ADJOURNMENT.

Then, in accordance with the resolution heretofore adopted, at 2 o'clock and 22 minutes p. m., the House adjourned until to-morrow, Monday, February 1, 1915, at 12 o'clock noon.

SENATE.

MONDAY, *February 1, 1915.*

(Legislative day of Tuesday, January 26, 1915.)

The Senate reassembled at 10 o'clock a. m., on the expiration of the recess.

Mr. SMOOT. Mr. President, there are but five Senators on the other side of the Chamber, and I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Johnson	Ransdell	Thomas
Bryan	Kenyon	Robinson	Thornton
Camden	Kern	Saulsbury	Vardaman
Culberson	La Follette	Sheppard	Walsh
Fletcher	Martin, Va.	Smith, Ga.	White
Gallinger	Overman	Smith, Mich.	Williams
Hollis	Perkins	Smoot	
James	Pittman	Swanson	

The VICE PRESIDENT. Thirty Senators have answered to the roll call. There is no quorum present.

Mr. KERN. Mr. President, I ask for the enforcement of the standing order.

The VICE PRESIDENT. May the Chair inquire what is the standing order?

Mr. KERN. To compel the attendance of absent Senators.

The VICE PRESIDENT. The Sergeant at Arms will enforce the order of the Senate.

Mr. MARTINE of New Jersey, Mr. SIMMONS, Mr. STONE, Mr. HARDWICK, Mr. LANE, Mr. JONES, Mr. MCCUMBER, Mr. CLAPP, Mr. WEEKS, Mr. CUMMINS, Mr. NELSON, Mr. SHAFROTH, Mr. BURTON, Mr. CHAMBERLAIN, Mr. POMERENE, Mr. LIPPITT, Mr. MYERS, Mr. REED, and Mr. CHILTON entered the Chamber and answered to their names.

The VICE PRESIDENT. Forty-nine Senators have answered to the roll call. There is a quorum present. The Senator from Michigan [Mr. SMITH] is entitled to the floor.

PETITIONS AND MEMORIALS.

Mr. BRANDEGEE presented petitions of the Turners' Society, of New Britain; of the Quartette Club, of New Britain; of the German-American Alliance, of New Britain; of the Teutonia Mannerchor, of New Britain; and of sundry citizens of Clinton, all in the State of Connecticut, praying for the enactment of legislation to prohibit the exportation of ammunition, etc., which were referred to the Committee of Foreign Relations.

Mr. WARREN presented a petition of sundry citizens of Sheridan, Wyo., praying for the enactment of legislation to prohibit the exportation of ammunition, which was referred to the Committee on Foreign Relations.

Mr. POINDEXTER presented petitions of Dr. Otto E. Wilde, August von Boecklin, A. H. Hardee, Richard Fechtner, Carl Krummel, and sundry other citizens of Tacoma, and of the Germania Club, of Wenatchee, all in the State of Washington, praying for the enactment of legislation to prohibit the exportation of ammunition, etc., which were referred to the Committee on Foreign Relations.

He also presented petitions of Rev. E. W. Wilder and sundry other citizens of Granger, Wash., praying for the passage of the so-called immigration bill, which were ordered to lie on the table.

Mr. CHAMBERLAIN presented petitions of sundry citizens of Oregon, praying for the enactment of legislation to prohibit the exportation of ammunition, etc., which were referred to the Committee on Foreign Relations.

Mr. MCLEAN presented a memorial of Centennial Lodge, No. 118, Ancient Free and Accepted Masons, of New Britain, Conn., remonstrating against any change in the present law relative to the printing of Government return envelopes, which was referred to the Committee on Post Offices and Post Roads.

He also presented petitions of the Teutonia Mannerchor, the Quartette Club, the German-American Alliance, the Turners' Society, and the Kaiser Franz Joseph Society, all of New Britain, and of the Turners' Society and of sundry citizens of Meriden, all in the State of Connecticut, praying for the enactment of legislation to prohibit the exportation of ammunition, which were referred to the Committee on Foreign Relations.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. HOLLIS:

A bill (S. 7503) granting an increase of pension to William D. Eudy; to the Committee on Pensions.

By Mr. McLEAN:

A bill (S. 7504) granting an increase of pension to James K. Stebbins (with accompanying papers); to the Committee on Pensions.

By Mr. THOMPSON:

A bill (S. 7505) granting an increase of pension to Annia Clark; and

A bill (S. 7506) granting a pension to Mary L. Taylor (with accompanying papers); to the Committee on Pensions.

By Mr. SHIVELY:

A bill (S. 7507) for the relief of Sarah J. Ireland; to the Committee on Claims.

By Mr. BURLEIGH:

A bill (S. 7508) granting an increase of pension to James Baker; to the Committee on Pensions.

BUREAU OF LABOR SAFETY.

Mr. WALSH submitted an amendment intended to be proposed by him to the bill (H. R. 10735) to create a bureau of labor safety in the Department of Labor, which was referred to the Committee on Education and Labor and ordered to be printed.

THE MERCHANT MARINE.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 6856) to authorize the United States, acting through a shipping board, to subscribe to the capital stock of a corporation to be organized under the laws of the United States or of a State thereof or of the District of Columbia, to purchase, construct, equip, maintain, and operate merchant vessels in the foreign trade of the United States, and for other purposes.

[Mr. SMITH of Michigan addressed the Senate. See Appendix.]

Mr. CLARKE of Arkansas. Mr. President——

The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from Arkansas?

Mr. SMITH of Michigan. I yield for a question.

Mr. CLARKE of Arkansas. Will the Senator yield to me to make a motion?

Mr. SMITH of Michigan. If I do not forfeit the floor.

Mr. CLARKE of Arkansas. The Senator has occupied it but once, and he has the right to resume it again.

Mr. SMITH of Michigan. Mr. President, I certainly can not object to any request made by my honored friend from Arkansas, and I yield for a motion.

Mr. CLARKE of Arkansas. Mr. President, it is very evident to some of the Senators on this side of the Chamber that the proceeding that is now going on can be indefinitely continued. That has imposed upon us the duty of determining whether or not our highest obligations to our constituents require that we submit to that sort of a result when it may injuriously affect interests we deem to be more directly imposed upon us. We see the passage of the great supply bills jeopardized; we see the river and harbor bill again put into a situation where even a fair attack may jeopardize its passage. The people of the section from which I come are vitally interested in that measure.

It is likewise true that there is an ingrained and widespread impression among the farmers of my State that they have not received at the hands of the present Congress the consideration that their interests require should be extended to them, not only because it would be just to do so but because they feel that a generation of fidelity to the interests of the great Democratic Party justifies a thorough investigation into the situation of their affairs and the extension, to the very limit of constitutional power, of any remedy that might relieve them. I believe that the rural-credits bill is one of the measures that would, at this particular time, extend to those people some relief as against the misfortunes which the great calamity that has fallen upon humanity has imposed upon them.

In the regular progress of events, in the regular unfolding of a policy of reform and progress, a rural-credits law is due. I do not believe there is anything connected with this particular shipping bill that addresses itself to the people of that section at this time with sufficient force to justify them in permitting any opportunity to pass, or to justify them in excusing their representatives for permitting any opportunity to pass, that might bring to them the relief that that measure could afford.

In order to give voice to the sentiments of a number of us who share the opinions that I have but briefly and imperfectly stated, I move that the pending bill and all amendments be recommitted to the Committee on Commerce.

Mr. FLETCHER. Mr. President, I make the point of order that that motion is not in order. The Senate has decided to take a vote on the pending question and the yeas and nays have been ordered. No other motion is in order until that is decided. The Senate has determined that, and I make that point of order.

The VICE PRESIDENT. The Chair sustains the point of order.

Mr. CLARKE of Arkansas. Mr. President, with great deference I appeal from the decision of the Chair, and upon that I ask for the yeas and nays.

The yeas and nays were ordered.

The VICE PRESIDENT. The question is, Shall the decision of the Chair stand as the judgment of the Senate? The Secretary will call the roll.

The Secretary proceeded to call the roll.

Mr. CRAWFORD (when his name was called). I have a general pair with the senior Senator from Tennessee [Mr. LEA], who is absent, and will withhold my vote unless I can make a transfer, in which event I shall vote.

Mr. TILLMAN (when his name was called). I transfer my pair with the junior Senator from West Virginia [Mr. GOFF] to the senior Senator from Illinois [Mr. LEWIS] and will vote. I vote "yea."

Mr. WILLIAMS (when his name was called). I transfer my pair with the senior Senator from Pennsylvania [Mr. PENROSE] to the junior Senator from South Carolina [Mr. SMITH] and will vote. I vote "yea."

The roll call was concluded.

Mr. CATRON (after having voted in the negative). I am paired with the senior Senator from Oklahoma [Mr. OWEN], who is temporarily absent, and I therefore withdraw my vote.

Mr. CHILTON. I transfer my pair with the junior Senator from New Mexico [Mr. FALL] to the senior Senator from Nevada [Mr. NEWLANDS] and will vote. I vote "yea."

Mr. CRAWFORD. I transfer my pair with the senior Senator from Tennessee [Mr. LEA] to the junior Senator from Nebraska [Mr. NORRIS] and will vote. I vote "nay."

The roll call resulted, yeas 37, nays 46, as follows:

YEAS—37.

Ashurst	Kern	Robinson	Thomas
Chamberlain	Lane	Saulsbury	Thompson
Chilton	Lee, Md.	Sheppard	Thornton
Culberson	Martin, Va.	Shields	Tillman
Fletcher	Martine, N. J.	Shively	Walsh
Gore	Myers	Simmons	White
Hollis	Overman	Smith, Ariz.	Williams
Hughes	Pittman	Smith, Md.	
James	Pomerene	Stone	
Johnson	Reed	Swanson	

NAYS—46.

Bankhead	Colt	Lodge	Smith, Mich.
Borah	Crawford	McCumber	Smoot
Brady	Cummins	McLean	Stephenson
Brandegee	Dillingham	Nelson	Sterling
Bristow	du Pont	O'Gorman	Sutherland
Bryan	Gallinger	Oliver	Townsend
Burleigh	Gronna	Page	Vardaman
Burton	Hardwick	Perkins	Warren
Camden	Hitchcock	Poindexter	Weeks
Clapp	Jones	Root	Works
Clark, Wyo.	Kenyon	Sherman	
Clarke, Ark.	Lippitt	Smith, Ga.	

NOT VOTING—13.

Catron	Lea, Tenn.	Owen	Smith, S. C.
Fall	Lewis	Penrose	
Goff	Newlands	Ransdell	
La Follette	Norris	Shafroth	

The VICE PRESIDENT. On the question, Shall the decision of the Chair stand as the judgment of the Senate? the yeas are 37, the nays are 46. So the Senate does not agree with the ruling of the Chair. The question is on the motion of the Senator from Arkansas.

Mr. STONE. Mr. President, to the end that real Democrats may have a conference and that Republicans and their allies may have a caucus, so that we may see just what the new line-up is, I move that the Senate adjourn.

Mr. CLARKE of Arkansas. Mr. President——

Mr. GALLINGER and others called for the yeas and nays, and they were ordered.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary proceeded to call the roll.

Mr. CRAWFORD (when his name was called). I transfer my pair with the senior Senator from Tennessee [Mr. LEA] to the junior Senator from Nebraska [Mr. NORRIS] and will vote. I vote "nay."

Mr. TILLMAN (when his name was called). Making the same announcement as a little while ago and the same transfer, I vote "yea."

The roll call was concluded.

Mr. WILLIAMS. With the same announcement that was made by me on the last roll call, I vote "nay."

Mr. NORRIS entered the Chamber and voted "nay."

Mr. CRAWFORD (after having voted in the negative). Mr. President, the transfer of my pair is ineffectual, because the junior Senator from Nebraska [Mr. NORRIS] has entered the Chamber and voted. I therefore withdraw my vote, being paired with the senior Senator from Tennessee [Mr. LEA].

Mr. CHILTON. Making the same announcement as before, I vote "yea."

The result was announced—yeas 36, nays 49, as follows:

YEAS—36.

Ashurst	Johnson	Ransdell	Smith, Md.
Bryan	Kern	Reed	Stone
Chilton	Lane	Robinson	Swanson
Culberson	Lee, Md.	Saulsbury	Thomas
Fletcher	Martin, Va.	Sheppard	Thompson
Gore	Martine, N. J.	Shields	Thornton
Hollis	Myers	Shively	Tillman
Hughes	Pittman	Simmons	Walsh
James	Pomerene	Smith, Ariz.	White

NAYS—49.

Bankhead	Cummins	McLean	Smoot
Borah	Dillingham	Nelson	Stephenson
Brady	du Pont	Norris	Sterling
Brandegee	Gallinger	O'Gorman	Townsend
Bristow	Gronna	Oliver	Vardaman
Burleigh	Hardwick	Overman	Sutherland
Burton	Hitchcock	Page	Warren
Camden	Jones	Perkins	Weeks
Chamberlain	Kenyon	Poindexter	Williams
Clapp	La Follette	Root	Works
Clark, Wyo.	Lippitt	Sherman	
Clarke, Ark.	Lodge	Smith, Ga.	
Colt	McCumber	Smith, Mich.	

NOT VOTING—11.

Catron	Goff	Newlands	Shafroth
Crawford	Lea, Tenn.	Owen	Smith, S. C.
Fall	Lewis	Penrose	

So the Senate refused to adjourn.

Mr. STONE. I move to lay the motion to recommit upon the table, and upon that I demand the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. CATRON (when his name was called). I am paired with the Senator from Oklahoma [Mr. OWEN] and withhold my vote.

Mr. CHILTON (when his name was called). Making the same announcement as before, I vote "yea."

Mr. CRAWFORD (when his name was called). Again announcing my pair with the senior Senator from Tennessee [Mr. LEA], who is absent, I withhold my vote.

Mr. WILLIAMS (when his name was called). With the same announcement as on the last roll call, I vote "yea."

The roll call having been concluded, the result was announced—yeas 42, nays 44, as follows:

YEAS—42.

Ashurst	Kern	Reed	Stone
Bryan	La Follette	Robinson	Swanson
Chamberlain	Lane	Saulsbury	Thomas
Chilton	Lee, Md.	Shafroth	Thompson
Culberson	Martin, Va.	Sheppard	Thornton
Fletcher	Martine, N. J.	Shields	Tillman
Gore	Myers	Shively	Walsh
Hollis	Overman	Simmons	White
Hughes	Pittman	Smith, Ariz.	Williams
James	Pomerene	Smith, Ga.	
Johnson	Ransdell	Smith, Md.	

NAYS—44.

Bankhead	Colt	Lodge	Sherman
Borah	Cummins	McCumber	Smith, Mich.
Brady	Dillingham	McLean	Smoot
Brandegee	du Pont	Nelson	Stephenson
Bristow	Gallinger	Norris	Sterling
Burleigh	Gronna	O'Gorman	Sutherland
Burton	Hardwick	Oliver	Townsend
Camden	Hitchcock	Page	Vardaman
Clapp	Jones	Perkins	Warren
Clark, Wyo.	Kenyon	Poindexter	Weeks
Clarke, Ark.	Lippitt	Root	Works

NOT VOTING—10.

Catron	Goff	Newlands	Smith, S. C.
Crawford	Lea, Tenn.	Owen	
Fall	Lewis	Penrose	

So the Senate refused to lay on the table the motion to recommit.

Mr. REED. Mr. President, as I listened to the roll call just ended I wondered whether our old friend, the Shipping Trust, was not already congratulating itself upon another legislative victory. It has had many in the past. This vote indicates that it is about to record another triumph.

The Shipping Trust has been very busy in and about the opposition to this bill. Its attorneys have prepared learned briefs to circulate among the Members of the Senate advising us of the great dangers to befall if the Government of the United States shall purchase some vessels, sail them under the American flag, and transport at a reasonable cost the products of this land to European and South American markets.

My own opinion is that the patriots who prepared the brief I have referred to and who forwarded it to the Members of the Senate are not so much concerned in maintaining peace between the United States and Europe as they are in keeping the strangle hold which the shipping combination has upon the commerce of our land. These patriots are not so much agitated about universal peace as they are interested in exorbitant profits.

They regard their opportunity to practice extortion upon the commerce of the United States as of greater importance than the safety of the Republic. They are unwilling that the Government should provide an auxiliary fleet for its Navy lest it also be used to relieve the farmers and manufacturers from their monopolistic exactions.

A few years ago the Shipping Trust came to Congress demanding an immense subsidy. Many of the Senators who supported that outrageous measure, who were then willing to permit the Shipping Trust to thrust its hands deep into the pockets of the American taxpayers, who were "cheek by jowl" with the trust at every step in its attempted raid upon the Treasury, are still in this body. They have all with one accord opposed this bill. Their faces are now wreathed in smiles because the last two or three roll calls have indicated that there is a sufficient Democratic defection to possibly work the defeat of this bill. For days the countenances of these gentlemen have worn the doleful expression of those who see their favorite protégé being led to execution. But now their countenances wear an expression of exquisite glee as they gaze upon the Democratic recruits who have just joined their ranks.

I congratulate, therefore, this hoary old monopoly upon the fact that it appears to have sufficient vigor in this day and age not only to command a unanimous Republican support but to invade the Democratic side of the Chamber and gain recruits.

Mr. President, every man must answer for his own vote, and every man will answer for his vote upon this bill as he must upon any other bill; but there should be no possible misunderstanding by the people of this country as to the exact situation which is presented.

It is a principle of law that a common carrier is only entitled to a fair return upon its investment. With that principle of law staring it in the face, the moment war was declared the Shipping Trust began its scheme of plunder; by extorting enormous sums of money from American citizens who sought to escape from Europe, ten, twenty, and thirty times the usual rates were charged. The American woman with her children in Europe, desiring to return to this land, found herself excluded from the opportunity to take passage unless she could pay the outrageous and illegal toll extorted by the merciless and conscienceless brood controlling trans-Atlantic transportation.

In consonance with the same plan of robbery, the proprietors of freight vessels ran them to the American docks, where cotton and all other products of our farms were waiting for shipment, and demanded from two to ten times the usual price for hauling goods. It was a clear case of a trust employing an emergency for the purpose of plunder. It was a clear case of the robbery of the American producer and farmer. It was a clear case of extortion and of theft, for money taken under such circumstances is as surely acquired by unjust force as is money yielded at the point of a pistol to a highway robber.

Under these conditions the President of the United States sought to give relief to the farmers and producers of the country. He saw the planter with his cotton and the farmer with his grain at the wharves awaiting shipment. Between that planter and the market stood the Shipping Trust prepared to extort the pirates' tariff.

He also observed the fact that one of the great weaknesses of our war Navy is that it is without auxiliary supply ships. He recognized the truth, as must every other man, that if we were at present unfortunately to become involved in war we would be unable to secure vessels to act as auxiliaries to our Navy.

So the President submitted or suggested a plan by which the Government of the United States might acquire vessels to meet the two existing emergencies. The bill came up for discussion. The old Shipping Trust got busy. I have wondered if it hoped there might be war and expected to duplicate its performance during the Spanish War. We were then without vessels. We were obliged to buy them where and how we could. The Senator from Utah [Mr. SMOOT] put into the RECORD a few days ago the prices at which his party bought and the price at which his party sold those boats. In both instances, in the last analysis, the Shipping Trust was the seller and the buyer. It robbed the Government at both ends of the transaction in a manner so conscienceless that I wonder even the Senator from Utah [Mr.

SMOOT] does not find his ostrich stomach rebel at the possibility of a repetition.

This measure was brought forward. The old trust is now as always on guard. I well remember that about two years ago some patriotic citizens of California, desiring to exhibit the products of that State in the ports of other countries, wanted to buy a vessel. They desired to sail the vessel under the American flag. They were forced to go to the Shipping Trust, for it owned substantially all the vessels under the American flag. That beneficent institution demanded about three prices for a vessel. Unwilling to be robbed, these gentlemen went outside the trust. They found a vessel that had been built in foreign parts, which they could buy for about one-third of the sum demanded by the combination. They caused a bill to be introduced in Congress granting the privilege to that vessel to sail under the American flag, for they did not want to exhibit American products under a foreign flag. When that little bill, permitting the purchase of a single vessel, came before the Commerce Committee all of the shipyards and the representatives of the great Shipping Trust appeared, protesting that the people of California should not have the privilege asked. When the committee informed the representatives of the interests that it proposed to report the bill favorably, the intending purchasers were taken out into the hall and their demands were satisfied.

Mr. President, the shipyards and Shipping Trust of this country have been very potential for a great many years. We have endeavored on several occasions to pass bills for the amelioration of the condition of sailors upon its ships, and I have always found the trust on hand, as it is on hand to-day, as the country knows it is on hand to-day, ready to oppose the public interest in its own selfish interest.

Mr. President, the opponents of this bill well understand the situation. If this bill is killed, then the Shipping Trust will continue to absolutely hold the foreign commerce of this country in its grip. It will continue to extort all that its conscience will permit it to take. History as well as its present conduct demonstrates that its conscience will not balk at robbing a grave or despoiling the blind.

Mr. THOMAS. Mr. President——

The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from Colorado?

Mr. REED. I yield.

Mr. THOMAS. Does the Senator from Missouri think that the Shipping Trust has such a thing as a conscience?

Mr. REED. Well, there are various kinds of consciences. Frequently a scoundrel employs his conscience as the cloak of his villainy. I doubt not but the Shipping Trust possesses that accommodating kind of mentality. I have generally observed that those who vote with it always invoke their conscience.

But I return to what I was saying a moment ago. If this bill is defeated, then the farmers and manufacturers, both of the North and South, who have goods to transport across the seas will in the future, as at this present hour, remain subject to extortion, outrage, and robbery by the shipping monopoly. Every man who votes against this bill to-day votes in favor of preserving the grip of the trust.

I have not the slightest patience with those gentlemen who are professing to vote against the bill upon the ground that by its passage we thereby endanger our neutrality. That argument is based, in its last analysis, upon the hypothesis that the President of the United States will appoint a shipping board that, in the face of the law and the common sense of the situation, will do something to involve this country in war. Mr. President, that might be a genuine fear if we had as President of the United States the man whom many of you on the other side of the Chamber followed with cheers and acclamations only a few years ago. Thoughtful men might well hesitate if we had as President of the United States the man who so loved bloodshed and war as to boast, after a battle, that his own hand had struck down a human being, that he had "potted a Spaniard."

If we had as President of the United States a man of bluster, a lover of contention, one who preferred the accouterments of the cowboy and the headgear of a Barbary pirate to the more sober uniform of the American soldier, whose stock in trade was bombast and fustian—if we had such a man, we might be fearful of permitting him even to run at large at a time like this. But, Mr. President, if there is one thing above another that has characterized every act of Woodrow Wilson, it is his profound and unalterable devotion to the cause of human peace. Aye, more than that, he possesses the poise, the coolness, the deliberation, and the high intelligence that enables him to carry out that policy with due regard for the dignity of this country and with proper consideration for the rights of all other nations. He has shown that he possesses, along with the coolness and deliberation of a Jefferson, the high courage of a Jackson. That courage will not permit him to be swayed from his purpose by any sudden impulse, clamor, or frenzy that may seize the country. It will enable him to stand calmly at the helm of the ship of state and keep her within the waters of safety. This man, devoted to peace; this man, whose every act shows his love of peace, will not plunge our country into war simply because he is given the right to purchase or build a few vessels. There is not a man in this Chamber who believes the country will be plunged into war by Woodrow Wilson. That pretense is a false pretense. Those who make it deliberately seek to mislead the public.

Let me say to these gentlemen you will deceive no one. The people will understand, and do now understand, that if this bill is defeated, it is defeated at the demand of the shipping monopoly that has so long controlled the commerce of the high seas.

Mr. President, I again congratulate our old friend, the Shipping Trust. There will be rejoicing wherever its representatives meet to-night. Many a bottle of champagne will be broken because the Democratic ranks have been broken. If the trust is strong enough to override a Democratic caucus, if it is strong enough to make Democrats turn their backs upon their party council, aye, if it is wizard enough to amalgamate into a solid body the highly conscientious insurgent and the standpatter whom the insurgent has for four years denounced, it is indeed potential. If it can put to bed under the same cover the turbulent elements of the Republican Party and lull them to peaceful slumber by its siren song, then, indeed, is it the prince of seducers, and is entitled to be congratulated.

As I looked over at the other side during the roll call and beheld the solid line-up, the Progressive and the reactionary, the standpatter and the Bull Mooser, the followers of Taft and the followers of Roosevelt, and the followers of no one in particular, all voting together, I said to myself, "How beautiful a thing it is for brethren to dwell together in unity." What a glorious consolation must come to the hearts of all the Republican brethren in the thought that their party has been reunited and all its wounds healed by the soothing touch of that Shipping Trust which has for a quarter of a century been plundering the people of the United States.

The cry of those who oppose this bill is that it is socialistic. That claim sounds strange from Republicans who a few years ago proposed to vote $9,000,000 per year for 20 years, a total of $180,000,000, of the taxpayers' money as a sop to the shipping combination.

There was then no socialism in turning the taxpayers' money over as a subsidy to boats and boat owners. That was highly patriotic; that was entirely constitutional; that was greatly to be desired; that was statecraft; that was not socialism. But now that we propose, instead of giving the money to a shipowner and allowing him to keep the ship, to take the ship over and have something for our money, we are the wickedest of socialists. That may be socialism of a very unpleasant variety to the gentleman who wants to get our money and keep his ship, but the policy will be most agreeable to the man who wants to ship his goods at a fair price.

Mr. President, let me suppose an almost unsupposable case. Let us assume that this Government shall be drawn into the European war—an unthinkable proposition to my mind and lamentable beyond human expression—but assume that it does happen, and that this bill has been passed, and the ships have been acquired. We will then have a hundred vessels under our own flag subject to our immediate call. These ships will be prepared to carry coal and munitions and men wherever they were needed. But if the bill is defeated, and if war shall come, the country will find itself with scarce a vessel to transport a ton of coal or a company of soldiers.

Senators are voting against this addition to the Navy of the United States who have clamored for years for more ships of war. They refuse now to vote for ships of peace which may be invaluable in case of war. They prefer crippling the United States Navy to crippling the Shipping Trust.

Mr. President, we have for days witnessed a most heroic exhibition—the entire Republican side engaging in a filibuster to prevent a vote upon this bill. All night long they have stood and talked about everything except the shipping bill. They have organized themselves into oratorical relays. Every obstruction known to the parliamentarian has been brought into play, and for what reason? It was in order that the forces might be mustered. When a conference action on this side is disregarded, and when on the other side the standpatter and the Progressive get together, the reason is plain.

The old bull moose is said to be shrinking, drying up, almost ready to take its place with the dead dust of the departed.

Some of us fondly hoped that there might be a little vitality left in the animal; that there might remain such a thing as a final kick of independence. Some of us cherished the thought that there still might be a little heat in the expiring embers of that fire of virtuous reform which poured forth so hot a flame a few years ago. But it appears that the Bull Moose Party has just laid down and died—that the Progressives have gone back to the flesbpots of the standpatter. They are all to-day dining out of the same trough. They hunt together. They are enlisted in the same service. They are traveling in the same harness.

They are exhibiting wonderful "teamwork." They answer to the crack of the same lash. The insurgent who has for four years been sitting on the breeching is now tugging at the traces. He will soon have collar galls. If it were not impolite, I would venture to repeat the old scriptural phrase, "The dog is turned to his own vomit and the sow that was washed to her wallowing in the mire."

But I will not quote the Scripture—it is sometimes too harsh for polite society—so I will content myself with saying that the insurgents and the standpatters, the bull moose and the elephant, the nondescript and the political "what is it" are now all bedding together.

Democrats, we, at least, will get a little satisfaction out of that fact. The country will no longer be afflicted with the epidemic of political false pretense.

The political Pharisee will cease standing upon the street corner and thanking God that he is not as other Republicans and sinners. He will admit in the future—at least the people will admit it for him—that all Republicans are of one class, bone of the same bone, flesh of the same flesh, now, as in the past, controlled by the same fundamental motives and answering to-day as of old to the lash of the interests.

Let me read you the words of one of the eloquent opponents of this bill, who joins in the cry that if the Government now acquires some ships to haul our grains at a fair price it will be guilty of socialism, who, when he was advocating the plundering of the people through a ship subsidy uttered an argument which is as true to-day as it was then, namely, "that an abundance of shipping is of benefit to the entire country and to all of its people." Mr. LODGE on January 30, 1906, said:

> This is not a mere question of advantage and assistance to the interests which lie along our ocean coasts. It may not be as obvious to those who dwell in the interior as it is to those of us who live either on the shores of the Pacific or of the Atlantic. But it is in the interest of every man in the United States who is interested in our agriculture or our industries that we should have a great merchant marine, able to save us from such foreign combinations and syndicates as the one I have described.

Why, Brother LODGE said then there were syndicates and combinations, and the only way we could get rid of them was by creating a merchant marine. But he wanted to create a merchant marine, pay for it out of the people's money, and give it to somebody, while we want to create a merchant marine and own it ourselves until such time, at least, as it can be disposed of to those who will run it in the interest of the people of the country.

I read you also from Senator GALLINGER and can also read from other distinguished Senators upon that side, who, when they were asking for money to put into the pockets of private citizens, could stand, with tears in their eyes, weeping over the extortion practiced by the shipping combination upon the farmer and the merchant and the manufacturer. Yet, all of these statesmen have to-day opposed the only possible measure that can be brought forward at this time and that will give any relief to the people of the United States.

In discussing the question of ship subsidy in 1902 Senator GALLINGER quoted from an English telegram, which read:

> British shipowners have been watching with great interest the efforts of the United States to foster the growth of the merchant marine. They believe that if the subsidy bill in Congress becomes a law it will deal a severe blow to British shipbuilding. To-morrow the chambers of shipping of the United Kingdom will meet. Col. Ropner, M. P., will be reelected president. In the speech which he will deliver he will point this out as a danger which is threatening Great Britain's supremacy in the ocean carrying trade.

Then, Mr. GALLINGER said:

> In the interests of commerce it is proposed that the Government shall build an interoceanic canal, the cost of which will be hundreds of millions of dollars, and the value of which to the commerce of the United States is largely problematical. No one is wise enough to state with any degree of accuracy the cost of the canal, its value to commerce, or its cost of maintenance.

Then he added:

> I am willing to risk something in the attempt to restore our flag to the ocean and to put lines of steamships on the great highways of commerce. If it succeeds, it will be the grandest achievement of the century, while if it fails it will be no reproach to those of us who made an honest effort to bring about the desired result.

Again, I ask, what was the difference between that proposition and this? The substance of that proposition was to take the taxpayers' money and give it to a shipowner and let him own and have the benefit of the ship. The substance of this proposition is to take the taxpayers' money and buy the ships for the benefit of the people of the United States.

But I return to the argument made here that by buying some vessels we become socialists. Mr. President, the same men who make that argument now, with a front so solemn it would do credit to a professional mourner at a Chinese funeral, sat in the Senate Chamber only a few weeks ago and voted unanimously for the Government to go into the business of insuring ships. If the Government can go into the business of insuring ships without engaging in socialism, then the Government can go into the business of owning ships without becoming socialistic. For what is an insurance policy? When the Government writes a policy upon a ship or its cargo it puts itself in the place of the owner of that ship. It stands between the shipowner and loss. It assumes the great responsibilities of ownership. Its share of the profit is in the premium. It is not as much of a governmental function to insure ships as it is to own ships—aye, it is much less—because the ownership of the vessel is of value to our Navy, and because it has to do directly with the shipment of goods, which is always a governmental function, whereas the business of insurance has always been a private business.

But why were the Senators upon the other side of this Chamber willing to vote with such alacrity for a governmental insurance of vessels? Was it because that bill put the money of the United States back of private enterprise? Was it because we were guaranteeing the boats of the Shipping Trust? When that bill was here the Shipping Trust, through the exchanges that it controls, could hold meetings and pass resolutions demanding that the United States assume the risk of shipping. That was not socialistic. But if the United States does anything to relieve the shipper its action is wickedly socialistic. The argument is a fraud and is not believed in by those who make it. Let me state it in a sentence. If the United States guarantees the Shipping Trust against loss, that is patriotic; but if it guarantees the shipper against extortion by the trust, that is socialistic.

Again, I remark that the very gentlemen who inveigh against this bill and denounce it as socialistic were also, some of them, Members of this body when we acquired a line of vessels which we now own and run. Is it pure democracy to run vessels to the ports of Panama? Is that pure democracy? And is it socialistic to run other vessels through the Panama Canal to Costa Rica or to the California coast? If the one is socialistic, sir, the other is socialistic; and the man who voted to put that Panama line of vessels upon the seas and to have the Government own them voted for the same kind of socialism embraced in this bill.

The gentlemen will justify by saying that it was necessary to use the vessels in connection with the Panama Canal project.

I grant you that excuse existed, but I call your attention to the fact that a greater reason exists now, namely, that the commerce of the ocean is paralyzed. Our cotton lies upon the docks unshipped, our wheat and corn await vessels; and the extortioner and usurer of commerce stands at the docks to demand a Shylock's toll from all the people of the land.

Again, we could take $400,000,000 and build the Panama Canal, and we could buy and own and operate a railroad, not only to use in connection with the canal itself but to transport the goods of private individuals. I make you the prediction now that when the canal is finished, when the railroad is no longer needed in connection with the canal, if that time ever comes, there will not be found in this Chamber a corporal's guard of men who will dare vote to take that railroad out of the Government's control and turn it over to a private corporation. Likewise we are now preparing to build a railway in Alaska.

Mr. President, what is the relief Senators on the other side propose? What have you to bring forward? If you have a better proposition, why have you not submitted it? You have put orators upon the floor who have sung their wearisome songs and filled in their dry platitudes and maunderings with long extracts from newspapers that had nothing whatever to do with the case.

We listened to a speech that was concluded this afternoon presumptively upon this bill that began some time Saturday afternoon. It originated in a burst of poetry, which was some kind of eulogy upon old age. It ran and ranted up and down the scale, through the falsetto, the orotund, the guttural, and all intermediate noises, natural and supernatural, human ears can endure. It continued to run on, like the stream, almost forever,

and it ended, so far as I know, without for a single moment touching this bill; but in the meantime the Republican-Democratic caucus was going on.

We have heard a good deal of denunciation by the other side of caucuses and conferences. How wicked they have been to the holy vision of the unco good! And yet, when I saw the performance here of a few moments ago, I knew there had been a caucus. I knew there had been a hard-and-fast caucus—a caucus that was strong enough to bring in all the insurgent Republicans, except LA FOLLETTE, I understand. Thank God for the exception, if he was not here!

Mr. MARTINE of New Jersey. POINDEXTER, as well, was out.

Mr. REED. Well, well—if Senator POINDEXTER was out, I will except him.

Mr. POINDEXTER. What is that, Mr. President? I did not catch it.

Mr. REED. I am making an exception that I think will be agreeable to the Senator. I stated that I understood he did not vote a few moments ago.

Mr. POINDEXTER. The Senator is mistaken about that. I did vote.

Mr. REED. Ah! Then I must withdraw my encomium. I was misled.

Mr. POINDEXTER. I am very sorry I can not receive the Senator's encomium.

Mr. REED. The caucus reached across the aisle; it invaded the Democratic side. There was an arranged program, a complete understanding, if human evidence means anything. I used to belong, in my callow youth, to the militia. I happened to be captain of a company for a short time. If I could ever have gotten my company of raw recruits to respond to the command "Fall in" with the alacrity that was manifested by the Republicans and some eight or nine Democrats an hour ago, when this motion was made, I would have believed that my militia company was almost ready to be mustered into the Regular Army and entitled to be ranked as veterans.

I trust we will hear no more cant from the other side about "caucuses" and "agreements" and "conferences" and the wickedness of "doing business when the public is not there to see all that is going on." I hope and pray that these gentlemen will no longer wear that threadbare mask, but that standing out in the open, as they ought to do, they will cease pretending that they are too good to have a caucus or a conference.

The Senator from New York [Mr. ROOT] rose, not early in this discussion but after it had gone on several days, and with a pious unction that would have done credit to the original Pharisee on the streets of Jerusalem said that he did "believe in caucuses, but that caucuses should never be held until there had been full public debate, the bill had been considered, and the views of all men had been heard." Then, Mr. President, he joined in a filibuster to prevent an expression of opinion; and, of course, he joined in to-day's caucus, the purpose of which was to "put something over" when nobody suspected it was coming.

The line of attack that was made here this afternoon is very much like that going on over in Europe. There they burrow under the ground, keep out of sight, let nobody know anything about what is going on; finally, they get up close enough so that they can plant a bomb under the breastworks of the enemy. Sometimes it is said they even acquire a few deserters.

Now, I make no complaint about that. You have the right to adopt these tactics if you want to. But please, please, do not appear here in the future with sanctimonious faces and pious preachments about the evil of conferences and the wickedness of "not doing the public business in the public eye." Let us have done with that. Let this be the last time we ever hear it. Let the almost disappearing modesty of your natures rise up to protest against a repetition of that miserable pretense.

What proposition have the gentlemen on the other side for a naval reserve? What are you going to give us? You have been urging that our fleet is not strong enough. What do you propose? How shall we get these vessels? A naval reserve has hitherto been your slogan.

Mr. THOMAS. Mr. President, I ask for order in the Senate Chamber.

The PRESIDING OFFICER (Mr. SWANSON in the chair). The Senator from Missouri will suspend until order is restored. Conversation will cease on the floor.

Mr. REED. Whatever disturbance there is comes from some embarrassed gentlemen who want to discuss the question in the rear of the Hall.

The PRESIDING OFFICER. The Senate will be in order. The Senator from Missouri will proceed.

Mr. REED. The naval reserve was an important question some time ago. Let me read from a great Senator:

> Our naval fleet is almost the only one in the world, with the exception of that of Russia and China, perhaps, which has no second line—no sea militia—behind it. And we can never have such a second line, such a sea militia, so long as nine-tenths of our foreign commerce is conveyed by foreign ships, even if 10 or 12 per cent of these foreign ships are owned by American capital.
>
> This bill of the merchant marine commission will give us ships of our own—American built and manned by American officers and seamen. It will not give us floating palaces. It is not primarily a bill for fast trans-Atlantic navigation. It aims, rather, to encourage the creation of steam lines of moderate speed and great carrying power to South America, Africa, and Asia—

And so forth.

Those were the words of no less a personage in the Republican Party than Senator PENROSE. Why, you were all of one mind. You all wanted a merchant marine then. You all wanted an auxiliary fleet then. But somehow or some way you wanted a graft in the nature of a subsidy for the old Shipping Trust. The mere thought of that graft aroused your patriotism. How your rhetorical periods resounded in favor of a merchant marine and an auxiliary navy. But when it is proposed that there shall be no graft, that the vessels shall be bought and paid for and owned, that no one shall have his hands in the pockets of the people, that the auxiliary navy shall be really ours, how quick you can discover that there is no necessity for a single ship. With what alacrity you can cry "socialism"!

You sit on the other side of the Chamber without a proposition. You propose to leave the farmers of your State in a position where their products that are shipped across the ocean must pay the extortioners' price. You propose to leave the great manufacturers of the country and the smaller alike at the mercy of the Shipping Trust. You propose to leave our fleet of war without an auxiliary vessel. You have nothing to propose.

Well, it is a proud day for the old Shipping Trust. A naval officer told me, in illustration of how far that concern can reach, that for many years this Nation built men-of-war far below the size of the vessels of other nations, vessels that in size were absolutely obsolete, and that the reason why that was done was because the shipyards of this country were not yet ready to build larger vessels. The very life of our Nation was thus imperiled at the demand of the ship combination.

Mr. President, there have been no legitimate arguments brought against this bill. Gentlemen may cry "Socialism! socialism! socialism!" but there is no socialism in the bill. It is primarily a war measure. It will not necessarily continue in existence six months after the war is over and after normal conditions have been restored. It is simply a question whether the United States will leave the people of the country at the mercy of a merciless combination or whether the Government of the United States in this exigency—in this unprecedented emergency—will come to the rescue of the people of the United States.

Mr. President, the vote just taken may mean the death of this bill; I do not know. I do not intend to quarrel with Democratic Senators who do not see the question as I see it. But I recently attended a Democratic conference that sat for several days. It was the best attended conference, first and last, that I have had the pleasure of being a member of since I became a Senator. That conference, with one dissenting vote, pledged itself to the support of this bill. It was the result of common counsel. At the last every man in the conference agreed to support this bill. There were but few Senators who did not at some time attend the conference. I can not understand how a Senator who was present can take any other action than one that is consistent with the resolution of the conference. I can not understand how Democrats who have insisted upon party solidarity, who have been willing to go into conferences heretofore, who have accepted the honors conferred by those caucusses, who hold positions in the Senate to-day by virtue of caucus action, can find it within their conscience to take the course we have just witnessed.

Mr. FLETCHER. Mr. President, it might as well be understood; I think it is quite so by Senators, but it should be understood by the country, precisely what this motion means. If the motion is carried, it means that the ship-purchasing bill is dead, especially for this session. If this motion is carried, all our work, all our hopes, all our time will have been spent in vain. The influences which have brought about this course of things are the influences which will muster all their power so as to prevent this sort of legislation in the future.

Mr. President, it is not news to this body that we have no merchant marine for this great country of ours to-day. It is not news to them that we will never have if we depend upon

private initiative to supply it, without what they demand, a direct subsidy from the Government.

Mr. President, I tell no new story when I recite here that in 1846 American ships carried 87.1 per cent of our imports and 76.1 per cent of our exports, and that American ships carried in 1846, 81.7 per cent of the combined imports and exports of this country. Up to 1860 that percentage was on imports 63 per cent, on exports 69 per cent, on both combined, exports and imports, 66.5 per cent. Beginning with 1861 American ships carried 65.2 per cent of all our exports and imports, and by 1875 they had fallen to 26.2 per cent. Beginning with 1876 the percentage of our commerce, exports and imports, carried by American ships was 27.7 per cent. By 1890 that had fallen to 12.8 per cent. By 1901 American ships were carrying only 8.1 per cent of the exports and imports of the United States, and to-day it is less than 5 per cent.

Have we done nothing to encourage the building of an American merchant marine? We have passed laws exempting from tariff duties the materials and supplies entering into ships built here. We have passed a law, in 1912, allowing the purchase of ships in any markets of the world, to be registered under our flag. We have in various ways endeavored to foster and encourage the building of ships and the establishment of a merchant marine in this country. Yet the situation to-day is that we are utterly helpless at a time when our producers are struggling to get our products into market. We are utterly dependent upon foreigners for the supply of the carriers of the products of farm and factory and mine in this country to the markets where they are in demand and much needed.

That is the situation; and, Senators, will you do nothing to unchain the commerce of the United States? Will you absolutely confess your dependence upon foreign merchant vessels, your absolute dependence upon your foreign competitors in all the markets at a time when we are in sore need of the relief which the establishment even of a beginning of a merchant marine would bring to our people?

Mr. President, it has been urged here as an argument against this bill that the appropriation would be a mere bagatelle; that it would amount to nothing. The Senator from Michigan [Mr. SMITH] to-day said instead of a mountain a mouse would be the result, and all sorts of ridicule has been endeavored to be thrown upon this proposition because it was said it would accomplish nothing on account of the small number of vessels it would provide. And yet in the face of that we find active, open opposition against this measure by the people whose special business it would affect. From Maine to Washington they are down here endeavoring to impress upon Senators in every way in their power the advisability of defeating this bill. These people are to-day combined in a conspiracy to lay tribute upon the manufacturers, upon the farmers, and upon the producers of this country to their heart's content. They are the people who are opposing this measure; and in the next breath they say, "If you pass the bill, it will accomplish nothing of any consequence." They are the people who, on the other hand, say, "We can not put our vessels under the American flag; it costs from 5 to 10 per cent more per annum to operate vessels under the American flag than under a foreign flag"; and they say, "We can not afford it, because there is no profit in the business." They say, "You are wasting the Government's money when you provide for this enterprise, because you will lose that money; there is absolutely no profit in shipping to-day, and you must provide a subsidy if you want to build up a merchant marine for the United States"

I am prepared to show by the authority of those people, by their reports officially made, that practically every line of ships in this country and abroad is making from 20 to 300 per cent upon the capital invested in the business. In this very document is the statement, which has not been questioned by a single opponent of this measure—and I have stated and I reiterate it because it is the truth that—

> The shipping business is one of the most profitable in the world. Special Diplomatic and Consular Reports, page 39, says:
> "The White Star Line in 1910 earned a net profit of £540,000 on a capital of £750,000 after writing off £370,016 for depreciation. A dividend of 30 per cent was paid in that year."

The PRESIDING OFFICER. The Senator from Florida will suspend for a few moments until order is restored in the Chamber.

Mr. FLETCHER. If Senators do not want to hear me, I ask them to go outside.

The PRESIDING OFFICER. Senators will please cease conversation on the floor of the Senate. Let there be order.

Mr. REED. Mr. President, there are a great many of us who want to hear what the Senator from Florida is saying, and we should be permitted to hear him without interruption by those in the rear of the Chamber.

The PRESIDING OFFICER. The Chair must insist that Senators cease conversation on the floor of the Senate.

Mr. FLETCHER. To continue the reading of this document, it is shown that—

> The Holland Amerika Line earned about 50 per cent net on its capital during the fiscal year of 1913. The Hamburg-American Line earned about 30 per cent net during its fiscal year of 1913. These are only a few specific instances of steamship-line earnings. They are not at all unusual, but are the regular thing in the shipping business.
> F. E. Dixon & Co., of London, who own and operate a large fleet of "tramp" freighters, showed earnings of about 50 per cent net last year, which proves that steamship earnings are large in the irregular services as well as in the regular lines.

Do you suppose these gentlemen want that business interfered with? Do you suppose they will ever allow any independent line to be established in this country to compete with them? Do you suppose that they would welcome the beginning of the establishment of a line that might interfere with the profits they are making? I think not.

That is the situation. These are the gentlemen who say that the Government would sink its money if it went into this venture, although they are making from 20 to 300 per cent per annum in the business year after year; yet they say the Government would waste the people's money if it undertook to establish a line and operate it. These are the gentlemen who do not want competition; these are the gentleman who are willing to spend their time and their money and their energy in employing special agents, lawyers, and what not, to come here to Washington to break down what they regard as the only practicable and feasible opposition that they are likely to have. That is the situation. Do you want to yield to them? If you want to do that, you want to fasten further the chains of this tax burden upon the commerce of the United States. You gentlemen who do that take that responsibility. Thank God, it will not rest on my shoulders.

Mr. President, I move that the Senate adjourn.

Mr. CLARKE of Arkansas. I intended to make the motion myself, and I hope it will be adopted.

The PRESIDING OFFICER. The question is on the motion of the Senator from Florida, that the Senate adjourn.

The motion was agreed to; and (at 6 o'clock and 25 minutes p. m., Monday, February 1, 1915) the Senate adjourned until to-morrow, Tuesday, February 2, 1915, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES.

MONDAY, *February 1, 1915.*

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

O Lord God of hosts, humbly we bow in Thy holy presence and wait upon Thy blessing that with clear perceptions, honesty of purpose, high and noble convictions we may meet the new duties of the new day in a faithful service to Thee and our fellow men, and thus merit Thy praise and those whom we serve. For Thine is the kingdom and the power and the glory forever. Amen.

THE JOURNAL.

The SPEAKER. The Clerk will read the Journal of Saturday, January 30, 1915.

The Clerk read the Journal.

The Journal of the proceedings of Saturday was approved.

The SPEAKER. The Clerk will read the Journal of the proceedings of Sunday, January 31, 1915.

The Journal of the proceedings of Sunday was read and approved.

ENROLED BILL SIGNED.

The SPEAKER announced his signature to enrolled bill of the following title:

S. 6839. An act extending the time for completion of the bridge across the Delaware River authorized by an act entitled "An act to authorize the Pennsylvania Railroad Co. and the Pennsylvania & Newark Railroad Co., or their successors, to construct, maintain, and operate bridge across the Delaware River," approved the 24th day of August, 1912.

CALENDAR FOR UNANIMOUS CONSENT.

The SPEAKER. The Clerk will report the bills on the Calendar for Unanimous Consent.

BRIDGE ACROSS ST. LOUIS RIVER BETWEEN WISCONSIN AND MINNESOTA.

The first business on the Calendar for Unanimous Consent was the bill (H. R. 17762) to authorize the Interstate Transfer

Railway Co. to construct a bridge across the St. Louis River between the States of Wisconsin and Minnesota.

The Clerk read the title of the bill.

Mr. MILLER. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection?

There was no objection.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 15727) authorizing the county of St. Louis to construct a bridge across the St. Louis River between Minnesota and Wisconsin.

The Clerk read the title of the bill.

Mr. LENROOT. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. The gentleman from Wisconsin asks unanimous consent to pass the bill over without prejudice. Is there objection?

There was no objection.

CLAIMS OF UNITED STATES AGAINST STATE OF TENNESSEE.

The next business on the Calendar for Unanimous Consent was Senate joint resolution 65, to amend Senate joint resolution 34, approved May 12, 1898, entitled "Joint resolution providing for the adjustment of certain claims of the United States against the State of Tennessee and certain claims against the United States."

The SPEAKER. Is there objection?

Mr. MANN. Mr. Speaker, I object.

The SPEAKER. The gentleman from Illinois objects, and the resolution is stricken from the calendar.

Mr. HOUSTON. Mr. Speaker, I will ask the gentleman if he will withhold his objection for a moment.

Mr. MANN. Certainly. I will reserve the objection.

Mr. HOUSTON. Mr. Speaker, I want to state that I have been to the Department of Justice and I have talked with the Attorney General with regard to this matter. The subject matter of the resolution is not before the department in any way except in a preliminary way. There are a great many papers there in respect to this matter, but nothing as to the merits or the rights of the parties to the controversy. The department is perfectly willing to submit to any Member of Congress or to Congress the statements of facts that they have, or rather a history of the matter so far. I think this form of resolution proposing that this commission, composed of three Cabinet officers, meet with the commission from the State of Tennessee and report on the matter without regard to the question of loyalty ought to meet with the approval of the House, because it leaves the matter to be determined at last by the Congress in all of its phases. It amounts to nothing more than a report similar to a report in chancery as to the facts in regard to the equities in a case. Then the matters can be determined by Congress when they come up on the report of this commission.

Mr. HULL. Mr. Speaker, my colleague, Judge HOUSTON, advises me, as he does the House, that he has conferred with the Department of Justice relative to the status of this matter, as it is pending before the department. I regret that it seems impossible to have this information properly assorted and compiled and assembled up to this time by the Department of Justice in such manner as will be satisfactory to the desires and the requests of some gentlemen in the House.

It looks as though the Department of Justice may not be able to do this within any particular time. They might or they might not. I do not know from the conversation of my colleague with the Attorney General as to when they might be able to do this. That leaves the matter before the House for the present as it came before the House in the beginning, and that is something like this: In 1898 this resolution was first introduced, and not in 1868, as my friend from Illinois, Mr. MANN, understood. There were three meetings of this commission with the representatives of the State of Tennessee, and on each occasion the representatives of the Government being very greatly rushed with their own departmental affairs, suggested this question of loyalty, and the matters were not gone into. They have not been brought up for some few years at all. There has been no meeting for some time, at least during this administration. It was the intention of the representatives of the State of Tennessee, according to information given to me by them, that the facts in support of the Government's claims on the one hand and the facts in support of the claims of the State of Tennessee on the other would be assembled and presented in an orderly manner, and that the conclusions of the representatives of the State and the Government would be reported to Congress. Whether they agreed in their conclusions on the merits or items, irrespective of the question of loyalty, or whether they disagreed, their conclusions would be presented with the question of loyalty remaining open for Congress to pass upon.

If Congress should decide that disloyalty was to bar the claims of Tennessee in the event that the commission has favorably agreed upon the merits of the claims, or any portion of them, then the claims would go out. If it should agree, as the courts have often held, that it was not a bar, then the report of this commission would be so elaborate and so well arranged as to enable Congress to act either favorably or adversely on the items as a whole, or any portion of the items, either as to the claims of the Government or of the State of Tennessee. That is the situation. It seems to me that the Government would get relief much sooner if it were allowed to take this course. If gentlemen think that would not be true, but would prefer to allow the matter to remain in abeyance indefinitely, of course this resolution can be objected to and defeated.

Mr. MANN. Well, while it is true that under the terms of this resolution any settlement is not to be effective or final until approved by Congress, the resolution provides that the claims of the parties, respectively, shall be considered, adjusted, and settled on their merits, without regard to any question of loyalty or disloyalty. Just what that amounts to may be a question.

Some time ago I asked the gentleman from Iowa [Mr. SCOTT] to give some special attention to this bill, and he went to the Department of Justice to get information, and was refused any information at the department. It may be possible to obtain information, but there is not very much in the report, and unless we can get information from the department that has to deal with it, it does not seem to me that we ought to prejudge the case. That is practically what this resolution does.

Mr. HOUSTON. Mr. Speaker, will the gentleman yield?

Mr. MANN. Yes.

Mr. HOUSTON. I want to state to the gentleman from Illinois that I was informed by the Attorney General that no request for information has been refused in regard to this matter, either by himself or by his predecessor. He stated to me that he had asked his predecessor about this, and he stated that no request for information had been refused.

Mr. MANN. He is mistaken.

Mr. HOUSTON. Well, he does not understand that such a thing has been done; and if it has been done, it has not been with his knowledge or approval, because he states the fact that there is quite a history of the matter in the department there, but it would take a good deal of time to go into it, and, of course, he could get opportunity, but has not done it; and if it was desired, he would have the proper parties go through those papers and make a report. I speak of that in order to set the gentleman right, because the Attorney General so stated to me.

Mr. MANN. He may not have been informed. I did not say he was. It was not under the present Attorney General, I think, that the request was refused.

Mr. HOUSTON. This Attorney General asked his predecessor, who had no knowledge of any request having been made. Of course, that was a matter of memory with him. He said that, of course, he had no disposition to refuse any information he had.

The SPEAKER. Is there objection?

Mr. MANN. I object.

The SPEAKER. The gentleman from Illinois [Mr. MANN] objects, and the bill is stricken from the calendar. The Clerk will report the next one.

PUBLIC BUILDING AT ST. PETERSBURG, FLA.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 18783) to increase the limit of cost of the United States post-office building and site at St. Petersburg, Fla.

The Clerk read the bill, as follows:

Be it enacted, etc., That the limit of cost of the United States post-office building at St. Petersburg, Fla., be, and the same is hereby, increased from $80,000 to $115,000, of which not to exceed $15,000 may be expended for additional land for the enlargement of the present site, payment for such additional land to be made from any sums heretofore appropriated for the construction of said building.

With a committee amendment as follows:

Amend, page 1, line 6, by striking out "$15,000" and inserting "$12,500."

The SPEAKER. Is there objection.

Mr. ANDERSON. Mr. Speaker, reserving the right to object——

The SPEAKER. For what purpose does the gentleman from Minnesota rise?

Mr. ANDERSON. I was going to reserve the right to object, but I withdraw that.

The SPEAKER. This bill is on the Union Calendar.

Mr. CLARK of Florida. I ask unanimous consent, Mr. Speaker, to consider this bill in the House as in Committee of the Whole.

The SPEAKER. The gentleman from Florida [Mr. CLARK] asks unanimous consent to consider this bill in the House as in Committee of the Whole. Is there objection?

There was no objection.

The SPEAKER. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill as amended.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. CLARK of Florida, a motion to reconsider the vote whereby the bill was passed was laid on the table.

The SPEAKER. The Clerk will report the next one.

FREE TRANSPORTATION FOR MEMBERS OF POLICE AND FIRE DEPARTMENTS.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 8847) amending paragraph 81 of the act creating a Public Utilities Commission.

The title of the bill was read.

Mr. STAFFORD. Mr. Speaker, I believe a bill of similar purport was under consideration some time ago, and on that occasion it was represented to the committee that the provisions of this bill were incorporated in the District of Columbia appropriation bill. I believe that was the representation of the gentleman from North Carolina [Mr. PAGE]. If that is the fact, I can not see any reason for considering it now. I would like to inquire of some gentleman on the Committee on the District of Columbia—Mr. JOHNSON of Kentucky, if he is here—as to whether that was not the statement made at the prior meeting of the committee.

Mr. JOHNSON of Kentucky. What was the gentleman's question?

Mr. STAFFORD. Reserving the right to object, Mr. Speaker, I will say that we have under consideration a bill, providing for granting to crossing policemen and members of the police force the right of free transportation on the street railways of the city of Washington. I direct the attention of the Chair to the fact that a similar bill was under consideration at a prior meeting, and at that time the gentleman from North Carolina [Mr. PAGE] stated that the provisions of this bill were incorporated in the District of Columbia appropriation bill, and that there was no need of considering this bill. I would like to inquire about that.

Mr. JOHNSON of Kentucky. Mr. Speaker, since the time to which the gentleman from Wisconsin refers I have looked up the District appropriation bill and find that it is not so broad as the House bill, better known as the Kahn bill, and I would really prefer to see the Kahn bill substituted for the Senate bill. That bill, I understand, is now before us, and I would prefer to have that adopted.

Mr. STAFFORD. Does the gentleman believe that the provisions in the District of Columbia bill are not broad enough?

Mr. JOHNSON of Kentucky. No; not as broad as this.

Mr. STAFFORD. I ask, Mr. Speaker, that the bill be reported. It has not been reported yet.

The SPEAKER. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That paragraph 81 of section 8 of an act entitled "An act making appropriations to provide for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1913, and for other purposes," approved March 4, 1913, be, and the same hereby is, amended to read as follows:

"*Provided*, That all street railroads in the District of Columbia be, and are hereby, authorized and required to grant free transportation to members of the fire department of the District of Columbia, members of the Metropolitan police department, and special officers of said department, when said members and officers are in uniform.

With committee amendments, as follows:

Amend, page 2, line 3, by striking out the words "special officers" and inserting "crossing policemen."

In line 4 insert after the word "department" the words "and members of the park police force."

And after the word "uniform," in line 5, insert the following: "However, before any of said officers herein mentioned shall receive free transportation as herein provided for he shall file with the Commissioners of the District of Columbia an affidavit to the effect that he has not, since the date of this report (July 11, 1914), and will not thereafter pay to any person anything for services in the preparation or passage of this bill."

The SPEAKER. Does the gentleman from Wisconsin [Mr. STAFFORD] know whether he wants to object or not?

Mr. STAFFORD. I believe the gentleman from Illinois [Mr. MANN] wishes to object.

Mr. MANN. Does the gentleman from Kentucky desire to have this last amendment made in the bill?

Mr. JOHNSON of Kentucky. I believe it would be better.

Mr. MANN. How would a conductor of a street car know whether a member of the police force had filed an affidavit with the Commissioners of the District of Columbia?

Mr. JOHNSON of Kentucky. I do not think that would be a pertinent question at all.

Mr. MANN. It may not be, but it seems to me a very pertinent question.

Mr. JOHNSON of Kentucky. It seems to me it does not come within the scope of the amendment proposed by the committee.

Mr. MANN. The bill provides that any member of the police force or fire department in uniform shall receive free transportation on the street cars, and then provides that no one of these members of the police force or fire department shall receive free transportation unless he has filed an affidavit with the District Commissioners.

Mr. JOHNSON of Kentucky. Those who do file an affidavit may receive the free transportation.

Mr. MANN. But how will the conductor of a street car know whether he has filed an affidavit or not?

Mr. JOHNSON of Kentucky. Oh, well, how would a conductor know he was a policeman or fireman?

Mr. MANN. He knows he is in uniform, and that is what he goes by.

Mr. JOHNSON of Kentucky. The conductor could get a certificate from the commissioners stating that the proper affidavit had been made. The policeman would, of course, provide himself with such a certificate, particularly if he had once been denied a free ride by the conductor. Besides, the conductor must continue with all other people to observe the rule that he must know the law.

Mr. STAFFORD. Perhaps it is proposed to have them furnished with badges like those proposed in the newspapers for Members of Congress.

Mr. JOHNSON of Kentucky. Oh, no. Under this provision no member of either of these forces entitled to this privilege would apply for free transportation unless he had made the required affidavit.

Mr. MANN. He is entitled to it if he appears on the street car in uniform, under the terms of the bill.

Mr. JOHNSON of Kentucky. I take it for granted that the gentleman knows why this amendment was put on. In other words, when the bill for the benefit of the crossing policemen was up, something like a year and a half ago, a man who had never appeared before the committee in behalf of these people afterwards went around among them and collected from them something like $5,000 for alleged services rendered, when he had rendered no service whatever, and this amendment is put upon this bill by the committee for the purpose of preventing a repetition of that kind of money-getting scheme.

Mr. MANN. I understand the purpose of the committee, which is a laudable purpose; but even if some member of the police force has contributed toward a fund to pay an attorney for drawing a bill, it may have been done through innocence or ignorance, and he ought not to be punished for that. But I do not see how the street car company or its officials can tell whether a member of the police force who appears in uniform has filed an affidavit with the commissioners.

Mr. JOHNSON of Kentucky. I believe the gentleman from Illinois, however, will be compelled to admit that this amendment will do no harm, if it may not do any good.

Mr. MANN. I think it might do very much harm. It might raise conflicts right along. The street car company might claim that before any policeman in uniform was entitled to receive free transportation he would have to produce evidence that he had filed an affidavit with the commissioners. Now, it seems to me that the provisions in the amendment to the District bill are far better than the terms of this bill as it stands, with this proposed amendment to it.

Mr. JOHNSON of Kentucky. This amendment is intended to protect these people, who are in the laboring class, and I believe it does protect them, and I hope the gentleman will not object to it on that account.

Mr. MANN. I am going to object to it on that account.

Mr. JOHNSON of Kentucky. Then there is no use for us to argue it at all. The gentleman might just as well have objected at first.

Mr. MANN. I thought possibly the gentleman would yield, having accomplished his purpose.

The SPEAKER. Is there objection?

Mr. MANN. I object.

ISLAND IN THE COOSA RIVER, ALA.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 17330) to authorize the sale and disposal of an island in the Coosa River in the State of Alabama.

The bill was read as follows:

Be it enacted, etc., That, with the assent of the Secretary of War, that certain island in Coosa River, St. Clair County, Ala., known as Rock Island and described upon the official plat of survey as lot 1, section 24, township 14 south, range 5 east, and lot 1, section 19, township 14 south, range 6 east, Huntsville meridian, containing 2.55 acres, may be restored to entry and the same may be disposed of by the Secretary of the Interior under existing laws: *Provided*, That the aforesaid land shall forever be and remain subject to the right of the United States to overflow the same or any part thereof in the improvement and development of navigation on the Coosa River; and no claim or right to compensation shall accrue from the overflowing of said land on account of said work of improvement: *Provided further*, That in any patent that the Secretary of the Interior may issue for said land the right to overflow without liability for damage shall be expressly reserved to the United States.

With the following committee amendments:

After the word "and," in line 10, strike out the words "the same may be disposed of by the Secretary of the Interior under existing laws" and insert the following: "That the Secretary of the Interior be, and he hereby is, authorized, in his discretion, to sell and convey said land to the Rock Island Fishing and Hunting Club at $1.25 per acre."

On page 2, after the word "States," in line 13, insert the following: "*Provided further*, That if said Rock Island Fishing and Hunting Club should at any time use or attempt to use said tract of land for any other purpose than that of recreation or club purposes, or should attempt to sell, lease, or convey said tract the said land shall revert to the United States."

The SPEAKER. Is there objection?

Mr. MANN. Reserving the right to object, I think the gentleman ought to explain this bill.

Mr. FERRIS. Mr. Speaker, the purpose of this bill is to allow the sale of 2.55 acres of land, it being a little island in the Coosa River in Alabama. It reserves all flowage and navigation rights, if any there be. It is recommended by both the Interior and the War Departments, and it contains a reversionary clause, so that if the island is not used for the purposes designated it will revert to the United States.

I am told by the gentleman from Alabama [Mr. UNDERWOOD], and the report shows, that this island is used as a kind of rendezvous for lawbreakers, and it really would be an advantage to the local community and the law-abiding citizens there if some legitimate use could be made of the island. The gentleman from Illinois [Mr. GRAHAM] has made quite an extended investigation about it, as did the committee, and we were all of the opinion that the island had no other use, and that it would be proper and right that this club have the right to buy it.

Mr. MANN. What is the island used for now?

Mr. FERRIS. It is not used for anything, as I understand it.

Mr. MANN. As I understand, the bill proposes to sell this island for something less than $10. How much is it rented for now?

Mr. FERRIS. It is not rented at all, as I understand.

Mr. MANN. The report of the Secretary of War says that it is rented to this same club for $31 a year.

Mr. FERRIS. The gentleman has read it more accurately than I have.

Mr. MANN. So that the gentleman's statement so far is a little inaccurate, when he says that it is now used by lawless persons. It is now rented to this same club for $31 per annum, as appears at the top of page 3 of the report. Now it is proposed to sell the entire piece for less than $10.

Mr. UNDERWOOD. If the gentleman will allow me, I introduced the original bill, which provided that the island should be sold under existing law, which authorized the Secretary of the Interior to sell it at such price as he thought reasonable. The committee fixed the price at $1.25 an acre. I have no desire to interfere with the committee amendment, but I am perfectly willing to leave the price to the Secretary of the Interior, as in the original bill, and let him fix a price that will be satisfactory to him.

The whole thing in a nutshell is this: This is a small rocky island in the Coosa River close to where a dam is proposed to be built, and when the dam is built this island will be entirely submerged. The island has no real value. It is good for a hunting and fishing club, and these men want to buy it for that purpose. The bill reserves all the Government's rights.

Mr. MANN. So far as I am concerned, I have no objection to selling the island. I asked simply for information as to why it was proposed to sell the land for $5 when the Government is now getting a rent of $31 a year for it.

Mr. UNDERWOOD. I do not know why the committee fixed the price at $1.25 an acre. I am willing, if the bill goes through, to leave it to the Secretary of the Interior.

Mr. J. M. C. SMITH. Will the gentleman yield?

Mr. UNDERWOOD. Yes.

Mr. J. M. C. SMITH. When this dam is constructed, if the title is in this hunting and fishing club, it will be entitled to compensation, will it not?

Mr. UNDERWOOD. No; the bill provides that it shall not receive any.

Mr. McLAUGHLIN. Will the gentleman yield?

Mr. UNDERWOOD. Yes.

Mr. McLAUGHLIN. The gentleman speaks about the Secretary of the Interior fixing the price, and also of selling it under existing law. Does not the existing law require that the land shall be advertised for sale and disposed of to the highest bidder?

Mr. UNDERWOOD. I have no objection to that, because nobody will buy it except these gentlemen. There is nothing on it except an opportunity for these men to build a cabin there.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

Mr. FERRIS. Mr. Speaker, I ask unanimous consent that the bill be considered in the House as in Committee of the Whole.

The SPEAKER. The gentleman from Oklahoma asks unanimous consent that the bill be considered in the House as in Committee of the Whole. Is there objection?

There was no objection.

The SPEAKER. The Clerk will report the first committee amendment.

The Clerk read as follows:

On page 1, line 10, strike out the words "the same may be disposed of by the Secretary of the Interior under existing laws" and insert in lieu thereof the following: "that the Secretary of the Interior be, and he hereby is, authorized, in his discretion, to sell and convey said land to the Rock Island Fishing and Hunting Club at $1.25 per acre."

Mr. MANN. Mr. Speaker, if this amendment is defeated, I shall offer an amendment to the original text of the bill, making it read "and the same may be disposed of by the Secretary of the Interior at such price as he may determine."

Mr. UNDERWOOD. That is satisfactory to me.

Mr. FERRIS. The committee has no objection to that, and I think perhaps it may be a better course to pursue.

The SPEAKER. The gentleman from Illinois predicated his amendment on the assumption that this amendment would be voted down.

Mr. FERRIS. I understand that. Let me say a word. The gentleman from Illinois asked me a few moments ago a question, and I gave him some information that was not quite correct. He had read with greater care the letter from the department than I had, and I had still in my recollection what was said about it in committee and also the War Department report. I find in the letter of Secretary Garrison the following:

The primary object of this bill, H. R. 17330, is to confer on the Secretary of the Interior the power and authority, with the consent of the Secretary of War, to dispose of the island under existing land laws, with the express reservation that the premises shall forever remain subject to the right of the United States to overflow all or any part of it in the improvement and development of navigation on Coosa River, and that no liability for damage on account of such flooding shall rest against the United States.

Before the present tenancy was established the island was a source of considerable trouble, being a resort for squatters and lawbreakers, who carried on various evil practices in defiance of the local authorities, more than one murder having been committed there. The proposed legislation is in line with the department's policy in such cases, similar acts having been passed with respect to reserved lands on the upper Mississippi River.

The bill, in my judgment, makes ample provision for safeguarding the interests of the United States, and I see no objection to the favorable consideration of the measure.

I read that simply in justification of the answer I gave the gentleman from Illinois.

Mr. MANN. The gentleman remembered a part of the report but not the balance, which is natural.

Mr. ADAMSON. Mr. Speaker, I suggest that the gentleman from Illinois offer a substitute for the committee amendment.

Mr. MANN. The committee amendment is to strike out and insert, and that can not be amended.

Mr. FERRIS. Mr. Speaker, I ask that the committee amendment be disagreed to.

The SPEAKER. The question is on the committee amendment.

The question was taken, and the committee amendment was rejected.

Mr. MANN. Now, Mr. Speaker, I move, in line 1, page 2, to strike out the words "under existing laws" and insert "at such price as he may determine."

Mr. FERRIS. Just a moment before the vote is taken, Mr. Speaker. I am in favor of the gentleman's amendment. I want to say that the thought of the committee was that if we left the language as it was it would not go quite as gentlemen thought it would, and the committee has adopted a plan, and I think a wise one, that no Government land shall be granted without any charge being made for it, even if it was land suitable for a gratuity, and we have tried to maintain that

policy, which would result in getting $1.25 per acre. With that explanation I ask for a vote.

The SPEAKER. The question is on the amendment of the gentleman from Illinois.

The amendment was agreed to.

The Clerk read the following committee amendment:

On page 2, after the words "United States," in line 13, insert the following:

"*Provided further*, That if said Rock Island Fishing and Hunting Club should at any time use or attempt to use said tract of land for any other purpose than that of recreation or club purposes, or should attempt to sell, lease, or convey said tract the said land shall revert to the United States."

The committee amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. FERRIS, a motion to reconsider the vote whereby the bill was passed was laid on the table.

HOUR OF MEETING TO-MORROW.

Mr. UNDERWOOD. Mr. Speaker, I ask unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock a. m. to-morrow.

The SPEAKER. The gentleman from Alabama asks unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock a. m. to-morrow. Is there objection?

There was no objection.

AMERICAN ACADEMY OF ARTS AND LETTERS.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 8960) incorporating the American Academy of Arts and Letters.

The Clerk read the title to the bill.

Mr. BARTLETT. Mr. Speaker, I desire to reserve a right to object. I have read the bill, but I will reserve the objection if the gentleman from Texas wishes to make a statement.

Mr. SLAYDEN. If the gentleman from Georgia is inclined to persist in the objection, it is useless to consume the time.

Mr. BARTLETT. I want to reserve the right to object, and if the gentleman from Texas will state the reasons for the bill I may not make the objection.

Mr. SLAYDEN. I will make a brief statement, Mr. Speaker. This is a bill which proposes to authorize a national charter for an association of gentlemen who are interested in arts and in letters. It is a purely educational institution. It was not the purpose of these gentlemen who propose to thus associate themselves to make money or to indulge in any propaganda except that for better art and superior education. The names of the incorporators would convince any man of that, I think. Among other gentlemen who are associated with it is the President of the United States, from whom I have a letter in my hand at the present moment asking me to do what I could to secure the passage of this bill.

Mr. STAFFORD. Mr. Speaker, will the gentleman yield?

Mr. SLAYDEN. Yes.

Mr. STAFFORD. Will the gentleman inform the committee why the West, which claims to have some literary men, has been so completely ignored in the list of members, only two from that section being included, one of whom I believe has since died, Mr. John Muir? The other westerner is Mr. James Whitcomb Reilly. We from the West or the Middle West know of many as equally illustrious litterateurs as those included in the list. Why should these 48 gentlemen include only those who live on the Atlantic seaboard?

Mr. BORLAND. Mr. Speaker, reserving the right to object, the explanation of the gentleman from Texas [Mr. SLAYDEN] shows that this bill is not properly upon this calendar. I understand that he expects to call it up later under a motion to suspend the rules, and thus give the House an opportunity to debate it. Therefore I think he ought not to take up time now. Otherwise I feel inclined to object.

The SPEAKER. Does the gentleman object?

Mr. BORLAND. Mr. Speaker, I object.

The SPEAKER. The gentleman from Missouri objects, and the bill is stricken from the calendar.

ADDITIONAL LAND DISTRICT IN ARIZONA.

The next business on the Calendar for Unanimous Consent was the bill (S. 2548) to create an additional land district in the State of Arizona.

The Clerk read the title of the bill.

Mr. MANN. Mr. Speaker, I object.

The SPEAKER. The gentleman from Illinois objects, and the bill is stricken from the calendar.

FORT ASSINNIBOINE MILITARY RESERVATION.

The next business on the Calendar for Unanimous Consent was the bill (S. 655) authorizing the Secretary of the Interior to survey the lands of the abandoned Fort Assinniboine Military Reservation and open the same to settlement.

The Clerk read the title of the bill.

The SPEAKER. Is there objection?

Mr. STAFFORD. Mr. Speaker, reserving the right to object, I wish to inquire of the gentleman most interested in this bill the reason why the committee went contrary to the recommendation of the Secretary of the Interior in listing as agricultural land open for settlement such land as contained 50,000 feet of merchantable timber——

Mr. MANN. Fifty-five million feet.

Mr. STOUT. Mr. Speaker, there simply had to be a line of demarcation fixed some place, and the gentleman, being acquainted with timberlands, understands that it is considered more valuable for timber than agricultural purposes when a 40-acre tract contains in excess of 50,000 feet.

Mr. STAFFORD. I think, with the Secretary, that when a 40-acre tract of land contains 50,000 feet of merchantable timber it is more timber than agricultural land, and should be included as timberland.

Mr. STOUT. I will simply say that we had to make the line some place—twenty-five, thirty, forty, or fifty thousand. The committee acted on its best judgment, and thought this was fair. I think, if the gentleman is thoroughly acquainted with timberland, he will realize that a 40-acre tract containing no more than 50,000 feet is not very valuable for timber.

Mr. STAFFORD. Fifty thousand feet of merchantable timber, not 50,000 feet of timber.

Mr. STOUT. I understand.

Mr. STAFFORD. The difference between a 40-acre tract containing 50,000 feet of timber and 50,000 feet of merchantable timber is very great.

Mr. STOUT. I will say to the gentleman that I would have no objection to changing it to 30,000 feet, but the committee got such information as it was able to gather on the subject and decided on 50,000 feet.

Mr. STAFFORD. Yes.

Mr. FALCONER. Mr. Speaker, will the gentleman yield?

Mr. STAFFORD. Yes.

Mr. FALCONER. Fifty thousand feet of timber on a 40-acre tract will be worth about how much in the State of Montana—$50?

Mr. STOUT. Fifty dollars.

Mr. FALCONER. When land is not worth more than $1.25 an acre for agricultural purposes it is not worth very much.

Mr. STOUT. We went into that matter and it seemed to be entirely fair.

Mr. MANN. Mr. Speaker, the report shows, I believe, that there are 55,000,000 feet of good timber which could be cut off this military reservation and which under the terms of this bill will be given away.

Mr. STOUT. I do not so understand it.

Mr. MANN. What will become of it?

Mr. STOUT. Well, it is all scattered, I will say to the gentleman, and no one claims it contains sufficient to make it valuable for its timber. There are 168,000 acres of land, I believe, in the reservation.

Mr. MANN. It is not generally scattered all over the whole land.

Small portions of the mountains are well wooded; that there are probably 55,000,000 feet of good timber—pine and fir—which could be cut from the military reservation.

I read from the report of the Secretary of the Interior. If there were 55,000,000 feet scattered over the entire area, that would be a different proposition.

Mr. STOUT. Well, I will say that provision reserving all containing 50,000 feet of merchantable timber to the 40-acre tract, it seems to me, would be sufficient to prevent the giving away of any valuable timber.

Mr. MANN. Well, where is that reservation?

Mr. STOUT. In the northeastern part of the State.

Mr. MANN. Where is the reservation the gentleman speaks of in the bill?

Mr. STOUT. In section 2, on page 2:

And in making such classification all lands susceptible of cultivation that do not contain in excess of 50,000 feet of merchantable timber to the 40-acre tract shall be classified as agricultural lands, and all lands containing in excess of 50,000 feet of merchantable timber to the 40-acre tract shall be classified as timberlands.

Mr. MANN. I understand that section. Now, is there any provision in the bill that reserves land classified as timberlands?

Mr. STOUT. It says on the same page, in section 3, further:

That lands classified as timberlands shall be disposed of under rules and regulations to be provided by the Secretary of the Interior, with the authority to dispose of the timber and land separately when deemed advisable.

Mr. MANN. What is the effect of the provision on page 6?—

That for lands lost to the State because classified as coal or mineral indemnity may be taken as provided for in sections 2275 and 2276 of the Revised Statutes.

Is that merely lieu-land selection?

Mr. STOUT. I so understand. I think that is what it refers to.

Mr. MANN. Could the State under the act go out and select other mineral lands?

Mr. STOUT. No; I think not.

Mr. MANN. Why not?

Mr. STOUT. That is not the law.

Mr. MANN. I do not remember whether there is any provision of the law——

Mr. STOUT. I have it here.

Mr. MANN. That may be. There is not very much information contained in the report on this bill or I would not seek to get this information now.

Mr. STOUT. I am very glad to give the gentleman the information. Here is the law, and if the gentleman will permit me I will read him the law. This is section 2275 of the Revised Statutes:

Where settlements, with a view to preemption, have been made before the survey of the lands in the field, which are found to have been made on sections 16 or 36, those sections shall be subject to the preemption claim of such settler; and if they, or either of them, have been or shall be reserved or pledged for the use of schools or colleges in the State or Territory in which the lands lie, other lands of like quantity are appropriated in lieu of such as may be patented by preemptors; and other lands are also appropriated to compensate deficiencies for school purposes, where sections 16 or 36 are fractional in quantity.

Mr. MANN. That does not answer the question I asked. Here is a provision that mineral lands shall be reserved and the State may select those lands if they desire to with a reservation to the Government of the minerals. Now, the gentleman proposed if they do not so desire they can go and make other selections of land. The inquiry I wanted to make of the gentleman was, Can they go and make other selections of land that have minerals?

Mr. STOUT. They can not.

Mr. MANN. Where is the law?

Mr. STOUT. I can not recall the section, but the State can not take mineral lands.

Mr. MANN. Well, I do not recollect; there may be a provision that in all lands which the State selects the minerals are reserved to the Government, although I do not recall such a provision.

Mr. STOUT. I do not recall the statute, but I certainly think they could not go and select other mineral lands unless the same restrictions were thrown around them.

Mr. MANN. I do not know; that would depend upon the law. They used to do it right along.

Mr. STOUT. They can not do it now, I feel quite sure.

Mr. MANN. I guess they could if there is not a reservation.

Mr. FERRIS. I think there is a reservation. Under the Pickett Act of June 25, 1910, the President is given authority to withdraw anything and everything that might have mineral value, and while, of course——

Mr. MANN. Of course, if it is withdrawn the State can not take it.

Mr. FERRIS. I think a good deal has been withdrawn.

The SPEAKER. Is there objection?

Mr. LENROOT. Mr. Speaker, reserving the right to object. In reference to these sections 16 and 36 I would like to ask the gentleman whether the United States in the original grant to the State an account was taken of sections 16 and 36 in the Indian reservations, and whether they were then given lieu lands therefor?

Mr. STOUT. No; I do not know.

Mr. LENROOT. Of course, if they were withdrawn it could not.

Mr. STOUT. That is the reason I assume they were not, certainly, or undoubtedly the department would have found that objection in the law; but that point has never occurred to me.

Mr. LENROOT. Of course, in some cases in reference to reservations that have been taken into consideration, I understand.

Mr. STOUT. I feel reasonably certain that is not the case, but I could not state positively.

Mr. LENROOT. Then I want to ask the gentleman another question, with reference to the sale of this timber. Under the language of the bill, does not the gentleman think the Secretary would be required to proceed at once with the sale of the timber upon this reservation?

Mr. STOUT. When deemed advisable. You will notice the last three words of that proviso.

Mr. LENROOT. That only relates to selling the timber and lands separately.

Mr. STOUT. Yes.

Mr. LENROOT. Does the gentleman think, in view of all the conditions, that it should be mandatory to sell this timber now?

Mr. STOUT. No; I do not. And if the gentleman thinks that would be the effect of that provision, I would be more than willing to have an amendment, although I do not think it is really important. There is comparatively little timber there.

The SPEAKER. Is there objection?

Mr. JOHNSON of Washington. Mr. Speaker, reserving the right to object, I want to ask the gentleman from Montana if he is a member of the Committee on Public Lands?

Mr. STOUT. Yes.

Mr. JOHNSON of Washington. Is there immediate necessity for the passage of this bill?

Mr. STOUT. I will state to the gentleman that this is the urgency of it: This reservation has been abandoned for two or three years or longer. There are some old buildings there which were used by the soldiers, and which the State hopes to be able to take over under the provisions of this bill, with the 2,000 acres of land for which they paid $2.50 an acre, and establish some sort of an industrial school, or make some use of the buildings there, which are now going to rack and ruin very rapidly.

Mr. JOHNSON of Washington. This emergency is such that it would bring this bill out of the committee ahead of four or five hundred other bills?

Mr. STOUT. This bill has been in the committee a long while, if the gentleman pleases.

Mr. JOHNSON of Washington. The Committee on Public Lands have been engaged for a number of months on administration bills.

Mr. STOUT. This bill was on the Unanimous Consent Calendar last session.

Mr. STAFFORD. Mr. Speaker, reserving the right to object, for one further query: The bill provides for the donation to the State not only of buildings on the former reservation, but 2000 acres of land besides. What is the value of those buildings?

Mr. STOUT. Many of those buildings were built as far back as 30 years ago. They were very good buildings when they were constructed. They are rapidly disintegrating now, and unless the State gets charge of them and repairs the buildings and takes some steps to prevent the disintegration which is in progress there, in two or three years they will be absolutely worthless.

Mr. STAFFORD. I can realize that any building that is not used deteriorates rapidly. What did it cost to erect these buildings? I ask this in order to ascertain what we are giving to the State of Montana by this bill.

Mr. STOUT. Originally those buildings cost, I understand, several hundred thousand dollars.

Mr. STAFFORD. Are they of permanent construction, such as of stone and brick?

Mr. STOUT. Some of them are of brick and some of them are frame buildings, and, of course, the frame buildings are practically gone, but the brick buildings are, as I say, in a fair state of preservation, but absolutely worthless for any other purpose that the Government could possibly put them to.

Mr. STAFFORD. Suppose the State declines to accept these buildings for the purposes suggested in this bill. Then what becomes of the buildings and the use of them?

Mr. STOUT. I will say to the gentleman that the State has already passed a joint resolution providing for the taking over of these buildings in the event of the passage of this act. And I will state further that our State legislature is now in session, and if we could get this bill through at this session, in all probability we could get an appropriation through before the legislature adjourns.

Mr. STAFFORD. Is there any opposition in the State legislature to accepting these buildings for the purposes as stated in this bill?

Mr. STOUT. None whatever. I will say to the gentleman that I was a member of the legislature when that resolution was passed, and it was absolutely unanimous.

Mr. STAFFORD. Then, one further query as to the need of including 2,000 acres in the donation to the State for this purpose. Why so large a grant?

Mr. STOUT. Well, they are going to establish quite a large industrial school there, and it was felt that that was no more than ample.

Mr. STAFFORD. Mr. Speaker, while this is a very important bill to be considered under unanimous consent, I do not think that I will object.

The SPEAKER. Is there objection?

Mr. BUTLER. Mr. Speaker, I feel like economizing for a few minutes, if I can. What will the Government get out of this? What advantage will it be to the Government?

Mr. STOUT. The Government gets the proceeds from the sale of this land.

Mr. BUTLER. I understand at $2.50 an acre. But will it be worth any less next year?

Mr. STOUT. It will be worth much less by reason of the disintegration of the buildings, unless somebody steps in there. They are out on the naked plains, being swept by the winds, the doors are blowing off and the roofs caving in, and I think the gentleman can see that they are rapidly deteriorating in value.

Mr. BUTLER. Then I am through.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none. This bill is on the Union Calendar.

Mr. STOUT. Mr. Speaker, I ask unanimous consent to consider the bill in the House as in the Committee of the Whole.

Mr. STAFFORD. Mr. Speaker, it has not been reported as yet.

The SPEAKER. As soon as we get the consent, it will be reported. Is there objection? [After a pause.] The Chair hears none. The Clerk will report the bill.

The Clerk read the bill, as follows:

An act (S. 655) authorizing the Secretary of the Interior to survey the lands of the abandoned Fort Assiniboine Military Reservation and open the same to settlement.

Be it enacted, etc., That the Secretary of the Interior is hereby authorized and directed to immediately cause to be surveyed all of the lands embraced within the limits of the abandoned Fort Assiniboine Military Reservation, in the State of Montana.

SEC. 2. That before said lands are opened to entry the Secretary of the Interior shall have said lands classified by an inspector or special agent of the Department of the Interior into four classes—first, agricultural lands; second, timberlands; third, coal lands; and fourth, mineral lands—and in making such classification all lands susceptible of cultivation that do not contain in excess of 50,000 feet of merchantable timber to the 40-acre tract shall be classified as agricultural lands, and all lands containing in excess of 50,000 feet of merchantable timber to the 40-acre tract shall be classified as timber lands.

SEC. 3. That when so classified, all of said lands classed as agricultural land shall be opened to settlement and entry under the homestead laws of the United States, but not to entry or location under sections 2306 and 2307 of the Revised Statutes: *Provided, however*, That the enlarged homestead act, approved February 19, 1909, shall not apply until six months after said land has been opened to settlement and entry as aforesaid: *And provided further*, That any rights which may have attached to any of said lands under any of the public-land laws of the United States prior to the passage of this act may be perfected and the lands so affected may be patented upon proof of compliance with the laws under which such rights so attached: *Provided further*, That lands classified as timberlands shall be disposed of under rules and regulations to be provided by the Secretary of the Interior with the authority to dispose of the timber and land separately when deemed advisable: *Provided further*, That the lands classified as coal lands shall be subject to disposition under the homestead laws, as herein provided for lands classified as agricultural, but those making entry of such lands must agree to a reservation to the United States of the coal deposits therein and of the right in the United States, or those claiming through the United States, to prospect for, mine, and remove the same, and such coal deposits shall be disposed of as provided by section 3 of the act of June 22, 1910 (36 Stats., p. 583), but no purchase of the coal deposits shall confer any right to the surface of the lands excepting such as is necessary to the mining and removal of the coal deposits: *Provided further*, That lands classified as mineral shall be disposed of under the mining laws.

SEC. 4. That entrymen upon said lands shall, in addition to the regular land-office fees, pay the sum of $1.25 per acre for said land, such payments to be made as follows: Twenty-five cents per acre at the time of making entry and 25 cents per acre each and every year thereafter until the full sum of $1.25 per acre shall have been paid: *Provided*, That for a period of six months subsequent to the date on which the lands are opened to settlement entrymen upon said lands shall, in addition to the regular land-office fees, pay the sum of $2.50 per acre for said land, such payments to be made as follows: Fifty cents per acre at the time of making entry and 50 cents per acre each and every year thereafter until the full sum of $2.50 per acre shall have been paid. In case any entryman fails to make annual payments, or any of them when due, all right in and to the lands covered by his entry shall cease; and any payments theretofore made shall be forfeited and the entry canceled, and the land shall be again subject to entry under the provisions of the homestead law at the price fixed therefor by the former entry; but in all cases the full amount of purchase money must be paid on or before the offer of final proof: *Provided, however*, That the commutation provision of the general homestead law shall be applicable to all persons making homestead entry on said land under the provisions of this act, save and excepting entries made hereunder in accordance with the provisions of the enlarged homestead act, approved February 19, 1909, which shall not be subject to commutation, but in instances where commutation is permissible hereunder, the entryman shall pay, in addition to the price fixed for entry, the sum of $1.25 per acre, as consideration for the privilege.

SEC. 5. That this act shall not apply to an area of 2,000 acres embracing the Government buildings at Fort Assiniboine.

SEC. 6. That the Thirteenth Legislative Assembly of the State of Montana having enacted a law for the purpose of establishing an agricultural, manual training, or other educational or public institution upon the present site of Fort Assiniboine, Mont., duly approved by the governor of Montana, and to be in full force and effect after the 4th day of July, 1915, and upon the transfer to the State of Montana by the President of the United States of 2,000 acres of land, situate in said abandoned Fort Assiniboine Reservation and embracing the military buildings at said abandoned fort, except the guardhouse at said post; the President of the United States is hereby authorized and directed to transfer, grant, and set over to the State of Montana all right, title, and interest of, in, and to the said 2,000 acres of land hereby reserved, embracing the buildings at Fort Assiniboine, except the guardhouse at said post, upon payment therefor by the State of Montana to the United States of the sum of $2.50 per acre: *Provided*, That the State of Montana shall be required to make its selection of 2,000 acres within one year from the date of the passage of this act.

SEC. 7. That sections 16 and 36 of the land in each township within said abandoned Fort Assiniboine Military Reservation, except those portions thereof classified as coal or mineral lands, shall be reserved for the use of the common schools of the State of Montana, and are hereby granted to the State of Montana: *Provided*, That the State may, if it so elects within one year from the date of the passage of this act, accept, subject to the reservation in the United States of the coal deposits therein, the portion of said sections 16 and 36 classified as coal lands, in full satisfaction of the grant herein made for common schools: *Provided*, That for all lands lost to the State because classified as coal or mineral indemnity may be taken as provided for in sections 2275 and 2276 of the Revised Statutes: *And provided*, That there is hereby reserved for homestead entry by Mary A. Herron, or her heirs, subject to the terms of this act, the following described land upon said reservations: Northwest quarter of northeast quarter of section 28; west half of southeast quarter, northeast quarter of southeast quarter, section 21, township 32, range 15 east: *Provided further*, That in case of failure of Mary A. Herron, or her heirs, to make entry within six months from the date of the passage of this act the lands will become subject to settlement and entry in accordance with the provisions of section 4 of this act, the price to be fixed by the period of entry reckoned from the date of the expiration of the reservation in favor of Mary A. Herron and her heirs.

SEC. 8. That the lands shall be opened to settlement and entry by proclamation of the President, which proclamation shall prescribe the manner in which the lands may be settled upon, occupied, and entered by persons entitled to make entry thereon; and no person shall be permitted to settle upon, occupy, or enter any of said land except as prescribed in said proclamation.

SEC. 9. That there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $20,000, or so much thereof as may be necessary, for the survey and classification of said lands and for the expenses incident to their opening to settlement and entry, and for the care of said buildings.

The SPEAKER. The Clerk will read the bill for amendment.

The Clerk read as follows:

SEC. 3. That when so classified, all of said lands classed as agricultural land shall be opened to settlement and entry under the homestead laws of the United States, but not to entry or location under sections 2306 and 2307 of the Revised Statutes: *Provided, however*, That the enlarged-homestead act, approved February 19, 1909, shall not apply until six months after said land has been opened to settlement and entry as aforesaid: *And provided further*, That any rights which may have attached to any of said lands under any of the public-land laws of the United States prior to the passage of this act may be perfected and the lands so affected may be patented upon proof of compliance with the laws under which such rights so attached: *Provided further*, That lands classified as timberlands shall be disposed of under rules and regulations to be provided by the Secretary of the Interior with the authority to dispose of the timber and land separately when deemed advisable: *Provided further*, That the lands classified as coal lands shall be subject to disposition under the homestead laws, as herein provided for lands classified as agricultural, but those making entry of such lands must agree to a reservation to the United States of the coal deposits therein and of the right in the United States, or those claiming through the United States, to prospect for, mine, and remove the same, and such coal deposits shall be disposed of as provided by section 3 of the act of June 22, 1910 (36 Stat., p. 583), but no purchase of the coal deposits shall confer any right to the surface of the lands excepting such as is necessary to the mining and removal of the coal deposits: *Provided further*, That lands classified as mineral shall be disposed of under the mining laws.

Mr. MONDELL. Mr. Speaker, I move to strike out lines 13, 14, 15, and 16 on page 2.

The SPEAKER. Those in favor of the amendment——

Mr. MONDELL. Mr. Speaker, I wish to ask the gentleman from Montana [Mr. STOUT] if there are any lands on the reservation to which the enlarged homestead law would not apply—to which its terms would not apply?

Mr. STOUT. I do not know of any.

Mr. MONDELL. It is very evident that this provision was intended to delay for six months the designation of any lands under the enlarged homestead act, but it occurs to me that the department might interpret this language as actually designating all the lands under the enlarged homestead law at the end of six months, this being a congressional designation. The gentleman recalls that lands do not become subject to the enlarged homestead law unless they are designated by the Secretary as not being susceptible to irrigation at a reasonable cost from any known source of water supply.

Mr. STOUT. I would prefer not to have the gentleman's amendment adopted. While I say I do not know of any land on this reservation that will not fall within the limits of a 320-acre homestead, yet——

Mr. MONDELL. If the gentleman will allow me, if this language is simply to be interpreted as delaying action on the part of the Secretary of the Interior for six months, then there is no objection to it; but if it is to be interpreted—and it seems to me this language would justify such an interpretation—as a congressional designation of these lands as subject to the enlarged homestead law at the expiration of six months, then the provision is objectionable.

Mr. STOUT. I do not so interpret it. It would simply delay us six months before they will be subject to the enlarged homestead act.

Mr. MONDELL. If that were the only effect, there would be no objection to it.

Mr. LENROOT. Mr. Speaker, I will ask the gentleman if the insertion of the words "any of said lands" after the word "apply," in line 15 of page 2, would not make it clear?

Mr. MONDELL. In order to make it clear it would be necessary to put language in there such as "until designated by the Secretary of the Interior in any event," not "until six months afterwards."

Let me make this suggestion to the gentleman from Montana: If, after the word "apply," in line 15, you added the words "until designated under such law by the Secretary of the Interior, or in any event not," then you would accomplish just what this seeks to accomplish.

Mr. STOUT. I really can not possibly arrive at the interpretation of the gentleman. It seems to me to be as plain as it can be that it simply holds this off for six months.

Mr. MONDELL. If there is no reasonable ground for the interpretation that I have suggested that this is a congressional designation at the end of six months, then I have no desire to press my amendment. Possibly this discussion and this expression of opinion will serve to guide the department. Clearly it is the intent of the committee not to make a congressional designation of these lands, but simply to leave them subject to designation, if they may be properly designated after six months.

Mr. STOUT. That was the intent of the committee.

Mr. MONDELL. Well, Mr. Speaker, with that view of the intent of the language I withdraw my amendment.

The SPEAKER. The gentleman from Wyoming withdraws his amendment.

Mr. MONDELL. Mr. Speaker, I want to call the attention of the gentleman from Montana [Mr. STOUT] and the chairman of the committee to the language in lines 11, 12, and 13 on page 3—that is, "no purchase of the coal deposits shall confer any right to the surface of the lands, excepting such as is necessary to the mining and removal of the coal deposits." The language just before that provides that these coal deposits shall be acquired in accordance with the provisions of the act of June 22, 1910. The provision of that act relative to coal is as follows:

Coal deposits in such lands shall be subject to disposal by the United States in accordance with the provisions of the coal-land law in operation at the time of such disposal.

Now, it might be possible that in the enactment of coal legislation there would be some legislation which would authorize the parties securing the right to the coal to secure the right to a certain amount of the surface, in which event these particular lands would by this legislation be differentiated from other lands affected by the coal-land law. Unless there is some reason why you should have this particular provision with regard to these lands, without regard to what Congress may do in the way of general legislation, it seems to me the language ought to go out.

Mr. STOUT. I will say to the gentleman that, so far as the coal is concerned on this land, it is a negligible quantity. The reports indicate that there are some considerable bodies of very low-grade lignite coal there.

Mr. MONDELL. Yes; there are considerable bodies of very low-grade lignite coal there; and therefore it seems to me Congress will in all probability, when it legislates, make some provision in the case of those low-grade lignite lands by which the title to the surface can be secured with the coal. It occurs to me that there is no special reason to provide for it in the bill at this place.

You say all that is necessary when you say these lands "shall be disposed of in accordance with the provisions of the act of June 22, 1910." You then place these coal lands in the same condition and situation that the other coal lands of the country are in.

Mr. STOUT. The remaining part of the paragraph also places them in the same position and situation that other coal lands are in now. Does it not?

Mr. MONDELL. I am not insistent in the matter; but it seems to me that in the interest of uniform legislation it would be better to leave out any provision which might differentiate these coal lands from the other coal lands of the country. You cover the matter completely when you provide for the disposition of these deposits in accordance with the act of June 22, 1910.

Mr. LENROOT. Is not that act one with reference to the disposal of the deposits?

Mr. MONDELL. That act is an act in regard to the disposal of the deposits, or the deposits and the land, depending upon what Congress might do. It is a section of the law for the agricultural entry of coal lands.

Mr. LENROOT. Surface entry is provided for in the same act?

Mr. MONDELL. Yes. It is a limited entry act. I do not consider the point I have raised especially important, but it differentiates these lands from other lands.

Mr. STOUT. I do not think it is important one way or the other. It is perfectly satisfactory to me.

The SPEAKER. The Clerk will report the amendment.

The Clerk read as follows:

Amend, page 2, line 23, after the words "disposed of," by inserting the words "whenever the Secretary of the Interior shall so direct," and strike out, in line 24, the words "the Secretary of the Interior" and insert the word "him."

Mr. LENROOT. The purpose of this is to make it discretionary with the Secretary.

Mr. FERRIS. Mr. Speaker, I have no objection whatever to the gentleman's amendment, except that I am wondering if the gentleman will not recognize the fact that in the present crowded condition in the Senate the adoption of this amendment might cause the bill to fail if it had to go back there for further action. The bill has been reported without amendment, and unless the gentleman feels very keenly about it I hope he will not press his amendment, for that reason.

Mr. LENROOT. It seems to me that under the language the Secretary would feel a direction by Congress to sell this timberland immediately, and he certainly ought to have the discretion as to when he will sell it.

Mr. FERRIS. The Secretary of the Interior has the right to make all necessary rules and regulations, and he can make them sufficiently rigid so that there will be ample protection, I think; and I really hope the gentleman will not, insist on the amendment, for the reason I have stated.

Mr. LENROOT. I do not think there will be any question about the adoption of the amendment by the Senate.

Mr. FERRIS. I think it will cause trouble at the other end of the Capitol. They are so crowded over there, and I feel the bill as it stands will be ample to protect the Government.

Mr. LENROOT. I do not think a bill of this importance ought to be considered here upon the theory that no amendment which may be necessary can be adopted to the bill.

Mr. FERRIS. If it were anything very vital; but I do not think it is.

Mr. LENROOT. I feel that it is quite important.

Mr. FERRIS. The land will first have to be classified, and then the department will have to work out rules and regulations, and I think that will cover all that the gentleman cares about. The department can make any kind of rules and regulations and secure any price that it deems proper.

Mr. LENROOT. But under those rules and regulations, when once made, all the timber must be subject to sale.

Mr. FERRIS. I think not. They can make rules and regulations that timber of a certain character shall not be sold for a certain period of time. I have had so much experience in the sale of land under rules and regulations, and have always observed that they take such care and pains and that they have secured such enormous prices that, while I do not want to be insistent upon this, I urge upon the gentleman that there is no danger in the bill as it stands. The danger is when you provide that the lands shall be appraised and that they shall be sold pursuant to the appraisement. There is where the trouble comes. In this instance they will put these lands up to the highest bidder in small tracts, no doubt. I should hate to have the bill fail in the Senate for lack of consideration, and it will have to go back there if we amend it.

Mr. LENROOT. It seems to me we all recognize that under the present conditions it would not be wise or desirable to put all these timberlands up for sale at this time, or in the immediate future.

Mr. FERRIS. There is really very little timber there.

Mr. LENROOT. Fifty-five million feet are not such a very small amount.

Mr. FERRIS. It is scattered. A good deal of it will fall under the 50,000 feet in one lot and will come under the homesteader provision. Not only that, but there are only 168,000 acres in the whole tract.

Mr. LENROOT. I really feel that the amendment ought to be adopted. Of course, the House will take such action as it sees fit.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wisconsin [Mr. LENROOT].

The amendment was rejected.

The Clerk read as follows:

SEC. 4. That entrymen upon said lands shall, in addition to the regular land-office fees, pay the sum of $1.25 per acre for said land,

such payments to be made as follows: Twenty-five cents per acre at the time of making entry and 25 cents per acre each and every year thereafter until the full sum of $1.25 per acre shall have been paid: *Provided*, That for a period of six months subsequent to the date on which the lands are opened to settlement entrymen upon said lands shall, in addition to the regular land-office fees, pay the sum of $2.50 per acre for said land, such payments to be made as follows: Fifty cents per acre at the time of making entry and 50 cents per acre each and every year thereafter until the full sum of $2.50 per acre shall have been paid. In case any entryman fails to make annual payments, or any of them when due, all right in and to the lands covered by his entry shall cease; and any payments theretofore made shall be forfeited and the entry canceled, and the land shall be again subject to entry under the provisions of the homestead law at the price fixed therefor by the former entry; but in all cases the full amount of purchase money must be paid on or before the offer of final proof: *Provided, however*, That the commutation provision of the general homestead law shall be applicable to all persons making homestead entry on said land under the provisions of this act, save and excepting entries made hereunder in accordance with the provisions of the enlarged-homestead act, approved February 19, 1909, which shall not be subject to commutation, but in instances where commutation is permissible hereunder, the entryman shall pay, in addition to the price fixed for entry, the sum of $1.25 per acre, as consideration for the privilege.

Mr. LENROOT. I move to strike out the last word. I should like to ask the gentleman from Montana [Mr. STOUT] one or two questions about this. The present commutation price under the general homestead law is what?

Mr. STOUT. One dollar and twenty-five cents.

Mr. LENROOT. What does this language men? Does it mean $1.25 in addition to that?

Mr. STOUT. No; it does not.

Mr. LENROOT. What is the purpose of it?

Mr. MONDELL. I can suggest to the gentleman a very good purpose. In some cases where a cash price has been fixed for land and the commutation privilege has been granted, it has been assumed by the department that as there was a cash payment to be made in any case, there was not to be an additional payment on account of commutation, and this is evidently to make it clear that in addition to the sum of $2.50 per acre to be paid the commuter, if he avails himself of the privilege, shall pay an additional $1.25 per acre.

Mr. LENROOT. Is not the payment the very basis of commutation always?

Mr. MONDELL. Very true; but the fact is, as I have stated, that it has been held in some cases—erroneously, it seems to me—that the payment of the cash price relieves the commuter from the necessity of any additional payment under commutation.

Mr. LENROOT. What would he do to commute, then?

Mr. MONDELL. He would simply make his commutation proof.

Mr. LENROOT. It gives him 14 months instead of 3 years.

Mr. MONDELL. Yes. I think there have been some Indian reservations where that ruling was made.

Mr. NORTON. The commutation price of $1.25 an acre does not apply to all public lands.

Mr. MONDELL. It applies to all of the old 160-acre homestead entries.

Mr. NORTON. No; it does not apply to all of the old 160-acre homestead entries.

Mr. MONDELL. Unless the lands were opened with a provision that it should not apply.

Mr. LENROOT. Does not the general homestead law relating to commutation provide for $1.25 an acre?

Mr. NORTON. Not for all public lands.

Mr. LENROOT. What are the exceptions?

Mr. NORTON. There are some lands in North and South Dakota which are commuted at 50 cents an acre.

Mr. LENROOT. Is not that under a special law?

Mr. NORTON. No; that is the way the lands were thrown open.

Mr. LENROOT. It must be under a special act. The general homestead law provides for $1.25 an acre; and when it says "commuted under the general homestead law" and then provides for a payment of $2.50 an acre, it might mean $1.25 for commutation and then $2.50 in addition for the privilege.

Mr. MONDELL. I have not read the language carefully enough to know whether it is clear, but clearly the intent is to require the commuter to pay $1.25 in addition to the $2.50.

Mr. MANN. Will the gentleman yield? Under the terms of the bill the homesteader has to pay $2.50 an acre for a part of the land.

Mr. LENROOT. Within six months; yes.

Mr. MANN. Even if he homesteads it. If he homesteads, he must pay $2.50 and an additional $1.25 an acre. Is not that plain?

Mr. LENROOT. That he would have to do, only we apply it to the commutation provision without any mention of the $1.25.

Mr. MANN. I am not sure. Usually the homesteader gets the land at no price at all; but if he commutes, he pays $1.25.

Mr. LENROOT. The first part applies to the commutation provision.

Mr. MANN. Under existing law the homesteader pays $1.25 an acre, but he does not pay $1.25 in addition to any other price, because there is no other price. Now, while we fix an upset price, with the right of the homesteader to carry out the intent of the law, if he commutes, he pays an additional $1.25.

Mr. MONDELL. I am of the opinion there have been cases where, in the absence of a provision of this kind, the department has held that the payment of a fixed cash price relieved the commuter of the additional $1.25.

Mr. BURKE of South Dakota. There are cases where it provided that the commutation price will be the price fixed for the land. In the case of where we disposed of the surplus in the great Sioux Reservation, in the act of 1889, a price was fixed at $1.25 if the land was taken in the first two years, and then 75 cents per acre for a year and then 50 cents an acre. The department construed the law, in the case of commutation, that they had to pay $1.25 in addition to that price. Congress subsequently by legislation provided that the price to be paid in cases of commutation was the price that was fixed by the original act.

The Clerk read as follows:

SEC. 7. That sections 16 and 36 of the land in each township within said abandoned Fort Assiniboine Military Reservation, except those portions thereof classified as coal or mineral lands, shall be reserved for the use of the common schools of the State of Montana, and are hereby granted to the State of Montana: *Provided*, That the State may, if it so elects within one year from the date of the passage of this act, accept subject to the reservation in the United States of the coal deposits therein the portion of said sections 16 and 36 classified as coal lands, in full satisfaction of the grant herein made for common schools: *Provided*, That for all lands lost to the State because classified as coal or mineral indemnity may be taken as provided for in sections 2275 and 2276 of the Revised Statutes: *And provided*, That there is hereby reserved for homestead entry by Mary A. Herron, or her heirs, subject to the terms of this act, the following-described land upon said reservations: Northwest quarter of northeast quarter of section 28; west half of southeast quarter, northeast quarter of southeast quarter, section 21, township 32, range 15 east: *Provided further*, That in case of failure of Mary A. Herron, or her heirs, to make entry within six months from the date of the passage of this act, the lands will become subject to settlement and entry in accordance with the provisions of section 4 of this act, the price to be fixed by the period of entry reckoned from the date of the expiration of the reservation in favor of Mary A. Herron and her heirs.

Mr. LENROOT. Mr. Speaker, I move to strike out the last word. I would like to ask the gentleman from Montana, in relation to the wording of the previous section 6, whether he thinks there will be any difficulty about its construction, providing that the States shall select certain coal land, and so forth. It provides that—

The State may, if it so elects within one year from date of the passage of this act, accept, subject to the reservation in the United States of the coal deposits therein, the portion of said sections 16 and 36 classified as coal lands, in full satisfaction of the grant herein made for common schools.

My query is, if the State should see fit to accept surface land, whether they would be entitled to any other sections 16 and 36 which were not coal lands?

Mr. STOUT. I do not think they would. I am satisfied with the language.

The Clerk read as follows:

SEC. 9. That there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $20,000, or so much thereof as may be necessary, for the survey and classification of said lands and for the expenses incident to their opening to settlement and entry, and for the care of said buildings.

Mr. MANN. Mr. Speaker, I move to strike out the last word. I would like to inquire of the gentleman from Montana whether he has any information as to how much of the $20,000 is to be used for the care of these buildings. I may say to the gentleman, if he is not already aware of the fact, that we have had bills before Congress with an estimate made at various times from the department seeking to get a considerable appropriation for this purpose which Congress has heretofore invariably refused to grant. Now it comes in as a part of this bill, while the rest of the bill is quite meritorious. How much of the $20,000 is to be expended by the Government in taking care of the buildings which it is giving away?

Mr. STOUT. I do not know.

Mr. MANN. That is a very frank answer, and I can not go any further.

Mr. STAFFORD. Is not the money appropriated limited to a specific purpose?

Mr. MANN. It is not limited to a specific purpose; it is limited to several purposes that are specified, and this is one of them.

Mr. STAFFORD. Does not the gentleman think that the major portion of it would be taken up by the care of the buildings?

Mr. MANN. I fear so, because they have been asking for years for a considerable appropriation for this purpose, which Congress has refused to grant.

Mr. EVANS. Mr. Speaker, answering the gentleman from Illinois as to how much of this will be used for the care of buildings, I suggest that there is a keeper there now drawing $40 or $50 a month.

Mr. MANN. I understand that.

Mr. EVANS. And I anticipate that that is all that will be used out of the appropriation and all they want.

Mr. MANN. That is not all they want. They have been seeking money for other purposes in connection with the care of the buildings heretofore.

Mr. STOUT. It occurs to me that it will take the greater portion of this sum for the survey of the lands and classifying them.

Mr. MANN. The gentleman knows that if they should spend the entire $20,000 on the buildings they would ask for an estimate for additional money to survey the land, and it would be an item that would be in order on appropriation bills and would be granted as a matter of course. Where Congress provides for opening up the lands it will provide the money to make the surveys. The amount is not limited to $20,000; this carries an appropriation of $20,000.

Mr. BURKE of South Dakota. Will the gentleman from Montana inform us, if he knows, what regulations will probably be adopted in connection with the disposition of these lands?

Mr. STOUT. I do not know what regulations they will adopt. They adopt different regulations in different cases in opening up reservations.

Mr. BURKE of South Dakota. The area to be disposed of is about 150,000 acres, is it not?

Mr. STOUT. Approximately.

Mr. BURKE of South Dakota. Is the land particularly valuable so that there probably will be a demand for it?

Mr. STOUT. No. It is no different from millions of acres of land that the gentleman is acquainted with in that section. Much of it is not valuable for any purpose, because it is scrub foothill land.

Mr. BURKE of South Dakota. Is the gentleman familiar with the regulations adopted last summer in connection with the surplus land in the Fort Peck Reservation in Montana?

Mr. STOUT. Somewhat.

Mr. BURKE of South Dakota. Has the gentleman any information as to whether the regulations worked satisfactorily?

Mr. STOUT. Not in all particulars.

Mr. BURKE of South Dakota. My understanding is, and I think some Members of the House may be interested in knowing, that in that opening they abandoned the lottery system and provided that in case of there being more than one claimant for the same tract of land that then the several claimants would draw lots as to which one would be awarded the land, and that that method had worked satisfactorily so far as the reservation in Montana that was opened last summer is concerned. It avoids the speculative element that is involved in the old system of lottery.

Mr. STOUT. It is a much better system than the old one, although it is lacking in some respects at that.

Mr. BURKE of South Dakota. Perhaps like the old lottery system it will be perfected as it is used.

Mr. STOUT. No doubt of that.

Mr. BURKE of South Dakota. And I believe it will be a more satisfactory way of disposing of lands than the lottery system that has prevailed heretofore.

Mr. STOUT. I think so, and I hope so.

The SPEAKER. The question is on the third reading of the Senate bill.

The bill was ordered to be read a third time, was read the third time, and passed.

On motion of Mr. STOUT, a motion to reconsider the vote by which the bill was passed was laid on the table.

EXTENSION OF REMARKS.

Mr. BORLAND. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the subject of recent improvements of the Missouri River.

The SPEAKER. The gentleman from Missouri asks unanimous consent to extend his remarks in the RECORD on the subject of the recent improvement of the Missouri River. Is there objection?

Mr. MANN. Mr. Speaker, reserving the right to object, does the gentleman purpose to extend his remarks by inserting a speech of his own, or by printing a speech by somebody else or some other matter in the RECORD?

Mr. BORLAND. By inserting a speech of my own in the RECORD, together with some data that have been collected from practical steamboat captains.

Mr. MANN. I will ask the gentleman whether his request involves any departure from his well-known attitude in the House of objecting to other people extending their remarks in the RECORD?

Mr. BORLAND. No; it involves no departure, and nothing I have not conceded to every other Member.

Mr. MANN. I have observed with great pleasure to myself that the gentleman keeps a good deal of matter out of the RECORD, and frequently saves me from the odium of objecting when other gentlemen make requests to extend their remarks in the RECORD. I wondered whether he was applying the same rigorous rules to himself that he has in the past applied to the rest of us.

Mr. BORLAND. I think I am. I hope so.

Mr. MANN. We will look in the RECORD and see.

Mr. HUMPHREY of Washington. Mr. Speaker, reserving the right to object, I would like to ask the gentleman if in view of his well-known attitude he would have any objection to my extending my remarks by placing in the RECORD statements that appeared yesterday in the New York Sun and other papers in relation to the State Department being notified by Great Britain that the transfer of interned ships, under the proposed shipping bill, would be regarded as an unneutral act?

Mr. BORLAND. Mr. Speaker, the political matter to which the gentleman refers has no relevancy whatever to a great governmental work like improving inland navigation, and while we are endeavoring to increase the business facilities of the country the gentleman is trying to discourage them, and I would not want to have my request objected to——

Mr. HUMPHREY of Washington. Mr. Speaker, remembering that the gentleman objected to my talking the other day, I shall not now object.

Mr. BORLAND. I thank the gentleman for his courtesy.

The SPEAKER. Is there objection to the request of the gentleman from Missouri? [After a pause.] The Chair hears none, and it is so ordered.

ADDITIONAL REVENUE CUTTERS.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 18876) to provide for the construction of two revenue cutters.

The Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to construct one steam revenue cutter for service in the waters of California, at a cost not to exceed the sum of $350,000; and one steam revenue cutter for service as anchorage patrol boat in New York Harbor, at a cost not to exceed the sum of $110,000, such vessel to be especially constructed for ice breaking.

The SPEAKER. Is there objection?

Mr. MANN. Mr. Speaker, I object.

Mr. ADAMSON. Mr. Speaker, will the gentleman reserve his objection?

Mr. MANN. I will reserve the objection.

Mr. ADAMSON. The gentleman must certainly be joking about objecting to such a good bill as this.

Mr. MANN. I will be very frank with the gentleman and say that I am not sure but that it may be a good bill. I am not sure but that the Government needs the revenue cutters, but I am very sure that the Government is very short of money and can get along for another year without these revenue cutters.

Mr. ADAMSON. Mr. Speaker, if the gentleman is in earnest about his objection, and I know he is candid about recognizing the necessity for the ships, I am going to ask unanimous consent that the bill be permitted to remain, without prejudice, upon the calendar. It may be that by another unanimous-consent day the atmosphere will be clarified a little.

Mr. MANN. Mr. Speaker, I have no objection to the bill remaining on the calendar, and if by another unanimous-consent day it appears that the revenues or the amount of free money in the Treasury are increasing, instead of rapidly decreasing, as has been the case for some months now, I do not know but that I would change my views; so if the gentleman will see to it that everybody hurries and pays more money into the Treasury as governmental receipts, he may then accomplish his purpose.

Mr. ADAMSON. Mr. Speaker, thanking the gentleman for his concession, I wish to suggest that perhaps some of our economical, patriotic friends will succeed in cutting some large amounts off large bills by the time the next unanimous-consent day rolls around, so that there will be less objection to this bill.

Mr. MANN. Mr. Speaker, I probably will be found voting with the gentlemen to whom the gentleman from Georgia refers, but I fear that we will be in the minority, because there will be such a small number of gentlemen on the other side of the House who will vote with us.

The SPEAKER. The gentleman from Illinois objects to the present consideration of the bill, and the gentleman from Georgia asks unanimous consent that it be passed over without prejudice. Is there objection

There was no objection.

The SPEAKER. Debate is ended on this bill. The Clerk will report the next bill.

DIVISIONS OF MENTAL HYGIENE AND RURAL SANITATION IN THE UNITED STATES PUBLIC HEALTH SERVICE.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 16637) to provide divisions of mental hygiene and rural sanitation in the United States Public Health Service.

The Clerk read as follows:

Be it enacted, etc., That there shall be established one additional division each on mental hygiene and rural sanitation in the United States Public Health Service, and said divisions shall be in charge of commissioned medical officers of the United States Public Health Service, detailed by the Surgeon General, which officers, while thus serving, shall be assistant surgeons general within the meaning of section 3 of the act approved July 1, 1902, entitled "An act to increase the efficiency and change the name of the United States Marine Hospital Service."

SEC. 2. That the duties of the division of mental hygiene shall be to study and investigate mental disorders and their causes, care, and prevention. The duty of the division of rural sanitation shall be to investigate and encourage the adoption of improved methods of rural and industrial sanitation and disseminate information among farmers and others for the prevention and suppression of communicable diseases.

The SPEAKER. Is there objection?

Mr. MANN. Reserving the right to object——

Mr. MOORE. Mr. Speaker, I notice the report accompanying the bill sets forth:

Notwithstanding the many natural advantages of country life, from a health standpoint, certain diseases depending upon insanitary conditions have a higher rate of prevalence in our country districts than in our cities.

Are we to understand from that that the work contemplated by this bill is to be confined exclusively to the country?

Mr. MONTAGUE. As I understand it, Mr. Speaker, the bill contemplates two departmental lines of work, one relating to mental diseases, such as insanity and mental disorders, and the other to rural sanitation.

Mr. MOORE. Are these conditions of insanity more conspicuous in the country districts than in the cities?

Mr. MONTAGUE. No; one relates to insanity and mental defectives and the other relates to sanitation. The one relating to insanity, I will say to the gentleman, will primarily relate to immigrants.

Mr. MOORE. The immigrants who go to the country or who remain in the cities?

Mr. MONTAGUE. The immigrants who land in this country. There are two divisions in this bill, one dealing with insanity, to speak generally, and the other with rural sanitation, embracing the subjects of typhoid fever, malaria, pellagra, and other diseases.

Mr. MOORE. Has it any reference to the investigation of trachoma?

Mr. MONTAGUE. I think so.

Mr. MOORE. Since drainage and sanitation are both provided for in the bill, if the bill should pass, why should we not include a provision for dealing with certain insects, like the mosquito, that have so much to do with the spread of such diseases as fever, malaria, and so forth?

Mr. MONTAGUE. That would necessarily be included in an investigation of typhoid and such diseases in relation to their spread.

Mr. MOORE. And the insects which carry diseases of that kind?

Mr. MONTAGUE. That would be included in the investigation.

Mr. MOORE. On several occasions I have tried to secure consideration of this subject in the agricultural appropriation bill, but have been told always that pests of that kind should be treated by the medical service and not from an agricultural standpoint. Now, in some way or other, at some time or other, the medical service should be advised that the spread of diseases, such as malaria or typhoid, if due to the mosquito, is a legitimate source of inquiry.

Mr. MONTAGUE. I will say to the gentleman that that is contemplated by this bill, and the hearings clearly establish that that is one of the objects the gentlemen of this bureau had in mind.

Mr. MOORE. The Health Bureau has recently been making investigations in certain States—I think West Virginia is one of them; possibly North Carolina is another—as to the prevalence of the eye disease known as trachoma among the natives. That disease generally is charged up against immigrants, especially those coming from Syria. It is a contagious disease and is one which has been covered in the immigration law, which prohibits immigrants coming in who have that disease.

Mr. MONTAGUE. It has been in the immigration bill for quite a while.

Mr. MOORE. Yes; and immigrants infected with that disease are deportable, although I understand a certain treatment has been discovered for this disease which effects a permanent cure. I would like to know whether the money which this new division of the health service will expend would be applied to treatment of such diseases and if in the matter of sanitation and drainage we may expect some action in regard to disease-carrying pests?

Mr. MONTAGUE. I will answer affirmatively the gentleman's last interrogatory. I will say this bill simply takes two assistant surgeons out of the existing number of surgeons—one will look after the subject of mental defectives, mental disorders, and the other will confine his duties to rural sanitation and diseases which the gentleman has suggested.

Mr. MOORE. Well, I am inclined to think the bill is good. Has the gentleman any statistics——

Mr. MONTAGUE. The hearings unquestionably show the whole subject of rural sanitation and the disease incident to insanitary life is to be considered from the scientific standpoint, and the purpose is to give these assistant surgeons adequate facilities to do this work.

Mr. MOORE. The ordinary house in the city to-day, the modern house, would have sanitary appliances, such as drainage from inside closets, kitchen sinks, and so forth, and the householder would be protected against disease in this respect. In some of the old farmhouses to-day perhaps those conveniences are still not in evidence. Is it thought that this new service will consider things with regard to the improvement of sanitation in the homes of the farmers, especially the poorer farmers of the country?

Mr. MONTAGUE. That is one of the chief ideas, to teach the necessities of rural sanitation, what can be done to promote health and to prevent disease, and I will say to the gentleman there seems to be a good deal of public sentiment in behalf of the measure.

Mr. MOORE. This means an inspection of the farmhouses from a sanitation point of view.

Mr. MONTAGUE. To educate the people as to the necessity for the introduction of such processes and how to operate and maintain them.

Mr. MOORE. Would you give them information as to the removal of stagnant pools and things of that kind?

Mr. MONTAGUE. Unquestionably.

Mr. MOORE. And that is the purpose of the bill?

Mr. MONTAGUE. Yes, sir.

Mr. LEVER. If that is the purpose of the bill, the gentleman ought not to object to it at all.

Mr. MOORE. I do not expect to.

Mr. STAFFORD. Will the gentleman yield?

Mr. MONTAGUE. Certainly.

Mr. STAFFORD. I understand the Bureau of Public Health at present has the authority to make the investigations provided for in this bill?

Mr. MONTAGUE. It has not the facilities. It has the authority, but the facilities are inadequate.

Mr. STAFFORD. Will you kindly elaborate on the position that they have not the facilities? I understood that when the Bureau of Public Health has the authority to pursue any investigation, they have the facilities to pursue those investigations as far as their appropriation permits.

Mr. MONTAGUE. They want to classify the service, and the administrative features will be under two Assistant Surgeons General. One Assistant Surgeon General, with two clerks, will be confined to the mental hygiene investigation and the other to rural sanitation.

Mr. STAFFORD. Under this you do not increase the force in the service, but you promote the present clerical force that is in charge of this work to the position of Assistant Surgeons General?

Mr. MONTAGUE. No. You have already the surgeons and Assistant Surgeons General, but this bill will involve a cost of $900 each for two surgeons who are promoted to the position of Assistant Surgeons General. They must have that rank in order to be at the head of this administrative bureau, as I understand it.

Mr. STAFFORD. The bill provides for the promotion of two present surgeons to the position of Assistant Surgeons General.

Mr. MONTAGUE. That is true. I do not think they are additional employees.

Mr. STAFFORD. Of course they have the facilities to-day, but you merely provide for the promotion of these two officials.

Mr. MONTAGUE. They have authority and have facilities, but those facilities are not adequate.

Mr. STAFFORD. It is merely intended to promote two officials or specialists in their respective line of work?

Mr. MONTAGUE. It is intended to secure two officials of the requisite scientific knowledge to devote themselves to work which before now has not been adequately done.

Mr. STAFFORD. I wish to inquire whether the Chief of the Bureau of Public Health has authority under existing law to arrange the divisions of the work in that bureau?

Mr. MONTAGUE. I understand he has not the authority to classify them, but the reason for this law is to make proper classification.

Mr. STAFFORD. Under the laws that we have passed I do not understand that we have ever assumed the prerogatives to determine the divisions in which the Bureau of Public Health should be arranged. I stand corrected if I am in error as to that position. I do not recall any law we have ever passed providing for the Bureau of Public Health that determines in advance the divisions in which they shall carry on their work.

Mr. MONTAGUE. I understand that years ago the work was assigned to the bureau without classification, and there was practically no authority to do it.

Mr. STAFFORD. The work was assigned to them by the Chief of the Public Health Service under the authority he has to assign work to various members of his force. Why should Congress determine the administrative features as to the divisions into which a respective bureau should be divided for the respective lines of its work?

Mr. MONTAGUE. I am not sufficiently apprised about that, but my information is based on the hearings before our committee that the department thinks this bill is necessary.

Mr. STAFFORD. I do not recall—and I wish to be corrected by the gentleman—if there is any instance where the Government has assumed the prerogative in determining for the bureau chief the departments or divisions into which his work should be divided, and I think it is questionable practice for the Congress to determine the divisions of administration of a bureau or a department. For instance, in the Post Office Department, concerning which I have a little more acquaintance than with other departments, the Postmaster General from time to time rearranges the divisions in those respective bureaus and transfers them as he thinks best for the good of the service. Here is a bill in which we are determining for a bureau chief the divisions for carrying on the work in his bureau. It is a matter of decision rather than administration. I would like to hear from the gentleman.

Mr. MONTAGUE. I have answered, but I do not know whether I satisfied the gentleman or not, that the Public Health Department itself asks for these administrative divisions in order that they might better carry on their work.

Mr. STAFFORD. They have not done it before, even when we sought generally the reorganization of their service.

Mr. MONTAGUE. I am not prepared to controvert the gentleman's statement in regard to that, but I do not think that is any reason why this is not a meritorious measure.

Mr. STAFFORD. If the gentleman considers for a moment the prerogatives of administrative legislation, I hope he will determine it is not for Congress to determine the respective divisions in the service.

Mr. ANTHONY. Mr. Speaker, I ask for the regular order.

The SPEAKER. The regular order is, Is there objection?

Mr. ANTHONY. There is entirely too much debate on this bill.

Mr. STAFFORD. If the gentleman had been here——

Mr. ANTHONY. I think some gentlemen talk altogether too much.

The SPEAKER. Is there objection?

Mr. STAFFORD. Some gentlemen talk only when they happen to be in the Chamber.

The SPEAKER. Is there objection?

Mr. STAFFORD. I reserve the right to object.

The SPEAKER. The Chair knows that, but the matter has to come to an end some time. The gentleman from Kansas demands the regular order, and the regular order is, Is there objection? [After a pause.] The Chair hears none. This bill is on the Union Calendar.

Mr. MONTAGUE. Mr. Speaker, I ask unanimous consent that the bill be considered in the House as in Committee of the Whole.

The SPEAKER. The gentleman from Virginia asks unanimous consent that the bill be considered in the House as in the Committee of the Whole. Is there objection?

Mr. MANN. I object, Mr. Speaker.

Mr. MONTAGUE. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of this bill.

The motion was agreed to.

The SPEAKER. The gentleman from Mississippi [Mr. HARRISON] will take the chair.

Mr. ADAMSON. Mr. Speaker, somebody was talking to me. I ask unanimous consent that it be considered in the House as in the Committee of the Whole.

The SPEAKER. The gentleman did ask it, and there was objection made.

The CHAIRMAN (Mr. HARRISON). The House is in Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 16637, which the Clerk will report.

Mr. MONTAGUE. I ask unanimous consent that the first reading of the bill be dispensed with.

The CHAIRMAN. The gentleman from Virginia [Mr. MONTAGUE] asks that the first reading of the bill be dispensed with. Is there objection?

There was no objection.

Mr. MONTAGUE. Mr. Chairman, I ask unanimous consent that the bill be read under the five-minute rule.

Mr. MANN. Mr. Chairman, I would like to be recognized under general debate.

The CHAIRMAN. The gentleman from Illinois [Mr. MANN] is recognized.

Mr. MONTAGUE. Mr. Chairman, will the gentleman from Illinois excuse me one moment? Can I reserve my time?

Mr. MANN. The gentleman did not reserve any time.

The CHAIRMAN. The gentleman has no time if he yields time to the gentleman from Illinois.

Mr. MANN. If the gentleman from Virginia desires time I will yield to him. [Laughter.] Does he desire to proceed now?

Mr. MONTAGUE. No.

Mr. MANN. Mr. Chairman, I wanted to call attention, under a reservation of objections to the bill, to some provisions that I think ought not to be in any bill, in the hope that we may have them eliminated.

The bill provides for a division of mental hygiene. I have no objection to that provision of the bill. Then the bill provides that the "duty of the division of rural sanitation shall be to investigate and encourage the adoption of improved methods," and so forth. I do not think it is proper to give to any bureau of the Government authority to encourage the adoption of something or other that it thinks is proper. It is enough for a bureau of the Government to investigate and make public the results of the investigation.

Now, here is a proposition to have the Public Health Service go entirely outside the investigation of the causes of diseases and start in a propaganda to have people follow a certain prescribed course of medicine.

Mr. MONTAGUE. Mr. Chairman, will the gentleman pardon me?

Mr. MANN. Certainly.

Mr. MONTAGUE. If I caught the gentleman's objection, it was against the words "and encourage the adoption of improved methods."

Mr. MANN. I would like to have "encourage the adoption" go out.

Mr. MONTAGUE. Would it meet the gentleman's view to say "encourage improved methods"?

Mr. MANN. No. It is not their business to encourage the adoption of improved methods. Their business is to ascertain facts. I do not agree with the idea that they shall tell people what school of medicine shall be followed in the country.

Mr. MONTAGUE. Would the gentleman kindly give me the language that he objects to?

Mr. MANN. The language that I would like to strike out is, first, "to encourage the adoption of," so that it would read so far, "The duty of the division of rural sanitation shall be to investigate improved methods of rural sanitation."

Mr. MONTAGUE. Has the gentleman any other objection?

Mr. MANN. Yes. Then, I do think this division ought not to mix up industrial sanitation with rural sanitation. There has been a conflict for quite a while between the Public Health Service and the Department of Labor as to the study of indus-

trial sanitation and improved methods of industrial sanitation. Methods of industrial sanitation are entirely apart from the study of disease.

Mr. MONTAGUE. If the gentleman, then, will pardon me, I think the objection of the gentleman is met by the fact that there are two administrative agencies, one to deal with one subject and the other to deal with the other subject, and therefore the confusion that the gentleman objects to would not occur. I submit that under the construction——

Mr. MANN. Well, I think the gentleman is mistaken. I have given considerable study to this subject, and have been in several conferences where there has been conflict on this point. The improvement of industrial sanitation is mechanical to a certain extent. It is not a study of disease. The Public Health Service desires to obtain control of that, and the Department of Labor desires to retain control of the study of the subject of devices or improved methods to preserve the health of people employed in industry. It is entirely apart from the question of disease.

Mr. ADAMSON rose.

Mr. MANN. Mr. Chairman, I yield to the gentleman.

Mr. ADAMSON. Was not an accommodation of the conflict made when a bill was adopted here at the last session of Congress by which the Department of Labor looked into the question of industrial sanitation? I believe something of that kind was agreed to.

Mr. MANN. Well, some kind of an agreement was entered into, but not covering this, and not turning it over to the Public Health Service. Now, even if it were to be included, there is absolutely no connection between the study of rural sanitation and the study of industrial sanitation. They do not belong in the same division at all.

Mr. ADAMSON. Then the gentleman would wish to eliminate the words "and industrial sanitation"?

Mr. MANN. Yes; "and industrial."

Mr. ADAMSON. Are there any other things that the gentleman would eliminate?

Mr. MANN. Yes. I would strike out "and disseminate information among farmers and others for." The Bureau of Public Health Service already has the power now to publish the information it obtains. But I am not in favor of having the Public Health Service hire a lot of men to go throughout this country to tell farmers and everybody else—for this includes everybody in the country—how they shall do this or that or anything ad libitum. I do not think my friend from Georgia [Mr. ADAMSON] is in favor of that, either.

Mr. ADAMSON. Would the gentleman kindly read the paragraph as he would construe it?

Mr. MANN. I will. I would have it read: "The duty of the division of rural sanitation shall be to investigate improved methods of rural sanitation and disseminate information among farmers and others for the prevention and suppression of communicable diseases."

Mr. ADAMSON. Very well. I am willing to accept that.

Mr. MANN. Now I yield, Mr. Chairman, five minutes to the gentleman from Wisconsin [Mr. STAFFORD].

The CHAIRMAN. The gentleman from Wisconsin [Mr. STAFFORD] is recognized for five minutes.

Mr. STAFFORD. Mr. Chairman, when I was taken off of my feet by the strong opposition of the gentleman from Kansas [Mr. ANTHONY] I was trying to elicit information from the author of the bill as to the real purpose that was designed to be accomplished by this measure. I am in thorough sympathy with these additional activities as prescribed in this bill, with the limitations as suggested by the gentleman from Illinois [Mr. MANN]. I think those criticisms are well merited. We had that very question under consideration when it was my privilege to be a member of the Committee on Interstate and Foreign Commerce, and it was the consensus of opinion then that we should not branch out too generally into forcing upon the public generally the ideas of various branches of schools of medicine.

Mr. MONTAGUE. Would the gentleman permit me to ask him a question?

Mr. STAFFORD. I would be glad to have the gentleman do so.

Mr. MONTAGUE. Is there one school of medicine to examine rural sanitation that is differentiated entirely from the school of medicine that examines industrial sanitation?

Mr. STAFFORD. The gentleman did not catch the full purport of the criticism of the gentleman from Illinois.

Mr. MONTAGUE. I do not think I did

Mr. STAFFORD. He directed his attention to the language in lines 4 and 5, where it might vest authority in the Bureau of Public Health, or in this division, by allowing them to adopt means to encourage the adoption of these methods, which might be construed as vesting them with authority——

Mr. ADAMSON. Will the gentleman yield?

Mr. STAFFORD. As soon as I finish my sentence—as vesting them with authority to enforce certain ideas that would be obnoxious to them.

Mr. ADAMSON. Will the gentleman be satisfied with the transformation of the sentence as suggested by the gentleman from Illinois.

Mr. STAFFORD. I am entirely satisfied with that.

Mr. ADAMSON. I wish to say that during the investigation had before the committee I was in perfect accord with the gentleman from Wisconsin [Mr. STAFFORD] and the gentleman from Illinois [Mr. MANN], and I am yet in accord with them.

Mr. STAFFORD. I thought it was through an oversight——

Mr. ADAMSON. I do not wish to prefer, promote, or encourage the selection of any school of medicine. We desire to show entire impartiality. The gentleman will remember that two years ago we put upon the statute book a law authorizing wide investigation and great and beneficial work by the Public Health Service. We did not make any subdivisions then, and up to this time, it being a slow and gradual growth, it has never been necessary to make subdivisions; but now, in order that there may be efficient work and no friction in the service, and that the different divisions may understand the duties, one of another, and especially of themselves, it has been suggested that we allow them to make a division of rural sanitation and a division on mental conditions.

Mr. STAFFORD. Will the gentleman yield right there?

Mr. ADAMSON. Yes.

Mr. STAFFORD. As I understand it, the Chief of the Bureau of Public Health to-day has authority to arrange the work of his bureau in the different divisions.

Mr. ADAMSON. Of course he could.

Mr. STAFFORD. And if he saw fit, he could create a division of mental hygiene, and one also of rural sanitation.

Mr. ADAMSON. I have no doubt he could assume that authority and go ahead and direct each man's work; but he prefers, for the efficiency of the service, that the law shall declare what divisions shall have jurisdiction of certain duties and certain functions. Incidentally he wishes, when those divisions are created, that the head of each one shall be of some dignity and authority, and that it shall have adequate clerical assistance. It is a very small matter, I think only about $7,000 a year.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MANN. I yield to the gentleman five minutes.

Mr. STAFFORD. If the chief of the bureau has authority to divide up the work, and has already done that under general authority, will he not be likely to come to Congress and ask us to give him legislation for other administration matters in the division of his work, after those divisions have been authorized?

Mr. ADAMSON. If he does that, we or our successors will be here to look after it. I presume that our successors will be as vigilant as we are. I assure the gentleman that I am going to continue to agree with him about this.

Mr. STAFFORD. We always get along very well together.

Mr. ADAMSON. This is merely a practical question, for the efficiency and work of the department. The department wants it, and we have great pressure for it from all over the country, as is exhibited by correspondence which has come to the committee.

Mr. STAFFORD. Mr. Chairman, as I read this bill, after eliminating the obnoxious features pointed out by the gentleman from Illinois [Mr. MANN], which I understand are going to be eliminated by the committee, I think it is nothing more than a measure to increase the salaries of two present surgeons. The chief of the bureau has authority to divide up the work. He does not have to come to Congress to create an additional division, but he does have to come to Congress to have them given a higher grade than of the number now authorized.

I recognize the value of this special work. I would much rather have supported this bill if the sponsors had come and asked us to promote two additional surgeons to the position of Assistant Surgeons General, and have it show on its face what the real purpose of the bill is rather than in this veiled way try to give the impression that they have not the authority to create divisions, but must come to Congress to have the divisions created, and then have the salaries or grades of surgeons prescribed who will fill these positions.

I intend to support the bill with the provisions eliminated as recommended by the gentleman from Illinois [Mr. MANN].

Mr. MANN. I yield to the gentleman from Washington [Mr. HUMPHREY].

Mr. HUMPHREY of Washington. Mr. Chairman, on Saturday I made a statement on the floor of the House in reference to the notice that had been received by the State Department from the British Government, notifying the department of their attitude with reference to the purchasing of interned ships. After I had made that statement the distinguished gentleman from Alabama [Mr. UNDERWOOD] arose and submitted a denial that he said came from the State Department. Yesterday the New York Sun and several other papers reiterated that statement. They claimed that such a communication, dated January 19, was received by Mr. Bryan, and it is to be presumed that if it was received it is still in his office. I read from the New York Sun of yesterday:

GREY'S WARNING ON SHIPS HELD BACK BY BRYAN—DESPITE DENIALS OF ITS EXISTENCE, THE COMMUNICATION REACHED SECRETARY'S OFFICE—BRYAN SOUGHT RULING ON INTERNED VESSELS.

WASHINGTON, *January 30.*

In view of statements made in official quarters and Congress to-day it is necessary to reiterate what was said in a Washington dispatch to the Sun yesterday, that Secretary Bryan has received a communication making the fact unmistakably clear that the British Government would regard the purchase and operation of interned German vessels by the United States as an unneutral act.

Such a communication, dated January 19, was received by Mr. Bryan, and it is to be presumed that it is still in his office. Developments here, however, indicate that Mr. Bryan has not seen fit to inform the President or his associates in the State Department or administration leaders in charge of the ship-purchase bill of what he has learned of the British Government's views.

At the White House it was declared there is no such communication. Representative UNDERWOOD on the floor of the House made a similar statement. In fact, much comment was caused by the eagerness of those most interested in the passage of the ship-purchase bill to rush forth with denials of the existence of this document. Secretary Bryan himself was out of town to-day.

MR. UNDERWOOD'S STATEMENT.

Representative UNDERWOOD said:

"I saw the telegram in the morning paper stating that there was a letter from Sir Edward Grey, protesting against the purchase of these ships, and I called up the State Department and asked if that statement in the morning papers was correct, and I am authorized by the State Department to deny categorically that the statement is correct. There is no such letter there and never has been such a letter there." [Applause on the Democratic side.]

Were it not for the well-known fact that Mr. Bryan often fails to inform other officials of the State Department of communications received the statements made by officials to-day regarding the presentation of British views on a wholesale release of interned belligerent ships would be surprising, particularly in view of the fact that the communication referred to was received in response to a request of Secretary Bryan himself.

In other words, the document, the existence of which is denied, was received by Mr. Bryan for the sole reason that he had asked for it. As a result of the discussions growing out of the exchanges between the two Governments in the *Dacia* case a request was made that the views of the British Government on the subject be presented. This was done.

NO MENTION OF THE BILL.

The British communication was carefully phrased, and contains no mention of the so-called ship-purchase bill. This was necessary, as Sir Edward Grey could hardly be put in the position of lodging a protest against a measure which has not yet passed either House of Congress and which does not in terms declare the intention of the United States Government to purchase and set on the high seas vessels now flying the flag of England's enemies. Just as clearly as these circumstances would permit, however, it was intimated to Secretary Bryan that he could not expect the British Government would silently acquiesce in such action being taken.

It was pointed out that a sharp distinction exists in the minds of the British Government between the commercial transaction of transferring a vessel from one flag to another, and the general release of a number of interned belligerent ships. The latter case would, it was pointed out, bear an intimate relation with the question of neutrality.

The declaration was made that should a neutral power intervene to relieve one of the belligerents from the consequences of the military action of the other belligerent such intervention would be in effect not of a neutral character.

No language could be plainer short of a blunt statement to the effect that Great Britain would regard as an unfriendly act the purchase and operation of the interned belligerent ships by this Government.

NO DOUBT IN SITUATION.

In view of the statements contained in the communication to Mr. Bryan and other authoritative information available in Washington, there is now no room for doubt that Great Britain will not be found resting her case on the technicalities of international law or international conferences should the United States Government become the operator of the interned German vessels.

The complaint will be made that this Government is intervening to offset an advantage which the allies have gained through their supremacy on the seas and the vessels in question will undoubtedly be treated as enemy ships whenever encountered on the high seas.

Difficulty is found here in comprehending the course of the administration in first committing itself to the ship-purchase bill program, then making an eleventh-hour inquiry as to the views of the British Government, and when these were found to be strongly adverse failing to make this information public.

It seems to me quite remarkable that if there is no truth in that statement the great journals of this country should again repeat it. Since I came on this floor, within the last few minutes, I have been informed by a Member of this House that he received the information directly from the British Embassy, that recently a communication was presented to the State Department by the British ambassador setting forth the attitude of the British Government in the matter of the purchase of the interned German vessels. This communication was in response to a request for information preferred by Secretary Bryan. This communication was submitted to the Secretary of State some time before the gentleman from Alabama [Mr. UNDERWOOD] made a categorical denial of its existence. In view of these facts, and in view of the recent history of some of the transactions in the State Department, I still have some lingering doubt as to whether or not there is such information in the Department of State. You will perhaps recall that when the proposed Colombian treaty was under consideration that a specific and absolute denial was sent forth by the State Department that the proposed treaty contained anything in the way of an apology by this Government to Colombia. And yet when the treaty was published it did contain such apology, and it was shown that it had been at the State Department for some time when the denial was made.

Now, what is the motive, if there is such information as this in the State Department, for its suppression. I read an editorial from the New York Sun to-day:

INCAPACITY OR WORSE.

The Washington dispatches of the Sun yesterday contained the subjoined specific details concerning a subject of the utmost importance to this Nation

"Secretary Bryan has received a communication, dated January 19, making the fact unmistakably clear that the British Government would regard the purchase and operation of interned German vessels by the United States as an unneutral act.

"Developments here, however, indicate that Mr. Bryan has not seen fit to inform the President or his associates in the State Department or administration leaders in charge of the ship-purchase bill of what he has learned of the British Government's views.

"At the White House it was declared there is no such communication.

"Representative UNDERWOOD on the floor of the House made a similar statement.

"Secretary Bryan himself was out of town to-day."

This communication, it is plain, must have a powerful influence on the ultimate fate of the President's ship-purchase bill.

Has it been willfully suppressed to prevent its contents becoming known while that measure of folly and indiscretion is pending?

Or have we only another incident of the monumental incapacity that presides to-day over the Department of State?

Who is the man who to-day will rise in Congress and demand the exhaustive investigation this amazing conduct of William J. Bryan renders imperative?

In view of these statements repeated by the press throughout the country, giving the exact date of the communication as January 19 last; in view of the statement made by a Member of this House on information received from the British Embassy, I would like to inquire whether gentlemen on that side of the House are ready now to say that there has been no information received at the State Department in reference to the attitude of the British Government with reference to the purchase of these interned vessels.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MANN. I yield to the gentleman from Washington five minutes more.

Mr. HUMPHREY of Washington. I do not contend that it is the duty of the Secretary of State to make public all information that comes into his office. I recognize that frequently it ought not to be done; but here is a bill pending before Congress, considered of such importance that great appropriation bills are being held up in order to force its passage through another body; so important that the Secretary of the President has been spending a great deal of his time over on the floor of that other body to see that there is "team work" and to see that there is no neglect on behalf of the Democratic sponsors for this bill. It is reported that he stayed until 4 or 5 o'clock in the morning seeing that Democratic Senators faithfully obeyed orders. When we remember the fact that the Secretary of the Treasury, Mr. McAdoo, when he appeared before the Committee of the House on the Merchant Marine and Fisheries, stated that if this shipping bill passed, it was the purpose of the administration to purchase these interned German ships, and in view of the fact that such act would be a violation of our neutrality, in view of the fact that we are all in favor of peace, and that everybody had been praising the President, as he ought to be, for his attitude in that respect, why is it if there is such a communication there and we are headed toward war it is not given to the country?

Mr. ALEXANDER. Will the gentleman yield?

Mr. HUMPHREY of Washington. Yes.

Mr. ALEXANDER. I think the gentleman from Washington ought not to misstate what the Secretary of the Treasury said before the Merchant Marine and Fisheries Committee on the purchase of the German ships. As I recall his statement, he never said that it was the intention of the Government to purchase these ships; he expressed his opinion that the Government would have a right to purchase these ships and that it would not be a violation of international law.

I expect that I am as closely in touch with the administration in reference to the shipping bill as anybody, and I never heard it expressed that it was the intention to buy German ships. On the other hand, if the bill becomes a law, the question of purchasing any ships becomes a matter of consideration, and I assume that the administration, through the State Department, will ascertain if there is any valid objection to the purchase of the ships of any of the belligerents, whether it is Germany or any other nation.

As far as this information in the State Department is concerned, I take the statement that came from the Secretary of State's office, through the gentleman from Alabama [Mr. UNDERWOOD], as authentic, and it ought to have the credit of the House, and not take these statements sent out by correspondents from Washington, who are on a roving expedition, trying to find out, if possible, if there have been any such representations made.

Mr. HUMPHREY of Washington. I am always glad to yield to my friend, and I will say that I read the statement of Secretary McAdoo before his committee this morning. And in response to a question from Representative SAUNDERS, of Virginia, in regard to these German vessels, the Secretary of the Treasury expressed surprise that there should be any question that they had not the right to purchase the German ships provided they were purchased in good faith, and he then said, "And that is exactly what would be done in this case." That is almost his identical language. If the gentleman from Missouri will get it and read it, he will see that I am right, for I read it to refresh my memory this morning.

If we are not to purchase the interned vessels, the whole shipping proposition is childish, because there are no other vessels we can purchase. If we purchase vessels that are already running, that is not going to relieve the situation.

The CHAIRMAN. The time of the gentleman from Washington has again expired.

Mr. MANN. I yield the gentleman three minutes more.

Mr. ROGERS. Will the gentleman yield?

Mr. HUMPHREY of Washington. Yes.

Mr. ROGERS. I wonder if the gentleman has had his attention called to an interview by Secretary Redfield in New Orleans the other day, in the course of which he is quoted as follows:

> Mr. Redfield answered a formal protest against the ship-purchase bill which the association recently sent to Washington. One of the points brought out in the protest was that operation of such a law would involve the United States in difficulties with the foreign powers. This he said was a joke.

If the bill passes, Mr. Redfield will be one of the board to administer it.

Mr. HUMPHREY of Washington. Yes; the Secretary of Commerce is to be one, and he says it is a joke. Mr. McAdoo will be president of the board, and he says that that is what would be done, and when they submitted the question the other day to a vote in the Senate as to whether they should prohibit the purchase of these ships it was voted down on a roll call. Now, if you do not propose to purchase the ships, where are you going to get the vessels? The whole thing becomes absurd unless that is the object of the bill.

And in view of the direct statement made by a Member of this House, which I have just quoted, in view of the repetition by great journals of the country that such communication has been received, and in view of the former attitude of the office of the Secretary of State, I do not feel any hesitancy in saying that I still have some doubts as to whether or not this communication has been received.

Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD by inserting two clippings from the New York Sun of to-day.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MANN. Mr. Chairman, does the gentleman from Alabama [Mr. UNDERWOOD] desire some time?

Mr. UNDERWOOD. Mr. Chairman, I desire to be recognized in my own right.

Mr. MANN. Very well. I have not yielded the floor. I was trying to expedite business.

Mr. Chairman, I heard the statement made by the gentleman from Alabama [Mr. UNDERWOOD] the other day. Although I am not quite sure of just what he said, my recollection is that he said he was informed by the State Department that they had no letter——

Mr. UNDERWOOD. Mr. Chairman, so that there will be no dispute about what I said, I will call attention to it again. I stated, after the gentleman from Washington [Mr. HUMPHREY] had attempted to make his statement about the matter of the letter supposed to have been written by Sir Edward Grey to the Secretary of State, that I had my secretary telephone down to the State Department and make inquiry, and the State Department advised me that there was no such letter there and asked me to deny on the floor of the House that there was.

Mr. MANN. Mr. Chairman, I think the statement made by the gentleman from Alabama covers a part of the case quite fully, and of course the statement of the gentleman from Alabama is to be relied upon—that he had information from the State Department that that department had not received a letter from Sir Edward Grey. I have no doubt that is a correct statement on the part of the Secretary of State or the State Department. As the statement was made by my distinguished friend from Alabama, it gave the impression to many that the State Department had no letter on the subject and had received no communication upon the subject. I am afraid the State Department was not entirely frank with the distinguished leader of the majority on the floor of this House. Information has come to me, in a way which I think makes it reliable, that that department not only has had communications upon the subject but that it has had a letter on the subject from an official of the British Government.

I reserve the remainder of my time.

Mr. UNDERWOOD. Mr. Chairman, I do not care to take up the time of the House in thrashing out this matter. A few moments ago I stated the only direct information I have in reference to the subject, and that came from the State Department. The charge that the gentleman from Washington [Mr. HUMPHREY] made the other day was that Sir Edward Grey had written to the State Department protesting against the purchase of these interned German ships. I stated then, and I state now, that I telephoned to the State Department and asked for information as to whether such a letter existed. I was advised by that department that it had no such letter, and that department further asked me to deny on the floor of the House that there was such a communication. I do not question for a minute that that is true. As to whether any other communications have been received by the State Department in reference to this matter, of course I have no knowledge, but I am satisfied that distinguished gentlemen on the other side of the aisle have no knowledge directly on the subject, because if they had it would have been public property and in the papers before this time. I think that is as far as it is necessary for me to make a statement in reference to the Sir Edward Grey letter.

Mr. MANN. Mr. Chairman, will the gentleman yield?

Mr. UNDERWOOD. Certainly.

Mr. MANN. Of course the gentleman is aware that Sir Edward Grey under no circumstances would address a letter to the State Department at Washington, and that no other member of the English Government would do it.

Mr. UNDERWOOD. I assumed that the other day, but I did not rest with that. I asked the State Department.

Mr. MANN. But that is beating around the bush.

Mr. UNDERWOOD. Oh, no; it is not at all.

Mr. MANN. If Sir Edward Grey had written a letter, it would not be addressed to the State Department.

Mr. UNDERWOOD. I am not disposed to think that the State Department would have authorized me to deny that such a letter existed if there was a letter of that kind in existence. That is my opinion. I do not state that as a fact, because I am not possessed of any facts further than those I have stated to the House.

Mr. MANN. Mr. Chairman, will the gentleman yield further?

Mr. UNDERWOOD. Yes.

Mr. MANN. Would the statement that the gentleman had from the State Department lead him to suppose that Sir Edward Grey or other responsible authority of the English Government had not sent a letter or a wire or other communication to the ambassador of Great Britain in Washington, the substance of which was to be communicated to the State Department?

Mr. UNDERWOOD. Mr. Chairman, I will say to the gentleman that it certainly did lead me to suppose that fact. I do not say that was the statement that came to me from the State Department, but I do judge from the statement that came to me that that department had no such letter.

Mr. MADDEN. But it might have had representations from the ambassador of Great Britain without having them in writing.

Mr. UNDERWOOD. It might have had a thousand things.

Mr. BARTLETT. But the gentleman from Washington [Mr. HUMPHREY] stated there was a "letter" there.

Mr. UNDERWOOD. The statement was that there was a letter there from Sir Edward Grey.

Mr. BARTLETT. And that the Secretary of State had kept it concealed and had not let anyone know about it.

Mr. UNDERWOOD. Certainly, and it was that fact that I was authorized to deny. All I desire to say in reference to this matter is this: In the first place, the bill now pending in the Senate has not one line in it that compels the purchase of a German ship or an interned ship of the allies. It leaves it discretionary with the board that is to be appointed under the bill to purchase these ships wherever they can be purchased in the interest of commerce. I think it is going far afield for gentlemen in this House to occupy the time of the House and try and convince the country that the President of the United States is going to do some overt act that will put this country in unfriendly relations with any other country in the world. I hold no commission to defend the President of the United States; he is perfectly able to defend himself on all occasions. [Applause on Democratic side.]

But it has only been a few months ago when gentlemen from that side of the House were severely criticizing the President of the United States because he did not commit himself to acts that would have involved this country in actual warfare, and I say that it does not now lie within the mouths of those gentlemen to say that because a bill may pass the Congress of the United States under the terms of which the President might commit an act that would bring about unfriendly relations with other countries of the world, to contend for one minute that the President of the United States would be guilty of such an act.

Gentlemen on that side of the House know as well as I do that of all the people and all the men in the United States the President of the United States would be the last man to involve this country in a war that was not justified or justifiable. [Applause on the Democratic side.] And no matter what you may think about the economic reasons for the passage of this bill, no matter what you may think about the reasons that may justify its passage, no matter whether you may think it is a wise piece of legislation from an economic or governmental standpoint or not, there is no man on that side of the House who I believe will stand in his place as an American Representative and say on his honor as a man or Representative in this House that he believes that the President of the United States, if this bill becomes a law, would commit an overt act under its terms that would involve this country in unfriendly relations with any other nation of the world. [Applause on the Democratic side.]

Mr. TOWNER. Mr. Chairman, will the gentleman yield for a question?

Mr. UNDERWOOD. In just one minute. Now, if that is the case—and I am sure the past record of the President justifies that position—is not it unwise on the floor of this House to agitate this question in this way? [Applause on the Democratic side.]

Mr. TOWNER. Will the gentleman yield now?

Mr. UNDERWOOD. In one minute. When the whole people of our country desire above all things that in the dangers that to-day confront the world that peace, and peace alone, may rest upon our Republic. [Applause on the Democratic side.] I now yield to the gentleman.

Mr. TOWNER. Will the gentleman, in order to be certain that these very desirable results should follow, vote an amendment to the pending bill that would prevent the purchase of these interned vessels?

Mr. UNDERWOOD. Well, I will consider that question when the bill comes before the House, but I will say to the gentleman that so far as my own judgment is concerned and so far as I believe the opinion of the people of this country rests there is no necessity whatever for an amendment of that kind. [Applause on the Democratic side.]

Mr. Chairman, I yield the balance of my time to the gentleman from Georgia [Mr. ADAMSON].

Mr. ADAMSON. Mr. Chairman, there is not one word in the pending bill which would violate our neutrality. I do not wish to participate in a political discussion, nor to talk about war, nor to shed any light upon the controversy as to the comparative veracity or audacity of the State Department or the gentleman from Washington [Mr. HUMPHREY] or their newspaper friends, but I do request that if further political discussion is desirable that it be postponed until the consideration of the next bill on the Unanimous-Consent Calendar [laughter], and I hope we may have a vote on the amendment of the gentleman from Illinois and get through with this bill. Mr. Chairman, I reserve the balance of my time for the present.

Mr. MANN. Mr. Chairman, I yield three minutes of my time to the gentleman from Washington [Mr. HUMPHREY].

Mr. HUMPHREY of Washington. Mr. Chairman, the distinguished gentleman from Alabama [Mr. UNDERWOOD] has made a very eloquent defense of the President when nobody is attacking him. So far as I know no one on this side has criticized the President or in any way reflected upon him. But the man who is going to be at the head of this ship-purchasing board is Secretary McAdoo, if we can believe the press, and he is the man who stated before the committee that they intended to purchase these interned German ships. Now, I do not know whether the gentleman from Alabama has any particular license to lecture anybody upon the floor of this House for attacking the President or not. My memory goes back not so very long ago when he made a speech upon the floor of the House that was not so loudly applauded upon that side, and if I am correct at that time the President of the United States was urging the passage of the bill about as insistently as he is now urging the passage of the shipping bill, and the distinguished gentleman from Alabama stood down here in his place and declared that the proposition was un-American. Is he in a position to lecture this side of the House about attacking the President before he has been attacked? The gentleman has not hesitated to criticize him himself. I agreed with what he said about the Panama legislation, and I think the present shipping legislation is also un-American. I think that for the sake of saving a few dollars in freight it is proposed to bring us into the very shadow of war. It is proposed to place against the peace of this Nation the opportunity to buy a few secondhand ships and run them at a loss, and if the day comes that they ever do make a profit, then we are to abandon them and turn the field over to private parties. The most crude, socialistic scheme that ever has been proposed to the American people. A scheme that does not appeal to the judgment of the majority of mankind and something that is unknown in the history of the world. Never, I believe, has any nation run ships in the foreign trade. Some countries have maintained socialistic schemes inside of their own boundaries, but this is the first time it has been ever seriously proposed that any nation should go out into the international trade and go into the shipping business with all the difficulties and dangers that might follow.

Mr. ADAMSON. Does the gentleman desire to yield further time?

Mr. MANN. I yield three minutes to the gentleman from Massachusetts [Mr. GARDNER].

Mr. GARDNER. Mr. Chairman, I do not think that the State Department ought to split hairs. If it had in its possession a communication handed to it by the British ambassador by direction of the British Government, and if in spite of that circumstance the gentleman from Alabama [Mr. UNDERWOOD] was told that no communication had been received from Sir Edward Grey, why all I can say is that the department was guilty of equivocation or worse. But I do not believe that the department knew that the communication was there. Nevertheless, as a matter of fact, the communication certainly was there. I assert that it was there, although I do not believe that the officials of the State Department were aware of the situation. I believe they were acting honestly when they made their denial to Mr. UNDERWOOD. I believe that the famous communication went to the Secretary of State; that he did not communicate it to the State Department, but instead of that he went off on one of his lecture tours.

Mr. MARTIN. Will the gentleman yield?

Mr. GARDNER. I will.

Mr. MARTIN. Does not the gentleman consider, if he now has a correct line on the facts, that ordinary frankness would suggest to the Secretary of State that he had better make the truth known at this late hour?

Mr. GARDNER. I do not know whether the Secretary communicated the facts to the department or not, but I make the assertion that there was actually submitted to the Secretary of State just such a communication as has been indicated.

Now, Mr. Chairman, if anyone criticizes the President on the supposition that he intends to buy those German ships, no one is to blame except the President himself. He has only to say to the American people, "I shall not buy those interned ships," and he will end the criticism in a moment's time. That is all he has to do. Ordinarily, Mr. Chairman, the President is the most adroit man who has ever occupied the White House, and I am surprised that he does not make the statement I indicate. Why, the President is so adroit that although he has been two years in office every conservative still thinks him a conservative and every radical still thinks him a radical. When Mr. Taft had been in office for two years every conservative thought he was a radical and every radical thought he was a conservative. [Laughter.] The fact is that on Tuesdays

Thursdays, and Saturdays President Wilson is a radical and on Mondays, Wednesdays, and Fridays he is a conservative. [Laughter.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. MANN. Mr. Chairman, I yield to the gentleman from Pennsylvania [Mr. MOORE].

Mr. MOORE. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD on the subject of the shipping bill.

The CHAIRMAN. The gentleman from Pennsylvania asks unanimous consent to extend his remarks in the RECORD on the subject of the shipping bill. Is there objection?

There was no objection.

Mr. HUMPHREYS of Mississippi. Will the gentleman from Illinois yield to me?

Mr. MANN. I yield to the gentleman from Mississippi.

Mr. HUMPHREYS of Mississippi. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Mississippi asks unanimous consent to extend his remarks in the RECORD. Is there objection. [After a pause.] The Chair hears none.

Mr. ADAMSON. Mr. Chairman, while I am loath to indulge in any political discussion and postpone the vote on this bill, the gentleman from Alabama [Mr. HEFLIN] desires to participate in the debate, and I yield to him five minutes.

Mr. MANN. Then I reserve the balance of my time.

Mr. HEFLIN. Mr. Chairman, I do not know that I will consume that much time, but the gentleman from Massachusetts [Mr. GARDNER], in his short speech, saw fit to assail the Secretary of State and to wave him aside with the suggestion that he supposes he had gone off on another lecturing tour. This great man has been slandered and misrepresented time and again by Republicans in this House about the lectures that he has delivered since he has been Secretary of State.

I want to say to gentlemen on that side now, and to my good friend from Massachusetts, Mr. GARDNER, in particular, that in all the time that Mr. Bryan has been secretary of State he has never been absent from that department engaged in lecturing as much as the time allowed to a Government clerk in one year for his vacation. Other men have held the office of Secretary of State and they could leave and be gone for days and days and the public did not know where they were. They could carry on a law practice and go to New York and be consulted maybe in big lawsuits and receive $5,000 or $10,000 for their services, but the public did not know what they were doing. But here is a man who has gone over this country for many years pleading the cause of the masses. He is engaged at spare times in lecturing, a business which enlightens the public and reduces the size of the Republican Party. [Laughter.] His whereabouts is always known, and when he delivers one of his great lectures the time and place is announced in a fashion something like this: "Mr. Bryan will lecture at this place at a certain time on the subject of 'The Prince of Peace.'" And Republicans who want to build up a big Navy and increase the standing Army are opposed to the Prince of Peace. [Applause on the Democratic side.]

No wonder you are always talking about Mr. Bryan's lecturing over the country. You get up on this floor and say he has gone off on another lecturing tour. What this great man does is in the open. He invites the public into his confidence, and he is to-day at his post of duty, standing by the highest and best interests of this Government. [Applause.]

Mr. GARDNER. Will the gentleman yield?

Mr. HEFLIN. I will.

Mr. GARDNER. As a matter of fact, on Saturday last was he not inviting the public into his confidence on a lecturing tour in North Carolina?

Mr. HEFLIN. He went down to his home in North Carolina, I understand, Mr. Chairman; but you Republicans who are watching him so closely and always talking about him going on a lecture tour, if you will investigate a little you will find that he has not been absent on a lecturing tour, not counting Sundays, as much as one-fourth of the time that the law allows him for vacation. His lecturing dates altogether during the week days, or work days, constitute a period of time not more than 15 days, which is less than one-fourth of the time that the law allows him for vacation. He has not neglected his duties, and he has not had as much vacation as the Government grants every year to the ordinary clerk. [Applause on the Democratic side.]

Mr. MANN. Mr. Chairman, just a word. I do not know whether this will end it or not, but I presume not. The gentleman from Alabama [Mr. HEFLIN] is not correct in his statement. I dare say that the records of the State Department will not show that the Secretary of State has been away a single day, but by compilation of statistics as to where he has been elsewhere than Washington, it is proven he has been away much more of the time than has been indicated by the gentleman from Alabama.

But I do not think the Secretary of State is to be very much criticized for that. The State Department is probably better run when he is away than it is when he is present. [Laughter on the Republican side.] He does not know what is going on in the State Department when he is here. So he has to be excused for going to his home in North Carolina. I am glad to know, and so will Nebraska be glad to know, that he has moved to a home in North Carolina. And I hope he will continue to be permitted to hunt there as he pleases and lecture as he pleases.

But, after all, the question here is not a question of criticism of the President or the policy of the Government, but a question as to whether the State Department, the ranking department of this Government, can furnish information to the floor leader of this House of the majority party of the Government, and have that information spread over the land, which, while technically true, is, in fact, untrue. We ought to know. The gentleman from Alabama [Mr. UNDERWOOD] ought to be the first one to ask why, when he inquires of the State Department as to whether it is in possession of certain information, he is answered technically, "We do not have that information," when, in very fact, it has in its possession all the information referred to.

I have been, even as the minority leader of the House, informed by the Secretary of State during a Republican administration, as the gentleman from Alabama has been, and if it had been asserted on the floor of the House that that information was really misleading, I would have asked an investigation of a Republican administration to see whether the ranking department of the Government will endeavor to mislead this great body of the Government. [Laughter on the Democratic side.] But gentlemen on the other side of the House, with commendable courtesy, hoot. That is the way they look at it. They believe that it is proper to deceive the people. That is what they have been trying to do for years. [Applause on the Republican side.]

Mr. HELM. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Illinois yield to the gentleman from Kentucky?

Mr. MANN. No. I yield two minutes to the gentleman from Wisconsin [Mr. LENROOT].

Mr. MOORE. Mr. Chairman, will the gentleman yield to me for a question before he does that?

Mr. MANN. No.

The CHAIRMAN. The gentleman from Wisconsin [Mr. LENROOT] is recognized for two minutes.

Mr. LENROOT. Mr. Chairman, on last Saturday the gentleman from Alabama [Mr. UNDERWOOD], because of a statement to the effect that a letter had been sent and was on file in the State Department, thought it important enough to inquire of the Secretary of State whether a letter had been received. The point was not whether it was a letter, but whether the representation had been made. If it were important last Saturday to know whether a letter had been received, it ought to be just as important for the gentleman this afternoon to inquire of the State Department whether a representation had been made in some other form and get either an affirmation or a denial of it.

The CHAIRMAN. Does the gentleman from Georgia [Mr. ADAMSON] wish to yield any of his time?

Mr. UNDERWOOD rose.

Mr. ADAMSON. Does the gentleman from Kentucky [Mr. JOHNSON] wish some time?

Mr. UNDERWOOD. I do.

Mr. ADAMSON. Then, Mr. Chairman, I yield to the gentleman from Alabama such time as he wishes to use.

The CHAIRMAN. The gentleman from Alabama [Mr. UNDERWOOD] is recognized.

Mr. UNDERWOOD. Mr. Chairman, I think the gentlemen on the other side of the House are trying to raise a tempest in a teapot. My distinguished friend from Wisconsin [Mr. LENROOT] usually looks at all questions from the wrong angle and turns the telescope in the wrong direction toward the battle line.

I called down to the State Department to ascertain in regard to a statement of facts, based upon a publication in the morning paper, with reference to a statement said to have been written by Sir Edward Grey. I was authorized to give a categorical denial of that statement, which I did, and which I stand on, and which I think is conceded to be correct by the gentlemen on the other side.

Now, since the gentleman from Wisconsin [Mr. LENROOT] has taken his seat, I have been informed by gentlemen on this

side of the House, but not by the State Department, so far as I am personally concerned, that the State Department has given out this morning to the press a denial that it has in its possession a protest from the English Government upon this subject from any source. I ask the gentleman from Indiana to make the statement.

Mr. CULLOP. Mr. Chairman, since this question arose I called up the State Department and was informed that no protest or objection from any nation had been received against the shipping bill, and that the Secretary of State gave a statement to the press this morning stating that no protest or objection had been made to the bill for the purchase of any ships [applause on the Democratic side], and that the bill raised no diplomatic question for which there should be occasion for such a protest to be made.

Mr. HUMPHREY of Washington. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Indiana yield to the gentleman from Washington?

Mr. CULLOP. Certainly.

Mr. HUMPHREY of Washington. I simply wanted to remind the gentleman from Indiana that nobody has said there is any protest against the bill. That is specifically denied in this article that I read from the New York Sun. It says specifically that no protest was made against the shipping bill. The protest was made against the transfer of these vessels.

Mr. CULLOP. No protest against any action that was proposed has been made, so I am informed.

Mr. HUMPHREY of Washington. From the British Government?

Mr. CULLOP. Not from the British Government or any other nation.

Mr. HUMPHREY of Washington. In reference to these interned vessels?

Mr. CULLOP. Yes; and none whatever in reference to the proposed legislation or the action that would follow. It is not likely any nation would protest before any purchase was attempted.

Mr. GARDNER. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Indiana yield to the gentleman from Massachusetts?

Mr. CULLOP. Yes.

Mr. GARDNER. Did the gentleman from Alabama [Mr. UNDERWOOD] ask the State Department whether or not it was true that Sir Cecil Arthur Spring-Rice, in response to a request from Mr. Bryan as to the way in which the British Government would regard the purchase of these interned vessels—whether, as a matter of fact, Sir Cecil Arthur Spring-Rice did not reply under instruction from his own Government?

Mr. UNDERWOOD. Under the statement just made by the gentleman from Indiana and the statement issued by the State Department this morning I do not think it is necessary to ask them any further questions.

Mr. JOHNSON of Kentucky rose.

The CHAIRMAN. The gentleman from Kentucky is recognized for one hour.

Mr. JOHNSON of Kentucky. Mr. Chairman, since this discussion has departed from the bill under consideration, I wish to discuss a matter which is of consequence to the property holders of the District of Columbia.

The subject I wish to discuss relates to the "Insurance Trust," which has just been formed in the District of Columbia. It will be remembered that about two years ago the Commercial Fire Insurance Co., which is located in the District of Columbia and doing business here, increased its capital stock and surplus from about $150,000 to $650,000. In other words, it added from popular subscription about half a million dollars to its capital stock and surplus. Before the addition of that half million dollars—in round figures—to its capital stock and surplus fund it was doing only a small business, and that business was confined to the District of Columbia. But after it had increased its capital stock and surplus fund to about $650,000 it commenced to do a very large business, particularly in the District of Columbia.

One feature by which it increased its business was by the adoption of what was entirely a new feature in the insurance business in the District of Columbia, and that was that this company did away with agents' commissions upon premiums and gave to the assured the benefit of commissions upon premiums which theretofore went to the agents. This action displeased all the insurance agents in the District of Columbia.

Soon thereafter an insurance agent, who is at the head of one of the big financial institutions in the District of Columbia, admitted under oath that he, for his company, had during the next preceding year received commissions upon premiums which came from placing $14,500,000 of insurance. He, I assume, took exception to the inroad which the Commercial Fire Insurance Co. was making upon his companies, because of the fact that the Commercial Fire Insurance Co. was giving to the assured, instead of to the agents, the commissions on premiums for policies of insurance.

This financier to whom I have just referred as having received commissions on premiums for the $14,500,000 of insurance written during the preceding year went to another financier-insurance agent, who was also at the head of a large financial institution in the District of Columbia. This second financier-insurance agent also admitted under oath that the concern of which he was president was receiving something like $25,000 a year profit from this business, which the Commercial Fire Insurance Co. was injuring by giving the commissions to the assured instead of to the agent. Thereupon these two insurance agents went to the then Commissioners of the District of Columbia, and those commissioners took up the matter with certain Members of the House and, by statements which were later developed not to be true, induced this body to enter upon an investigation of the Commercial Fire Insurance Co., which had commenced the practice of giving commissions to the assured instead of to the agent as theretofore. As a result of that investigation I wrote a minority report from the committee to which the investigating resolution was referred. In that report I expressed the belief that this fight upon this insurance company had been inaugurated by these particular people for the reason that this company was no longer giving commissions to the insurance agents, and for the additional reason that this insurance company would not become a member of the proposed insurance trust for the District of Columbia.

Subsequent facts have developed beyond all sort of question or peradventure that this statement made by me in that report was correct. After that investigation was over and all of its aftermath was practically forgotten an insurance trust has been formed here in the District of Columbia, right under the dome of the Capitol, and to-day it is charging the property holders in the District of Columbia from 50 per cent to 150 per cent higher rates than was charged when the Commercial Insurance Co. was offering policies to the people of the District of Columbia minus agents' commissions.

My information is—and I believe my information is reliable—that the insurance agents and financial institutions who originally started this fight upon the Commercial Fire Insurance Co. kept it up and pressed it on and on until that company has been driven out of business in the District of Columbia. No sooner was that done than the Insurance Trust stepped in and established itself here in this community.

Mr. GORDON. What were the means and methods by which this conspiracy drove this Commercial Co. out of business?

Mr. JOHNSON of Kentucky. I will tell the gentleman. I regret to say that some of the methods adopted were used through no less a personage than the superintendent of insurance for the District of Columbia. The present superintendent of insurance for the District of Columbia did many things to injure the Commercial Fire Insurance Co. One thing he did was that when the Commercial Fire Insurance Co. had succeeded in renting two stories of its building at the corner of Fifteenth and H, known as the Southern Building, to the Customs Court and the Department of Justice, the superintendent of insurance and another very high official voluntarily stepped in and advised the Customs Court and the Department of Justice against taking the lease. The superintendent of insurance then told the Commercial Fire Insurance Co. that if it spent $150,000 toward improving that part of the building which the Department of Justice was to occupy, he would not allow that $150,000 in its statement; that he would treat that $150,000 as an impairment to that extent of its capital stock. When this gentleman was about to be appointed superintendent of insurance for the District of Columbia I believed, from what I gathered, that it was possible, at least, for him to become the instrument of the contemplated Insurance Trust. I did not know him personally. All I knew about him was what came to me voluntarily from people in the District of Columbia. It was represented to me that he himself was in the insurance business, and that he belonged to that particular branch of the insurance business which desired to fasten a trust upon the people of the District of Columbia, rather than become interested in seeing that the people of the District of Columbia secured low rates of insurance.

Mr. MOORE. Will the gentleman yield?

Mr. JOHNSON of Kentucky. I do.

Mr. MOORE. Will the gentleman give us the name of the president of the Commercial Insurance Co.?

Mr. JOHNSON of Kentucky. The president of the insurance company of which I was speaking was Mr. Robert R. Tuttle.

Mr. MOORE. Will the gentleman tell us the result of the investigation which was had in the House some years ago?

Mr. JOHNSON of Kentucky. The particular charge that was made against the insurance company was that it was not solvent. The expert accountants who examined their books were chosen by those who were most hostile to the insurance company, but they reported that the company was absolutely solvent. Both the majority report and the minority report show that this company was solvent beyond all sort of question.

Mr. MOORE. I understood the gentleman to say that that company is now out of business, or has been driven out of business?

Mr. JOHNSON of Kentucky. That company is not now doing any business in the District of Columbia because of this war that has been waged upon it.

Mr. OLDFIELD. Will the gentleman give us the name of the District superintendent of insurance?

Mr. JOHNSON of Kentucky. His name is Nesbit. I am not sure of his initials. I think his name is Charles. It is suggested by the Clerk that his name is Charles F. Nesbit.

Now, when these charges were first made by the two financiers and insurance agents of whom I have spoken, and after they had gone to the Commissioners of the District of Columbia for the purpose of having an investigation brought about as to the solvency of the Commercial Fire Insurance Co., Mr. Charles F. Nesbit, who then was not the superintendent of insurance for the District of Columbia, according to the testimony of Col. William V. Judson, called upon the commissioners; and, as I say, according to Col. Judson's testimony, the object of his call was to encourage the warfare upon the Commercial Fire Insurance Co. Then, as I have said, after the Commercial Fire Insurance Co. had made arrangements to lease part of its building to the Customs Court or to the Department of Justice—I am not quite sure that it was the Department of Justice, but I think it was—then the present superintendent of insurance interfered and did what he could to prevent this company from making a profitable lease upon part of its building. In this petty piece of persecution he was aided, as I have said, by one who is very high indeed in political affairs and is in position to exercise potent influence.

But the superintendent of insurance did not stop there. He theretofore had been associated with Mr. Walter A. Brown, an insurance agent in the District of Columbia, and he also had been very intimately associated with Mr. William H. West, another insurance agent doing business in the District of Columbia.

After the Commercial Fire Insurance Co. had been so crippled that it could no longer do a profitable business in the District of Columbia, this Mr. Walter A. Brown and this Mr. William H. West canvassed the insurance companies doing business in the District of Columbia for the purpose of forming an insurance trust, which is now in existence in the District of Columbia. While they were canvassing the city of Washington for the purpose of forming this trust, upon several different occasions, when noontime came they took lunch with Charles F. Nesbit, the superintendent of insurance in the District of Columbia. Upon one occasion, if not upon both—and I think upon two occasions—immediately after the superintendent of insurance had taken lunch with these two gentlemen, he called upon the president of the Commercial Fire Insurance Co. and urged him to sign the articles which created this trust in the District of Columbia, and he never desisted in his persistence in that direction until after the Commercial Insurance Co. had so signed.

Mr. MOORE. Will the gentleman yield?

Mr. JOHNSON of Kentucky. Yes.

Mr. MOORE. Has the gentleman in his possession information as to the character of the so-called trust, what form it has taken?

Mr. JOHNSON of Kentucky. In a few moments I will present the "constitution and by-laws" of this insurance trust, and will make some comment on it.

Mr. MOORE. One more question. Is the Commercial Fire Insurance Co. still doing business outside of the District of Columbia?

Mr. JOHNSON of Kentucky. It is.

Mr. MOORE. Is it the company of which the former Assistant Postmaster General, Robert J. Wynne, was president?

Mr. JOHNSON of Kentucky. He was with the company in some official capacity before its referred-to troubles came on, but I do not know whether or not he is now.

As I was saying, the superintendent of insurance called upon Robert R. Tuttle, president of the Commercial Fire Insurance Co., upon more than one occasion, and encouraged him to have his company become a member of this trust.

About two weeks ago I had a conversation with the superintendent of insurance over the telephone relative to some insurance subjects. In that conversation he suggested that he come to my house that evening for the purpose of conferring with me relative to them. He came; and while he was there, unexpectedly to me, Mr. Tuttle, former president of the Commercial Fire Insurance Co., called with his wife to make a visit to me and my wife.

Mr. Tuttle came to my house just at the moment when I was talking to the superintendent of insurance about his having encouraged Tuttle to go into this Insurance Trust, and because of the presence of Mr. Tuttle I brought the question up in the presence of both the superintendent of insurance and Mr. Tuttle.

In that conversation Mr. Tuttle reiterated what he had theretofore said to me, and that was that the superintendent of insurance had come, I think, on two former occasions to him and encouraged him to put his company into the trust.

Mr. MOORE. Was the word "trust" used in that conversation?

Mr. JOHNSON of Kentucky. It was in every part of it.

Now, I have in my hand the Constitution and By-Laws of the Underwriters' Association of the District of Columbia. The bottom of the front page of this pamphlet shows that it was printed, not in Washington, but in New York, in 1913. In other words, the intention to form this trust here was a preconceived one, and they awaited only the destruction of the local company that stood in their way before they brought this trust into existence.

I am informed that Mr. Edward R. Hardy, of the State of New York, is the managing head of the Insurance Trust, which has control of insurance matters in the State of New York. There is apparent proof, at least, that the Insurance Trust which has recently been created in the District of Columbia, was formed under the guiding hand of this same Mr. Hardy. There is an insurance publication in the State of New York which is known to be absolutely controlled by the Insurance Trust. It is a paper edited by a man named Best, who voluntarily appeared before the House Committee on the District of Columbia for the purpose of breaking down the Commercial Fire Insurance Co. In his testimony he admitted that in the State of New York there was an Insurance Trust.

It develops that Mr. Hardy, who is at the head of the Insurance Trust in New York, came down to the District of Columbia, and has formed the Insurance Trust which has recently raised the rates in the District of Columbia from 50 per cent to more than 100 per cent.

Here I ask leave to insert the entire constitution and by-laws as a part of my remarks.

The CHAIRMAN. The gentleman from Kentucky asks unanimous consent to extend his remarks in the RECORD by inserting the paper indicated by him. Is there objection?

There was no objection.

Mr. JOHNSON of Kentucky. There are, however, some parts of it which I wish to discuss briefly.

Mr. MOORE. Will the gentleman yield?

Mr. JOHNSON of Kentucky. Yes.

Mr. MOORE. Is there anything in the by-laws of the Underwriters' Association that shows whether the business therein controlled is wholly within the District of Columbia?

Mr. JOHNSON of Kentucky. I will read the gentleman some portions of it which will enlighten him.

Mr. MOORE. Does it go beyond the District?

Mr. JOHNSON of Kentucky. It does not.

Mr. BARTON. Will the gentleman yield?

Mr. JOHNSON of Kentucky. Yes.

Mr. BARTON. Referring to Mr. Best's statement, to what committee did he make the statement?

Mr. JOHNSON of Kentucky. To the subcommittee of the House Committee on the District of Columbia, which had charge of the investigation of the Commercial Fire Insurance Co.

Mr. BARTON. Have those hearings been printed?

Mr. JOHNSON of Kentucky. Yes.

Mr. SUTHERLAND. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Kentucky. Yes.

Mr. SUTHERLAND. Is the gentleman prepared to say that $150,000 expended, as he has suggested, on the repairs or alterations of the Southern Building should as a matter of good practice be carried as an asset?

Mr. JOHNSON of Kentucky. I do not propose to discuss that.

Mr. SUTHERLAND. The gentleman suggested that that was an improper act on the part of the insurance inspector.

Mr. JOHNSON of Kentucky. Yes. I do not think it was any of his business.

Mr. SUTHERLAND. He refused to carry that as an asset. Would it not be properly carried as an expense, just as he suggested?

Mr. JOHNSON of Kentucky. I think not. When a man or a corporation transfers dollars and cents into tangible, valuable property I do not think that property is any less an asset than the money which went into it.

Upon page 2 of the Constitution and By-laws of the Underwriters' Association of the District of Columbia I find the following:

Voting shall be as hereinafter provided, except that only class 1 members shall vote, and each member of that class shall have one vote.

Class 1 members are the insurance companies, and class 2 members are the agents of the insurance companies. It is therefore patent upon its face that they propose to hold the control of this organization within the insurance companies, and not even delegate any part of that control to their insurance agents.

To further show that this is a trust, I quote from page 3, article 4, under the caption "Officers":

SECTION 1. At the annual meeting (and in the manner provided in section 1, article 5, of these by-laws) there shall be elected by ballot a governing committee, a manager, and a treasurer. The governing committee shall elect one of its members as chairman and one as vice chairman.

Then, on page 4 of the same constitution and by-laws I find this statement:

SEC. 4. The duties of the managers shall be:
(a) To make all rates under the rules, schedules, and minimums of the association and promptly promulgate them to all the members, also advising them at once of all changes of ratings and of all rules and regulations adopted or altered.

Thus direct authority is conferred upon the manager to make all rates which shall obtain in the District of Columbia.

Mr. GREENE of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Kentucky. Yes.

Mr. GREENE of Massachusetts. I want to ask the gentleman if he thinks it is any different here from what it is anywhere else in the United States?

Mr. JOHNSON of Kentucky. I think it is. I hope the trust has not yet accomplished its purpose of acquiring control over the entire territory of the United States. However, it may already have done so.

Mr. GREENE of Massachusetts. I think in general the insurance companies throughout this country regulate the rates and make them after the same fashion the gentleman has outlined these parties do in the District of Columbia.

Mr. JOHNSON of Kentucky. If so, it is just as indefensible elsewhere as it is here; and I do not believe Congress should sit here idly and see this thing go on where Congress makes the laws.

On page 4, article 5, under the title of "Governing committee," I find the following:

SECTION 1. This committee shall consist of 12 members, 3 of whom shall be officers of Washington companies, 6 shall be representatives of companies of other States, and 3 shall be representatives of foreign companies.

From that quotation I think it easily will be seen that outside companies under this organization have fixed it so that they can overrule the local companies, because they give the local companies a representation of only three members upon their board.

Further quoting, I find the following:

In 1913 and thereafter 4 shall be elected at each annual meeting to serve for a term of 3 years, those elected to be representatives of Washington companies, other States or foreign companies the same as those whose terms expired, provided that no member shall be eligible for reelection within 12 months of the expiration of his term of service.

I read that part of the by-laws and constitution for the purpose of showing that this trust was contemplated as far back as 1913, when the local companies that were standing in the way had not yet been destroyed.

On page 5 I find this:

SEC. 4. (a) The committee shall maintain an efficient department of surveys and inspection, and shall arrange for the making of rates, standards, schedules, minimums, and rules which shall be binding on all members as soon as promulgated. Ratings to be made by the managers and all in accordance with the standards, schedules, or minimums.

On the same page, near the bottom, I find this:

Fourth. No application for rerating shall be considered by the manager or governing committee unless the cause thereof is stated therein, and not then unless it be for one of the reasons set forth in these by-laws.

On page 6 I find a provision that the by-laws shall not be altered or amended except by a two-third vote of class 1; and, as I said before, class 1 is composed of the insurance companies themselves.

Article 9, under the title of "Commissions and brokerages," says:

Commissions: (a) Thirty per cent of the following classes of risks:
Dwellings and apartment houses and their contents.
Private stables and private family garages, and other buildings and their contents, when written in connection with dwellings upon the same premises, excluding farm property.
Buildings and their contents occupied on the first floor as stores and exclusively as dwellings above the first floor.
Churches, convents, synagogues, schoolhouses, educational institutions, hospitals, public buildings and their contents (excepting institutions whose inmates are under legal restraint).
(b) Twenty-five per cent on brick buildings and contents occupied for mercantile purposes, office, public or large halls, and not exclusively for dwelling purposes above the first floor, etc.

In other words this constitution and by-laws goes on and fixes not only the rates, from which the companies shall not depart, but it also fixes the agents' commissions, from which no company is also permitted to depart.

As I already have permission, Mr. Chairman, to insert the constitution and by-laws in the RECORD I will not further quote from it, but wish to express the earnest desire that Members read it for the purpose of informing themselves.

I see from the local press that the assistant district attorney is investigating the question as to whether or not there is a local insurance trust, with a view of prosecuting it if there is one. I wish to invite the attention of the assistant district attorney to the fact, as I am informed, that Mr. Walter A. Brown and Mr. William H. West canvassed the insurance companies doing business in the District of Columbia for the purpose of having them become members of this trust. If the officers of the local insurance companies could be called, I doubt not that they could tell the district attorney that they were importuned and encouraged by those two gentlemen to join this trust.

For the purpose of supporting this local organization each company doing business in the District of Columbia had levied upon it by Mr. Hardy an assessment of three-quarters of 1 per cent upon its commissions or premiums—I am not quite sure which—and that three-quarters of 1 per cent, when collected, was to be paid to Mr. Edward R. Hardy, to whom I have heretofore made reference.

Mr. Chairman, I believe that I do not care to say more upon that subject, but before I resume my seat there is another subject concerning which I propose to make a few remarks. Last spring——

Mr. ASHBROOK. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Kentucky. I do.

Mr. ASHBROOK. I just came in and have not had the benefit of all the remarks of the gentleman from Kentucky, but I notice that he is discussing the insurance companies of the District of Columbia. I would like to inquire of the gentleman if he knows a way whereby some constituents of mine who have invested their good, hard-earned dollars in insurance companies in the District of Columbia could realize? Does the gentleman know anything about the insurance companies who are in bad favor at this time, and who have been selling stock to the people throughout the United States? And now these constituents who have been investing their hard-earned dollars find that they are holding the bag and can not realize; that their stock is worthless, or practically so.

Mr. JOHNSON of Kentucky. I do not know to what company the gentleman from Ohio refers, but if he refers to either the Commercial Fire Insurance Co.——

Mr. ASHBROOK. I believe that is the company.

Mr. JOHNSON of Kentucky. Or to the First National Fire Insurance Co., I will say to him, in giving an opinion, that if this fight never had been made by the then organizing insurance trust in the District of Columbia, that both of those companies would have made money, and that the gentleman's constituents not only would have been able to have gotten back what they invested but a handsome dividend also.

Now, to illustrate for the gentleman's information. While this investigation was going on before the House District Committee these companies brought to the committee daily hundreds and hundreds of policies which had been canceled by the assured because the investigation was being made, and because of hostile publications which were also being made in papers and periodicals controlled by the trust.

Mr. ASHBROOK. It is then the opinion of the gentleman that these companies to which he refers have been brought to their present condition through the persecution that has been brought about by these other people——

Mr. JOHNSON of Kentucky. That is my unqualified opinion.

Mr. ASHBROOK. And the men behind the companies are honorable men and had no desire to hornswoggle, to use such a rural-constituent phrase?

Mr. JOHNSON of Kentucky. No; they evidenced no desire to hornswoggle, to use the same expression the gentleman used.

Mr. BARKLEY. If the gentleman will permit, I have some constituents in the same fix as those of the gentleman from Ohio, and I suppose I am authorized to make the same answer to them.

Mr. JOHNSON of Kentucky. Yes; and I have some myself.

As I was saying, Mr. Chairman, when interrupted by the question of the gentleman from Ohio, there is another subject to which I wish to devote a few remarks.

Last spring, I believe it was, this House unanimously passed a bill which placed the auditor for the Supreme Court of the District of Columbia upon a salary of $5,000 a year, instead of permitting him to continue to be compensated by the unlimited-fee system. Under the fee system the auditor for the District of Columbia is being paid, as I say and as I can establish, an annual compensation of $12,372, after paying all official expenses. To repeat, the House unanimously passed a bill to give to that official a salary of $5,000 and to do away with the present unlimited-fee system of compensation. That bill is now pending in the Senate. On January 16 the auditor went before the Senate Committee on the Judiciary and made a statement relative to his fees.

The printed hearing begins by reciting the fact that there appeared before the subcommittee W. Meyer Lewin, Esq., Chapin Brown, Esq., Arthur A. Birney, Esq., J. Morrill Chamberlain, Esq., Matthew E. O'Brien, Esq., F. W. Brandenburg, Esq., Louis A. Dent, Esq., auditor of the Supreme Court of the District of Columbia, and Mr. George W. Evans, president of the West End Citizens' Association.

Mr. ADAIR. Was he "esquire," too?

Mr. JOHNSON of Kentucky. I will answer the gentleman from Indiana by saying that the representative from the citizens' association was not designated as "esquire," but as "mister."

Some years ago when the illustrious and lamented J. Proctor Knott was governor of Kentucky and titles were floating around promiscuously, he formally, as governor, gave the title of "mister" to one of Kentucky's distinguished citizens.

I have looked up the word "esquire," although I thought I knew what it was, and I found that it was properly used to designate a justice of the peace.

Squire Dent, auditor for the Supreme Court of the District of Columbia, made a very astounding statement when he appeared before the Senate Judiciary Committee for the purpose of defeating the passage of this bill in order that he may continue to draw $12,372 net a year as his compensation from the unfortunate litigants of the District of Columbia. He denied that he receives as much as $12,372, but admitted that he does receive about $9,900. He reduces the net amount of his compensation by several methods, one of which is by subtracting expenses. A part of those expenses are law books and furniture, which, when bought, become his own property. Therefore our committee in treating it has included that part of the money so spent as net income, and has found that his net income, as I said, during the last four years would average annually the sum of $12,372.

Squire Dent, in arguing before that committee the proposition that this bill should not be passed, says that this whole proposal to reduce his compensation grew out of spite against him. In so far as this House is concerned the bill originated with me; and when it originated with me I did not even know the name of the auditor of the Supreme Court of the District of Columbia; and up to this good moment I have never laid eyes on Squire Dent. I would not know him if I were to see him; and God knows I bear him no ill will. I am actuated solely by the purpose to relieve unfortunate litigants in the District of Columbia and at the same time to allow him only a reasonable compensation for his work. The bill which has passed this House has fixed $5,000 a year as his compensation.

But he complains that a man named Masters, whom he characterizes as an extortioner in lending money, is behind the movement to lessen his compensation. He also says that a local attorney—Mr. James Easby-Smith—reported to him—Squire Dent—that Masters had approached him—Mr. Easby-Smith—with a proposition to come to me and get such a bill started as has passed the House. Now, Squire Dent asserts that Masters—whoever he is—sought to have Mr. James Easby-Smith to come to me for the purpose of inducing me to introduce this bill; but Squire Dent failed to tell the Senate committee that he himself did send Mr. James Easby-Smith to me for the purpose of getting the passage of this bill stopped.

Suppose Mr. Masters, the alleged extortioner, did have a grievance against Squire Dent, the charger of unconscionable fees against the unfortunate litigants in the District of Columbia; how could that possibly come to a member of the District Committee with any force? Neither I nor any other member of the committee cared whether Mr. Masters was for or against Squire Dent's fee system. None of us cared whether Mr. James Easby-Smith was sent by Mr. Masters or by Squire Dent. We went ahead and did our duty, and the House has done its duty, regardless of that intended interference.

Squire Dent admitted to the Senate committee that he had been politely invited to appear before the House committee, but that he declined to do so because the House committee had no jurisdiction of the subject matter, notwithstanding a bill had been introduced and the Speaker of this House had referred that bill to the Committee on the District of Columbia. But Squire Dent, who fixes his own fees and rules his department of the court as he sees fit, indirectly criticizes the Speaker of this House for assigning a bill to what he—Squire Dent—thinks is the wrong committee.

But what difference does it make whether Mr. Masters was inspired by ill will against Mr. Dent or not? What difference does it make whether the House committee had jurisdiction or not? The fact still remains that Squire Dent has been receiving an average annual compensation of $12,372, after the payment of official expenses, notwithstanding the fact that he says he has not. However, let me repeat that he admits to about $9,900, which is at least $4,900 too much. The members of the court who appointed him receive only $6,000 a year each. Yet it has been conclusively shown that he receives more than twice as much as either one of the judges who appointed him and who are superior to him. Now, Squire Dent, in his statement before the Judiciary Committee of the Senate, says that an accountant from the Department of Justice, by the name of McNish, also investigated the amount of his annual compensation and found it to be less than $10,000 a year. This is not true. Mr. McNish found the amount to be much larger than this. But, in any event, I say, without fear of contradiction, that when Mr. McNish made his investigation Squire Dent, the auditor for the Supreme Court of the District of Columbia, withheld from him information as to fees he had then earned. The accountant who acted for the House District Committee was an impartial man. He never had seen or heard of Squire Dent before the bill came up; but he arrived at his figures in this way: He took the cases which had been referred to Squire Dent as auditor during the entire time that he had been auditor, and from these cases and the records of the auditor's office he got the amount of the fees which Squire Dent had allowed to himself as auditor, and, when he had gotten this information from the cases and the auditor's own records, he added up the figures so obtained, and then he subtracted the legitimate expenses of the office and found that Squire Dent's net annual compensation was $12,372. He, of course, included fees that had been earned, according to the auditor's method of computation, up to the time to which the investigation extended.

I doubt not that I have dignified Squire Dent's statement entirely too much by undertaking, through these means, of giving light to the public as to his doings or information to the Judiciary Committee of the Senate. Squire Dent undertakes to distract attention from his big charge of $50 a day by complaining that a man by the name of Masters ha procured the passage of this bill. And I might say that Squire Dent, in discussing the subject, criticized the district attorney over in Virginia, Mr. Crandal Mackey, and his main criticism of Mr. Mackey is leveled at him because this man Masters, the alleged usurer, has been, according to Squire Dent, a client of Mr. Mackey; and therefore Col. Mackey is contaminated because he associates with Masters. And, as Masters was once indicted, upon the same kind of logic, Squire Dent can also be criticized. There was an infamous lumber company called the Washington Lumber Co., and in that company Squire Dent was one of the directors; and Mr. Eugene H. Taggart was another one of the directors; and Mr. Taggart, the codirector with Squire Dent, also has been indicted for criminal fraud. So it seems that Squire Dent's business associates are no better off in that respect than are Mr. Mackey's alleged clients. One of these criticisms is no better than the other, and neither is sound. Neither will one nor both of them, no matter how adroitly handled by Squire Dent, conceal the fact that he is collecting from litigants more than he should collect. One large estate here in town is owned by a crazy man by the name of Peters. Peters has a committee. Squire Dent has been charging more than $50 a day for overlooking the settlements of his committee, and has allowed that committee during the last few years nearly $100,000 compensation out of that lunatic's estate.

Let me invite your attention to two of those allowances. The lunatic, in charge of a couple of men, was sent over to Atlantic City, and when the week end came the committee visited him over there, and the committee charged $100 for that visit. And that is not all. The committee took along with him his accountant to see the lunatic. God only knows what an accountant would want to see the lunatic about, but that accountant was allowed $150 for going over to Atlantic City on that occasion to see this lunatic. But these are small items. Some of the other allowances are more indefensible.

We have another case of the estate of a lunatic where——

Mr. SHERWOOD. What was the value of the lunatic's estate?

Mr. JOHNSON of Kentucky. About half a million dollars. As I said, we have another estate of a lunatic who is confined in the asylum. As stated in the House committee report, Squire Dent has allowed enormous and unusual fees, not only to the committee but to the law partners of the committee as well; and one of the committee of this lunatic who is receiving these large fees by the grace of Squire Dent came to me—whether or not he came upon the advice of Squire Dent I can not say—and asked me to stop the passage of this bill.

Mr. RUCKER. Mr. Chairman, will the gentleman pardon me for a question?

The CHAIRMAN. Does the gentleman yield?

Mr. JOHNSON of Kentucky. Yes.

Mr. RUCKER. I am anxious to know what connection with the court this auditor, Squire Dent, has.

Mr. JOHNSON of Kentucky. Well, the auditor of the Supreme Court of the District of Columbia is much the same as a master in chancery in your court or mine.

Now, then, this office that Squire Dent holds was established in 1785, before the District of Columbia was separated from the State of Maryland. By an act passed in 1802 that act of 1785 of the State of Maryland was made applicable to the District of Columbia, so that the fee system, which is still preserved for the benefit of Squire Dent as the auditor of the District of Columbia, was fixed in 1785.

Squire Dent also says that Mr. Wilton J. Lambert, a local attorney, helped to inspire the introduction of the bill which abolishes his exorbitant fees. I do not believe that Mr. Lambert has ever attempted to have anything to do with the matter. For myself I can truthfully say I do not know Mr. Lambert. I never saw him.

Not long ago the Washington Star said editorially that Squire Dent's compensation should be large, because he, while auditor, could not practice law. The editor of the Star seems to have overlooked the fact that the auditor was then practicing law for one of the owners of the Star in the case of Gaddis against Noyes. It is also true that the auditor uses his public office in practicing law.

The CHAIRMAN. The time of the gentleman from Kentucky has expired.

Mr. JOHNSON of Kentucky. Mr. Chairman, I wish to append the following as a part of my remarks:

CONSTITUTION AND BY-LAWS OF THE UNDERWRITERS' ASSOCIATION OF THE DISTRICT OF COLUMBIA.

CONSTITUTION.

ARTICLE 1.

Name.

The name of this organization shall be the Underwriters' Association of the District of Columbia.

ARTICLE 2.

Objects.

The object of this association shall be the reduction of the fire waste in the District of Columbia, the establishment of just and fair rates, whereby the cost of fire insurance may be equitably distributed among all classes of manufacturers, merchants, private householders, and others, and the prevention of discrimination between one property owner and another; for these purposes this association will establish a system of schedule and minimum ratings, giving the best risks, the lowest rates, and adding specific charges for all deficiencies from required standards, making reductions from such rates when the deficiencies charged for are eliminated, and also provide rules and plans for regulating the practices of the business of fire underwriting, including commissions and brokerages in the District of Columbia.

ARTICLE 3.

Membership.

Shall consist of two classes:

1. Fire insurance companies.
2. Associate members—Local or general agents.

All fire insurance companies regularly admitted to do business in the District of Columbia shall be eligible to class 1, and all regularly licensed fire insurance agents shall be eligible to class 2.

Voting.

Voting shall be as hereinafter provided, except that only class 1 members shall vote, and each member of that class shall have one vote.

ARTICLE 4.

Meetings.

Meetings shall be held at such times and places and under such regulations as may be prescribed by the by-laws. Class 2 members shall have the privilege of the floor.

ARTICLE 5.

Management.

The management of the association shall be under direction and control of such officers and committees as shall be prescribed by the by-laws.

ARTICLE 6.

Any member may withdraw from this association at any time on giving 60 days' notice, in writing, it being understood that at the end of such 60 days and on such withdrawals any other member may withdraw on 2 days' notice.

ARTICLE 7.

This constitution shall not be altered or amended except by a two-thirds vote of the class 1 members represented at any stated meeting or at a meeting specially called for the purpose, copies of such amendments to be sent to the members at least 10 days in advance of said meeting.

BY-LAWS.

ARTICLE 1.

Applications for membership shall be made, in writing, through the manager hereinafter provided for to the governing committee, and, if approved by it, the applicant shall be a member upon signing the constitution and by-laws and company agreement.

ARTICLE 2.

Representation.

Each company may be represented at the meetings of the association by one of its officers or managers, or in the absence of such officer or manager, by its local agent having written authorization of the company, such authorization to be effective at any meeting at which the company may not be represented by one of its officers or managers, and to remain in force until revoked by the company. Each company shall be entitled to one vote, which, in the absence of an officer, may be cast by the agent or firm of agents duly authorized in writing.

ARTICLE 3.

Meetings.

SECTION 1. Stated meetings shall be held on the first Thursday of the months of March, June, September, and December at 2 o'clock p. m. The September meeting to be the annual meeting.

SEC. 2. Special meetings may be called by the chairman of the governing committee at his discretion, and shall be called by him when requested in writing by nine members of the association, but no business shall be transacted at a special meeting except that which is specified in the call for same, except by unanimous consent of the members present.

SEC. 3. Fifteen representatives shall constitute a quorum at any meeting, counting individuals or firms.

ARTICLE 4.

Officers.

SECTION 1. At the annual meetings (and in the manner provided in sec. 1, art. 5, of these by-laws) there shall be elected by ballot a governing committee, a manager, and a treasurer. The governing committee shall elect one of its members as chairman and one as vice chairman.

SEC. 2. The duties of the chairman and vice chairman shall be such as are usual to these positions.

SEC. 3. The treasurer shall collect all moneys due the association, deposit the same in the name of the association in a depository to be approved by the governing committee, and pay all bills when approved by said committee, by check drawn by himself and countersigned by the chairman. He shall keep proper books of account and make a report of the finances at the annual meeting. His account shall be audited quarterly by a public accountant. He shall give a bond for the faithful performance of his duties for such an amount as may be fixed by the governing committee, premium to be paid by the association. He may be the same person as the manager hereinafter provided for.

SEC. 4. The duties of the manager shall be:

(a) To make all rates under the rules, schedules, and minimums of the association, and promptly promulgate them to all the members, also advising them at once of all changes of ratings and of all rules and regulations adopted or altered.

(b) He shall keep a record of the proceedings of the association and its committees and perform such other duties as they shall require.

(c) He shall, under the direction of the governing committee, have charge of all employees and all books and papers.

(d) Surveys shall be printed or otherwise duplicated and the duplicates shall be furnished members and owners of the property surveyed upon request.

ARTICLE 5.

Governing committee.

SECTION 1. This committee shall consist of 12 members, 3 of whom shall be officers of Washington companies, 6 shall be representatives of companies of other States, and 3 shall be representatives of foreign companies. In 1913 and thereafter four shall be elected at each annual meeting to serve for a term of three years, those elected to be representatives of Washington companies, other States, or foreign companies the same as those whose terms expire, provided that no member shall be eligible for reelection within 12 months of the expiration of his term of service. Vacancies shall be filled by the governing committee from the class represented by the retiring members; such election shall be until the next annual meeting only.

NOTE.—In 1913 the four nominees receiving the highest vote shall serve for three years; the four nominees receiving the next highest vote, for two years; and the four nominees receiving the next highest vote, for one year. In case of tie between two or more, lots shall be cast.

SEC. 2. Regular meetings of the committee shall be held at such times and places as it may designate.

SEC. 3. The committee shall have the management of all the affairs of the association unless otherwise provided for.

SEC. 4. (a) The committee shall maintain an efficient department of surveys and inspections and shall arrange for the making of rates, standards, schedules, minimums, and rules, which shall be binding upon all members as soon as promulgated, ratings to be made by the manager and only in accordance with the standards, schedules, or minimums.

(b) Notice of such rates and rules, or changes thereof, shall be given to the members within 24 hours after their adoption, Sundays and holidays excepted.

(c) The committee may also prescribe rules and wording of forms for policies.

SEC. 5. No alteration shall be made in an established rate either by the manager or by the governing committee, except for one of the following-named causes:

First. A change in occupancy, improvements, or a change in the risk, or its exposures material to the hazard, or in case there is a general advance or reduction of rates, or a change in the schedule, standard, minimum, or rules applicable to the risk.

Second. Rates made prior to the adoption of a minimum, schedule, or standard shall be revised to accord with said minimum, schedule, standard, or rules.

Third. If a minimum, schedule, standard, or rule has been erroneously applied by the manager, the governing committee may correct the error upon written appeal from a member, specifying the error.

Fourth. No application for rerating shall be considered by the manager or governing committee unless the cause thereof is stated therein, and not then unless it be for one of the reasons set forth in these by-laws.

ARTICLE 6.

Revenue.

The governing committee shall levy an assessment on or before ——, sufficient to cover the estimated expenses of the association for the current year, said assessment to be based on premiums written within the jurisdiction of this board during the year ending the previous 31st day of December, and shall include all premiums received for insurance or reinsurance on rated and unrated risks, less reinsurance effected in companies, members of this association, and return premiums.

The assessment shall be paid on or before the 31st day of March succeeding. The failure of a member to pay the assessment when due shall be cause for suspension or expulsion at the will of the association, provided that the manager shall notify the members in writing at least 10 days prior to the meeting of the association at which such default shall be reported for consideration.

ARTICLE 7.

Outside risks.

Associate members (class 2) of this association shall observe the rules, rates, commissions, and brokerages of other fire underwriters' associations.

ARTICLE 8.

Alterations and amendments.

These by-laws shall not be altered or amended except by a two-thirds vote of class 1 members of the association present at any stated meeting, or at any meeting to be called especially for that purpose. Notice of any change in the by-laws shall be sent to the members at least 10 days in advance of said stated or special meeting, and accompanying said notice there shall be a copy of the proposed amendment or amendments.

ARTICLE 9.

Commissions and brokerages.

Commissions: (a) Thirty per cent on the following classes of risks:

Dwellings and apartment houses and their contents.

Private stables and private family garages, and other outbuildings and their contents, when written in connection with dwelling upon the same premises, excluding farm property.

Buildings and their contents occupied on the first floor as stores and exclusively as dwellings above the first floor.
